GAME IN MONMOUTH COUNTY, N. J.—Hornertown, March 31.—So far as I have learned by observation and otherwise, quail and partridges through this section have wintered in good shape. Although they were sharply hunted last season their number now seems to be quite large, so if nothing happens there will be plenty of bird shooting next fall. Rabbits also have wintered well. Many of them are to be seen as one goes through the open fields and sproutlands. Should judge the number is larger than common for this time of the year; also the numbers of English hares—the increase of strays from Lorillard's late game preserve near Jobstown—are to be seen in the fields, and their number seems to be increasing from year to year, so the farmers and local gunners say. As game, the hunters around here much prefer the common rabbit (*Lepus sylvaticus*) to the hare. As to small birds, although having lived in different parts of this State for a number of years, I never recollect seeing so many large flocks of them before as I have seen this spring, especially of robins and blackbirds; often the woods and fields are full of them. The uncommonly large flocks have at different times reminded me of their migrating period in the fall.—A. L. L.

BOB WHITE AND THE OTHER WHITES.—Unlike the young broods of the woodcock, which are mute, save the twitter with which they rise, the beves of quail appear to be attached to each other by tender affection. If dispersed by accidental causes, either in the pursuit of their food, or from being flushed by some casual intruder, so soon as their first alarm has passed over they begin calling to each other with a small, plaintive note, quite different from the amorous whistle of the male bird and from their merry, day-break cheeping, and each one running toward the sound and repeating it at intervals, they soon collect themselves together into one happy little family. If, however, the ruthless sportsman has been among them with his well-trained setter and unerring gun, so that death has sorely thinned their numbers, they will protract their little call for their lost comrades, even to night fall; and in such cases—I know not if it be fancy on my part—there has often seemed to me to be an unusual degree of melancholy in their wailing whistle.—FRANK FORRESTER.

THE KNEE REST FOR AIMING.—A correspondent with the signature "H. S.," writing in FOREST AND STREAM of Feb. 12, has mistaken my object in sending you a photograph of the sitting position for shooting with the rifle at game. I was well aware of the wiping or loading rod having been used as a rest by hunters in America many years ago. Mr. Ruxton, a British officer who traveled through the Rocky Mountains in 1846, writes of the trappers in some of the fights with Indians, dropping on one knee and resting the rifle barrel on the loading rod. I sent the photograph in order to draw attention to the superiority of sitting down with an elbow on each knee, over other positions, when taking long shots at game, and my chief reason was the hope that, by some sportsmen trying this, a certain number of animals might be killed on the spot instead of escaping to die in misery from their wounds. The use of a stick, in addition, gives a little extra steadiness, but is not actually necessary for even very close shooting.—J. J. M.

GAME ON JEKYL ISLAND.—Jekyl Island Club, Brunswick, Ga., April 1.—The record of game shot during season 1890-91 is as follows: Quail 2,516, English pheasant 17, wild turkey 4, deer 6, ducks 80, marsh hens 36, wild hogs 11, doves 59.—E. G. GROH, Supt.

A MONTREAL GAME CASE.—Montreal, April 3.—Yesterday afternoon was almost entirely taken up in the Police Court with the case of the Fish and Game Protection Club of the Province of Quebec against D. P. Irish, manager of the Canadian Express Company, for carrying three carcasses of deer, addressed to Hon. Geo. A. Drummond, in the close season. During the progress of the case it came out that the deer, with sixteen others, had been killed on Longue Pointe, an island comprising 2,000 acres, in Lake Erie, owned by the Longue Pointe Game Club, which has only fifteen members, of whom Senator Drummond is one. The president of the club, a well-known lawyer from Toronto, named Harris, was in court as a witness, and it appeared that the deer, which were killed on Nov. 10, had been kept in refrigerators till now, but, as the warm weather was coming, it was decided to have them shipped to friends of the club. Those that were shipped to the United States were refused admittance, and the claim of Mr. Walker, the attorney for the Quebec Fish and Game Club, is that in this province it takes a special permit from the Commissioner of Crown Lands to import game even killed in season. Decision was reserved.

NEW YORK GAME BILL.—The Assembly has passed the game code bill without amendment.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

DYEING FISHING LINES.

Editor Forest and Stream:

Will you please inform me (or have some of your readers to do so) what is a good homemade dye for fishing lines that will give them a fixed color, or dye them black, and at the same time not injure them by rotting, swelling or otherwise greatly affecting the form, texture or size of the lines?

In explanation of the question I have to say that I never find any lines in the market dyed to suit my taste, and it is sometimes, recently, difficult to find any that are suitable, otherwise as to size and quality, for the locality. I therefore often have to do my own dyeing.

While my mind is on this subject I shall give you an idea I have as to the appearance a line for use in very clear water should have, which idea I have often put in practice with apparent success; and inasmuch as I have not heard of any one else using lines prepared in the same way it may prove new, and possibly of some value, to FOREST AND STREAM. If so, I shall be happy in having contributed a mite to heighten the success, and therefore increase the pleasures, of the "gentle sport."

I will first give a brief description of the nature of the streams in middle Tennessee, to which my fishing experience is limited.

As will be seen from the map prepared by the State Commissioner of Agriculture, and from any other geological map of the State, the great central basin of this State is surrounded by an elevated region many miles in extent known as the "Upland Rim." This region is very rich in iron ores and timber, but affords scanty soil and scarcely any lime. For this reason the streams which have their rise and courses in that particular section are very clear, the bottom being often plainly visible at a depth of 6 ft. or more, forming a marked contrast with the streams of the adjacent basin the waters of which are, when the weather has been fair, a blueish green from the lime held in solution, and at other times turbid with extraneous matter carried by rain from the rich fields and from the outskirts of towns.

In "ye olden time" both classes of streams fairly swarmed with the finest fishes, as the country did with deer and buffalo; for was not this the most highly prized hunting ground of the red men north and south whose mutual jealousies forbade the tribes of either section to possess it as their own? For many years after the country was settled these lowland streams were the paradise of the awkward fisherman with primitive tackle, and those were the days when the ubiquitous "one-gallussed" boy with his home-made line and sycamore pole is said to have laid the city dude, with his fine seagrass line, in the shade. Delicate tackle and extra skill could not be a great necessity in taking game fish in a narrow stream in which black bass and rock bass abounded and which held substances in solution to such an extent that a log sunk to the depth of 1 ft. could not be seen. I have myself had the small-mouth bass—which is a much more wary fish than the large-mouth, of which there are none in this immediate vicinity—to take the bait in 18 or 20 in. of water and within 10 ft. of where I was standing; and yet no glimpse of the fish could be seen. From the facility, therefore, with which almost any kind of fisherman could take fish, and from the constant seining, the streams have been almost entirely denuded of fish, and I believe that, whether from the fouling of the streams or from the washing away of bars and the decay of drifts, bringing the bottoms of the streams almost to a dead level instead of the alternation of rapids, pools, eddies and holes that formerly existed, the few bass that remain are abandoning these lowland streams and seeking more congenial quarters, and the blue cat is filling, to some extent, the abandoned habitations. Be that as it may, if one's duties are such that he cannot devote some days together to fishing, to him it is farewell to the finny tribes—"Othello's occupation's gone." I believe this is true of about all the limestone waters of Tennessee and Kentucky.

In the clear streams in the upland rim and mountains it is somewhat different. The country is more sparsely settled, and so the army of invasion is smaller. Again, the "nigger-pole" (common rod without reel) is not an effective weapon against small-mouth bass in clear water; and again, these streams afford in many places good protection from seines in the shape of shelving rocks, undermined banks and deep pools.

Of course the sport is not comparable here to what it is in the hundreds of other places in the country. Ten or twelve bass averaging one pound is a fair day's sport, and often one must put up with five or six, although you may now and then find a man with imagination strong enough to magnify this latter number into food enough

apparently to feed several thousand people. I doubt not that there is quite as much real enjoyment in taking a dozen bass in these streams as there would be in taking fifty in Florida; from which sentiment you will see that we regard ourselves in this line,

"As the indifferent children of the earth,
Happy in that we are not over happy;
On fortune's cap we are not the very button."

In the clear water the bass are very wary and will not take the hook when the angler is in sight. It is necessary to cast to a great distance and to remain concealed. As a four-pounder is a great rarity and the common run is below two pounds, a very small line must be used—one smaller than many first-class dealers advertise. A white line is quite a conspicuous object in clear water, and I am satisfied that bass cannot be taken readily when one is used. It is necessary to use a line that cannot be seen readily, and this is all the more necessary in casting, as Dr. Henshall says truly that in that style of fishing the leader must be discarded. To prevent the line from being seen by the game, manufacturers have, as we all know, made lines of various different solid colors, and also braided and twisted together threads of different colors. Either of these is better than a white line, but they still fall short of the requirement. The point I insist upon is this, that that which enables the human eye, as well as the fish's eye, to catch and follow a line of any kind is the continuity of the line as to form and color, and *e converso*, breaks or irregularities in contour or color have a strong tendency to prevent the eye from following up the line. In other words, irregularity, so far as the vision is concerned, destroys a line. If a line be speckled or ringed, the continuity is not broken, because it is still regular in that form. The line should be so dyed as to run from one shade to another, then perhaps to spots, and then to other shades, so as to make the whole irregular and unsystematic.

I have dyed in this way by wrapping or balling the line up upon itself so as to leave irregular interstices for the penetration of the fluid, and then dipping in the juice of a walnut, warm, and renewing after a short time. The line can then be wiped off with a wet rag. Applications of water immediately after dyeing will reduce the shade. A line dyed in this way is not readily followed by the eye at some little distance; and I imagine when stretched on the bottom of a stream it would attract little more attention than the gravel and small twigs and stems of leaves that often lie there.

An illustration of the manner in which the eye can be misled by a broken line is this: Many a bass angler has spent hours of suspense lest the "one-gallussed" boy should do harm to his bucket of shiners, or "steel-backs," in his absence. Let the fisherman cast his minnow bucket into the stream and fasten the cord to a root or stone at the shore; if the water be clear the cord will probably be seen very plainly. But then let him take two or three switches, or say a small branch with several twigs, and place them, in an apparently haphazard manner, at the surface and at a slight angle over and across the cord; and he will find, especially if shadows be cast, that he will have to look close in order to locate the cord.

This may all be regarded as very trivial and I may find in course of time that I have come too quickly to a conclusion, but from fishing in company with others and from sometimes using two rods at once, my observation and experience lead me just now to believe that the best results have been obtained with such a line as I have described, and I would suggest that anglers elsewhere on similar waters, especially where bass are wary, give it a trial, if the idea has not already been practically tested by others.

FRANKLIN, Tenn.

[Hon. H. C. Ford, president of the Pennsylvania Fish Commission, makes a beautiful olive colored dye for gut by the following process: "Take two empty tomato cans; pour into one about an inch of Stafford's writing fluid; then pour in water until the can is over half full. Put two table-spoonsful of logwood into the second can, and pour in water until two-thirds full. Bring both to a boiling point on your range. Then take your hank of gut, from which the rough ends have been severed, and immerse in the ink can a minute and a half. Hold it under the hydrant a short time to wash out the superfluous dye, and then plunge into the logwood can for two minutes. Then wash off the superfluous dye as before. If the color is not dark enough repeat the process in both cans." We have seen this gut used in clear water and know that it is highly effective. Doubtless the same method will be available for lines. Walnut leaves and shells have been used to produce a brown color from a very early date, with alum to fix the color.]

HONNEDAGA (JOCK'S) LAKE.

Editor Forest and Stream:

The Adirondack League Club now has a fish and game preserve of 120,000 acres in the great northern wilderness of this State. In addition to the Blake estate tract of 85,000 acres to which the club obtained title last year, it has recently secured control of Township No. 5, containing 35,000 acres, adjoining the Blake tract. The club has decided to change the name of Jock's or Transparent Lake to "Honnedaga," the old Indian appellation. A. D. Barber, Jr., who has conducted the Forest Lodge at Jock's Lake for four years past, has been appointed steward for the club and will continue to conduct the Lodge. He is now engaged in erecting two new buildings for himself, and also has the supervision of the construction of four cottages on the lake. One of these, for L. O. Snyder, of Buffalo, to cost \$2,500, will be located at Flat Rock, and a second for M. W. Barse, of Olean, after the same plans, will be built. L. B. Jones, of New York, is putting up a cottage in the colonial style of architecture at Big Rock Bay. M. M. Pomeroy, otherwise known as "Brick" Pomeroy, is also to build a neat cottage at the head of the lake. The season promises to be early at the lake although the snow in the woods is still 2 ft. in depth, and the ice on the lake is from 20 to 24 in. thick. The beauty of the Lower Stillwater on the West Canada Creek, three miles from Jock's Lake, has been spoiled this winter by the lumbermen who have erected a dam there and felled all of the spruce timber in the vicinity. The lumbermen are also making great inroads on the soft timber on Black River near North Lake. Mr. Barse is quoted as saying that palace cars will be running to North Lake by Aug. 1. PORTA.

UTICA, May 5.

WHERE THE TROUT LURK IN NORTH CAROLINA.

A WAY up in the heart of the Blue Ridge Mountains, in Macon county, N. C., 4,000ft. above the sea level, in a little basin of not over 400 acres, and which from its appearance might have been the crater of a fiercely burning volcano, nestles the picturesque village of Highlands. For thirty miles from Walhalla, S. C., the nearest railroad station, the weary tourist and his more weary team have been toiling up the intervening 3,000ft. of ascent, and just as body and mind are on the verge of collapse, and the setting sun sending its level rays up the valley of the Cullasagee River to gild the barren tops of Whiteside and Satulah Mountains, the welcome sound reaches his ear from the kindly hack driver, "There's Highlands!"

Since 7 o'clock in the morning the eye has been feasting almost to satiety on the grand old mountains that rise tier upon tier as one advances toward the main chain of the Blue Ridge. At first in long rolling hills, with an occasional steep ascent, clothed to the top with dense forests of oak, yellow pine, walnut and hickory, then gradually changing to the more rugged and wild mountains, with their wealth of white pine, hemlock, chestnut and cucumber, while the gorges between are dark and solemn with their almost impenetrable mass of rhododendron and laurel, these mountains gradually assume that wild and barren aspect that characterize the peaks around Highlands, and forcibly remind the tourist that he is now reaching well up toward the limit of vegetation.

While all this magnificence of scenery, ever varying as one advances, has helped to sustain the weary body and mind for the last few miles; yet the feeling of relief and pleasure can better be imagined than described when "There's Highlands!" greets the ear. Looking from the ridge, on which the tired team has been momentarily stopped to "blow," we gaze in rapture on one of the prettiest little pictures of a rural snugery that can be found in the mountains of any land. Entirely surrounded by mountains, save on the western side, the little valley is studded all over with neat and, in some instances, very handsome cottages, each surrounded with the bright greensward of well-kept lawns. Pushing its Norman-looking roof through the foliage of surrounding chestnuts and white pines, the water tower attached to one of the several good hotels here acts as a beacon to the sore-limbed tourist, guiding him to a place of rest after his twelve hours of rumbling and tumbling over what are not the best roads in the world.

A choice is afforded of very good hotels and boarding houses, and after making your selection and removing part of the soil of the three States you have been traveling through all day (South Carolina, Georgia and North Carolina), you find yourself comfortably seated round a roaring fire, which is found far from unpleasant even if the season is midsummer and you are in the midst of the Southern States.

It is claimed that this is one of, if not the highest, villages east of the Rocky Mountains; it lies about 4,000ft. above the sea level. The mountains which so closely surround it fend off at all seasons the cold blasts that otherwise might be expected at such an altitude, hence fruit of a superior quality can be raised here that cannot be grown 1,000 to 1,500ft. lower down. This temperate climate has induced people suffering from throat and lung disease to seek it out, and having found relief, they have remained to make one of the most cosmopolitan populations that can be imagined, for here we find, as permanent residents, citizens of nearly every State and Territory. Although arriving here in feeble health, yet they brought their bright and active Northern and Western minds, the exercise of which has caused this lonely mountain valley to blossom into as thriving a little town as could be found anywhere even under more favorable circumstances. Excellent schools, a good public library, scientific and botanical societies, and churches of several denominations, all speak for their intelligence and advancement. Manufacturing and milling, in a small but highly improved way, tell of their thrift; and the beauty of their homes and surroundings leaves their taste beyond dispute. Several of the wealthier Southerners, even from as far as the Mississippi Valley, have erected summer houses here, where they enjoy relief from their malarial farms and the much dreaded "hay fever." During the season commencing with June and extending to the end of October about 300 or 400 visitors arrive from all parts of the Union to breathe the pure air, drink the cold spring water (anything stronger being unattainable), climb the lofty mountain peaks from whence a view extending into four States is obtained, gaze with wrapt awe on the mighty waterfalls that abound in every direction for five miles; and a few, among them the writer, to kill the beautiful brook trout that are found in such quantities in all the streams for miles around.

It was at this lovely mountain retreat that a party of five casually met in the month of July, 1890. Like the inhabitants of the village, they hailed from far divergent points; Kentucky, Kansas, Georgia, South Carolina and Scotland claiming their several birth places. Though strangers to each other till they thus met, they were brothers bound by a well-recognized tie among lovers of the rod and reel—keen fishermen all, willing to face any and all difficulties, and endure endless hardships where trout were to be their reward.

For several days mysterious caucuses intimated to the other visitors that something important was about to happen with the "fishing crowd," as we had been dubbed; and when one bright morning it was announced that a week's camp on the Lower Cullasagee River was our plan, a gay crowd of ladies and gentlemen dismissed us on our way with many a wish for our good luck.

Our rig consisted of a two-mule wagon without springs, on which we loaded our 12ft. Sibly walled tent, numerous boxes and bags of duff, all the sundry paraphernalia necessary for a week of camp life, and perched wherever a soft place could be found, the four unlucky ones who hadn't been quick enough to secure the one spring seat beside our driver and guide.

The first mile or two of our road lay through one of the most beautiful pieces of mountain woodlands that the most fastidious of woodland critics could desire. Considerable care had been exercised in grading the road along the steep sides of the mountain, resulting in a drive that would rival successfully the studied avenues in the parks of more favored localities. As it winds and turns

the eye is delighted by the magnificent display of forest growth. Giant chestnuts, hemlocks, poplars and cucumbers entwine their branches over head until the soft light of evening seems to surround you. Beautiful springs of sparkling water gush from the mountain sides, and rushing across the road, dance down their rocky beds to join the Cullasagee below, affording sustenance to dense thickets of rhododendrons and mountain laurel, whose gorgeous flowers make the air heavy with their perfume. Under the spreading trees the flaming azalia, with its flowers ranging from pure white through all the shades of yellow to a ruddy orange, is handsomely set off by the intense green of matted beds of giant ferns that abound in all varieties from the coarse bracken to the delicate maiden hair. This is part of the property of the "Highlands Park Association," whose lands extend along the banks of the Cullasagee for some miles lower down. The woods on each side of the road for a mile or more have been neatly but substantially fenced in by the Association to protect them from the ravages of roaming cattle, and an object lesson in protecting undergrowth in this way is plainly before us, as nowhere in any mountains can such undergrowth be found over which cattle and fire have exerted their baneful influence.

On we dash, and soon we pass the mill of Mr. Henry Stewart, President of the Park Association, who lives here for his health, though his home is in New Jersey. Mr. Stewart carries on an experimental farm around his mill, and as he is on the editorial staff of the agricultural department of the *New York Times*, the public gets the benefit of his intelligent researches into nature. Through about seven miles of his estate the Cullasagee River rolls and tumbles, and some years ago he planted in that stream large quantities of California (rainbow) trout fry, which, with careful protection, have gradually stocked the stream for ten miles with these gamiest of all trout.

Past the mill, the roar and almost the spray of the Neiad Fall are around us as the foaming waters dash down some seventy feet into a pool that would make a trout fisher's mouth water. Soon we ford the waters of Big Creek, a tributary of the Cullasagee, and rising a steep and extremely rough road reach a point where there bursts on our delighted eyes a panorama far beyond my feeble pen to describe. Imagine an immense gulch hundreds of feet below you, where the roaring of a series of cataracts, the Long Falls, extending for over a mile, churns the waters of the river into a mass of foam, and finally dashes them into a narrow cañon through a crevice in the rocks not over two feet in width. On the opposite side of the gulch, and rising almost precipitously from the water's edge, is the main chain of the Blue Ridge, its rugged face frowning with many a precipice and seared by countless fissures. Lower down the dense foliage of the hemlock and chestnut, relieved by the broad green leaves of the cucumber, are fringed, as the water is approached, by the glossy-leaved and bright-flowered rhododendrons. Here and there a glimpse of the rushing stream adds finish to the picture. Creeping up the mountain side to mingle with the clouds that rest upon their tops, gauzy flecks of gray mist are stealing, for though the morning is well advanced, the depth of the gorge and the density of the foliage keep the rays of the sun long at bay.

A bend in the road hides this beautiful landscape from view only to open another as enchanting; and so on from mile to mile, until with a sudden jerk our guide pulls up his team and announces, "Now ye'll hev to fut it." And such a "futting" it was! Soon the contents of the wagon are deposited on the ground by willing hands all anxious to get to the camping ground. Each one seized a generous share of the loads and away we start. One of the mules was pressed into service to act as a carrier for the tent canvas and other heavy articles. For a short distance the trail lay up the almost precipitous side of a short mountain, which cut our "wind" sadly and made us each regret we had been so free-handed in supplying ourselves with loads. However, this soon came to an end, and down the hill we went.

As the camp ground on the banks of the stream was neared the trail disappeared entirely, and our course carried us into a perfect labyrinth of enormous boulders, varying from the size of a trunk to that of a church. In every direction these masses of rock lay scattered propped up against each other, forming cave-like crevasses, or standing solitary, like Mexican houses with their square box like walls. The whole place looked more like a ruined city than anything else.

While on the way down one of our party narrowly escaped being bitten by a huge black rattlesnake. The first intimation we had was a perfect volley of "Queen's English" and the rapid rise and fall of the heavy tent pole which he was carrying. By the time we reached him little of that snake remained to tell the tale. I don't think I ever saw a riding switch used with so much freedom as that tent pole, 3in. in diameter and 10ft. long. This piece of excitement carried us to the camp ground.

The spot selected, and in fact the only available one, was picturesque and convenient to the stream and a beautiful spring of ice cold water; but as to comfort—well, we didn't come there to hunt comfort. The sides of the gorge were so steep that nowhere could enough level ground be found on which to pitch our tent decently. Hemlock twigs furnished good bedding, and though there was a lively chance of rolling out of doors in our sleep, yet many a camper has been worse off than we.

Leisure to look around, while dinner was in course of preparation, revealed the fact that we had pitched our tent on a narrow strip of slanting ground which lay at the foot of an enormous precipice, that loomed almost over our heads, ending in a sharp rocky peak, hundreds of feet above the camp. Immediately in front of the tent door, and level with same, lay one of these enormous blocks of rocks, the face of whose smooth surface rested in the stream 30ft. below. All around us, like the ruins of Pompei or an Aztec village, lay hundreds of these massive blocks, the squareness of whose sides certainly left little to the imagination to make one feel that he was gazing on some ruined city of by-gone ages. Immediately below the camp an enormous slab, at least 80x40ft. and 10ft. thick, stood on edge and extending out from the mountain side far into the middle of the river bed formed an eddy that raised visions of lusty trout. This point of vantage we dubbed the "Pulpit," as a reverend gentleman from Charleston, who formed one of our party, was so carried away by the awful grandeur of the view obtained from its outer point that his actions strongly resembled the necessary adjunct to one of his eloquent sermons. Immediately across the stream from

the camp another precipice, corresponding to that which towered above us, frowned on the chaos below with its rugged and shattered face. Without doubt, in the dim past, these two frowning walls had been firmly joined by a mighty wall whose fragments lay scattered in such profusion around us and for more than a mile below.

Standing on the "Pulpit" the view up stream is nothing but a chaotic succession of these boulders, around, under and over which the stream boils and churns, forming deep black pools, which would delight the heart of any angler. Below the top of one of three falls of from 50 to 75ft. each is in view, and far below where the stream gradually assumes a more level and placid condition, the sun lights into golden tints the fields of a beautiful little farm that smiles as complacently as if far removed from the ruins of nature which surround us. Nothing could be grander than these three falls after you have clambered at risk of life or limb to a point where a view can be obtained. The broken and scattered boulders not allowing the free passage of the water give them a look of wildness seldom seen. At some points on the stream the blockade is so complete that the stream has forced its way into the mountain side, emerging lower down to its natural bed in many a swirl and eddy. This whole stream from the time it takes its rise at Highlands till it reaches a point about nine miles below there, has more or less this wild and grand aspect, having descended at least 2,000ft. in its rugged course.

Well, of course, in the angler all this description of falls, rapids and pools must have prepared the mind for trout, and we found them, both many and large. I question if a fly had ever been cast on these waters till we arrived, so some idea of the sport that was in store for us can be imagined.

The choice fishing grounds where good wading could be had were in the more level stream below the third falls, and thither I wended my way with my chum on the morning after our arrival. On the way I managed to hang my landing net, which I had stuck through the strap of my basket, on a bush, and though I discovered my loss in a few minutes the closest search failed to find it, and there it remained till the last day we were in camp, when I accidentally stumbled on it. This, of course, was a very serious loss if the fish proved very large, so I attempted to improvise one by stretching a handkerchief on a willow hoop and then cutting holes all over it.

Arrived at the fishing grounds I put on a whip consisting of a green-drake, coachman and brown-hackle, and made a few casts and captured as many fair fish. While standing on a rock at the foot of a small, still pool I chance to see a good-sized fish rise to a fly between two large rocks lower down, where the stream, contracted to one-tenth of its natural width, made its escape from the pool. At once I dropped a fly to the spot. With a suddenness, that forced my heart into my mouth and caused my reel fairly to scream, I felt a pull. Though, little looking for such a reception to my fly, I at first felt a little excited, the old instincts of a fly-fisher soon brought me to my senses. As I immediately perceived that I had no common fish to handle, I braced myself more firmly on my narrow foot space and prepared for the fight. Had his lordship concluded to continue the down-stream course he started on all would soon have been ended, as once through the narrow space between the rocks no leader in the world would have stood the chafing. Luckily for me, he concluded that up stream was where he belonged, so at me he came with such speed that the most rapid reeling and skillful manipulation of my rod failed to dispose of the slack. Again I feared he was gone, but soon the sudden tightening of the line announced he was still with me. As soon as he felt the line tighten he rushed madly to the top, and as he leaped high in air I recognized from the brilliant scarlet of his side that he was a California rainbow trout of no mean size. As the pool was of the smallest and the sharp-edged rocks above and below portended danger to my tackle I determined to keep him as near me as possible, even at the risk of a tip. For several minutes, with tip and butt almost meeting, the fierce struggle went on. Sometimes leaping in the air and vainly trying to knock the hook out of his mouth with his tail, then to the bottom, where he would sulk till I almost feared he had got under some rock and was lost to me. But my trusty little rod (a 7oz. lancewood) did me good service, and after a battle of several minutes he gradually turned on his side and I reeled in carefully. Feeling for my landing net I remembered for the first time what kind of one I had, but hating to ask aid I went for him with that. At sight of my flag of truce the gentleman from California concluded that he wasn't so far gone as he thought, and away he went braced for another tussle. This was a short one, however, as he soon came to hand again. I attempted the white rag again, but he showed such an antipathy to it that I was forced to call for aid from my chum, who was enjoying the sport from a rock below. Soon the prize was on the grass with the sun reflected back from his beautifully rainbow-tinted sides. He was "a beauty without paint." While the fight was in course I could have sworn he was 24in. long and weighed at least 5lbs., but a calmer examination of him on the grass reduced him to about 16in. and 1½lbs. Those who have tackled this gamiest of the salmon tribe can readily excuse my rough guess.

During the time we staid on this stream we caught several of these fish, and one in particular was by one of our party who was new to the sport, who yanked him out before the trout knew what was the trouble.

After a fine day's sport we returned to camp to find that good baskets had fallen to the luck of all of the party. Such cooking and frying and eating and lying as was done that day can be easily understood.

Good weather and necessarily good water furnished us for the rest of our stay with many fine baskets, and it was with regret that we saw our old friend the pack mule wending his way down the mountain to conduct us back to civilization.

Not one of the party but hope to meet another time in this beautiful spot, and assist at the killing of more of these California trout, which an additional year's growth will make worthy of any angler's rod and reel.

Within twenty miles of Highlands there are many fine trout streams, some justly due the name of rivers. The roads are remarkably good for the mountains, and the accommodations for those who don't care to go into camp are fair from an angler's point of view. Highlands is reached by rail to Walhalla, S. C., or Silver, N. C., thence across the mountains in hacks for thirty miles.

THE PIKE FAMILY.—II.

HAVING already considered the typical pike, the best known and most widely distributed of its family, and probably the oldest in point of time, let us pass to a review of the smaller members of the same family, which have been grouped under the subgeneric name of *Picorellus*, none of which have the extensive range of the pike, nor his surpassing size. In the pike the cheek is scaled, but the lower half of the gill cover is scaleless, while in the group *Picorellus* both the cheeks and gill covers are scaly. These fishes are best entitled to the name pickerel, which means little pike. They may be readily distinguished from the pike and the masacalonge by their difference in coloration, the ground color being green, while in the pike and masacalonge it is grayish. The pickerels, again, are marked with streaks or bars, while the other two species have spots of whitish or blackish. The young pike, it is true, has pale bars, but these are in a much smaller number and very different from those of the pickerels.

The pickerels, as we shall hereafter call them, are now referred to three species, two of which are found east of the Alleghenies, from Maine to Florida, and the other inhabiting the Ohio and Mississippi valleys and the tributaries of the Great Lakes.

THE CHAIN PICKEREL (*Esox reticulatus*).

The largest member of this group is the eastern pickerel, *Esox reticulatus*. This species is sometimes called chain pickerel, green pike, Federation pike, and in the Southern States jack. The Federation pike of Dr. Mitchell was obtained by him from Oneida Lake, and as its coloration is peculiar, I quote his account: "The four individuals now before me were obtained by Mr. Wm. Sykes on the 26th January, 1835. The largest is 23in. long, and more than 9in. greatest girth. Eyes yellow; tail forked; skin covered with small scales. Color of the back and upper part of the head brown, almost running into black; all the contiguous parts brown, running into yellowish or orange, and the yellow ending in the snowy or silvery white of the belly. The broad side, that is the space between the back and belly, is beautifully and curiously variegated with irregular black lines, which inter-oculate with each other all the way from the eyes to the tail, and surround spaces of various sizes and figures, all of which are fantastic and odd. Toward the belly and tail these black lines lose themselves or end abruptly. Sometimes they are oblong and roundish spots. The modifications of these colors give the fish a very striking and indeed elegant appearance, quite equal to the Spanish mackerel, or indeed superior to it. * * * The fins are reddish and their color contrasts admirably with the others to increase the beauty of the fish. I know of no fish of the fresh, or even of the salt-water, in the market and region of New York that equals it. The flesh is savory and fine." The origin of the common name Federation pike is somewhat singular. Dr. Mitchell found that the branchiostegal rays and those of the pectoral and dorsal fins were almost uniformly thirteen in number, and thereby suggestive to the original States in the Union. It is evident that Dr. Mitchell's specimens were in the spawning condition, and this will account for the peculiar coloration. Although the ground color of this pickerel is usually greenish, it is subject to a great deal of variation. De Kay says: "In some it is deep green, varying to bluish on the back and head, or bluish gray; in others it is of a golden or olive yellow on the sides, the free margins of the scales bordered with black. Numerous irregular abbreviated longitudinal du-ky streaks on the sides of the body, united with similar oblique streaks, and producing an imperfectly reticulated appearance. Iris yellowish varied with blue. The fins greenish, those below tinged with reddish."

Esox reticulatus derives its name from the markings on the body, which are dark on a green ground. Occasionally an individual is found which lacks the dark reticulations altogether, and the body shows only a uniform pale green. Such a pickerel was obtained from the Potomac River a few years ago. The coloration of the species of *Esox* changes very greatly with age. The young *reticulatus*, for example, resembles *lucius* in its markings, the reticulations being inconspicuous. There is, also, a faint white stripe along the middle of the body in the second half of its length.

Distribution.—The common eastern pickerel does not occur west of the Allegheny Mountains, but east of this range it is found from Maine to Florida and Alabama. It lives in ponds and lakes as well as in streams. Dr. Kenworthy mentions as among the best points in Florida, tributaries of the St. John's between Mandarin and Lake Monroe. In these streams the bream, a member of the sunfish family, is associated with the pickerel. Another one of the pickerels is also found in Florida, the smaller of the two eastern species (*Esox americanus*). In Vermont the *E. reticulatus* is the common pickerel on the east side of the Green Mountains, while on the west side of this range the pike (*E. lucius*) is known as the pickerel.

Size.—The species reaches a length of 2ft., and individuals weighing 8lbs. are recorded, but the average weight is much less.

Habits.—This, like the pike, is one of the most predaceous of all our fishes, and its increased distribution is, therefore, very undesirable, and yet it has been transported to numerous points by inhabitants of the neighborhood and has greatly multiplied. Pickerel are extremely abundant in many of the large rivers, as, for example, the Potomac and the Connecticut. It is to be found in great numbers in the shelter of river grasses and in the ponds among the stems of water plants, where it lies in wait for minnows, of which it consumes vast numbers. In the article upon the pike, an incident showing the wonderful voracity of that species is given, and the same is equally true of the pickerel.

The pickerel spawns in winter and early spring. Thoreau has given the following graphic description of the feeding habits of the species. He styles it "the swiftest, variet and most ravenous of fishes, which Josselyn calls the River Wolf. It is a solemn, stately, ruminant fish, lurking under the shadow of a pad at noon, with slow, circumspect, voracious eye; motionless as a jewel set in water, or moving slowly along to take up its position; darting from time to time at such unlucky fish or frog or insect as comes within its range, and swallowing it at a gulp. Sometimes a striped snake, bound to greener meadows across the stream, ends its undulatory progress in the same receptacle."

Edible Qualities.—Herbert describes it as having coarse, watery flesh, of little value for the table. The species, however, is pretty generally considered as a fairly good table fish, its flesh in most localities being white and of

THE CHAIN PICKEREL (*Esox reticulatus*).THE LITTLE PICKEREL (*Esox vermiculatus*).

good flavor, with just a little tendency to toughness and dryness.

Mode of Capture.—Trolling with the spoon or still-fishing with live bait, shiners, pickerel frogs, etc., are good methods of angling for the pickerel. The hooks should be tied on gimp and a minnow gang is often effective. The fish bites with great freedom and boldness, and fights with great stubbornness when hooked.

Two small members of the sub-genus *Picorellus* remain to be considered. One of these is western and the other eastern.

THE LITTLE PICKEREL (*Esox vermiculatus*).

The small pickerel of the West inhabits the Ohio valley, the upper Mississippi valley and streams flowing into the Great Lakes from the south. It is common in ponds formed in the spring by the overflow of river banks and has frequently been taken in large numbers in cornfields. Last spring we referred to a circumstance of this kind, which was brought to our notice by Mr. S. F. Denton while in Ohio collecting natural history specimens. He told us that the people at the time were "fishing in the cornfield." This sojourn in overflow waters is often followed by great destruction of fish when the ponds dry up.

The little pickerel grows to the length of about one foot, and is too small to be of much importance as a food fish. The sides of the body are green or grayish and usually have many reticulations or irregular streaks, but these may be entirely absent. The sides of the head are generally variegated. A dark bar extends downward from the eye and another one forward. The fins are plain except that the caudal is sometimes mottled at its base.

As a member of the pike family, this fish keeps up its reputation for voracity and destroys vast numbers of fishes smaller than itself. It is very prolific and congregates in swarms ascending small streams in the spring.

THE BANDED PICKEREL (*Esox americanus*).

This is a fish of the same size as the last, but occurs only east of the Alleghenies from Massachusetts to Florida. De Kay calls it the varied pickerel. The body color is dark green, and the sides are ornamented with about twenty dark curved bars, which are usually very distinct,

A black stripe passes along the snout and through the eye to the upper edge of the gill-cover; another extends from the eye downward on the cheek. The fins are not mottled or banded.

De Kay describes the color as "dark brownish black above, descending in irregular dark clouds a short distance on the sides. Sides greenish yellow, with irregular vertical brown stripes descending on the belly. Dorsal and caudal fins dark brown. The pectorals, ventral and anal lighter colored; often, by infiltration, reddish. A short dark band from the eye to the angle of the jaw."

The banded pickerel is similar in general appearance and habits to the little pickerel of the West. It frequents rapid brooks and clear, cold waters, and is said to be not injurious to trout when inhabiting the same stream. The species scarcely reaches a foot in length, and individuals will not average more than 1/2 lb. in weight.

Dr. De Kay believed the banded pickerel to be identical with the mackerel pike of Mitchell, and his supposition appears to have been well founded. Many streams and ponds of Long Island contain this handsome little species in abundance, and only its small size spoils it for a game fish.

T. H. BEAN.

ANGLING RETREATS OF MAINE.

VI.—IN THE VICINITY OF MONSON.

ONE of the delightful drives for the tourist is over the road to the head of Sebec Lake through the pleasant farming town of Willimantic pleasantly situated in the Wilson River valley. About six miles from Monson, at a place called William's Mills, a highway in Willimantic crosses this river and runs in a northerly direction, ending in a new farm on the rim of the great wilderness. Here is Grindstone Pond, a beautiful little sheet of water and famous for its great abundance of spotted trout, and also for being the place where a local angler, John McDermott, immortalized his name by resisting the efforts of the owner of the land around the pond to prevent sportsmen and fishermen from fishing in its waters. The result was a law suit, and a decision by the Supreme Court of Maine that all great ponds (being ponds of ten acres in size) were free to the public as highways for fishing and fowling. The opinion in this important and interesting case (Barrows vs. McDermott) was rendered May 27, 1883, and may be found in the 73 Maine Reports, p. 441.

In the township of Shirley adjacent to Monson on the west and northwest are also some excellent trout ponds. The two Bunker ponds and the Marble pond are not very far from the Spectacle ponds. There are several others some eight miles west of Shirley Mills, a small village on the B. & P. railroad accessible by buckboard. Among these the most popular are the Riddell and Indian ponds. The entire chain of ponds in that locality is very famous for superior trout

fishing. It is not unusual for a party of two or three to bring away from them two hundred trout averaging one pound in size as trophies of a three days' fishing trip. A good camp is in the vicinity.

Among the pleasant drives near Monson is one of about four miles over hills and through the green woods to Blanchard, which is in a deep valley through which wanders the Piscataquis River, where many enjoy the pleasures of stream fishing in its numerous gorges. The high tops of Russell and Bald Mountains, grim-visaged and spruce-clad, look down upon pretty and pastoral scenes along the shores of this still and peaceful running river. On the sides of Russell and near Bald Mountain are several good trout ponds.

The best white perch fishing in this neighborhood is at Kingsbury pond in Kingsbury plantation, sixteen miles southwest from this place. There they are found in large numbers, as well as an abundance of pickerel. A club house owned by parties from Massachusetts is located on its shores.

Piper pond is in the town of Abbott, ten miles distant from Monson. It is three miles in area and many large lake trout are taken there. Pickerel and white perch are also plenty. Whetstone is in the same town, and is considerably smaller than Piper, but has much better spotted trout fishing. It is only a short distance from the former. Greenleaf pond, also in Abbot, is a good pickerel pond, but has no trout.

The principal game here that the sportsmen are interested in are moose, deer, caribou, grouse and ducks. Moose are not as common in this immediate vicinity as they are in the wilds above Moosehead Lake, yet they are occasionally seen in the Elliottville forests. But caribou and deer abound in great numbers in the northern part of this town, and many are killed each year after Oct. 1. It is a mountainous and uneven country well calculated for their retreats.

Throughout Elliottville and in the region beyond, around the wild mountains and the lakes, the sportsman from Oct. 1 to Jan. 1 can with a guide familiar with the country secure his lawful number at almost any time.

Other excellent places in near proximity to Monson for capturing large game are the Blanchard, Square Moun-

tain and Bald Mountain regions and other wild townships lying to the westward. In the season when duck shooting is lawful these favorite game birds may be found in plentiful numbers at nearly all of the Monson and Elliottsville lakes and ponds. Doe pond in Munson near Lake Hebron is one of the spots that they frequent the most. Poaching is not indulged in in this section to any great extent, although the present lamentable laxity in the enforcement of our game laws prevails here as in other parts of Maine.

For about a quarter of a century the people of Maine through their representatives in the Legislature have been gradually formulating the present code of protective laws. During the same time the so-called pleasure travel here from other parts of the Union has increased to a wonderful extent. This has been like a river of gold annually flowing through our State, benefiting all classes and industries from the rough-hewn shores of the sea to the bleak mountains of the interior. The result has been to educate the people up to a high standard of thought in relation to game protection. Especially is this true of this part of Maine where numerous summer hotels are being maintained, and where large numbers of people derive a liberal income from the business of catering to tourists. Yet in Washington county and some parts of Penobscot an unfortunate antagonism to the enforcement of the laws arose a few years ago among the citizens. It matters not who in the long and bitter contest which has been waged was the most blameless, for the result has been bad and almost disastrous to the cause of game protection. By reason of this violent opposition in a few localities, the most important part of the law was repealed in 1887. I refer to the act which gave one-half of the fines to the complainant. Although its repeal was effected clandestinely and unfairly, it was no less a result of this contention. The same influences succeeded in preventing its revival at the session of 1889. Until this is restored the friends of game protection must continue to experience the chagrin and bitter disappointment which they have for the past three years in viewing a non-enforcement of one of the most righteous laws on our statute books.

I will close these brief and hasty notes by extending my hearty greetings to the tourists, campers and lovers of the "gentle art," whose annual visits to Monson have become a pleasant feature of the season when the birds sing and the flowers bloom.

MONSON, Me.

J. F. SPRAGUE.

A WADING OUTFIT.

Editor Forest and Stream:

In answer to Mr. Hough's query let me say that here is the way some of us arrange our wading outfits and that we find the plan very satisfactory: The first requirement is a pair of wading pantaloons with stocking feet, cost \$6 to \$18, as one's taste and pocket-book may dictate. Over the feet of these draw a pair of loose-fitting heavy woolen socks, and inclose the entire outfit in a pair of low, broad-soled leather "stitch-downs," as the shoe men call them, which will need to be about two sizes larger than your ordinary boot or shoe. These "stitch-downs," which cost \$1 to \$1.25 per pair, should have the bottom of the soles filled with soft iron hobnails and be perforated along the lower edge of the uppers for the free passage of water. In this way you have a footing that is much more secure than any rubber boot, an easy and comfortable arrangement for walking or wading and perfect protection for your rubber wading stockings. When your "stitch-downs" give out you can duplicate them at a small expense entirely independent of your waders. Being sewed work there are no pegs to damage the rubber. I have one such pair of shoes that have already done service for two pairs of waders and are pretty good yet. You can oil them occasionally if you like, although that is not absolutely necessary.

TOLEDO, O., March 31.

JAY BEEBE.

A TERRAPIN FARM.—Of late years a number of terrapin farms have been started along the Chesapeake. The biggest farm is on the Patuxent River, and it consists of a large salt water lake, which could accommodate thousands of terrapin if they would breed as rapidly as is desired. The farmer has surrounded this lake with broad fences to keep out the muskrats and foxes, which are the terrapin's enemies. He has made hatcheries of boxes partly filled with sand, and so arranged that when the females enter them they cannot get out until they are taken out. He has nurseries for young terrapin, and he keeps the little ones in here until they are 10 months old, in order to preserve them from their fathers.—*Frank G. Carpenter in Pittsburg Dispatch.*

BERKSHIRE TROUT IN APRIL.—Berkshire County, Mass., April 6.—The most convincing argument in favor of a later opening season for brook trout in our State was the appearance of the fish caught in this section April 1 of this year. The day was raw, chilly and sour, but the fish took everything offered them and well-filled creels were the order of the day. The fish, however, were shaped like overgrown and elongated smelts, one specimen, 15in. in length, weighing only 12oz., dressed with the head on. The law permitted the catch, but does it not seem clearly wrong to take such slim, lank, ill-conditioned fish? The stream from which they were taken furnishes splendid fish in proper season.—*NED.*

SALMON IN THE PENOBSCOT.—Bangor, Me., April 1.—To-day big salmon were jumping in the river in front of the city, and at the pool one twelve-pounder was taken. This is two weeks earlier than these fish have ever taken the fly here. April 16, 1889, one was taken and last year a twelve-pounder was caught April 18. Five days later eleven fish weighing 234lbs. took the silver dollar and thereafter one ton was caught before the season waned. Fish Commissioners say that the sport should be fine this year with salmon averaging 25lbs. or better. Salmon take the fly until June. The best sport is usually in May.

LAKE CHAMPLAIN.—Albany, April 6.—I have just returned from a trip around Lake Champlain. The ice has commenced to break up and will soon be out. There is considerable open water in the south end and the netters are getting in their work; I counted over a dozen sets of poles between Putnam and Dresden stations.—*DEXTER.*

Fishculture.

A PLEA FOR LAKE CHAMPLAIN.—Albany, March 30.—*Editor Forest and Stream:* I read with much satisfaction your extracts from Fish Commissioners' report and comments thereon. Why do they entirely overlook Lake Champlain? Would not the whitefish do well there? Also salmon trout? There is plenty of pure, deep water for the latter and an abundance of smelts for deep water food and all kinds of little fishes for surface feeding in the spring. I am not posted as to the relative value of wall-eyed pike and other food fishes in the matter of production; I do know that there are few fresh water fishes that equal them as a food fish. 'Tis only of late they seem to have attracted the attention of breeders, and I sincerely trust that they may repay all efforts. As the commission's desire is to do the greatest good to the greatest number of people, 'tis such as these that will further that end. Lake Champlain is one of the best natural breeding lakes we have, and while we are not selfish on this end of the State, we would like to see a few of the good things going around dropped in her basket.—*DEXTER.*

FISHCULTURE IN MEXICO.—We learn from Col. John Gay that Señor E. Cházari, Fish Commissioner of Mexico, obtained eggs of carp in abundance in the City of Mexico on March 22. The summer has fully set in, which accounts for the early spawning of carp. We have already noted the successful introduction of rainbow trout into Mexico with the aid of the U. S. Fish Commission, and we are now informed that this is the only trout which has reproduced naturally in that country.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

April 8 to 11.—Third Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.
April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.
April 15 to 18.—Dog Show of the Southern California Kennel Club, at Los Angeles.
April 23 to May 2.—Dog Show of the California Kennel Club, at San Francisco, Cal. H. L. Miller, Sec'y.
Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.
Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.

FIELD TRIALS.

Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

BOSTON DOG SHOW.

EVERYONE interested in dog shows must feel pleased to hear that the show which the N. E. K. C. held in the Mechanic's Hall, Boston, last week, was one of the most successful ever held by this club. When the number of entries was announced and it was found that only 625 had been secured, the knowing ones shook their heads and predicted a loss again. But it was ordained that the management should share in the general boom which dog shows have had this season. The crowd on the first day was much larger than that of any previous show they have held, and when Thursday (Fast Day) came around those who have followed the shows of this club since its initiation admitted that they had never seen a better attendance, consequently the faces of Messrs. Grosvenor, Fay and Moore took on an expression of buoyancy that spoke volumes. It was a good show and well managed—how could it be otherwise with John Reed at the helm and Alf. Burgess to attend to the details, and the above named gentlemen always on hand as general supervisors. There is no better building in this country for a dog show than this Mechanic's Hall. Plenty of space, excellent light and ventilation without draught. It is all in the size of the judging rings that they are ahead, which, when the partitions which divide them are taken away leave an exercising ring that cannot be excelled, and which gives Parker full swing with his jumpers; by the way, many are disappointed this year in not seeing his long distance flyer—the fawn-colored one—with the troupe, personally I always looked forward to this jump and saw it whenever I could get the chance.

The judging was got through in better time than in any show of the circuit, but of course there were more judges and rings, still it felt a bit like old times to get all the "regulars" put in their places by 6 P. M. All the judges excepting Mr. Davidson, who had the pointers and setters to do, had their classes finished by about 4 P. M. The service of the rings was good, and any number of attendants were provided for each ring; this is where some of the other shows this season have shown their want of experience. As usual the first day, the annual "feed" came off, and pretty nearly every one known to the club partook of an excellent lunch, and afterward a pleasant half-hour was spent over the coffee and cigars, and "dog chat" was indulged in. Among those we noticed at the show were Messrs. Sidney W. Smith, J. H. Winslow, W. H. Child, W. Wade, C. H. Mason, John E. Thayer, J. P. Willey, E. M. Oldham, E. B. Elliott, Victor Haldeman, Thos. Burke, N. J. and Frank Comstock, Frank F. Dole, C. A. Parker, H. W. Smith, C. A. Shinn, James Greene, brother of the late owner of Sir Bedivere, Joe Lewis, R. P. Keasby, Geo. Shepard Page, W. H. Walbridge, W. Teague, W. C. Sanborn, H. D. Kendall, James Mortimer, R. F. Mayhew, Drs. Jarvis and Faxon, Henry Jarrett, Robert Exley, German Hopkins, J. H. Pritchard, Clarence Rathbone, H. Twyford, P. H. Coombs, Col. Purcell, F. W. Chapman, F. Parry, O. W. Brooking, C. S. Turpin, D. A. Williams, W. F. Rutter, Jr., W. Stewart Diffenderfer, H. L. Krueger, A. E. Leary, H. V. Jamieson, G. A. Peabody, C. Inness, and of course all the regular handlers not already mentioned. There is little more to be said here unless I remark that on Thursday the "take" at the gate was \$3,500. The weather the first three days was beautiful, but Thursday night and Friday morning saw plenty of regular Boston weather, a little of everything. This year Spratts Co. put up their benches, and it is not likely that the old style will be reverted to again, as was the case last year. The disinfectant used, though we could not find out what it was—something furnished by Spratts—was very efficient and kept the building very free from odor. I will now pass on to the awards.

POINTERS.—(MR. JOHN DAVIDSON.)

(Report by Mr. Mason.)

There were nearly sixty entries in these classes and the quality of many was of a high order. This does not, however, go to show that breeders are making headway, and the best specimens are still to be found among the imported division. Nobody seems able to breed a good dog, and at the rate we are moving it will be forty or fifty years before one can go to a dog show and find a class of dogs typical in head, truly formed in body, strong in limbs, good in feet

and true to correct type. And why will this be so? The answer is easily found. A handful of incompetent persons will run a pig-faced, round-barreled, wide-fronted dog like Sensation to the front. The uninitiated breed to that dog and the country becomes over-run by a race of spike-nosed, round-bodied bitches. Then we get another Sensation in the shape of the round-skulled, yellow-eyed and splay-footed Croxeth, who, when run off his legs, falls down and makes a "sensational point." The produce of this wonder is crossed into the Sensation family. The result we have seen and see to-day. Then a bit of whippet blood is put in, and the shallow-faced, characterless Meteor is introduced, just because a well known judge says he is an "easy moving dog." Next comes Robert le Diable, the lovely spotted flat-catcher that never sired a good pointer and never will. What will be the next sad none can tell. If it be a good dog he will be of little use when the type of bitches is ruined and the blood hopelessly mixed. The past cannot be recalled, a fresh start will have to be made. It is all nonsense to say that pointers cannot be bred true to type—the right type—for they can be. Compare Mr. Heath's dogs as shown at Boston with the exhibits from any other kennel, and you find in it a striking uniformity of type as compared with the rest. Surely what has been accomplished by this kennel can also be done by others, but it never will so long as breeders are all mixed in their ideas. Paying extravagant prices for good imported bitches is throwing good money away when they are bred at random to all types of dogs and into any mongrel conglomeration of blood that comes along. "Why do the English dogs run truer to type?" I was asked while taking my notes. Because pointer men in England have agreed upon a type and because pointers are judged by pointer judges. A man who would place dogs like Sensation, Croxeth, Meteor, Robert le Diable, etc., over pointers true and pure like Graphic, Revel III, Woolton Game, Naso of Kippen, Lass of Bow, et al., would judge once and only once. Here he would be patted on the back by the uninitiated members of a clique specialty club or by some ignorant reporter who knows no better than do as he is told. This is clearly not the place for advice on the question of breeding, but as this is my last report on the circuit shows, and as things are going the wrong way I want to call a halt and start folks at thinking. As an old and successful breeder of pointers I am not altogether unknown to your readers, and having won over 500 first prizes for this breed alone, some of them before a dog show had been held in America, I do not feel any particular delicacy about coming out flat-footed and giving advice where it is needed. Look at the puppies shown at New York and Boston! Did mortal man ever see such a drove of cattle? Why they are 90 per cent. worse than in 1887. This is the result of following the blind. Well, gentlemen, you are paying for your experience. Nobody will question that; and experience dearly purchased is less likely to be forgotten. The trouble is I fear we will all be in our graves before you realize the significance of the memorable Chicago editorial "Whither are We Drifting?" You bred good bitches to Sensation and never produced a typical specimen. You tried it with Croxeth and failed. Now you are ruining the breed by using Robert le Diable. Look at the puppies one finds at the shows and there find live evidence of the breeders' inability to produce dogs worthy the name of pointers. The direct cause is staring you in the face, and you either cannot see it or do not want to see it. The judging of the classes was a decided improvement on New York, and although mistakes were made, there was nothing glaring, like, for instance, the placing of Robert le Diable over Duke of Vernon. Quite a number of pointer men were looking for a meeting of Robert and Graphic, but the owners of the former very wisely kept him at home. Under a judge of pointers he has the same chance of beating a good dog like Graphic that I have of becoming President of the United States. So Graphic was alone, Duke of Vernon having been sold and gone West. Mr. Heath's grand old champion had a swelling on the throat, the result of a fight, and this gave him the appearance of being bad in neck, but elsewhere he looked nearly as well as ever he did in his life, and he can still beat any large pointer dog in America. He moves a bit stiff behind when taken from the bench, but this wears off after he has had a run. The bitch class brought out a couple of good ones in Revel III. and Lass of Bow. The former, clearly the better specimen, won with many points to the good. Mr. Mortimer wanted to know in what points Revel III. can beat Lass, but I guess he was joking and really wished to know in what points Revel III. cannot beat Lass. These are mighty few, and it tests a man's ability to find them. Lass wins in eyes, skull and coat. Revel III. wins in all other points. Pontiac headed the open dog class, which was not strong in point of quality. His coarse, throaty neck and very wide front must always put him behind a good one, but he was rightly placed on this occasion. My old reports give all his other defects. His sire, Bang II., though a better dog was always a coarse one and, like Pontiac, he was very throaty. He had a grand body and the very best of legs and feet, his general appearance being marred by a high-carried and coarse stern. So it will be well to be very careful in selecting bitches for this dog. There is coarseness in the family, and even old Bang (Price's), the sire of Bang II., was not without it. Dare-g, second prize, was in his proper place. He has not fulfilled early expectations, having gone off in many points where he was fairly good when a puppy. He is a white and liver flecked dog, lacking in size for the heavy-weight class and not of right type. Head only fair, stern not straight, set of forelegs not just right, rather flat and light in loin, does not stand quite true in front. I shall expect his owner, Mr. Parker, to breed a better one. Mikado, a son of Graphic, was third. He would need altering in many places to be a good one. Unlike most of Graphic's get, his stern is the best point about him. In head he is far better than average, but he lacks in position of forelegs, stifles, second thighs, and, in addition, is close in hocks, crooked in front and wrong in hind action. Through all his defects he shows some of the old dog's character. In color he is white and liver ticked. Nixie, vhc., is a white and lemon by Nick of Naso. He is rather coarse in skull, heavy and throaty in neck, wide in front, good in bone, coarse in stern and wrong below the hips. Schuyler, vhc., was shown in good shape, his coat especially being in nice condition. He is not quite clean in neck, on the leggy side, rather too pronounced in stop, light in loin and quarters and is rather straight in hindlegs. His best points are in skull and chest. Duke of Beaufort, vhc., is useful looking, but not quite a show dog. He is a white and liver heavily flecked throughout, and this does not add to his appearance. Head rather coarse, eyes a shade or two light, loin flat, not quite straight in front, good bone, moderate feet, hocks too high, throaty. Dandy, c., is a white and liver, pig-faced, short in neck, inclined to be throaty, ears set high, right eyelid in wrong position, bad expression, not a show dog by a long way and very lucky in getting a card. Class well judged. Miss Meally was clearly the best in the next class for large-size bitches. This bitch was fourth at New York where she should have been second. For description of her see my report of that show in FOREST AND STREAM, March 5. Cavalier's Lady, second prize, is many points behind the winner of first. Her face is too masculine and is not clean cut below the eyes. Eyes a shade light, throaty, ribs too flat, loin rather light, moves a bit stiff behind, good forelegs and feet, shows some character through many defects. Cicely, reserve, is a white and lemon of very ordinary appearance and wrong type. She is top-heavy, plain in head, not straight in front, wrong in carriage of stern, throaty, and lacking in true pointer character. Pama, vhc., showed up badly in the ring, acting as if shy and

nervous. She is good in legs and position of same, light in eye, too long and coarse in stern, and very throaty for a young one. Fedora, hc., is throaty, light in eyes, not quite right in ears, long and coarse in tail, good shoulders. This is a white with liver head markings and ticked body. She is sister to Pama and is of the same type. Mr. Harris's dogs were not in good condition, one being much too fat and the other too thin. If either of the two shown really was Bonanza I would not have known it. Freeze Bang Bang, hc., is a bit foxbound in type and too coarse for a show dog. She is not first-class in back, knees, stifles, hocks or in stern. Class well judged.

The challenge class for light weight dogs brought together Launcelot and Tribulation in show condition, and that once grand little dog Naso of Kippen, a wreck of his former self, dead out of condition, the hair off about his eyes and his body coat all stained with mange cure. Would it not pay Mr. Mortimer to get a good kennel man to put the dogs in condition for the shows? Bang Bang became a wreck as soon as he got to America, and it's the same thing with Kippen. Lad of Bow began to fall to pieces as soon as he got to Babylon. There is something wrong, and "Jim" should see to it. I am inclined to think that the trouble lies in the feeding department more than anywhere else. Well, Kippen was never in the hunt and should not have been sent to the show. I have been under the impression that Tribulation could beat Launcelot, and Mr. Davidson seemed to be of the same opinion, for he took a cursory glance at the two dogs and then handed the ribbon to the handler of the former. I marked down in my notebook "right," but when I got the dogs together after the judging and carefully overhauled them, I found Launcelot the better specimen, and he had some points to spare at that. This shows that one cannot be too careful in criticising dogs which are of the same class. Both dogs are dishd and shallow in muzzle, and are equal in head properties. They are also both of them light in eyes, Launcelot's being the best. But what Launce gains here he loses in quality (not carriage) of ears, Tribulation's being best. Launcelot is to-day rather coarse in neck and is beaten by Tribulation. In straightness of forelegs Trib gains a point, but loses it and some more in his long, light pasterns. In feet Launce is a good winner, also in knees. In back, ribs, loin, strength of quarters and hocks Launce is away ahead, and he also scores in formation of stern. Both move in good style, but Launce has much the more bone and power. I feel quite sure that if Mr. Davidson had given them as careful an examination as I did he would have reversed the decision. Two very useful-looking ones turned up in the corresponding class for bitches. These were Sally Brass II., that should have won at New York, and Glauca. There was a report abroad that the former had the mange, but as soon as it was found that the trouble was caused by a flea, she was allowed to compete, and Glauca being a bit outclassed, Sally proved an easy winner. Their good and bad points have been noticed in other reports. With the decisions in the open classes I cannot agree. Mr. Davidson judged them too rapidly, and I shall be prepared to see him reverse some of the awards after a more careful examination. Glen Morgan, first in dogs, has been doing some winning of late, but I do not think he is a show dog. He is a flash-looking, catchy flat-catcher that deceives the eye at first sight and on close and careful examination dwindles down to a bit of very inferior pointer flesh. Let him stand in a certain position and he gives one the idea that he is very good behind, but get him moving and follow him closely and it is easy to see there are structural defects in his stifles, which alone are sufficient to ever prevent him beating a fairly good dog. Not only is he bad behind, but he is crooked in front, rather weak in knees, bad in feet, wrong in bang of ears, flat in loin, throaty and he stands badly. To offset these defects there is nothing but a fairly good head and chest and catchy color, with good coat and average stern. I could not get him higher than third. Wrong type, Mr. Biddle! A "gay deceiver" and not a true pointer. Ossining, second prize, is not quite a show dog. In addition to the defects noted in my New York report, he is wide in front and his elbows are very apt to get into wrong position. Still he is a gay, merry mover, has good quarters and stifles, with clean hocks, enough bone, fairly good feet, a strong back and a moderate chest and ribs. The class was a weak one, and I would have placed him second although he is a long way removed from good form. He showed up much better than he did in the New York "cellar." Inspiration, third prize, should, I think, have won. To the defects noted in the New York report add rather upright shoulders and elbows not in correct position. He beats Ossining in muzzle, skull, carriage of ears, neck, knees, feet (a trifle), stern and carriage of stern, strength of loin, and is himself beaten in chest, shoulders (slightly), position of elbows (slightly) and below the hips. Nimrod, hc., is a white and lemon with a black nose and dark eyes, legacies of the defunct Bang Bang. A very wide blaze makes his head look worse than it really is. Bad stifles, defective hocks, stands over some at knees, flat loin, do with more depth of middle, lacks symmetry, not a show dog. Nicodemus of Ion reserve, a useful looking and sound dog, is weak in head, high stationed, rather flat in loin, and has acquired the habit of trying to scratch the back of his head with the tip of his tail. I thought he pressed the first prize winner very close for third place. He was shown light in flesh for a legacy dog. Mam'zelle, first in bitches, is not one of my sort. She is a rather catchy looking white and liver with ticks, whose best points are in head and tail. Eyes too light, not clean cut below the eyes, wide in front, position of forelegs wrong, shoulders not well placed, not straight in front, stands over at the knees, short ribs not deep enough and not carried far enough back, loin rather light and flat; good coat, color, carriage of stern, and below hips, also about right in ears. Naso's Belle, second prize, is another poor specimen, and I would have pegged her back. She lacks in head, carriage of ears, color of eyes, neck, stern, stifles and hocks (slightly), and was shown much too heavy. She is a white bitch with liver head markings and ticked body. Fan Fan, third prize, is a white and liver with lightly ticked body. Lips not just right, face dishd (slightly), eyes too light, ears not well carried, as a rule, but she can put them right; rather long from the knee down, somewhat light in bone, coarse in stern, fair good body and quarters, shows more true character than either first or second. Maygo, reserve, is a white and liver ticked with a head of more than average merit, albeit not perfect in lips. Throaty (a little), fairly good body, a bit too round, loin could be improved by more arch, not good behind, stern rather coarse, straight in hocks, short from hips to stern, would do with more bone. Bloom, vhc., is a white and liver, very lightly ticked on body. Her head, while rather heavy at all points for a bitch of her inches, is not badly formed; rather throaty, eye too light, tail too long, stands rather low at the shoulder, light in bone, shows quality and true character. That she is not a high class specimen is true, but she was, I think, good enough to win in this company, and I would have placed her first with the third prize winner second. Lady Graphic, hc., is well known. Her most prominent defects are in head, neck and forelegs. She is a white and liver ticked, showing good breeding through her several defects. Lassie Jean Beaufort, hc., is a white and liver ticked and was shown in nice fettle. She has a clean cut and rather neat head, is throaty, not right in stifles, flat in loin, does not carry her stern quite right, but shows quality. Blomo III., vhc., gets her stern very high, is light in eyes, not first class in feet, moderate in back and rather light in bone. In hocks, stifles and formation of stern there is lots of room for improvement. She is a white and liver, lightly ticked. Head is the best part of her. Win-

chester Girl, hc., was described at New York. Winchester Gladys and Winchester Nan, both hc., may do to breed from. They are not up to show form. Flossie B., c., is a white and dark liver, lightly ticked. She is plain in head, terribly straight behind, all wrong in stifles and she moves badly; not a show bitch. Puppies were a very funny lot. I have notes on them, but do not wish to waste good paper and printer's ink. The best advice I can give the owners is to drown them and start over. As Graphic was suffering from a temporary swelling of the neck the special for best pointer in the show was very properly awarded to Revel III. For the kennel prize the Westminster dogs of two or three types and none in first-rate condition, were fairly outclassed by Graphic, Revel III., Launcelot and Sally Brass II., a very sorry and level lot, showing strength and stoutness combined with action, quality and correct pointer character.

ENGLISH SETTERS—(MR. DAVIDSON).

Report by Mr. Mason.

There is no improvement in this breed, neither can there be any until breeders shall have agreed as to what is the right type. Take out a handful of imported dogs and the breed as a whole has not advanced an inch since 1881. The same reckless mating continues. There is little uniformity of type, and not likely to be any for many years to come. Juggling with the standards and skipping about from one type to another has proved a means of introducing a lot of animals which are said to be the best in the world, but which really could not take a hc. card in good company. From Thunder to Paul Gladstone was a mighty sharp curve, and from Paul Gladstone to Rockingham and Rockingham to Cincinnati is like climbing a greasy pole—you get up a foot and slip back a yard. Eight years ago the writer advised setter men not to breed to a bandy-legged, splay-footed dog like Thunder. Major Taylor's friends replied that I had gotten my knowledge of dogs out of a barnyard in England. Now these men get up a standard which tells us that the type of dog that was winning in Thunder's day was useless. I should say it was, and ten years hence the Major will probably wake up some morning and find that his friends have dropped the Tennessee whippets and gone off on another trail. Then we will need a new standard. It is easy to predict what will become of the English setters in the mean time. They will of course disappear as the pointers did at the time when a lot of ignorant but well-meaning gentlemen were breeding Sensations, Croxteths, Meteors, etc. The light will dawn on a few who, like the Westminster Kennel Club and Graphic Kennels, will clear out the rubbish and start over again. To-day a man will breed to anything that has four legs and can run. This was clearly demonstrated to me at Boston, when I was making notes on a certain cross between an English and a Tennessee setter. A man standing by remarked: "You ought to see him in the field; he is as fast as a ghost. I'm going to breed a couple of bitches to him this spring." "Indeed," said I; "why, I saw a dog going up our street the other day with a tin can to his tail, and I would wager this dog never traveled half so fast in his life, but I'm not going to breed to him." A few minutes later I was in another part of the building, and I saw that setter man sitting all alone on a dog box with his head firmly planted between two tiny hands. He was doing something he had probably seldom done before. He was thinking.

Mr. Davidson kept very close to the type which he insists is the right one, and while I cannot agree with one or two of his decisions there was none of that glaring work which perplexes the beginner and never fails to bring dog shows into bad repute. The challenge classes were drawn blank. Monk of Furness and the New York dogs were probably being prepared for Chicago, and Cincinnati is much too wise a dog to face the music under any but Tennessee judges. The open class for dogs was as good as the same class at New York, and after a careful examination of the competitors Mr. Davidson landed on his old favorite, Kent II., for first, with Gus Bonduh second and a new one, Prince L., third. Kent II. has been in the money at New York, Boston, Toronto and Ottawa, and is well-known. Never good behind he is getting worse with age. Old Gus, though ten years old, looks just as well as he did when I saw him at Boston five years ago. This is a dog in a thousand. He moved as well as any setter in the ring and does not show a trace of age in his wise old face. Prince L., third prize, is a Laverack possessing a number of good points. Head well formed, although a trifle coarse; inclined to be throaty; hang of ears not perfect; stands back a bit at the knees; a trifle flat in loin; hocks should be lower; stifles should be a little more out. These are his defects and none are very pronounced. He is not so neat and clean in the head as the winner, but so vastly better he is behind and in movement that I should have placed him first. There is room for improvement in his condition. Ranger, reserve, is a blue belton, by Rockingham out of American Girl. Head lacking some in quality, it might be cleaner cut; rather throaty; only fair in knees; coat not flat behind the withers; feet inclined to turn outward; fairly good behind, save in tail, which is too long; blows not free enough; rather coarse throughout. Canadian Locksley, vhc., got all he was entitled to. What a row Mr. Davey raised when I said this dog was faulty in eyes, loin, stern and hocks. Now, Mr. Davidson, who bred him, seldom gets him higher than vhc. In addition to defects previously noted, add plain face and wrong movement behind. Edge Mark, vhc., is a sound and useful-looking dog, possessing many good points, but he comes too near the Tennessee order to suit the judge, who, after the raking the Major got in these columns for inconsiderate and glaring work, seemed determined that none but dogs of true English setter type should have any of the money. This dog Edge Mark has been doing some winning, and although he is by no means a bad one I think we have heard quite a lot of nonsense about him. He is a white, black and tan, flecked, standing on good forelegs and feet. Head not clean cut below the eyes and lips, near nose, not hanging just right (too tight); quarters and second thighs rather light; hocks too far from the ground; stern should be shorter; somewhat short from hips to set of stern; ribs not sufficiently sprung. He is at present too light in flesh, but taken all in all, I like him better than Ranger. Tony Gladstone, vhc., is all out of condition and should have been left at home. Mr. Davidson was generous to give him a card and he was clearly out-classed by Edge Mark, who was in the next kennel to him. Fair type of head, eyes a shade or two light, good lengthy neck, proper shoulders, stands back a bit at knees (which in his present bad condition may result from weakness), might have more depth in middle, back ribs not deep enough, long, badly carried stern; coat hard and dry. I would have put him out of the ring as not in fit condition to be shown. Rex, hc., is a big, upstanding, pretty dog with dish face, wrong eye and expression, bad feet, open coat and a very spaniel appearance in front. He was in elegant condition but is not a show dog. Flush, hc., is a big, coarse dog, heavy in skull, none too good in ears, very straight and bad behind and cut away below the hips. His good bone, forelegs and feet won him notice. Glen Belton, hc., was described in the New York report. He has come on some since then. Young Gath, Jr., c., is a white, black and tan, good in chest, forelegs and feet, but bad at both ends. His Grace, c., is a big, coarse, white and lemon without a pedigree, which is not the greatest drawback. Forest Tatton, c., is not in good condition, especially in coat, or would surely have been higher on the list. Too high and straight in hocks, loin not well turned, fair good head, legs and feet and not without character. Among the unnoticed ones Prince Hasty is fairly good in skull and ears, but defective in ribs (too flat), loin (light), knees, quarters

(narrow), stern (too long), and the left foreleg appears to have been injured at some time. Dover is a red dog with feather on legs and stern. Leo M. is one of the old native white and lemons, short in neck, weak in head properties and lacking in true character. Paul H. is a better dog than Rex that got a c. card, albeit rather coarse and sour in head and shallow in middle, good forelegs and feet. Spot is a white and liver showing spaniel character and having a note book full of defects. Royal Arthur, big in name but light in setter quality, is bad in head and coat. He has a lovely butterfly nose, all well enough in a circus horse, but not the right thing for the English setter class. Prince Edward belongs in the same category. Bitches were a rather mixed lot and judging the class was the hardest kind of a task. Blue Nell, that has found a coat since I last saw her, was finally put aside for first. She has gone in cheeks and is too bad in front legs and feet to suit me. Albert's Nellie, second prize, is not of the same type as many of Mr. Davidson's winners, but she showed fewer structural defects than anything in the class, and for this reason, combined with the fact of her showing quality and strength for her size, I would have placed her first on this occasion. She is an undersized white, black and tan with flecked body. Stop and below eyes not clearly defined, good neck, eyes a shade light, expression not quite right, rather long from the knee down and inclined to stand back at the pasterns; fair good shoulders, good neck; set of legs might be better; stern a bit too long, but well carried; hocks too straight; very small, but not weedy. Blue Jennie, third prize, is a taking-looking one. She has just raised a litter and is very soft and flabby, besides being too fat. My note book says: Muzzle and below eyes not clean cut; good skull; head well set; plenty of bone; not quite straight in front; good back; strong loin; stifles and hocks not right; tail not well carried; does not move well behind; proper coat; shows quality; catchy. Jessie Noble III., reserve, possesses quite a number of good points. She is a blue belton of modest manners and showed up badly in the ring. Coat not free of curl; not right below the eyes; lips, near nose, not hanging well; eyes might be better; fair good body, legs and feet; stern not very well carried; shows quality. In the condition in which the third prize winner was shown I think this bitch should have gone ahead of her. However, she acted badly in the ring and out of it, and tasked my patience to get a fair description of her. Flirt, vhc., was not on the bench, neither could I find her. Quite a number of dogs have a bitter dislike to my pen, and possibly she is one of them. Maud Noble, vhc., is handicapped with a small yellow eye and poor expression, but she is a strong, sound bitch, with good body and correct legs and feet. She may not be able to beat the third prize winner when that bitch is in tip top condition, but I think that in the present condition of both dogs Maud Noble should have been ahead. Katie Howard, vhc., is a blue belton, by Count Howard out of Princess Phoebe, blood good enough to build a kennel on if judiciously used. Will it be? A neat head, spoiled a bit by slight fullness below the eyes; legs not in good position; not perfectly straight in front; feet inclined to turn out; light in bone, coat in fine condition; good top; straight in hocks; deep, well-formed chest; moves fairly well; if right in legs would take a good one to beat her. Lady Snowflake, c., would be improved by white face markings. Her black head and muzzle, edged with tan, does not add to her appearance, and has the same effect as a black head on a fox-terrier. Feet and pasterns moderate; heavy in front; hocks too much bent and showing weakness; down a bit behind shoulders. Princess Novel, hc., as she stands to-day is not clean cut in face; yellow eyes; stands back at knees; well-turned body; coat short and inclined to be woolly; hocks too high and straight; a big, roomy bitch, somewhat coarse throughout. Puppies, with the exception of the winner, that will never become a crack, were a miserable collection; and surely it is time breeders stopped to think what they are doing. Hundreds of thousands of dollars have been invested in English setters during the past ten years, and it is humiliating to have to admit that we have accomplished so little in the way of improvement.

IRISH SETTERS—(MR. DAVIDSON).

Report by Mr. Mason.

Certain owners and reporters have been telling us since the New York show that Irish setters are improving. Such statements are easily made, but the man does not live who can put forth evidence to support them. There is not a high class Irish setter dog on the bench to-day and with Molly Bawn out of condition there is not a high class bitch. Look at the classes and then go back to the time when Jarvis with Elcho, Jr., Wenzel with Chief and Tim, Pierce with Glencho, Roberts with the typical-headed Bruce, Clarke with Blarney and Dunphy with Molly Bawn (at her best) appeared at the shows. It needed an Irish setter to win in those days, and dogs that could not possibly have done better than vhc. are now winning, and in some cases winning easily. Breeders were on the right track but it was all too good to last. A handful of breeders with a correct idea of type raised the breed to a high level of excellence, and now that they have relaxed their efforts the beginner is having an inning. The result we see. New York showed a marked falling off in the quality of the exhibits. It was the same at Boston, although there were plenty of dogs. The challenge classes were represented by Max A., Kildare, Winnie II. and Ruby Glenmore. Max A. I have criticised before, but dogs, like other things, are apt to change with age and conditions, so I will go over him again. Rather plain about stop and below eyes, but not a bad head, it lacks that clean cut, bony and neat appearance which one likes to see in this breed, shows some jaw and too much neck skin, ribs not sufficiently sprung. Loin should be more arched, hocks rather high, good straight legs which are going a bit at the pasterns, would be better if shorter from knee to ground, eyes and ears about right, good coat, carriage correct, a dog of good size and showing some quality. His color is about right. Kildare, in his present condition, was rightly placed. He is a good topped dog, better in skull than Max, has well-placed ears and if put in tip-top shape would crowd and maybe beat him. Defects: Shows some throatiness, shoulders not first rate, not perfectly straight in front, out of condition, especially in coat; decision on this occasion correct. The bitches have been criticised recently.

Inchiquin, first in dog class, was very fully and carefully criticised in my New York report. I see nothing to change. He was in grand shape. Dan Mylrea, second prize, is a new one to me. He is defective in skull (too flat), cheeks (too full), muzzle (not clean cut nor quite right in lips), eyes (too light), and he might be better in chest (it's a bit wide), straightness in front and also in hocks. He is a useful-looking customer, not rangy enough for an Irishman (running too much to the English type), but he has a strong, sound frame, plenty of bone, good feet, a nice coat and a fine color. Bean Brummel has been temporarily injured in one hock, he was light in flesh and dull in coat. Those who have circulated the report that he is a cripple should be careful lest they hurt themselves more than the dog or his owner. For criticisms see New York show report in FOREST AND STREAM, March 5, and in addition to defects therein noted add too straight in hocks and lacking width through thighs and second thighs. Jacqueminot, reserve, was second at Boston last year. Head rather plain and coarse, though not actually bad, eyes a shade light, better than average ears, rather long from knees to ground, feet inclined outward, loin too short, falls too much from hips to stern, carriage of stern not perfect, color on and about quarters too light. Bluff, vhc., I did not find on the bench. Blaze, vhc., not clearly defined in stop, ears of good quality and well set, eyes rather light, a fairly-good head,

falls a bit behind shoulder, loin strong but rather short, knees not just right, good feet, straight behind and hocks too high, enough bone, color fair, leggy, head and feet his best points. Huntington, he., was second at New York, and was here looking worse, especially in coat. Glen Jarvis, he., was second at Pittsburgh under the same judge, but must have been in poor company. He is, however, only a puppy and his coat alone in its present condition is bound to beat him in a fair class. Head of good length, but not right in stop and a bit plain, forelegs and feet very bad, leggy, flat in loin, stands badly, too wide behind, skull the best part of him, will not be a show dog. Minstrel, he., was at New York. Duke, c., was not on the bench. Glen, c., is plain, light in eyes, straight behind, feet too small, lacks quality, not in show condition. Ben Hur, unnoticed, is fairly good in head and has an excellent color, but he is entirely too small for show purposes. Waif, unnoticed, is coarse and bad in color. Echo W., unnoticed, is bad at both ends, the ends commencing from the center.

Hazelnut II., first in the bitch class, is a well-known winner. The judge went very wide of the mark in selecting Elfreda for second place, as she was clearly beaten and out-classed by Eudora, that got third. Eudora was fully described at New York. She crowded Hazelnut II. for first place. Elfreda is somewhat coarse in muzzle, not clean cut below the eyes, a shade light in color of eyes, light in bone, very long from the knees down, inclined to stand over at the knees, too low at the shoulder for height of quarters, straight behind, no feather or flag, moves very badly when walking, coat showing curliness, was exceedingly lucky. This bitch took he. at New York, an award which represented her real merit. Belle, reserve, is a better specimen than the second prize winner. Stop and below the eyes not clearly defined, feet inclined outward, too flat in ribs, a bit slack behind the shoulders, stern should be straighter, skull too flat. Hammerless, vhc., and another chained near her were each marked No. 245, for this reason I shall pass both. Fanny Hazelnut, he., shows quality in head, though it is too short, too low at the shoulder, position of shoulders not correct, good feet, does not stand true in front, set of stern not correct, very straight in hocks, good coat, superb color. Onota Belle, he., is too flat in head, not correct in stop, shoulders not right, feet and pasterns not strong, leggy, short coupled, coat not in good condition, shows some quality, best part of her is back of the loin. Daisy, c., is coarse in head, curly, shoulders not in good position, back parts are best. Puppies a very weak class. Ben Lewis had an Irish bitch along with him bound for Chicago that could have smothered most of them at this show. She is owned, I think, by Dr. Jarvis, and I shall expect her to do some winning.

GORDON SETTERS—(MR. DAVIDSON).

Report by Mr. Mason.

As usual there were quite a number of black dogs in these classes, but very few Gordons. In the challenge class for dogs, Ivanhoe, just fair in head, wrong in expression, throaty, too wavy in coat and lacking correct type, was properly placed over his kennel companion, Leo B., who is very coarse in head but better than the winner in body and one or two other places. Becky Sharp in bitches beat Duchess of Waverly very easily. The last named is much above average in head, but is wrong in knees, hocks, neck, ribs and condition, and her hind feet especially are very bad. The open class for dogs was conspicuously free of good ones. Grouse, first prize, was first in puppy class at Boston last year. His head and bone which are just fair are about all the good I can find in him. Light eyes; ears long and spanely; very throaty; not straight in front; shows too much knee; ribs not right; tucked up in loin; very straight and stiltly behind; shallow in middle; hocks much too high; coat and shoulders and color passable. Dash L., second prize, is clearly inferior to the third prize winner, Tyrus, that should, I think, have been a rather easy winner of first prize. It is unnecessary to criticize these dogs again, because they are well-known winners. Rexmont, reserve, has some white on breast, is smutty in color, not right in knees, moderate in coat, not typical in head, and he lacks quality and true Gordon character. Nero, vhc., is rather short in ear, light in eye and in color, albeit rather plain. Rab II., he., is not a show dog. Yan, c., is plain in head, domed in muzzle, spanely in front and round in rump; good legs. Ranger, c., is plain throughout; wrong in knees; high and straight in hocks; narrow through the hips and he stands badly. Cliff B., is too long in front of the eyes, which are small and rather light, giving him a wrong expression. Bone plenty; inclined to stand over at the knees; good color; does not move well; coat fair. Carlo lacks in head, neck, color, coat, markings, knees and feet. Old Jessica, carrying her years very well, was first in bitches. Like the second prize winner, she has a head of English type. She does not carry her stern well, and is not good in color, but she has good bone and stands well in front. V-n, third prize, lacks in expression, position of legs, loin, knees, feet, and she is very deficient in type. Crete II., he., is not a show bitch. Puppies a very poor lot with not a future winner among them. Light eyes, long whip tails and plain heads were painfully conspicuous. Dr. Dixon's team had a walk over for the kennel prize.

SPANIELS—(MR. WATSON).

Report by Mr. Mason.

Here the quality was much the same as at New York, a number of winners at the latter show being hailed winners at Boston. After having examined the winners at both shows it is quite evident to the writer that spaniels, like pointers, setters and mastiffs, are not making headway. The challenge class for all sorts and conditions of field spaniels, over 25 lbs. weight, brought into competition the Clumber Newcastle and the well known winners Newton Abbot Don, Baron and Lady. Newcastle being outclassed the competition lay between the last three named and the bitch won. Mr. Oldham, who had charge of Don, thought that dog should have won easily. Mr. Morris thought the prize at the mercy of Baron, and the owner of Lady thought the decision correct. There was some kicking and there will be lots more of it unless the Spaniel Club takes the bull by the horns and clearly defines the type of head that a field spaniel ought to have. Would it not be a good move to make the distinction clear, and also provide a class for Sussex spaniels? Our judges do not seem to know what type of head a field spaniel should have to be a good one, and time and again one finds overgrown cockers winning over dogs which the writer believes to be of better type. There was really no room for kicking over the awards in this class, because cocker heads are to the front at one show, Sussex beats at another, and the higher, leaner and longer heads find favor at a third, clearly showing that it is all a matter of fancy. If Bowers's Maid was a typical Sussex, and I believe she was, then Lady is clearly defective in head and decidedly so. If Zulu was a typical field spaniel then Don and Baron are both of them defective in head properties. As our standards do not clearly define the head points for the field class, there need be no wonder that judges fail to agree and that when in a tight corner they try to keep on the right tack by selecting the best bodied specimens. When Don beat Baron at New York the writer indorsed the award, believing as he does that Don's head comes nearer to what is wanted than Baron's, and because Don is shorter in leg and fully as long in body. Don, as shown at Boston, was not as good in body as Lady, but his head comes nearer to my idea of a field spaniel's head than Lady's does to either the field or Sussex head, and for this reason I would have placed Don first. There is, however, as surely must be seen, plenty of room

for competent and honest difference of opinion, and Mr. Oldham, whom I believe to be a good judge of spaniels, should not be slow to recognize the fact. In a conversation I had with Messrs. Willey and Wilmerding at the New York show, I suggested that it would be best for the Spaniel Club to make known its idea in regard to the character of head that is most desirable for a field spaniel; and I hope the club will bestir itself so that when judging a class like the one under criticism we may know how to act so as to give satisfaction to ourselves, if not to the exhibitors.

In the open class for dogs Beverly Negus simply smothered Timbo, a short-bodied, leggy, light-eyed specimen of wrong type, but shown in good condition. Negus is in poor condition, but after the shows he should come on rapidly and prove a useful dog to Mr. Kearsbey. Saybrook Lass, first in bitches, has a rather coarse head of cocker type, ears might be better, light in eyes, not quite right behind, a black bitch, whose best points are in body and coat. Saybrook Dolly is a weak-faced black and tan, light in eyes, throaty, too high, feet and pasterns only moderately not right behind, stern not properly coated, coat too woolly, but may be improved, good body. She was entered in the class for blacks and transferred to that for "other than black," where she took first over her only competitor, Black Knight, a black dog with white on chest and near forefoot. This latter is not up to Mr. Willey's usual high class form, being short and plain in head, wrong in set of ears, defective in feet and pasterns, moderate in coat and bad in movement behind.

The challenge class for cockers found Jersey, Bessie W. and Rabbi in competition. The lucky winner at Lynn was here put in his proper place, going down before Jersey and Bessie W. All are well known. Decision correct. In the open class for dogs Oban, described in the New York report, was first. Sancho Panza, second prize, was not to be found when I called. Black Duchess, first in bitches, is a nice one and held the same position at New York, see report. Little Nell, second prize, is some points below her form. Cheeks rather prominent, lips not sufficiently forward, do with more bone, wrong behind. Lala, vhc., cheeks too prominent, lips too tight and not deep enough near nose; eyes too light, travels close behind, but not cowed; rather long cast, stern too high, bad feet, hocks rather straight, does not move freely. Shasta, he., was not on the bench. Ilva, he., shows too much stop, lips not right, good ears, tail not shortened, feet open and flat, coat only fair, not a good one.

In the class for dogs and bitches other than black Cherry Boy, the New York winner, was rightly placed over Rollo, a black and tan with some white on muzzle. Bad muzzle and eyes, hocks not first-class; body, legs and feet redeeming points. Peter, unnoticed, is a long-tailed, toothless, weak-faced and short coated specimen. He is a devil to howl. Ponto is a curly moulter. If Juliette has any good points they are inside and not out.

Clumbers, in the absence of the Ottawa Kennels, were a poor lot. Old Tyne, Mr. Richardson's once well known winner, was given second, and the rest of the p. izes withheld for want of merit. Now that Clumbers are improving, and we have one or two good ones, there is no reason why the old winners of very wrong type should be encouraged.

Only one Irishman showed up, and as he is all out of coat and condition the judge very properly withheld the prize. This action of Mr. Watson's broke Ben Lewis's heart and so the management put on a pouties in the form of a \$10 bill and a prize ribbon, which quickly restored the injured Benjamin to a normal condition.

FOX-TERRIERS (MR. MAYHEW).

Report by Mr. Mason.

Many years ago—in 1877, I think—I was judging at a north country show with an old Yorkshire man. We had given four or five first prizes to a well-known exhibitor who would not keep a bad dog in his kennels, when this same exhibitor brought into the ring another good one. "Let's equalize things a bit," said my colleague; "we have already given four or five firsts, and it will give better satisfaction to give somebody else an inning." "Not here for that purpose," said I; and the "equalizing" did not come off. The judging of fox-terriers at Boston was evidently done on the "equalizing" plan, the result being intense dissatisfaction, which extended even to some of those who got a slice of the "butter."

The judge not only reversed previous awards made by himself, but tacitly admitted that his dog show reports are worthless and that his knowledge of dogs is best as described by the letter O. Several of the awards call for a public explanation. This should be forthcoming without delay, for as matters now stand some of the work done has a very ugly appearance. In this opinion I am indorsed by the judge himself, as will be seen below. The challenge class for dogs contained a number of good ones. Indeed, it was about the best class of fox-terrier dogs that has been seen in this country. Raby Mixer, Dusky Trap, Lucifer, Raffle and Blemton Volunteer were the competitors, and the prize was given to Raffle, the reserve card going to Lucifer. These are dogs of the same type, though Lucifer is more upstanding and has more liberty throughout. He is of course a vastly better terrier than ever Raffle was or can be. Raby Mixer was unnoticed, although he beat Lucifer under this same judge at Boston last year, and the judge then stated that Lucifer is too short in couplings and cloddy-looking all through, that the dog was very much no good, and that he was dreadfully disappointed in him. This same judge has recently stated that Mixer has let down considerably, and that he is a better dog than he ever was, which is true. Lucifer was whelped in 1894, and of course is worse in month than he was a year ago and if anything weaker looking in foreface. In the interest of the fox-terrier fancy, justice and fair play, I ask why was Raby Mixer put back, and why was the short-legged and liberty-lacking Raffle placed over Lucifer? Here is Mr. Mayhew's report, which was printed in FOREST AND STREAM, April 10, 1890, the week following the Boston show. There can be no dodging this report, for it bears his own signature:

Editor Forest and Stream:

In compliance with your request I give you notes on the fox-terriers at the Boston show. The challenge class contained Raby Mixer, Blemton Rubicon, Lucifer and Bacchanal. It was soon evident the latter was outclassed, so I disposed of him early in the contest in order to make the reason for my award the plainer. I will first describe the three remaining dogs as far as my opinions of them were formed. Raby Mixer has a keen, hard, determined expression, with a jaw of sufficient power, good skull, well-shaped and beautifully carried ears; his neck is good, but owing to his upright shoulders not so well placed as it would be if the shoulders lie more oblique; he has clean, hard, granular formed bone of excellent substance, neither too heavy nor too light, and stands on close, deep feet; as regards his front generally the greatest crack in Christendom could not find fault with it; his shoulders, as I have previously said, are too upright, but they are clean and devoid of superfluous muscle; ribs strong and robust; loin powerful; hindquarters as might be expected from his shoulders, straight in stifles and ability, and not quite nice in second thigh, but as a whole is very good indeed, and runs out light and stands on close, deep feet; his ears are well placed, nicely arched, and of a size and well placed; bone clean, hard and well formed; his shoulders are oblique, but pitched too much

forward at the blade, which makes their mechanism too loose and floppy; ribs well formed and capacious, especially the back ones; loin too long and loose; hindquarters excellent, the muscle being beautifully distributed, with his hocks well let down. In top, set on of stern and general contour, he has all the high-class finish of his dam, which is saying a lot. His coat is of the fashionable profuseness, but is not dense enough, and when argued he puts up his hackles in a very pronounced way, which, to me, is not an additional attraction. In size he is about the same as Lucifer, though his extra length of loin makes him appear a bigger and longer-bodied dog. Lucifer I was woefully disappointed in, as I certainly had the impression that he was the best of three. His teeth are none too good, nor is his mouth level by any means; his jaw is short and somewhat wedge-shaped, skull wide in proportion, eyes light and unattractive. In expression and character he is commendable, lacking that high-class, keen, undeliberate property which should be found in a fox-terrier, nor, though game enough looking, there is a suspicion of foreign characteristics. His neck is short and inclined to be throaty; bone of sufficient substance, but its formation is marred by strong muscle on the outside of the forearm, and he falls away a bit about the pasterns, so that when he stands his front does not present that clean, even appearance so desirable. His shoulders are well placed, but hidden by layers of unnecessary muscle; ribs strong and good, though a trifle mind, too short; set on of stern excellent; hindquarters spoiled by badly distributed, knotty muscle. In general outline he is too short in couplings and cloddy-looking all through; in fact, this evident shortness of body was a surprise to me, as I had never noticed this defect in him before. In judging the three dogs, I first of all compared Rubicon with Lucifer, and found the former to score in quality, higher class character and finish in nearly all essentials of a fox-terrier, especially in distribution of muscle, power of head, formation of bone, length of body. Though the former is too long, I preferred this defect to the too short one of the latter, and only in size, and the way they stood in front had Lucifer the preference. After this Mixer underwent the ordeal of comparison with the white dog. In head, jaw, mouth, expression and character, he was the better of the two; in neck, front, formation of bone, cleanness of shoulders and general distribution of muscle, he had the preference, and only in size and movement could Lucifer beat him.

That dog shows as at present conducted are a royal farce, no experienced dog man can doubt, but this sort of thing is going a little too far and must be checked. Rachel, the beautiful, had an easy task in the challenge class for bitches, having only Blemton Consequence and Blemton Brilliant to beat. Blemton Brilliant took reserve, although, I think, the judge has described her as a bad one, and inferior to Blemton Consequence, but this was before Blemton Consequence was sold out of Mr. Belmont's kennel. She was the better bitch then, and I fail to see why a change of ownership should make her otherwise now. Mr. Thayer, who had been deprived of his just deserts in the challenge class for dogs (*vide* the judge's printed statement), was probably soothed a little by getting first in the open class for dogs. Russley Joker is the winner's name, and he showed up in much better form than at New York, where he was looking very seedy. Still I thought him lucky in beating the third prize winner, Blemton Victor, a grand-headed young one that only needs time. He is light in middle at present. Why Stardus Jack was given second I am at a loss to say, unless it was so that the Lyon decision in his favor might look less off-color than it would if he were sent out without a prize. He has a wretchedly bad head, and his coat about the neck and withers is long and open enough to suit any incompetent judge of "wires." Warren Laird, vhc., was at New York. He is a vastly better dog than Jack, and so is Blemton Valour, but what good looks the last named possesses will hardly be retained, as he is already getting coarse in head. Raby Trigger, vhc., is outclassed by Warren Laird, although placed equal to him. He falls too much in stop, has a rather plain head, is not good in expression, does not carry his ears close, and is none too good in coat. He is an inch too long in the back and although he can stand straight has a habit of throwing his feet out. He has plenty of bone, good straight legs, good feet and can beat the second prize winner. I may report of the New York show I saw Valour could be Russley Joker. This he cannot do when the latter is in condition to fight. If Victor had been first, with Joker and Warren Laird next, and Valour where he was, with Jack and Trigger vhc., they would have been about right. Blemton Match, he., is not a show dog, though well bred. He is plain in head, wide in front, wrong in set of stern and is not straight. Mr. Logan, who has stopped buying Blemton cast-offs, is now getting to the front. Dona, first in bitches, is one of his recent purchases. She was bred by Mr. R. dmond, from Dominie and Avon May, but is not all front, in fact her most conspicuous defect—bad feet—is in front. She has a nice type of head, a shade weak perhaps before the eyes, is rather large in ears, would do with more bone and shows slight weakness in knees. A little more length in loin would improve her. She shows lots of quality, in fact more quality than strength and was hard pressed by the second prize winner, from the same kennel and a winner at New York. The latter has come on and may yet get ahead of Dona, whose mouth is going already. Verdict, third prize, is of a lower and sturdier type than Ebor Nettle; I prefer the last named. Both are well known, as are also Princess and Rosa Canina. Tunlaw Villanelle, c., a rare bred one, a trifle weak in face and not very straight in front, should have been higher on the list. Princess, unnoticed, is a small, round-headed puppy, wrong all over. Ebor Dusty, also unnoticed, is cheeky and light in eyes, good ears. I did not see her off the bench. The New York exhibitors did not show anything in this class and the judging was much better than elsewhere. In the wire-haired class Mr. Mortimer, of course, got all the money with Suffolk Toby and Suffolk Settler. The former is rather light in eye, not just right in stop or below eyes, and his ears are large enough. He is also rather wide in front, might be better (closer) in coat, and he was shown too fat. Settler is wrong in head, wide in front, heavy in shoulders and only moderate in coat. Tic Tac is better in head and ears than the second prize winner, but he fails in eyes, front and in coat. Terrigan, reserve, and Lill Foiler, he., are toyish, scanty in coat and wrong in front. The placing of Crack over Hillside Joker in the puppy class was a most unjust decision. The former has a nasty, long, sheepish face, wretched stern, beagle ears, low set, and is not a show dog to-day and never will be. Joker is rather large in ear, on the coarse side in head; good legs, feet and puppy coat. He should have been the easiest kind of a winner. Warren Dare, reserve, is coarse and round in skull, bad in hocks, but is fairly good in legs and feet. His head will always stop him. Dominica in the bitch puppy class won all the time from Woodale Refusal, who equals her only in coat and strength of limbs. Woodale Reva, he., is coarse in head, cheeky, wrong behind and moderate in feet. Of all the puppies shown only Dominica will prove a winner in good company, though the second prize dog may be heard from again. Rachel won the special for best of all classes, and the Blemton Kennels won the kennel prizes. The award in favor of Mr. Mortimer's wire-haired terrier for best in the open class was as absurd and unjust a decision as was ever made in a fox-terrier class. Further comment is unnecessary. Such judging acts as a boomerang, doing far more injury to the judge than to the wronged exhibitors.

MASTIFFS—(E. H. MOORE).

Mr. Moore handled this breed, making his *début* as a judge, and I am sorry that there was not a larger and better entry; but somehow the mastiff classes have been poor all through the circuit, and if it was not for two or three kennels which have been more or less represented, the quality of dogs, like those in the collie classes, would have shown a palpable falling off. Iford Chancellor was here in the challenge class, and with his kennel mate, Lady Coleus, they were the only representatives in their classes. In open dogs

A GOOD BAGLE.—Barton, Vt.—*Editor Forest and Stream:* I wish to ask the boys through the FOREST and STREAM who owns a better beagle bitch than my old Skip (A.K.R. 1967)? Skip is eight years old, has had 72 pups and raised 61 of them, and has just whelped six. Skip stands 18½ in., chest measure 24½ in., weighs 27 lbs., and can run to day as many hours as the best of them. Skip is the dam of Frank Forest, Chapman's Tone, Proctor's Skippy and lots of other good dogs I have up here. Skip has never been shown, but was pronounced by a good judge a prize winner sure.—Geo. F. REED.

DOG CHAT.

THERE is one little item in show management which seems to have escaped the managers this year. This is a little square platform for each ring. To judge these platforms are of inestimable value to get an uninterrupted and raised view of the dogs. When it comes down to a critical question between the merits of two dogs almost equal, a raised view of the dogs is a great help in arriving at a correct decision.

Mr. Geo. Thomas, who is so favorably known among the boys as the manager and chief valet to those "dear" little Yorkshires, will sail for England after the Cleveland show. He goes over in the same vessel as Prof. Parker, who takes his troupe of performers along to delight the Britishers. George has several commissions to fill for terriers and will be home in time for the fall shows.

The article in the Boston *Globe* on the principal exhibitors and men of dogdom at the Boston show, took mightily, judging from the number of extra copies that were mailed even as far as the "tight little island."

Pneumonia was busy among both dogs and men at the Boston show. Ramona, one of Mr. Thayer's best deerhound bitches, was taken sick with it after winning the challenge prize on Tuesday afternoon and on Thursday morning was a dead dog. This is quite a loss to Mr. Thayer, as, of course, she was a good one to beat such a bitch as Wanda. Katie Howard, the English setter bitch, was also taken sick with it, but whether she pulled through or not we have not heard. Mr. Morris had her in charge, Joe Lewis having been called home, as all his family were down with la grippe.

What's this tale about Sally Brass II.? We heard she was ordered to the cellar for skin disease before the judging and Dr. Glover is said to have expressed an opinion that she was not fit for the bench. Wilcox persuaded him that he was mistaken and the bitch went back on the bench—and stayed there. Then went into the ring and won. Sally Brass II. was in good condition.

Mr. S. S. Hanks, of Boston, who has been doing St. Petersburg, Russia, this winter, comes home about the end of this month. It will be remembered we gave a list some time since of the several good fox-terriers this gentleman had purchased. It seems now that Mr. Jean Grosvenor and he are in partnership and intend getting together a good kennel of fox-terriers. The first of the bitches arrived March 30. This was Grouse II., in whelp to Venio and due April 13. Damson, a litter sister to Domine, will come out as soon as she has been bred to D'Orsay. Another is Brockenhurst Dutton, who will sail immediately after being bred to Domine. With this blood in the kennel Boston should soon become a strong fox-terrier center, especially with Mr. Thayer's kennels close at hand. Mr. Grosvenor and his friend will build a handsome kennel during the summer.

Our latest news from Baltimore is that Hepsey was much better and is on a fair way to recovery. We trust the pups can also be saved, as we believe they are about the first of the Scottish Prince's.

On Saturday last we saw Frank F. Dole and Frank Comstock off to England by the Umbria. Both looked happy and had no fear for the consequences. They go on the hunt after terriers. Frank Dole has numerous commissions, and we doubt if Cruik can hold another terrier show for some time to come. At the last moment we conveyed an order for the best pair of Dandies, to be bought for Mr. Brooks, of Boston. Frank's address will be care of the *Stock-Keeper*, 1 Hanover street, London.

We had the pleasure of meeting Mr. Ledyard, who is an enthusiastic beagle man, at the Boston show. He owns quite a nice beagle in The Rambler. He tells us that there is a movement on foot to form a kennel club in Maine, and no doubt this summer or in the early fall some definite action will be taken. It is intended to hold shows alternately at Portland, Bangor and Lewiston. Another object of the club will be to hold field trials for pointers and setters, for they see no reason why they should not; game is plentiful and the country well adapted, and much nearer to home for many of the sportsmen than those of the South.

Mrs. Smythe, owner of the Swiss Mountain Kennels, while at Boston, bought two nice young bitches by Alton from Mr. Sydney W. Smith. They will be bred to Scottish Prince before coming over.

The Toronto Kennel Club is booming and many new members have been enrolled and they intend holding a members' show soon. Speaking of Toronto reminds us that the Industrial dog show committee met Thursday last to elect officers for the next show. After some discussion as to whether officers of the committee should be allowed to show dogs at the show, because of some detrimental remarks having been made last year, it was resolved to finally settle this question at the next meeting, to-day, and the following officers were elected: C. E. Postlethwaite, Chairman; John Maughan, Vice-Chairman; J. F. Kirk, John Massey, C. H. Nelson, J. Henderson, J. Wilson, W. S. Jackson, Capt. C. Greville Harston, Robert Junior, J. G. Mitchener, H. B. Donovan, J. D. Dilworth. Mr. C. A. Stone was then elected superintendent with the right to publish the catalogue. After a statement of the financial resources of the dog show part of the exhibition was read it was found that there was \$1,354 to the good, an unprecedented showing. Messrs. Kirk, Wilson, Massey, Junior, Mitchener and Jackson were appointed a committee to consider the amount of prize money to be given and to select the judges. A great show may certainly be expected next September.

The new Omaha Kennel Club members are getting together a good lot of dogs. Mr. John H. Short, one of the officers of the club, has purchased a pair of good beagles of Bannerman stock. Another is going in for cocker spaniels, and a Mr. Koster is negotiating for a crack black and tan terrier. Recognizing the risk of sending East for all the dogs they want, the club intends, through its members, to get together good specimens of the most fashionable breeds and by breeding be able to supply the demand for dogs from the far Western States.

The St. Bernard breeders of this country had taken a great fancy to Alton and there is little doubt but that he would have become a very fashionable sire, as he had already proved his ability as a stud dog, having among others sired the crack bitch Alta Belle and Altona, and was not four years old when he died. His death is a great loss, both to Mr. Moore and the St. Bernard breed. On the Thursday before his death the doctor offered \$1,500 for him, the dog was improving so much, and then came two days of the most fearful snowstorm that Washington has experienced for many years, and this was more than the poor dog could stand, and on Sunday he went under. Arthur Trickett, who staid with him at Washington, never had his clothes off from the Saturday of the Washington snow till Sunday the week following, and naturally he was completely done up for want of sleep, having to administer medicine every hour. Alton was by the great Plinlimmon out of champion Queen Jura, and therefore royally bred.

On Friday the children from the Kindergarten for the Blind were invited to the show, and arrived in the morning in charge of the Misses Bennett and Phelps. Among them was Helen Keller and her teacher, Miss Sullivan. Last year Helen was unable to speak, but this year not only can she do so but asked after some of the winners of last year. While others of the afflicted children show unmistakable signs of not having all their senses, Helen Keller can certainly give points to many who are in full possession of them in brightness and animation. While in the ring the other children made no particular demonstration, but Helen was quite beside herself with excitement till the dogs came in to be fondled. The first to come was Harper, the bulldog, and the good natured old fellow just laid himself out to be as sociable as possible, and the way they mauled him must have been trying to any dog. Some got him by the head and others by his screw tail, but he didn't mind it, but just enjoyed himself. Then Gem of the Season, the greyhound, came in, and his spindly legs and long, thin tail rather puzzled the children, and from their looks they evidently found it hard to determine where he began and where he ended. The St. Bernards also came in for their share of attention. Helen, asked to place the dogs as she liked them, put Lord Melrose first, a great Dane second; and of the smaller dogs the Italian greyhound was given first place. It rather made one jealous to see what a favorite among these children was Mr. Blackwood Fay, their first inquiry was for him, and they were quite at home with him.

The Vredenburg vs. Peshall libel suit, as we reported last week, was set for yesterday. It was, however, not put on the calendar for that day. Mr. Peshall appeared before Judge Martine and after explaining that this was his ninth attempt to have the case tried, asked that it now be disposed of in order that he might go on with other suits. The District Attorney, for Mr. Vredenburg, said that it would not then be tried because "there were witnesses in Philadelphia whose convenience should be consulted." The new date agreed on is April 17, at which time, Judge Martine promised, it will be disposed of.

Secretary W. A. Coster, of the Eastern Field Trials Club, writes us that there will be a meeting of the governors at the office of Mr. F. R. Hitchcock, 44 Broadway, Tuesday April 14, at 8 P. M.

A little boy in Bergen Point, N. J., a son of a subscriber to *FOREST AND STREAM*, was so interested in the account of Helen Keller that he wrote a letter himself to Helen, inclosing a dollar of his own to the "Helen Keller" fund.

Mr. Francis S. Brown informs us that the Philadelphia Kennel Club claims the week commencing Dec. 14 for their next field trials.

"Dog Chat" this week must necessarily be "curtailed." La grippe holds us fast and a sore throat stops our bark.

CALIFORNIAN NOTES.

EASTERN greyhound men will have a chance to win a little money in this State this fall. The Merced meeting will probably offer \$500 for the first money, with \$250 for second. The Merced boys propose to run their own meeting this year and the other club cannot blame them. The work is all theirs and they should have the glory. After the Merced meeting, the Occidental Coursing Club will give an open meeting at their park at Newark, near San Francisco. The Occidental meeting will be a sort of consolation meeting for the losers at Merced. The Eastern dogs will also stand a better chance of winning at the inclosed coursing. It takes a regular cinker to win at open coursing with such jacks as are common about Merced.

The premium list of the California Kennel Club will contain 175 special prizes instead of 150, as I wrote you last week, and since the list went to the printer we have received specials to the value of \$100 more.

At the meeting of the executive committee of the California Kennel Club held at their rooms March 24, it was decided to hold the show at the Wigwam, April 29 to May 2 in place of beginning April 23 as first published. Mr. A. Russell Crowell was elected superintendent. The committee adopted the finest diploma the writer ever saw. It is a lithograph about 16 by 20 in. containing an appropriate hunting scene, 6 heads in profile of various breeds, a pointer (ch. Patti M.), and the usual reading matter. The committee distributed 144 special prizes, ranging in value from \$1 to \$80. The best pointer in the show wins \$30 cash. Best dog or bitch in show wins a \$60 portable house. The specials aggregate in value over \$1,000. The premium list will be out March 28. Many valuable specials will be added to the list before the opening of the show.

The Southern California Kennel Club's show at Los Angeles promises to be an enjoyable occasion. The premium list just issued is small, but neat. Ninety-six classes are provided for, with 45 specials of considerable value. I think the classification might be improved. Newfoundlands are given three classes and I doubt if the country contains three true Newfoundlands. There are a few smooth-coated St. Bernards here though, but the club has not provided for them at all. The prizes consist of diplomas, and while many would prefer cash, I doubt if a show could pay expenses here if they gave cash prizes. NAMQUOTT.

THE CHICAGO SHOW.

[Special Dispatch to Forest and Stream.]

CHICAGO, April 8.—The third show of the Mascoutah Kennel Club promises to be even a greater success than the others. Nearly all the well known Eastern handlers are here with big strings. Judging did not commence till 11:30, a few minutes since. Mastiffs, St. Bernards, great Danes, greyhounds and the sporting classes are especially well filled. Pug and terrier classes are as good, if not better, than at New York. There are six rings in the two buildings, but they are small.

The challenge Irish setter class is great. Geo. H. Covert's purchase of Elcho, Jr., from Dr. Jarvis, puts him surely in the front this year. Mastiffs show more quality than yet seen this season. The members of the club are, as usual, actively engaged, and everything is running smoothly excepting among the Irishmen. Ruby Gleamore will be protested for wrong entry. Weather charming and attendance good. Among the visitors are Wixom, Childs, Haldeman, Lewis, Cody, Diffenderfer, Winchell, Hopkins, Jarrett, Pritchard, Twyford, Pabst, Mortimer, Miss Whitney, John Davidson, J. J. H. Long, Nelles, J. Bell and others.

H. W. LACY.

CLEVELAND ENTRIES.—The Cleveland show folks have 44 entries as follows: bloodhounds 1, mastiffs 16, St. Bernards 3, Newfoundlands 5, boarhounds (Great Danes) 1, deerhounds 4, greyhounds 10, pointers 66, setters 97, retrievers 1, spaniels 37, foxhounds 14, Basset hounds 1, sheepdogs 20, Blenheim 3, poodles 2, King Charles spaniels 4, bull-terriers 18, Russian wolfhounds 2, fox-terriers 31, Irish terriers 2, black and tan terriers 8, Skye terriers 3, Yorkshire terriers 7, dachshunds 3, pugs 23, Bedlington 3, beagles 20, toy terriers 1, Italian greyhounds 1, miscellaneous 6.

THE BENCHING OUR EXCUSE.—Lancaster, Pa.—*Editor Forest and Stream*: In looking over my last issue of *FOREST AND STREAM* I see the report of the Washington

show. And in reading the comments on pointers I see that you say my pointer dog Duke of Richmond was vhc., and that he is big and coarse. Now if that were a correct description of the dog I would not say one word. But it is wrong. I claim that there does not live to-day a finer looking pointer or a more typical or symmetrical dog than Duke of Richmond. He has some faults. He is light in eye and slightly full in cheeks. But aside from those faults, I claim him as near perfect as a pointer can be bred. At the late New York show all the sporting papers claimed that all the crack pointers of America were there. I showed Duke of Richmond in the open class at that show, and in your report you say he was commended, but should have been vhc. In reading further on in your paper I see you complain of the manner of benching at Washington; and from the information I have received from a friend of mine who was at the show, I am convinced that the fault of the mistake in saying that my dog Duke of Richmond is big and coarse does not lay with your reporter, and should not discredit your paper, but the management or those who had the Washington show in charge deserve to be censured. My friend told me that he looked for my dog by the number in the catalogue, and when he got to the bench which had his number on he found a different dog there. He then started to hunt for him and found him benched away from the other pointers in a far end of the building, and on examining him found no number on his collar, or nothing to identify whose dog he was. This in my opinion accounts for your mistake, and in justice to the dog's merit and myself, as his owner, I think you should correct this mistake in your next issue.—JOS. R. TRISLER.

"HICKORY" TAKES UP THE CHALLENGE.—*Editor Forest and Stream*: Seeing for the first time the proposition to run a three-day race for a prize of \$500 from Mr. Isgriz, of Carthage, Mo., he to run or have run the market hunter's dog and I one of my own at a point equidistant between Boston and Carthage, Mo., it appears to be my duty to accept the proposition. Therefore I herewith hand you check for \$500 as my part of the contribution toward said prize, and I name Mr. F. R. Hitchcock, of New York (if he will kindly act), to represent my interests, as to what shall constitute a day's hunt, and to agree upon the grounds about equidistant between these two points fair to both breeds. Of course the Eastern rules will govern. Now, when I state the fact that during the entire season my dogs have scarcely been fired over at all, and that Nicodemus had last fall a bad case of distemper, Mr. Isgriz would appear to have a walk over, and therefore this race should materialize. My own health is such that I will ride when I prefer, and ordinary fair shooting weather will be counted. The race will be run in the month of May, I having most probably previous engagements of April 8 to meet. The condition of F. F. V., whom I would prefer to use in this race, and with whom I made Mr. Arent lay down without restriction when she was a puppy in Louisiana, on an eight-hour proposition, may be such that I may use Nicodemus, over whom I have only killed three Virginia partridges. I have, however, other dogs and puppies I wish to give some practice, being from sickness unable to do so during the season, which will give some distinguished kennel a soft snap, provided the prizes are not put too high, myself not being loaded with money. Now bring up your strings and I will try and match them, for business is business.—J. R. PURCELL. [Check for \$250 received and held subject to Colonel Purcell's disposition.]

DEATH OF LIST NOBLE.—Philadelphia, Pa.—*Editor Forest and Stream*: It is with great regret that I write you to-day of the loss by death of my English setter bitch List Noble, by Count Noble out of Fate Gladstone. Last Saturday I took List away from her puppies, which were six weeks old. In bringing her home we were caught in a very heavy shower of rain and the dogs were soaked. List took cold from this wetting which settled in the milk glands, and blood poisoning was the result. Her loss is a severe one indeed; she was one of the most promising field dogs I ever owned. Being but three years old I anticipated entering her in the trials this year with every prospect of a successful running. She was a bitch of great speed and endurance coupled with a wonderful nose and one of the most eager hunters I ever saw in the field. She reared all of her puppies, seven in number, by Breeze Gladstone, and it is but little satisfaction I am able to take in saying that they are all doing well.—FRANCIS G. TAYLOR.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

N. D. E.—A dog belonging to James Shelton, of Huntington, W. Va., is subject to the hallucination that he is constantly surrounded with devils of the air. He keeps up a constant snapping to the right and left, and in front of him, and apparently seems to feel that he captures the pesky thing at every snap. It is the first disease of the kind that has come under my notice. Except this his sanity seems unquestionable. I am of the opinion that the trouble is "ail in the eye." Ans. More likely in the stomach. Treat him for worms. Give after twenty-four hours fast, two pills, in lard, of area nut, half drachm each, one hour apart.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE REVOLVER CHAMPIONSHIP.

THE fixing upon the conditions to determine the ownership of the trophy which Mr. Walter Winans has proffered through *FOREST AND STREAM* to the amateur revolver shots of this country has been no easy task and the main discussion seems to have centered upon the distance. In deciding that 20yds. shall be the range we have borne in mind the requirements of the largest number of shooters. Of course it would be a fine sight to have all the revolver shooters of the country gathered at Creedmoor on a fixed day and with long rows of targets in line have a fusillade of skill all along the front. New York and Brooklyn would have a fine chance at such a place, Boston and Philadelphia might come in, Chicago and St. Louis would be there only at much inconvenience, while New Orleans and San Francisco would be practically debarred. To have a number of outdoor shoots on various fixed days at various places would introduce all the unfairness which now attaches to and makes so unpopular the telegraphic match. One place catches a cold, raw, blustering day, another a calm, moist afternoon, and at once the element of weather luck comes in to the discouragement of the hapless victim and the destruction of all value of comparative merit as shown in the score.

At 20yds. we can do indoor shooting and have the surroundings at any time essentially fair and even. The 20yds. range is a mean between indoor work where the great bulk of revolver shooting is done and will be done, and the outdoor work on the great ranges. Again, in considering the practical uses of the revolver, 20yds. is a fair working distance. That a great 6x8ft. target can be hit by a service revolver at 20yds. is an interesting

THE CRUISE OF THE SHENANDOAH C. C.

AS DETAILLED BY THE COMMODORE.

PART VII.

"BUT how came you to stop at this house up on the hill here, Commodore?" asked George, as he lazily filled his pipe for the second time.

"Well, it was late on Saturday evening, and I was pushing on, hoping to reach Massanutton before dark, as—"

"Ma-shun-ton! Why, that's eight or ten miles from here!" he exclaimed.

"Yes, I know that now, but I didn't know it then. I had had a tedious and difficult portage around the Newport Dam. The men were all in the harvest field and the mill was closed, and there was no one at hand to help around the dam, and I seemed fated to stop there all night. I felt that I must go on, for I knew there was some mail for me at Massanutton that I was very anxious to get; so in sheer despair I dragged my canoe ashore above the mill and unpacked her, and carried all my plunder around not only the dam but the mill also, and then picked up my empty canoe by one end and dragged it around also."

"Great Scott!" cried George, with a look of incredulity.

"Yes, that is one of the beauties of cruising alone. You'll never catch me out alone on another cruise, if I never cruise again. You have no idea of the trouble I experienced at every mill dam. I never succeeded in getting past one without a detention of one or two hours. Up at Shaner's Dam, for instance, I had to walk nearly half a mile across a plowed field to ask a couple of young men who were plowing on the other side to come and help me and—"

"Did they come?"

"O, yes, willingly."

"But couldn't you have jumped this Newport Dam, Commodore?" asked George. "We certainly came over it easily enough last night."

"Yes, I could have jumped it at the same place we did last night, and as easily; but my little adventure at the River Bank Dam (which I have told you of) was quite fresh and green in my memory, as it had only occurred two or three days before; and I was not jumping any more mill dams just then, no matter how harmless and innocent they looked."

"Well, I got a drink at a spring at Newport, and I ought to have gone into camp there for the night, as it was fully 6 o'clock, but I was anxious to get these letters at Massanutton, and I felt certain I could not be far from there; in fact, I was expecting to see the place at every turn of the river. So I repacked my canoe, launched and got aboard, and pushed on."

"Yes, and you might easily have paddled right along by it and never have noticed it," said George.

"Why, how so?" asked Lacy.

"Well, another one of the things I learned on this cruise was that a Virginia post-office very frequently makes a much bigger show on the map than it does in reality," I continued. "There are but two or three houses at Massanutton and you would no more take it for a village than this place up on the hill back of us, which is, indeed, all that is left of quite a little village that once stood here."

"Why where is the rest of it? what became of it?" asked Lacy.

"Washed out in the great flood of '70," I replied.

"Well, as I rounded the bend below Newp. rt and began the descent of the Columbian Falls a most terrific thunder storm, which had been rumbling around behind me all day, threatened soon to come to a focus in the immediate vicinity, and I began to think that I could not reach Massanutton that evening and that it was time to camp. I noticed that beautiful turf spot on the right bank under the trees about half way down the falls, where we stopped and got a drink and at once decided to camp there; but first I wanted a bucket of water, and as I failed to notice the spring right there to my hand I looked around for a house and at the same time caught sight of that old reddish-brown frame house perched way up there on the mountain spur on the left bank, across the river from my camping place."

"I thought I would have time to make the house, get my water, return across the river and get my canoe out and tent up before the storm caught me, so I caught up my bucket and scuttled off up the hill for the house, and I looked back of my canoe with the canon weighing at down with stones, and I began to think that I was mistaken, however, for I had barely reached the house before I was overtaken by one of the most sublime thunderstorms up there among the mountaintops that a man ever witnessed. The rain fell in sheets and the hail rattled like musketry on the roof and porches of the old houses, while the lightning flashed through the clouds and the place was rough and uninviting, and beyond giving me shelter from the storm freely enough they offered me no further hospitality, although I could plainly see that their supper was growing cold in an adjoining room while they were evidently only awaiting my departure before eating it."

"I asked how far it was to Massanutton and was told it was only about eight or ten miles, and that I could easily make it that night, as there was 'good drawin' water' all the way."

"Just fancy running the Shenandoah after dark!" said George.

"I should say so, especially on 'good drawin' water!" said Lacy.

"Yes; well, just as soon as the storm passed over, and the heavy black cloud-masses went skurrying down the sky toward the horizon, and while the last echoes of the thunder peals were still rumbling and thundering around among the mountain tops, and the rain drops were still falling from the leaves of the trees, I put out again in the fast gathering twilight, without troubling myself to fill my bucket with water, for I decided not to camp as everything was so hopelessly drenched and wet, but to drop on down the river and stop at the first reputable looking farmhouse I saw and ask a night's lodging. At the time I had waded down to my canoe through the tall grass, weeds and bushes, thoroughly saturated, of course, with the rain, I was completely wet through from the waist down, and by the time I had run the half mile of big waves at the lower end of the falls there, I was nearly as wet from the waist up; and you may imagine how glad I was to get sight of that big, log-looking house of Mr. Russell's up on the bluff there, and to find that I had reached my destination to stop."

"I certainly looked like a shipwrecked mariner as I told my story to the people of the house, and my request was readily and kindly granted, and an excellent cold supper given me, as their own supper had been over for a couple of hours. After my supper young Mr. Russell went with me to the river, and we carried my canoe up the bank and hid it for the night among a thick growth of weeds a little distance back from the house."

"I got some dry clothes from my rubber navy bag and put them on, and went to bed in a comfortable and well-furnished room, thoroughly tired out and fully resolved to abandon the cruise as soon as I reached Massanutton."

"Did you do so?" asked Lacy.

"Certainly did, as my reply. 'I had myself and canoe carried over to the railroad track at Luray in a spring wagon, and there our troubles were at an end.'"

"We found Long's dam, a few miles below, to the meanest, ugliest and generally worst place for portage we had encountered during the entire cruise. It was built of a conglomerate of brush, logs, and stones, and the *chevaux de frise* presented on the down stream side was truly formidable. At the present stage of the river the water that had been running around the mill race found its way through the dam, and the entire crest was above water. We were quite at a loss how to get the canoes over without having the canvas skin ripped clear off their hulls by the ugly, jagged mass of stubs, sticks and limbs; and the only alternative to our usual method of simply sliding the canoes over the crest of the dam was to make a long carry up a steep, high bank and clear around the mill."

"While walking along the crest of the dam in search of a passable place to slide the canoes over, George incautiously stepped on a rotten limb, which broke under him, and threw him headlong down the face of the dam. It was a fearful fall, and as he lay there perfectly motionless on his head and shoulders for a few seconds before attempting to rise, Lacy and I were greatly alarmed and hastened to his assistance, fully expecting to find a broken limb or some other terrible injury, and we were all greatly relieved when he regained the crest of the dam to find that with the exception of a few scratches he had escaped without injury."

"We finally found a place near one end of the dam where we succeeded, after some trouble, in working the canoes over without damage, and we were soon over the dam again in the swift water below the dam, and the cruise was resumed."

"Commodore, here's where we saw that pretty girl last cruise, when we stopped to get a drink of water," said George, as we approached a small white house some two or three miles below, located pretty well up the slope of a high bank with a straggling orchard in front of it, the ground underneath the trees being pretty well covered with apples.

"Say! Lacy, stop and get a drink! I'm fairly suffering for water!" said Lacy, with great earnestness.

"All right," I replied, laughing, as we rounded to at the beach in front of the house.

We walked up the winding path under the trees, and made our way around one end of the house—two boys keeping a sharp lookout on the floors and windows meanwhile—to a spring house, where we found an enormous wooden pump with a great iron handle, looking ample and capacious enough to supply water to a small village.

The boys saw no signs of any girl, pretty or otherwise, but our approach aroused a swarm of about twenty rough-looking men and boys who were lounging around the back porch and yard, apparently in from some kind of harvest or other farm work, and they gathered around us in a curious group, the natural interest created by the appearance of strangers at an isolated country house or hamlet being heightened by our peculiar encoined costumes, and the unwonted manner of our approach by the river—and followed us down to our canoes with great interest. We were kindly invited to take all the apples we wanted from the abundance scattered under the trees as we passed down the hill, an invitation which we did not at all backward in availing ourselves of.

The graceful, shapely canvas greatly excited their wonder and interest, and many and curious were the comments made upon them as we embarked and pushed off from the shore, the universal expression of opinion, however, being as invariably met with along the river, that they "didn't want to take no chances in them dam-bled little things."

"The boys," said George in a low tone as we swung out into the current and turned our bows down stream. A fair face appeared at an upper window, and the smiles and smiles of the boys in what they were pleased to consider their most killing attempts, were rewarded with a derisive little laugh for an instant before we were swept out of sight of the house behind the thick growth of trees that lined the banks.

The White House, a two-story stone mansion of the olden times, stood and painted white, standing as it does right on the high bank, is a familiar landmark on the river, and is well-known to all boatmen and frequenters of the river, as well as to wheelmen and tourists by the road, for at this ferry the road leading from the great "Valley Pike" to the Caverns of Luray emerges from the wild passes of the Massanutton Mountains and crosses the river.

George and I were remembered at Massanutton. At the White House we found our portly friend, Mr. Brubaker, comfortably seated in his door yard under the grateful shade of the trees, with a fan in his hand and a pitcher of ice water before him, reading his newspaper just as we had left him two years before, and the Postmaster, apparently undisturbed by the recent political revolution at Washington, handed me my mail without troubling me for my name, quite as though I belonged there.

Lacy and I had a very pleasant three-mile walk over a picturesque country road, winding around up hill and down dale, through woodland, field and meadow, affording the most beautiful, varied and imposing mountain scenery, to the Caverns of Luray, where we spent a couple of hours exploring their marvelous and wonderful subterranean recesses; and returning reached our camp again a little after sunset.

"Well, fellows, I've spread your blankets all out for you to air and dry out while you were gone," said George, with the conscious air of one having performed a meritorious action, and falling back to receive our thanks.

"Yes, that's all right," said I. "But you ought to have stretched a piece of blanket over the sun again before the sun let them, and not left them out until dark; they're full of dew now."

"Great Scott! mine are perfectly damp!" cried Lacy in dismay, as he gathered his in an armful off the fence and dumped them into his canoe.

"Certainly they are," I replied. "And the rest of them are no better."

"I tell you I declare! I never thought of that," said George in a crest-fallen tone, as he gathered in his own damp blankets, and we all prepared to make the best of a bad matter.

"Well, you'll think of it next time," said Lacy.

"I will indeed," he replied.

We found that George had devoted the leisure time afforded by our afternoon's absence to improving his knowledge of the manners and customs of rural society as exemplified in the conduct and conversation of the pretty girls of the vicinity.

In the course of his laudable researches he had discovered a really excellent parlor organ in one of the few houses of the little hamlet, and we spent the evening in a little impromptu concert, which seemed to be greatly enjoyed by the villagers, who thronged the rooms and gathered around the open doors and windows until well along in the evening before we could slip away for a quiet smoke around our little blaze of a camp-fire before turning in for the night.

A BIG CANOE REGATTA.

The Marine and Field and the Manhattan Athletic clubs jointly will hold their annual canoe regatta on June 20, in Gravesend Bay, off the grounds of the former club. The events and the order in which they will be called, weather permitting, are as follows:

1. Unclassified sailing race, 3 miles. 2. Tandem paddling, 1 mile straightaway. 3. Senior sailing, Marine and Field, 3 miles.

4. Marine and Field Club cup race, 4½ miles. 5. Manhattan Athletic challenge trophy, 7½ miles. 6. Consolation, 4½ miles.

The first race will be called at 9:30 A. M., the others following in the order named. These races will be open to all members of recognized canoe clubs or of the A. C. C., except No. 2 and No. 5, which are for the championships of New York Bay and adjacent waters and are open only to canoeists living within a radius of 25 miles of New York. Entries will be accepted up to and including the day of the races, but the committee request that they be made in as early a manner as possible. All races will be governed by the A. C. C., except the unclassified, which will be sailed under the rules of the Corinthian Navy. Race No. 4 is for the Marine and Field Club cup, which must be won twice in succession to become the property of the winner. Races No. 2 and 5 are for the local championships of these waters. The prizes are perpetual challenge trophies and the holders are subject to challenge once in each year. The regatta will be held on May 1 to Nov. 30, during which time a challenge to be given through the Manhattan Athletic Club and the races are to be sailed or paddled on waters designated by the M. A. C. C. All entries and correspondence must be addressed to W. S. ELLIOTT, Chairman of Committee, 161 Franklin street, N. Y.

GALT C. C.—The annual meeting of the Galt C. C. was held on April 3 with thirty-four members present. The annual reports which were very satisfactory to the members were read and adopted. The commodore congratulated the club on the success of the two regattas held on the home waters, and the success of the club in its representative at foreign regattas, several wins having been placed to their credit at Toronto, Montreal and Branford, while at the general A. C. C. meet at Jessup's Neck, Long Island, the single championship together with the tandem and club fours and several minor events were added to the list of victories. The following officers were elected: Com., T. A. Stephen; Rear-Com., J. H. McGregory; Treas., M. F. Smith; Sec., J. N. McKenney; Commodore, W. M. McLean; C. Trumbull; H. S. Hays. There are prospects of a very active season during 1891. Twenty new members were proposed. The executive committee were instructed to provide three challenge cups. Arrangements were made for a club cruise on the Grand River. The club house which will accommodate forty canoes will likely require enlargement during the present season. Commodore Howard announced the club's participation in the "Columbia" regatta, the club will probably send a delegation to the general meet.

ANOTHER WAR CANOE.—The St. Lawrence River Skiff, Canoe and Steam Launch Co., of Clayton, N. Y., have received an order from the Orange C. C. for a 30ft. x 50in. Ko-Ko-Ko-Ho canoe. This company has now orders for four of these immense canoes for delivery this spring. This will be the first war canoe built for the Passaic River.

WINTER QUARTERS.—Mr. Stephens was not present on Friday evening being busy with a very fully developed case of grippe. Commodore Howard amused the audience by an account of his recent trip to South America.

LANTHÉ C. C.—A very successful concert was given by the Lanthé C. C. on April 4, at Newark, a feature of the evening being the Rook Harmonicon.

Yachting.

Model Yachts and Boats. Their design, making and sailing, with designs and working drawings. Postpaid, \$2.

Yachtsmen who do not see what they want under this heading will please look under the notices of the Club page, the *Kennel*, *squint down the barrel of the Rifle*, *open the Fish Car* and *Game Bag*, inquire of the *Sportsman Tourist*, and if their yearnings are still unsatisfied, push their explorations into the *Editorial* and *Advertising Departments*.

THE NIGHT SKY FROM THE DECK OF A YACHT AND HOW TO SEE IT.

[Concluded from Page 230.]

REVOLVING the planisphere now two hours we have the sky as it would appear at 11 o'clock June 10 or at 9 o'clock July 10. About midway between the zenith and the horizon will be seen a small diamond-shaped constellation called Delphinus, popularly known as Job's Coffin. Almost directly overhead between Vega and Arcturus is the Northern Crown, the Corona Borealis, while the red first magnitude star Antares Alpha Scorpii is about on the meridian. Antares is one of the stars of which the lunar distance is tabulated in the Nautical Almanac, and it is, therefore, important for sailors to be able to find him. It is named after the planet Mars, from which it derives its red color, and near which it is often found. According to some astronomers it belongs to the class of expiring suns, but our space will hardly permit more than a mere reference to the fact, which, by the way, is not undisputed.

The constellation Scorpius is often mistaken on account of its bow of stars for the one which follows it, Sagittarius, the Archer, which of course being called the Archer, has no bow in it. There is, however, a figure here, commonly known as the Milk Dipper, which is quite conspicuous. This asteriod in Scorpio is popularly known as the Kite, and it certainly does not require much of an effort of the imagination to detect the resemblance.

Two hours later we have the sky as it would appear on Aug. 10. The great Square of Pegasus has now risen. A line drawn from Polaris through Beta of Cassiopeia will easily direct the eye to so prominent an object. This magnificent curve of five bright stars will also aid in finding it. Two hours later we have the sky as it would appear on Sept. 10 at 9 o'clock. You will notice that Altair has passed the meridian but still points to Vega; that "Boots" is on the point of setting, and that the Northern Crown, between him and Vega, is in a fine position for observation. Following the line of Alpha and Beta Pegasi, we come to the first magnitude star, Fomalhaut, low down in the S.E. horizon. It passes the meridian at about midnight Sept. 1, and is often used for latitude. We have now arrived at Oct. 10. The constellation of Taurus has risen. The Pleiades are well up. It was here in the Pleiades that Madler located his celebrated Central Sun, around which all of the stars were supposed to revolve. But as this idea has been entirely abandoned by modern astronomers, its position is only interesting as associated with a theory once generally accepted, and in connection with one of the most beautiful clusters in the heavens.

Below the Pleiades we see the great V, with Aldebaran—Jack's standby—at one of the extremities. A line drawn from Vega through the North Star will direct the eye to Capella, Alpha Aurigæ.

A sort of cross bearing for Capel's can be got by a line through Alpha and Delta in the Great Bear.

You will notice that the Great Bear and Cassiopeia Auriga and Vega are somewhat symmetrically spaced around the Polar Star. So the position of one naturally guides the eye to the other.

This star, Beta Aurigæ, has recently created much interest in the astronomical world, for it was last year discovered by Prof. Pickering, of Harvard College, that in their photographs certain lines in its spectrum were shown sometimes double and sometimes single, and that this doubling appeared at regular intervals, which could be accurately predicted. The explanation is that Beta Aurigæ is a binary star, having its components too close to be separated visually; and from these slight data they have actually been able to weigh, measure the orbit, and compute the period of these two stars, while, to the largest telescopes, the star still remains a single point of light. A similar discovery had previously been made in regard to Zeta Ursæ Majoris. Mr. Lockyer has now announced a like doubling of the lines in the spectrum of Vega. This last discovery is, however, still more than in doubt.

Two hours later, or at 9 o'clock on Nov. 10, this will be the position of the sky, and the most beautiful constellation in the heavens will be on the eastern horizon. I never see the constellation of Orion after its long absence from the summer sky, without a feeling that it is the return of an old and dear friend. As first seen in the east, it is a very low and ill-favored figure, and the Pleiades, as a line from the Pole Star through Capella, is an easy guide, but to find the constellation few directions are necessary. Once fairly above the horizon, it so dominates the surrounding sky that the eye is arrested by its marked individuality and splendor. Let us pass to Dec. 10 and get a better view of it. No map can give any idea of its brilliancy. The figure now shown on the screen, when actually seen in the sky, so stands alone, and on its left a super-curve of first and second magnitude stars, Capella, Beta, Aurigæ, Castor and Pollux, Procyon and Sirius form an appropriate framework to the picture. This curve, like almost all other star figures, is sometimes hard to trace at first, but once found it becomes very conspicuous, and it contains so many important stars that it will well repay the trouble of tracing it out, especially as it directs us to Sirius, the most important star in the northern heavens. It has been computed that the light of Sirius is more than 40 times that of our Sun, and that this light is over 8 years in reaching us. As Sirius as well as all of the vast suns have minute companions, the question naturally arises, are any of them similar to our planets, shining by reflected light?

The answer seems to be that while it is possible that other stars may have their families of planets, it is certain that none of them could be seen with our telescopes. From the nearest of the stars, Alpha Centauri, our Sun would be a small first magnitude star, and Jupiter, whose volume is 1,300 times that of the Earth, would be of the 21st magnitude, which would be barely visible with a glass 2½ ft. in diameter. That of the 11th magnitude is 3½ ft. Returning to the constellation of Orion, the lowest star is Rigel. Now a word about the planets. The most important appear to an observer from the Earth so erratic that they well deserve their name of wanderers. Viewed from the outside of the system their

orbits are all more or less elliptical, and their motion is from west to east, contrary to the hands of a watch; but viewed from the Earth, which is its life in motion, they describe a series of curves and loops, sometimes appearing to have their real or direct motion, and at other times retrograde or retrograde. These loops are the nightmare of the ancient astronomers, and they attempted to account for them by theories showing wonderful ingenuity, trying to reconcile their arguments with the supposition that the Sun and the planets revolved around the Earth. It is needless to say that when it became known that the Earth revolved around the Sun the whole matter was greatly simplified.

The planets are divided by astronomers into two classes, the Interior and Superior; but for our purposes they may well be divided into those which are interesting and not interesting. But after all a diagram like this is unsatisfactory, and to a certain extent misleading, for it is impossible to convey by it any idea of relative magnitudes and distances, and Herschel's old illustration, even if it has a flavor of the Kneegarten about it, has always appealed to me with singular force. "Choose any well leveled field. On it place a grain of 24 in diameter. This will represent the Sun, Mercury will be represented by a grain of mustard seed, on the circumference of a circle 164 ft. in diameter, for its orbit. Venus a pea on a circle 284 ft. in diameter. The Earth also a pea on a circle of 430 ft. Mars a rather large pin's head on a circle of 654 ft. The Asteroids grains of sand on orbits from 1000 and 1500 ft. Saturn a moderate sized orange in a circle nearly half a mile across. Saturn's small orange on a circle of 100 ft. Uranus a full-sized cherry or plum upon the circumference of a circle more than a mile and a half in diameter. Neptune a good-sized plum on a circle two and a half miles in diameter. On this scale the nearest star would be 8,000 miles away."

Jupiter and Neptune are, for all of our purposes, practically invisible, while Mercury, from his close proximity to the Sun, is seldom seen that we may almost dismiss him with the others. An old English writer, of the name of Goad, in 1685, called him "a squinting lackey of the Sun, who seldom shows his head in these parts—as if he were in debt."

It has always been supposed, since Schroter, about a hundred years ago, that the day of Venus is shorter than that of Mercury's day was similar to ours, but Schroter, who has recently created so much discussion about the canals in Mars, has, during the past year, announced that both Mercury and Venus, in their revolution, always present the same face to the Sun, exactly as the Moon turns on its axis, once in making her circuit around the Earth. This would make the day of Mercury about 88 of our days long, while that of Venus would be in the neighborhood of 225 days. One side of each of the planets would then be in constant illumination and the other in constant darkness.

Leaving these knotty questions for the astronomers to fight over, the question presents itself: When from the deck of a yacht we see a bright star which does not twinkle, and which we cannot find on our planisphere, how do we know which planet it is? Of course, if we have an almanac which gives the time when each planet rises, sets, or sets, the question is at once settled. But let us suppose that you have no almanac. If the planet is very bright and not decidedly red in color, you may be sure that it is either Jupiter or Venus. Saturn's place should always be known, as will appear hereafter. If it is anywhere on the meridian or where the Sun is, it is not Jupiter or Venus. If it is anywhere more than three hours from the Sun, and of course more time when the time she is much nearer, her orbit being within that of the Earth, she appears to simply vibrate across the Sun, being sometimes to the west of him, when she is Morning Star, and sometimes to the east, when she is Evening Star. She therefore sets soon after the Sun or rises a short time before him. She never rises when the Sun is setting, nor sets when the Sun is rising.

No celestial body comes so near the Earth as Venus does in portions of her orbit, except the Moon, and perhaps a stray comet. At inferior conjunction, when she is between us and the Sun, she is only 26,000,000 of miles distant. This happens once in every 584 days, and her light then reaches us in a little over two minutes. If it were not that she has phases precisely like the Moon, and that, unfortunately, she is not so bright as the Moon, she should at such times have as other small moons in the sky, and be able to minutely examine this planet which so nearly resembles the Earth in volume and perhaps in physical characteristics. Although at these near approaches a more crescent, she becomes at these times such an object of unusual splendor, that we are always sure to hear from the devout of the Star of Bethlehem; for when the quidnuncs of the light of the planet are seen in the newspaper, they set them straight, and people begin to realize that it is their old friend Venus, only six times nearer than they are accustomed to see her.

It was my fortune once during the war to be a humble member of a brigade of Saturn, which was counted up by the long roll in the early morning, to witness this planet rise and set, and to see her in the wood, the officer in charge of the picket having mistaken the fair goddess for a signal light of the enemy. Before night that gentleman wished that he had acquired a more accurate idea of practical astronomy—and we meant he should.

By a process of exclusion then, knowing that the planet is not Venus, Mars or Saturn, we may naturally always locate Jupiter to satisfy our minds, however it may look at him through a good field glass under any reasonable conditions. Jupiter's moons should be plainly visible. They will appear in a straight line on either side of the planet. The figure on the screen gives a very fair idea of what you would see. This is a telescopic view of Jupiter showing the cloud belts and the great red spot which has excited so much discussion.

The red color of Mars makes his identification very easy. Saturn would be more difficult if it were not that his motion is so slow, the period of his revolution being 29½ years. He consequently accomplishes only about 12° a year, remaining 2½ years in each constellation. It follows then, if we once know what constellation we are pretty safe to find him again after any moderate lapse of time. He is now in the constellation of Leo, which is marked by the Sickle.

The screen shows a view of the most magnificent sight in the heavens. Saturn surrounded by his system of rings, probably consisting of a swarm of meteors, moving in orbits nearly circular and in one plane. As these rings always keep parallel to the Equator, which is inclined to the orbit, it follows that twice in each revolution they are edge on, when they are nearly invisible, except in the largest telescopes. They therefore must be extremely thin. The last disappearance of the rings was in February, 1878. The next will be in the autumn of this year, 1891.

If a model of Saturn were constructed, on a scale of 10,000 miles to the inch, the outer ring would have an exterior diameter of 100,000 miles, and the thickness of this sheet of paper would be in fair proportion.

The next view is a fair telescopic view of Mars as ordinarily seen under favorable conditions. You notice the snow caps, which increase during the Martian winter and decrease during the summer, also the general cloud-like markings, supposed to be land and water.

The distance of Mars from the Earth varies so enormously—from 33,000,000 to 35,000,000 of miles—that his apparent magnitude varies from about that of Polaris to that of Jupiter. He is sometimes 53 times as bright as other seasons. He can therefore only be satisfactorily observed when in opposition, which happens once in every 780 days. The most favorable time is when the opposition occurs at the planet's perihelion. It is then nearest to the Earth, and as we are very near to the Earth, the Sun, it is consequently nearer us than at any other time.

1892, he will be nearer than he has been for 15 years, and astronomers hope then to settle many questions which are now in dispute. The screen shows a map of Mars, by Schiaparelli, who has of late made such startling announcements in relation to this planet, showing his system of canals, about which there has been so much discussion.

Such vague ideas generally exist on this subject that perhaps a short statement of what the controversy really is may not be devoid of interest. Let me commence by saying that Schiaparelli occupies a deservedly high position in the astronomical world, and his statements are therefore entitled to respectful consideration. During the opposition of 1877, he was the first to claim to have discovered a network of fine straight dark lines, which he called "canals," crossing the planet in every direction. The term canal seems to be an unfortunate one, for the narrowest are from 40 to 50 miles broad, and they run hundreds, sometimes thousands of miles; nor is there the slightest evidence that they are filled with water. At times these lines are reported to become doubled, two canals appearing where there was only one before. In some instances Schiaparelli claims that he was actually able to follow the "canals" to the doubling, and he thinks that the phenomenon is in some way connected with the planet's change of seasons. H. and Perrotin, an observer at Nice, who strongly confirms his observations, also reports that large regions of land are subjected to periodical inundations, and that in 1889 a continent, "Lybia," so called, about as large as France, was hidden from view in the early part of that year.

On the other hand, Neisten, at Brussels, made drawings of the planet at the same time, in which the continent, reported as invisible "completely disappeared" by Schiaparelli and Perrotin, is

plainly shown. Neisten also reports that he could not see the duplicated canals, although he saw some single, while others to him look like the boundary lines of two different parts on the planet's surface. Mr. Proctor considered these markings to be "optical products." He was careful to explain that he did not mean to call them optical illusions. He thought that they were really pictured on the retina of the eye, but like refractive rings, could be explained according to some known optical law.

Prof. Hall, of Washington, with the great refractor of the Naval Observatory, the same instrument which discovered the Moons of Mars, observed for eighteen nights and failed to see the canals reported. Prof. Holden, of the Lick Observatory, failed to see any doubling of the canals, and Lybia was frequently drawn while invisible to Schiaparelli and Perrotin.

Prof. W. H. Pickering, in the October number of the *Sidereal Messenger*, reports as the result of an examination of a series of photographs taken on Mount Wilson, and from a careful series of visual observations at Cambridge with the Boyden 12 in. refractor, that he can see a large number of these markings. He further says: "I use his own words—I have not yet been able to doubt the existence of them, or to see many of the fainter ones, but I have the highest admiration for the eyesight of the astronomer who could discover them in the first place with an 8 in. telescope."

Such, then, is the evidence, as far as I know it. For the facts I am indebted to "Young's Elements of Astronomy," and to the *Sidereal Messenger* of December, 1890. There is still a wide divergence of opinion among observers, and we cannot say that we cannot say that astronomers are looking forward to the great opposition of 1892 with much interest and excitement.

We now come to comparatively familiar ground. When we see this object in the sky we need no one to tell us that it is the Moon. We also know that it is about 240,000 miles from the Earth, that it is completing its revolution in about a month, turning once upon its axis during that time, so that the same side is always presented to us.

The "Man in the Moon," that horrible warning to Sabbath breakers, sent there, with his staff and fogot, by Moses, for gathering sticks on the Sabbath day, is one of the familiar recollections of our nursery.

Recently, a lady who seems to have escaped the eye of Anti-Religion, and into fashion. We have most of us created a myth with interest and rejoiced that the mythical Lunarians are no longer confined to the sterner sex alone. We also remember, from our school books, diagrams similar to the one now shown, illustrating New Moon, first quarter, full Moon and third quarter. Our reason teaches us that these changes cannot possibly affect the Moon in any way, and yet, as yachismen, we are so constantly thrown into the world with these facts in the theory of light and immutable that it is sometimes hard to maintain our skepticism. We also hear a good deal from the same sources of "wet" and "dry" moons. When the horns of the crescent are turned up it is to be "dry weather," when they are turned down it is to be "wet."

As, these cusps or horns are obviously always turned away from the Sun and a line connecting them is always perpendicular to a line drawn from the Moon to the Sun, their precise position at any moment can be calculated with perfect certainty. If then, their position were an indication of rain or the reverse the Signal Service might well give up that branch of its duty and we could make our engagements for months ahead entirely undisturbed by the weather.

Familiar as well as these facts, it is amusing to see the errors into which distinguished artists and authors will sometimes carelessly fall. It was only the other day that I saw a very fine picture by a French artist of a sunset, in which the new moon was represented as about midway between the zenith and the horizon, with its cusps turned toward the west; that is to say, the moon was represented as toward the Sun. Like Sam Weller, I suppose the artist thought that it looked "more tender." But he was in good company, for Dickens himself, in "Barnaby Rudge," says: "It was a fine dry night and the light of the young moon, which was then rising, shed around that peace and tranquility, which gives to even time its most delicious charm."

The photograph now shown was taken by Mr. Rutherford in 1878 and it speaks volumes for his skill, that in spite of all the improvements in photography and optical power during the past 15 years, it still loses but little in comparison with the best modern work.

The next picture is a typical view of three great ring plains, Ptolemy, Alphonsus and Arzachel. Ptolemy has a breadth of about 115 miles. Its wall or rampart is about 18,000 ft. high and it contains 46 minute craters. Alphonsus is 83 miles in diameter and has 10 craters. Arzachel is 65 miles across and on its west side has a peak 13,600 ft. high.

This view is a copy of a photograph presented to the Camera Club of this city by Professor Keeler. The original was taken by the Lick telescope during the past year. I am enabled to show it to you through the kindness of Mr. Bridgeham, who made the slide from the negative in the possession of the club.

In representing the first picture I have given an amount of detail which I regret our time will not permit us to examine. Near the center you will notice the craters shown separately on the last slide. On the right these dark spots are the so-called Lunar seas, the Mare Crisium, Mare Focunditatis, Mare Tranquillitatis, Mare Serenitatis. Here are the Lunar Alps and the Apennines, ranging from 6,000 to 20,000 ft. in height. Near the edge of the crater Alphonsus the distance to the horizon is measured from the dark is called, you notice several minute points of light. Those are the tops of distant mountains whose bases are still in the shade, but whose peaks are gilded by the rising Sun. This suggests one of the methods by which the heights of Lunar mountains are measured, and in this connection a glance at the following picture may be interesting. When the bright spot first appears the distance from the center to the first appearance of the Moon is of course known. We have the two sides of this right angled triangle, and the remaining side, the hypotenuse, is obviously the radius of the Moon plus the height of the mountain.

I suppose that there is no one who owns a telescope who is not continually asked, how near does the Lick telescope bring us to the Moon? So I am going to anticipate the question, and tell you all I know about it. The answer seems to be, however, I am not now referring to the photographs just shown—that for ordinary working purposes, visually, about 500 miles. With a power of about 2,500 or 3,000 under exceptional atmospheric conditions, this distance can probably be reduced to about 100 miles, and the 50 miles with practically no atmosphere, no water, no life and no clouds, and probably a degree of cold which it would be hard for us to imagine. A dead world. A type of what the Earth, the planets and the Sun may one day become, for according to the best authorities everything leads to the conclusion that not they alone, but all of the stars which you see are gradually losing their heat and cooling off, that in the course of countless ages they too, like the moon, may become dead worlds. Whether a new system may be evolved from the wreck of the old, it is impossible even to conjecture.

Having now finished up the universe and suggested the possibility of a new one, this seems to be the proper place for me to conclude my remarks and to thank you for the kind attention with which you have listened to what I fear has been a long paper.

LIEUT. HENN'S CRUISE.—Lieut. and Mrs. Henn have just finished a long cruise at Trusville, Fla., their yacht, the *Mine-haha*, being a flat-bottomed Indian Riverskipjack, 36 ft. l.w.l., 12 ft. beam, and 2 ft. 2 in. draft. At Jupiter Inlet they met with an adventure, but for the most part it was a very successful one. They left Biscayne Bay for the 50-mile run to Jupiter Inlet in the morning and light and fair, and the sea smooth with rising glass, and all went well for the first 60 miles, when a heavy sea and rising wind were met. The boat was kept going and finally the Inlet was reached but the bar was impassable, and the only course was to anchor. The anchor was very heavy, and the sea being so bad that the Life Saving crew were unable for some time to launch their life boat. Finally they got off and took ashore Mrs. Henn and the steward, Lieut. Henn staying by the yacht. After a very bad night a shift of wind calmed the sea on the bar and the yacht made her way in with some danger, after which the cruise was resumed to Trusville. Lieut. and Mrs. Henn will be in New York City on their way home. Lieut. Henn speaks in the highest terms of the bravery and kindness of the Life Saving crew.

THISTLE'S NEW OWNER.—The New York *World* is responsible for the statement that Thistle's new owner is no less a personage than the Emperor of Germany, who will rather let British waters this summer.

CATS AND SAFETY.

Editor Forest and Stream:

At the outset of the very readable account of a "Cruise to the West Indies" we lost two numbers and the following paragraph shows some people will hold up their hands at the idea of a cat boat being safe. But no safer boat swims the salt water for its size than a good Newport or Cape Cod boat in competent hands, and no boat is safe in others. I confess I entertained some demur to this, but I read on. The boat the narrator went cruising in was a genuine Newport or Cape Cod, 36 ft. l.w.l., 10 ft. beam, and 28 in. draft. The weather was lovely so long as the water was smooth, and the breeze moderate. If we could always have those conditions we might go cruising in anything. But let this laudator of cats tell his own story. In Fort Pond Bay I came on to blow a good breeze from the northwest. It was evidently not more than a good breeze, for the cat was able to be tied up to an old wharf all night, where they could get ashore easily in case it blew too hard, for trying to get out of the bay at night in face of a north wind was out of the question. Why out of the question? It was not for want of room to sail the boat, because, as the narrator tells us, the bay is "beautifully clear and deep and free from all obstructions." It must have been on account of this safe and handy cat. I next made a mental note as I read of the account republished by you a few numbers back from *Hunt's* of the manner in which the English and French yachts, many small ones among them, forced passage at one o'clock in the morning, and were suddenly caught at midnight, not in a good plain breeze but in one of the savage equinoctials which lash the western coasts of the British Isles.

Next morning "as the sun rose the wind increased," so our narrator "put in three reefs and made a start" to beat out of the bay. "And we sailed and made a start" to beat out of the bay, until we struck the heavy tide of the water and the boat was "to go ground and bob up and down." Precisely; given a short, shallow, enormously wide boat with a huge mast in her eyes, a good breeze and a choppy sea, what else could she do but bob up and down and lose ground. Obviously there was only one thing to do, and that was to cram on more canvas and ram her through the waves and keep for Sunday wear. The water was on the bottom under an easy sail. So we put back and took out a reef and tried it again, with success. It was a good thing, though, that he had a snub anchorage behind him, seeing that he had to put back to do so simple a thing (on a snug-rigged boat) as shaking out a reef. It would have been awkward to have been caught that way on a lee shore. Ramming a boat along with its evils, the English and French yachts, many small ones among them, certainly, being a cat's mast it was in a case of a big heavy one, and stepped right where it was impossible to stay it properly, and what else could the short, broad, shallow hull do but bump and roll. "Plenty of water came on board," too, and the "sail, almost new, commenced to tear at the reef grogins." Canvas is only canvas, and if you put your sail plan all in one piece you must expect a big strain on the fastenings. Finally, as they made a harbor, and then proceeded to investigate the condition of things below. This is what they found:

"Before starting from Fort Pond we had made everything as snug as we could, but on opening the cabin door while I was gone for water the crew had been applied at the damage done. To be a nearly new pair of trousers, of a very nice light stripe, the new bed for Sunday wear, the new coat on the bottom of the cabin, and a quart bottle of tomato ketchup was carefully emptied into the sea and had run down both legs. Then the coffee pot, stove cover, shoes, pillow, kerosene can and all the odd ends of a boat's cabin, were all in a mass on top of them, and all well soaked from the water we had shipped, and which had splashed when she heeled. Such a mess I never want to see again, and I think the crew can echo that."

All this the result of a good breeze on Long Island Sound. What would have happened in case of a genuine blow and the open sea. And yet the narrator thinks a boat capable of cutting up such antics on such small provocation as good and safe as anything of her size that swims the salt water.

ANTI-CAT.

NEW ROCHELLE Y. C.

THE New Rochelle Y. C. is making an earnest effort to secure the best methods of measurement and classification, and its committee, Messrs. Henry A. Guage, Chas. Pryer, and B. W. Dinsmore have lately requested the views of the leading designers in the matter. On April 1 a meeting was held at the Grand Union Hotel at New Rochelle, when John Dinsmore and Wm. Gardner were present in person, while Messrs. J. B. Webb and H. J. Hielow, Messrs. A. C. Smith, J. B. Webb and H. J. Hielow, the opinions expressed by these gentlemen were as follows:

Mr. Gardner: "I am thoroughly in favor of rating by corrected length. A rating of this kind brings all boats built to the limit of any class in competition without time allowance, which I consider a very desirable rule. I should favor rating by the Spaulding rule, or a rule somewhere between the Spaulding and the New York rule. I look upon the rating of the Seawanhaka rule as very much superior to that of the New York, the latter seeming to be practically a length measurement stated in another form. The great point of rating by a rule that gives opportunity for taking advantage of length is that the racer and the cruiser would be spared practical for the same. The vessels that are now being built are certainly very undesirable craft for our waters. They represent maximum sail area and draught with a moderate amount of accommodation and a large expense for handling. In the adoption of rating by corrected length I believe we would see our racers doubled and trebled. On account of our waters and facilities for hauling out, it is of very great importance for us to get the largest and most desirable craft to race. The rating rule seems to be best adapted to accomplish that object. The advent of professional designers almost the entire tendency has been toward the large power. We have a great field before us in studying and developing small powered boats and this would be done if we had rules that would encourage designers going in that direction, instead of relying so much on brute force for gaining speed in racing. The racing boats that I am describing at the present time are the most satisfactory sailing craft to me that have ever attempted, and seem to show less objectionable features than any type of boat I have ever worked on. It seems to me that it is time the yacht clubs of this country should be represented in a conference to determine upon and draw up racing rules for the country generally."

Mr. Hielow: "My opinion is that none of our clubs have yet taken sail spread too much into account. It is impracticable for any one club acting by itself to make a classification by length and sail area combined, or indeed by length alone or in any other way, that shall be generally satisfactory to yachtsmen. I further believe that the general adoption of a classification by length and sail area, with the respective values attached as now in use by the New York, the Seawanhaka, Lacompont, Easton, and other clubs will be made practicable by the further experience of a season or two in the use and value of that rule. Such experience in these waters has been gained mainly by the use of an allowance regulated by factors representing length and sail area, but by a classification determined by length alone. A classification on which shall result by both factors can be made an easy and natural change from a more extended and general use of length and sail area in the government of allowances. But the determination of such a classification needs more experience, great deliberation and general concurrence to end in anything satisfactory and enduring. The best rules are those which offer the largest discretion and liberty to the elements and features of a design, and result only such as are directly connected with the production of speed, and these only to the extent of attaching to their use the requirements of a just allowance. The great evil of to-day is that yacht racing is going out. Cruising conditions have no chance with a large-rigged lead mine. The adoption of a rating by length and sail area is a good thing, but it is premature until we can settle upon the value of these two things—that is, to make them equivalent."

Mr. Webb: "The evil lies in classification rather than measurement. Yachts should be classified by their corrected length. Were that adopted I feel sure many yachts would be built. But unless adopted universally it would avail but little with one or two clubs."

Mr. Dinsmore: "I wrote a short paper on the measurement question for the *Week's Sport of Christmas*, '89, and I have had a discussion to change my views since. I believe in measuring water line and sail area in same combination. Under the New York Y. C. rule of '89 twice the load water line plus the square root of the sail area divided by three. I think we might set by class boats by rating by measurement, and I believe this would produce a better racing measure. It is proposed by the present classification, and allowances based on the length plus the square root of the sail area divided by two. Even under the New York rule it is very desirable to invent some fair method of measuring sail area than at present adopted, but I am not able to suggest anything in this respect."

Mr. Burgess says in the article mentioned: "I should not seriously object to a classification based on rating on the old New York Y. C. rule on the score of the vessel which would be produced under it; but the bad effect on sail plans would still be

felt, although, of course, the temptation to modify them to gain length would not be nearly so great. I think by measuring the after and the forward sail separately, and perhaps charging the forward triangle at half its area, this difficulty might be sensibly diminished. For the present, however, it seems to me safest to leave matters as they are, classifying by waterline length, and seeking to invent some more satisfactory and fairer method of measuring sail and of taxing it severely enough to prevent, or at least not to encourage, the building of "bushes," and at the same time to escape the difficulties above suggested. For some time to come, thanks to the example of the Minerva, yachtsmen will be satisfied to build boats of moderate proportions such as we all want. One thing is clearly necessary for encouragement of yacht racing—a combination among our large clubs by which we may be secure in the possession of a common and, if possible, stable measure."

Mr. Gielow: "I am strongly in favor of classifying yachts on their corrected length and sail area rule; and the measurement of sail area in accordance with the rules of the Seawanhaka Y. C. The statement, often heard, that the corrected length rule will produce a long and narrow boat has not been borne out by experience in Great Britain, where the rating rule, which is substantially the same thing, has been in force for several years. From data before me it appears that with one or two notable exceptions the wide boats have beaten fairly the old narrow cutters. The accurate measurement of sail area has always been a vexed question, and is likely to remain so. All rules formulated so far have been approximately correct only, and have admitted of more or less evasion by clever designers. Even if exact actual sail areas could be readily obtained and were used it would not eliminate evasions by reason of the fact that all sails are taxed as being of equal value for speed. Obviously, the more effective sails would be increased at the expense of the less effective, and the result would be a rigid undesirable for seagoing purposes. The Seawanhaka rule seems calculated not to offer a premium on bad rigs, and it is uniform with the rules of the other large yacht clubs. It has much to commend it."

BOAT BUILDERS WANTED.—Wanted immediately, first-class workmen for planking and decking high grade canoes, small sail boats and launches. Only good workmen required. Write stating previous experience to J. G. Fraser, Manager, St. Lawrence River Skiff, Canoe and Steam Launch Co., Clayton, N. Y.—*Ad.*

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

J. H. B.—There is a letter here for you.

H. S. Morristown, N. Y.—The New York Legislature has not yet passed any law affecting the wildfowl shooting.

W. E. H. M., Muncie, Ind.—Consult our advertising columns for addresses of St. Bernard breeders.

H. L. A., Canton, Ohio.—Apply to any of the large dealers in sportsmen's goods whose names you will find in our advertising columns.

A READER.—Whether ties on highest score take all prizes or not depends on the rules of the game, and those rules must be decided on beforehand.

G. W. H., Fredericton, N. B.—Will you kindly inform me where I can purchase some wild rice seed? Ans. Write to Chas. Gilchrist, Port Hope, Ont.

C. M. W., Providence, R. I.—You will find plover, ducks, etc., at Mace's Bay, New Brunswick, in season. The law requires non-residents to take out a license (from the office of the Provincial Secretary), fee \$20.

H. L. F., Camden.—1. Which one of the books you advertise gives the best instructions on the care of a horse? 2. What is the best way to kill a wounded rabbit? Ans. 1. Geo. A. Martin's "The Family Horse: His Stabling, Care and Feeding," price \$1. 2. Strike it on the back of the neck with the edge of your hand.

MONAN, Fitchburg, Mass.—The Catskill deer park is an enclosure of 150 acres, which has been stocked by the Forestry Commissioners. It is reached by the Ulster and Delaware R. R. to Big Indian, thence stage to Claryville and Slide Mountain. Hunting is not permitted there now.

P. H. R., Oakland, Cal.—Have you published any other writings by "Nessmuk" than the "Pooms" and "Woodcraft"? Is the 31b. campaign mentioned on page 74 in "Woodcraft" supposed to be the favorite pocket ax? At what age did he die? Ans. 1. No. 2. It is liked by many who use it. 3. "Nessmuk" (George W. Sears) died May 1, 1890, at the age of 69.

W. H. R., Tarrytown, N. Y.—Please give me the pedigrees of following pointers: Judge (A. K. R. 6330), Ruby (A. K. R. 4393). Ans. Judge, by Kibbee's Ned, by William's Quaker (Clement's Dash-Batty's Tid), out of Indicot's Vixen, by Foster's Dan out of William's Daisy, by Woodward's Mac out of Gillett's May. Dam, Elsie, by Indicot's Van, brother to Vixen, out of William's Blitzen, by Kron's Woolch out of William's Gypsy, by Snapshot out of Gabb's Fanny II. Ruby, by Rowell out of Romp II.

J. H. SHERMAN, Idaho.—Lake trout are readily caught by trolling with a minnow, about 4in. long, in deep water. A 6-0 to 10-0 O'Shaughnessy eyed hook is recommended for this kind of fishing. For the small lake trout, such as we have seen from Henry Lake, Idaho, an 8-0 would be suitable. The same arrangement will be proper for still-fishing. We do not know that bears make it a practice to visit salt licks. We would advise you to choose for bears nothing smaller than 45-70 or 45-90.

R. E. F., New York.—1. For trap-shooting pigeons near New York go to the new grounds to be opened by Mr. Penrose, whose office is at 178 Broadway (in Squire's gun store). 2. For Long Island duck shooting go to G. W. Howell's at Atlanticville. In New Jersey try Samuel Loper's at Waretown (on Barnegat Bay), or Capt. John Kelly's at Barnegat. 3. For information about the Chatham Club apply to Mr. Geo. Shepard Page, 69 Wall street, New York.

C. E. T., Indiana.—I would very much like to know how large the horns of mountain sheep grow. I have a pair that measure 14in. around the base of horn and spread 21in. Ans. Your horns are fair, but not large. Sixteen inches in circumference at the base of horn and from 35 to 34in. in length measured along the curve are fairly large horns. Seventeen inches is a big pair. We have heard of a head that measured 22in. about the base, but have never seen one that approached this, and never expect to. As with other game so with sheep, the big heads are growing more and more rare. The animals no longer have time to grow them.

E. T., Avon, Mont.—Have you any model of a screen to put at the mouths of irrigating ditches out of streams to prevent fish going out of the creek? Ans. Drive a post firmly at each side of the mouth of the ditch, each post containing a groove in which a screen can be placed and raised or lowered easily. The screen is merely a rectangular wooden frame supporting a sheet of wire gauze, and this should be of the proper fineness to prevent the fish from passing through. We have no model or figure of such a screen at hand, but the simple form here indicated will answer the purpose. Any of the works on fishculture advertised in our columns will give the necessary details about screens and their position.

AREFAR, Auburn, Cal.—Will you please tell me if "Antoine Bisette's Letters" are written by Mr. Rowland E. Robinson? Their great fidelity to the "Pea-soupers" methods of speaking English denotes a master hand, and one that has faithfully copied their pronunciation and traits of mind. I was born and raised among them and lived in daily communication with them for thirty-five years, and thought I "had them down fine" to use a bit of slang, and Antoine Bisette is the living embodiment of the Canuck of my youth. Although Mr. Robinson does not sign his name to these letters, I think no other man than the author of "Onc'

Lasha" could have written them. Ans. They are by Mr. Robinson, author of "Uncle Lisha's Shop" and "Sam Lovel's Camps."

J. A. E., New York.—We advise the .45cal. The hollow-pointed express bullet expands, on striking the game, and gives a greater shock than does the solid lead bullet. The steel fishing rods are liked; their use is largely a matter of individual fancy. The black fly preventive recommended by Mr. E. A. Samuels in his "With Fly-Rod and Camera" is this: One part pure Stockholm tar to two parts sweet oil, adding a little oil of pennyroyal or peppermint. Vaseline thoroughly incorporated with this mixture gives it consistency and "wear." Too much pennyroyal will irritate the skin. "Nessmuk's" famous recipe, as given in "Woodcraft," is this: Simmer together over a slow fire 3oz. pine tar, 3oz. castor oil, 1oz. oil pennyroyal; bottle for use. Rub it in thoroughly, and renew from day to day. "Kingfisher," in FOREST AND STREAM, recommends: One-half pint tar, ¼ pint lard or vaseline, ¼oz. pennyroyal, 3 drops crocus; mix with heat and bottle for use.

J. S. C., Jr., Boston.—In the number of your paper of March 26 I notice under the heading of "Maine Deer" your correspondent claims to have seen two deer "within the past two weeks," one of which had a fine pair of antlers. Allowing that it is now four weeks since these deer were seen, it brings the date some time during the latter part of February or first part of March. I would like to know if any one else has ever seen a deer at this season with a pair of antlers. Have never heard of such a thing. Ans. The Virginia deer is supposed to shed its antlers from January thence, later in the North than in the South. In his work on the "Deer and Antelope in North America" Judge C. A. Townsend the case of a buck which he had which had only shed one of his horns in April. This was in Illinois, and it is to be noted that the animal was in a park, i. e., perhaps not under perfectly natural conditions. We have a record of a captive deer in a Boston park which had shed one horn by March 15, 1878. Deer in the Baltimore park are reported to shed in April. On the other hand, we have seen a deer with only one horn about Feb. 15 in Nebraska. We imagine there is a good deal of individual variation in this matter, but that the rule first stated generally holds good. It is well known that different species of deer differ widely in the dates at which they shed their horns.

There are those who seem to think that wherever there is water there must of necessity be fish, but they are in error. If fish are not protected during their spawning season the supply must eventually become exhausted, just as the stock of swine of a farmer would be cut off should he butcher his sows just before they are about to farrow, or kill his other stock as they were about to produce their kind. The policy of Vermont has for some years been to protect valuable food fish during their breeding season, but the class we have spoken of, together with those who care more for the gratification of their present desire to catch fish either for pelf or pleasure, have been fighting these protective laws. At the last session of the Legislature they thought they did a mighty smart thing by the passage of an act that they seem to think has destroyed the effectiveness of the protective laws passed in former years. The statute book shows, however, that they have reckoned without their host. If the time comes when any of them shall presume to act upon what they seem to think to be true, they will find they have made a very great mistake. The act that they fondly hoped was going to enable them to defy the law with impunity, they will find to be but a rope of sand. When it says this, the *Argus and Patriot* speaks whereof it knows.—*Argus and Patriot, Montpelier, Vt.*

NAMES AND PORTRAITS OF BIRDS, by Gordon Trumbull. A book particularly interesting to gunners, for by its use they can identify without doubt all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

THE season is rapidly approaching when **Anglers will need to replenish their stock of Fishing Tackle.**

Before doing so, we would advise them to **call on us and examine the largest assortment to be found**

in the World, or send us 10 cents to pay postage and we will mail you our 136 folio page illustrated catalogue and price list.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR
The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if the angler chooses.
THIRD—No fish can ever get slack line with it.
FOURTH—It will save more fish than any other reel.
FIFTH—It will prevent tangles and snells from being broken by large fish.
SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

Improved AUTOMATIC REEL.

This reel is manipulated entirely by the hand that holds the rod.

Angell's Pat. Metal Revolving Flies, FOR TROUT AND BASS.

Revolving Metal Wings on a Feather Fly.

Revolving Wings and Body.

These flies are of light metal, of attractive colors, in nickel and bronze. When trolled in the water the body and wings revolve, giving them the appearance of live flies in the water. The difference between these flies and the artificial feather fly is this: One is a dead fly in the water and the other is a live fly. These flies have been well tried. The Angler has only to put one on the end of his leader to find out that it is the best trout fly in the world.
You can fish at the bottom of deep water by letting the metal fly sink and drawing it up rapidly each large trout that won't rise to the surface.
The metal wings shown in the lower cut are made to fit all sizes of artificial feather flies for trout and bass. The angler can vary his flies by slipping on various colored wings over a single feather fly, as shown in the center cut. A pair of nickel wings with bronze body, fitted to a "Professor," will be found a killing fly under all conditions.
Price of Wings or Flies, \$1.00 per dozen.

The Expert's High Grade Trap Cartridge.

Owing to the demand for a thoroughly reliable and strictly first class "Trap Cartridge," we have decided to put on the market a cartridge to be known as "The Expert's High Grade Trap Cartridge." These cartridges will be loaded with The Chamberlin Cartridge Co.'s "High Grade Trap Powder," which is made "exclusively and expressly" for these cartridges, and which we know to be the best trap powder made. The specifications and lists of these cartridges are as follows:

Load No. 30. 10-gauge Climax Shells, 3 drs. High Grade Trap Powder, 1 1/2 oz. No. 8 shot. List \$30.00 per M.

Wadded two 9 and one 10-gauge Black Edge Wads on powder and card on shot.

Load No. 32. 12-Gauge Climax Shells, 3 drs. High Grade Trap Powder, 1 1/2 oz. No. 8 shot. List \$27.50 per M.

Wadded two 11 and one 12-gauge Black Edge Wads on powder and card on shot.

Chilled shot \$1.00 per M. net extra.

We solicit a trial of these cartridges and know that they will not fail to give the very best of satisfaction. We are also prepared to load these or any of our regular trap or nitro-powder cartridges in the new U. M. C. Co.'s "Trap" shell for which an extra charge of \$10.00 per M. net will be made.

Send stamp for our list and discount.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners and besides this ABC teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duff between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, repairs and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, \$1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.

LIVE WHITE HARES (Lepus Americanus), captured and properly boxed and delivered to express in Bethel, Me., in good condition on receipt of orders and remittances at \$3 per pair. Refer to Hon. H. O. Stanley, Dixfield, Me., Fish and Game Commissioner, J. G. RICE, Bethel, Me.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understood of the people.

By G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—Troy Press.

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—Boston Evening Traveller.

The book should find its way to a choice place in every sportsman's library.—Chicago Inter-Ocean.

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—New York Herald.

Smooth fox-terrier Endcliffe Spies, black and tan, Price \$25 and Beaconfield, winner of over 50 firsts and specials, and acknowledged to be the best black and tan living, and sire of more winners than any other black and tan. Bull-terrier English Champion King of Hearts; Scotch terrier Kiltier, Dexter, the world renowned black-topped pointer. Gem of the Season, the phenomenal greyhound winner of over 30 firsts and specials during 1890. Address GEO. S. THOMAS, Manager of North Fields Yorkshire Kennels, Salem, Mass.

IRISH SETTER AT STUD.—RED RIVER Glencho (champion Glencho ex Lyda Belle). R. E. Glencho has won three first prizes on bench and is a fine field dog, beg. is large litters of strong, dark red puppies. Fee \$20.00. R. H. BURR, Middletown, Conn.

IN THE STUD—THE ETHAN ALLIN SETTER Al, fee \$25. Al was bred by the late Mr. Allin and trained on ruff d. grouse by his son. Two puppies for sale. Address P. L. NICHOLS, 34 Taylor street, Springfield, Mass. 19

YORKSHIRE TOY TERRIER. Champion Bradford Harry, described in show reports as "best Yorkshire in America. Pedigree and winnings free, photos \$0.50. A limited number of his pups for sale. P. H. COOMBS, 1 Exchange Block, Bangor, Me.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY. }
SIX MONTHS, \$2. }

NEW YORK, APRIL 16, 1891.

VOL. XXXVI.—No. 13.
{ NO. 318 BROADWAY, NEW YORK. }

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices \$1.00 per line.

SUBSCRIPTIONS.

May begin at any time. Subscription price for single copy \$4 per year, \$2 for six months. Rates for clubs of annual subscribers:

Three Copies, \$10. Five Copies, \$16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsmen throughout the United States, Canada and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, \$5 per year; \$2.50 for six months.

APRIL TALK.

OF right there should be no shooting now, but of pests and at inanimate targets. The killing of a bird in this season of northward migration means, at least, one better bird the less, perhaps two, or a dozen, in the season to which shooting properly belongs.

No right-minded man practices or advocates the shooting of woodcock, quail or any of the grouse in the spring. Why should such uphold the spring shooting of snipe, shore birds and waterfowl? The poor reason is, that the first breed with us and the loss is directly apparent, forced at once upon us, when in early summer days we visit the barren covers, fruitless now, not because of untimely harvesting, but for lack of seed, while the far northern fields, on which the crop of last-named birds are grown, are for the most part beyond our sight and ken. Just as surely as if we destroyed the seed there instead of here, the yearly crop diminishes and less and less of it returns to us.

The only plea for this improvident killing of migrants is, that without it we should have no spring shooting! As if life were not worth living unless one can be killing something from the beginning to the end of the year, and as if it were not better to stay our hands for a season now, than to have nothing to shoot by and by. No, let there be no more spring shooting of geese, ducks, snipe and bay birds. If we cannot be content without the pulling of triggers and the noise of guns, let us blaze away at targets and clay-pigeons. There will yet be left clay to mould others of. And if we want to go hunting, let us go now without a gun.

We shall not find it unpleasant nor unprofitable to take to the woods now, for we may be sure that they are pleasanter than the untidy fields. Where nature has her own way with herself, she makes her garb seemly even now, after all the tussling and rents she gave it in her

angry winter moods. The scraps of moss, bark and twigs with which the last surface of the snow was obtrusively littered lie now unnoticed on the flat-pressed leaves, an amber carpet dotted here with flecks of moss, there sprigged with fronds of evergreen fern, purple leaves of squirrel-cup and its downy buds and first blossoms. Between banks so clad the brook babbles as joyously as amid all the bloom and leafage of June, and catches a brighter gleam from the unobstructed sunbeams. So befittingly are the trees arrayed in graceful tracery of spray and beads of purpling buds, that their seemly nakedness is as beautiful as attire of summer's greenness or autumn's gorgeousness could make them.

Never sweeter than now, after the long silence of winter, do the birds' songs sound, and never in all the round of the year is there a better time to see them when the gray haze of the branches is the only hiding for their gay wedding garments.

If you would try your skill at still-hunting, follow up that muffled roll that throbs through the woods, and if you discover the ruffed grouse strutting upon his favorite log, and undiscovered by him can watch his proud performance, you will have done something better worth boasting of than bringing him to earth from his hurtling flight.

Out of the distant fields come, sweet and faint, the call of the meadow lark and the gurgle of the blackbirds that throng the brookside elms. From high overhead come down the clarion note of the goose, the sibilant beat of the wild ducks' wing, the bleat of the snipe and the plover's cry, each making his way to northern breeding grounds. Are you not glad they are going as safely as their uncaught shadows that sweep swiftly across the shadowy meshes of the forest floor? Are you not content to see what you see, hear what you hear, and kill nothing but time?

Verily you shall have a clearer conscience than if you were disturbing the voice of nature with the discordant uproar of your gun, and marring the fresh odors of spring with the fumes of villainous saltpeter.

THE MAINE GAME SITUATION.

THE Maine game question is so important that it is well worth our while to try to understand it; to learn all we can about it; to hear all sides.

Two classes are interested, residents and visitors. The chief importance attaching to the papers written by Miss Fannie P. Hardy is found in her claim for them that they give the side of the residents, or at least of those residents most nearly concerned. She professes to speak for this class—a class which is less often heard than the other; and she claims that her peculiar opportunities for gaining information and her long study of the subject enable her to represent the views of these people accurately.

Miss Hardy is a daughter of Mr. Manly Hardy, of Brewer, Maine, engaged for many years in fur trading (a business from which he has only recently retired). Mr. Hardy has had an acquaintance wider perhaps than that of any other man in the State with hunters, trappers, guides, lumbermen and other dwellers in the woods, upon whose co-operation the preservation of game so largely depends. More than this we understand that Mr. Hardy enjoys the respect of the Game Commissioners, as a citizen who has always obeyed the letter and spirit of the game laws, even when such compliance involved great personal loss to himself.

From all this it would seem that Miss Hardy's claim that she is qualified to speak for these people is well founded; and if it is; and if she can tell us how the Maine residents look at this game question, it is surely desirable that we should hear what she (for them) has to say. Their views may be full of error, their attitude a mistaken one, their logic at fault, their position untenable, their practices indefensible; nevertheless all these must be accepted as actually existing conditions, which should be taken into account in the effort to provide the remedy and save the game. For that, unless a change shall be inaugurated, the game is going, appears to us to be beyond dispute.

If what is told by Miss Hardy in to-day's issue is insufficient evidence as to the doings of so-called sportsmen in Maine, turn back to the FOREST AND STREAM of Dec. 11, 1890, and read there what "Special" wrote of the wholesale destruction of Maine deer by jacking and dogging and other modes of hunting in the summer months of 1890, and up to the opening of the season, Oct. 1. Ac-

cording to "Special's" report, this killing out of season and by forbidden methods was done by sportsmen from outside the State, or by guides employed for them. His account and Miss Hardy's amply corroborate each other. Their reports and much other information which has come to us indicate that the illegal destruction of large game in the Maine forests last year was practically unchecked, and exceeded that of any previous season.

The result appears to be this: The people of Maine, or at least that class for whom Miss Hardy speaks, having seen the deer and moose thus wantonly killed and wasted by sportsmen in the summer months, have themselves given over all restraint and in their turn have slaughtered the game in winter and without regard to the laws.

This, we are told, is the actual condition of things. We need not now discuss the moral aspects of the case; we have already said that two wrongs do not make a right; but the situation is one that cannot be touched by an abstruse or argumentative consideration of the points of ethics involved.

We confess that we do not at this moment see where the remedy lies. Perhaps Miss Hardy may have one to suggest; or it may come from elsewhere; but we are not without confidence that it will be found, and that the discussion of the question by Miss Hardy and by those who will doubtless follow her will aid in its discovery.

It surely must be discouraging to every true sportsman (and we know many such), who visits Maine, and by his practice, example and influence there strives to awaken among those with whom he comes in contact a respect for game protection and an observance of the laws, to find that after all he is in a minority; for it appears from what Miss Hardy has written that the Maine people themselves have acquired their notions of "sportsmen" as a class chiefly from the lawless individuals who in the close season commit outrages which are abhorred even less by the native of Maine than by sportsmen of better type themselves.

DEATH OF GENERAL STRONG.

ON Friday last the cable brought to this country news of the death, at Florence, Italy, of Gen. William E. Strong of Chicago, a gentleman who had a wide circle of friends all over the land. He sailed for Europe only a month ago for the benefit of his health, though he was not at the time supposed to be seriously ill. His death was therefore entirely unexpected. Gen. Strong was born in 1840 at Granville, N. Y., but during his boyhood his father removed to Wisconsin, where the son studied law and was admitted to the bar in 1861. At the breaking out of the war he raised a company of troops and saw much service, passing through the various grades of promotion from Captain to Brigadier General of Volunteers, which brevet he received March 31, 1865. Gen. Strong was Inspector General of the Freedman's Bureau from May, 1865, to September, 1866, and then became Secretary of the Peshtigo Lumber Co. of Chicago. In 1873 he became President of that company, and occupied the position until his death. He was Sergeant-at-Arms of the Republican National Convention which nominated President Garfield.

General Strong was an ardent sportsman, and has had a great deal of experience in many kinds of hunting. Years ago he was a most successful prairie chicken shooter, and did much deer hunting in Michigan. He was an intimate friend of President Arthur and General Sheridan, and accompanied them on many excursions into what used to be the wild West. He was with the Presidential party which in 1883 made the trip from the Union Pacific Railroad north through the Yellowstone Park, and one of the camps made by this party on Snake River, not far above Jackson's Lake, is still known as Camp Strong. General Strong was a most genial, kindly man, and was warmly esteemed by all who knew him.

At the meeting of the Massachusetts Fish and Game Protective Society last week 170 members and guests were present. New England uniform game legislation was the topic discussed, without definite result, the general opinion being that it would be difficult to make the game and fish seasons the same in the several States.

SOUTH SIDE CLUB TROUT.—The first day's catch at the South Side Sportsmen's Club was 556 trout weighing 546lbs.

The Sportsman Tourist.

SNOWBOUND.

THE storm has passed into the deep, impenetrable mountain whence it sprang. The frost king rules. White are his locks and beard, stern his eyes, and the unsympathetic diapason of his voice comes down the cañon on the strident blast. His icy breath congeals the laughing brook that groans beneath his pitiless sway. The forests crack and wild beasts seek their lairs at the mere whisper of the monarch's iron will. Even rough, weather-beaten men stand trembling at the half-opened door, for all their wraps and furs, their wool and hides, are but scant armor 'gainst the lances of the powers of the air.

They are gone and I am left alone. Before me is the cheery fire. Great logs of cedar snap and blaze, and from them rises a sweet incense—vain offering with which to propitiate an implacable deity. The cedar gives its fragrance forth not for love's sake, but impelled by rude necessity. Therein, with the crushed bay, it shows a trait most common in mankind. 'Tis strange that if the milk of human kindness once turn sour, it may, by pride or public sentiment, forced neutralizers, be given a semblance of its former self, and yet the quality and flavor, once lost, can never be restored. So, by the smell, that cedar log is cedar till it be reduced to ashes or fly away in smoke and vapor, but how different that odor from the rich perfume of which it was so prodigal when once it stood in upland grove and nodded to the blossoming earth or raised its sinewy limbs up to the smiling sun.

Now, I am not finding fault with the cedar. It is neither better nor worse than the majority of the men with whom it has been compared, and, on this bleak, bitter January morning it is doing valiant service. Up the wide-mouthed chimney roars its challenge, its defiance, and down from the upper ether comes the shrill reply of the angry, baffled sovereign. Listen! Did some one speak? No, I am yet alone, save as the elements companions be. The sounds change to words; the words frame themselves into song:

"Darkness my cradle,
Chaos my throne,
Terror my mantle,
I monarch alone.
Me defying,
All things dying
Prostrate fall;
And the armor
That they trusted
Is their pall.
While the moaning and the groaning
And the ever sad intoning
Of fierce winds 'mid branches bare,
And the wild, incessant rattle
Of the elements in battle
Makes sweet music everywhere.
"From realm of hail and bitter blast,
Where icy forms fly thick and fast,
Where frozen land looks on frozen sea,
I come, and I have come for thee.
Sharper than Toledo dart
Is the lance that seeks thy heart;
More sure than Borgia's poisoned steel
Is the weapon thou shalt feel,
For my breath
Is death."

But the dancing fire leaps higher, laughs and sheds abroad new lustre. Even the old, smoky rafters glow and the dull andirons take a cherry tint. The fire is alive and the great room, a moment since so cold and cheerless, is peopled with strange forms of light. There is music in my ears and the sound is the sound of murmuring waters, of bees lulling the nodding clover to sleep; the music is the music of the morning stars when they hailed the new-born earth, and from the dazzling splendor, to the inspired accompaniment, comes a sweeter song:

"I am the spirit of the flame;
The fire of love is my life.
Softly I conquer the hearts of men;
I banish care and strife.
"I have stolen the warmth of the noonday sun,
The light of the harvest moon,
The first faint blush from the maiden's cheek
And the mother's cradle tune.
"I have given love's hue to the budding rose;
I have cherished the eggs in the robin's nest;
From the babbling brook I have loosed thy bonds;
To the tired soul I have given rest.
"Oh, I am the spirit of the flame!
While the fire of love burns true
I know no rule but my own sweet will,
And that shall conquer you."

Roar on, old Boreas, thou king of darkness and desolation! Thy reign is short; make the most of it. Sing on, thou spirit of the flame; and you, light-hearted heralds of the spring, gather about the hearth. Pile on the logs of fragrant cedar. Winter storms without, but within is endless summer, peace and rest.

Ah, me! The great door opens; the vision flies; the song is hushed. Once more I am by the fire in the cold, dreary room, and the teamsters have come in from their morning chores. The breath of the ice king is on their garments. On the brick hearth they stamp their half frozen feet and smite their hands with pain. Then they take their customary seats in the half circle they have daily made since first the snow began to fall. The vile aroma from their pipes pervades the hall, and another day, monotonous, almost interminable, is here.

I wonder if the good Queen Anne's poet-philosopher, looking in upon this motley throng, could, with clear conscience, say:

"The noblest study of mankind is man."

But it takes all kinds of people to make the world, and there is a certain profit and pleasure to be found in the analysis of humanity, that can be derived from no other source. My new-made friends are silent now, but let

their voices thaw and the insidious nicotine bemuddle what they call their brains, and coarse jests will fly and tales of strange adventure such as might bring a blush to Baal's brazen brow or turn old Nimrod green with envy.

"Yes," Winn begins—a rough frontiersman of the genus cowboy, species *intractabilis*. Winn is the perpetrator of a joke upon a certain erudite justice of the peace and the tale will bear repeating before his own story is given. His home is in the quiet town of Richfield and when he visits the settlement he celebrates by painting the town a flaming cardinal. On one of these occasions he took a hand at some simple game played with five cards, of which the first is buried. I think they call it "stud." Something about the game was forbidden in the city ordinance "For the suppression of gambling," and under the kind supervision of the marshal, Winn, with five companions, found himself before the bar of justice. Denials and defense were useless. Justice Orrick solemnly perused the statutes and fined each offender \$12.50. Winn found he had but \$10, and this he offered to the magistrate, but no compromise could be effected with the city treasury. It was \$12.50 or 12½ days in durance vile. Finally a happy thought struck the young man.

"Say, Judge, I'll give you a bill of sale of my mule and if I don't bring you the money within five days I'll bring the critter and it's yours."

Now an average mule was worth \$40 and the justice thought he had a good bargain, so did Winn, although he never cracked a smile until the bill was drawn up, signed and delivered; then something in his countenance warned the grave Orrick of impending trouble.

"Winn, how old is that ar mewl?"
"Old enough to vote, Judge, old enough to vote," and the door was closed from the outside.

Now Richfield justice cannot be lightly treated. Straightaway the justice hid him to the constable and together they visited Winn's home.

"Well, Winn, I have a warrant for you."
"What fer?"
"The Judge says as you ain't settled that fine."

"Ain't settled that fine? You try and make me settle it agin and it'll cost you three or four mules."

"How's that?"
"Well, I give the Judge a bill of sale of my mule and he let me go."

"Is that so, Brother Orrick?"
The Judge, with much hesitation, confessed that such was the case.

"Well, then you can't do nothing more with Winn."
"But, Winn, you'll let me see the mewl?"
"Cert. Come along."

Out to the old corral they went and there upon the ground lay the ungainly hybrid, patriarch of all the mules in Utah. Winn kicked it and it slowly rose and tottered to its feet.

"Look out, gentlemen, it may fall on you and I can't be responsible for accidents."

"Now, Winn," whined the baffled Orrick, "I meant to do the right thing by you, but I guess I stretched the law a leetle. The law won't let me take anything that'll eat or run away."

"You're all right, Judge. You're all right. That mule can't do neither one."

Five days later there was a procession through the main street of Richfield. Winn drove a cart and behind was tied Brother Orrick's mule. Two of his boon companions marched on either side to steady its feeble steps, and the fifth brought up the rear and gave the beast a push whenever it seemed that it must surely fall. The next morning there was a funeral in Justice Orrick's corral, and the worthy magistrate, having just deposited \$12.50 of his own hard-earned cash in the city treasury, was the sole mourner.

But to return to Winn's narrative, which has been rudely broken by the advent of three lusty Corn Creek Utes. Tall, straight, broad-shouldered, with clear-cut profiles, they are noble specimens of their fast-dying tribe. From one to another they pass, trying to barter their heavy navy blankets. Failing in this, one produces a worn-out .22-cal. rifle on which he had evidently been swindled. He offers it for \$4, and with grim irony remarks: "Shootem buckskin, no much bueno; shootem mouse, shootem fly heap good."

Then the trio roll three cigarettes, and squatting on the floor behind the charmed circle puff away while Winn proceeds.

"Last summer I went up on Panquick Lake to see what show there was for choppin' ties and floatin' 'em down the river to Richfield and Salina. I allowed to chop this winter and float before irrigatin' time, but it's handier to get red pine and black balsam right here and on Clear Creek, so I give up the job. Bill Jones went with me. We had been running our cattle in Emery Valley and we knowed they couldn't get away, so we allowed to be gone about two weeks. We didn't take much grub, for the man that can't get all he wants to eat about Panquick Lake deserves to starve. There was no trail up Mammoth Creek, and we had a tough time of it. Didn't get to the lake until dark, and didn't see a deer on the whole way. Bill made a little yeast powder bread, and we wrapped up in our blankets and lay down by the fire to sleep. The next morning we started chopping, and worked a little every day on our cabin so as to have it all ready in case we came up in the winter. We didn't hurt ourselves with hard work. The fishing was too good. I believe there's more trout in Panquick Lake to-day than in all the rest of Utah. The Injuns used to catch lots of 'em in some kind of willow fish traps, and the time was when a man could buy all he could pack for two bits or a plug of terbaccer."

"After we'd picked a place for a camp and cut down one tree we wanted a mess of trout. But we was in the timber and thar warn't no hoppers, and we hadn't no fish eyes and pine logs make durned poor poles. So we wandered around till we found a little creek. There we cut some willows and caught a few minnies in our hats. We had to use our hats for pails in getting them back to camp. Then the fun began. We put on heavy sinkers so the little cusses couldn't swim very far and then we threw in. I didn't wait more 'n a second before there was a yank at my pole that almost pulled it out of my hands. That was the first fish that ever I had on that I couldn't fling out right over my head. He was a whopper and no mistake. The more I pulled the more he jerked. Bye 'n bye he jumped clean out 'n the water, and by jimminy he looked like a young whale. Well, I fooled with that feller half an hour before he turned belly up and let me

haul him in. He must have weighed 8 or 10 lbs. Well, we fished until noon and then had eight fish. Any one of them was enough for a meal. The rest we cleaned and hung up in a tree. Every day we had the same luck, and every day the string of fish in the tree got longer and heavier.

"One afternoon when we got back to camp the fish was gone. The whole pile had been drug away, and by the tracks, which wasn't very plain, the beast that done the thievin' was a bar. The trail was well marked and went up toward the mountain, and Bill and I thought that between the scalp and the hide we could make a good grub-stake; so we took our gun and started after it.

"We had gone about a mile when just ahead of us there was the darndest yowlin' and growlin' and spittin' that ever you heard. We stole up and looked through the bushes. There was a big wolverine and a she lion fightin' over them trout, and two kittens were havin' a circus of their own jist beyond them. We managed to git up pretty clost. The beasts had all they could do to look out for each other without attendin' to us. Talk about a wolverine bein' a coward! I know better. That old lion would walk round and round and switch her tail, and every time she'd spring the wolverine would half stand and half jump and snap at her neck. Then they'd roll over together, and when they parted for the next round the wolverine was always over the fish. They was both of 'em torn and bloody. By'm by the lion got in a side scraper—gee whiz! but it was a horrible belt—right on the wolverine's head, and the wolverine curled up and rolled as if it had been hit by a thunderbolt. The lion yowled a little and the kittens ran up to her, and she was just makin' off with the fish when 400 grains of lead took her whar she lived, and she never axed no questions. Before we got to her, Mister Wolverine picked himself up and shook himself together, but Bill attended to his case. Their hides was so cut up and bloody that it warn't no use skinnin' 'em, but you kin bet yer life we didn't have no more fish stole from that camp."

The door opens and Gretchen's frowzy head is thrust into the cloud of smoke. "Dinner's ready, gentlemen." So am I.

MARYSVILLE, Utah, Jan. 18.

AN EXCITING CHASE IN NEW JERSEY.

THIS being the inning of a driving northeasterly storm, when the authorities had cut and dri d a "westerly wind, with fair and colder weather," and having nothing worse to do, I make so bold as to tell you about a lovely fox chase we had down this way in January. Ever since we didn't go deer hunting and get shot by some other hunters, we had been solacing ourselves with the promise of a run after reynard some day when the time seemed propitious, and the time seemed at least to get around into that quarter when my friend C. asked me one evening if I was ready for that fox hunt. The outlook for a fine day was below par at that time, for Old Prob had guessed that a storm center had already formed in Arkansas with wicked intent, and head faced to the east, with a good second out among the Rockies; that the Arkansas trouble would give the mountain business a handicap of twelve hours or so, and that if there was not any counter diversion from Manitoba or the Gulf region, the two flyers would probably, other things being equal, impinge on the seaboard more or less according as the precipitation of moisture radiating from a given area should be influenced by opposing currents. This looked bad as a starter, added to which there was a ring around the moon and a decided tendency to disturbance in the cornfield, and when I retired the moon had done the same thing behind a thick covering of very snowy looking clouds; consequently I didn't lay out my hunting togs over night, as I usually do for an early start, for I did not think the circumstances warranted it, but went to bed in the usual way.

I heard the clock strike two, and in a minute or two, three, and shortly after four, and before I had time to turn over twice five came along, when I rose and looked forth. The wind had got lost somewhere, so that the dogs could be heard nicely, the mercury had stopped at 30, and a star or two twinkled from between bands of clouds which spanned the heavens. "Good luck," said I, and hopped into my clothes. By daylight the sky was almost clear, and by 7 o'clock F. was on hand, and I gave Moddesh her head and told her to g'long, to the old hunting song:

"A southerly wind and a cloudy sky
Proclaim it a hunting morning,
Before the sun rises away we fly,
Dull sleep and a drowy bed scornin'.
To horse (buggy), my brave boys and away,
Bright Phoebus the hills is adornin',
The face of all nature looks gay,
'Tis a beautiful scent-laying morning,
Hark! Hark! Forward!
Taut-a-ra, taut-a-ra,
Taut-a-ra-a-a."

We drove about four miles from town to a road from which the man with the dogs was to come into ours. The sun had fairly got above the low-lying clouds and begun to warm up stiffened nature considerably, giving promise of a day without flaw, when L. loomed up in the rear rumbling over the frozen road, flanked by skirmishers in the shape of five fine foxhounds that at intervals filled the circumambient with their musical baying. Just behind L. came C., having gathered in Mr. V. as he came along, and away we went for the rendezvous, a mile distant, at the house of Mr. F., an old fox and deer hunter, whose name by the way, is the same as the middle name of the world-famed author of the Leather Stocking tales. He was on hand to welcome us, and in a short time we were putting our guns together and discussing methods of operation, when up drove Mr. McK. in his road cart, followed by a hound or two. The party was now complete, and in a few minutes we were jogging down a woods road that skirted a swamp in which Bre'r Fox might, could, should or would be found.

In less than five minutes one young white purp, a heedless, headlong, headstrong hound had got out into the swampy brush and started a lively ruction all by himself after a rabbit. This wouldn't do at all, so L. dropped behind to call off his dog while we with much urgent persuasion restrained the other dogs and straggled along into the woods. After a while L. rejoined us, accompanied by the delinquent, which immediately went off into the woods to the right and began to stir up

another smell. We left him to his own devices and odors and plodded ahead.

By this time McK. had got his dog in leash to prevent any more hare rising, and was being towed along through the bushes at rather an uncomfortable rate of speed by the half-choked eager hound, which soon placed him in the advance together with C., and several dogs, which latter soon found what was pronounced a fox trail and dashed off. Right here we'll drop this much of the outfit for they don't interest us further, as we saw them no more that day. I neglected to mention C.'s big black and white dog, which accompanied him without any definite purpose, being composed of several different breeds with a good deal of other kind of dog, and exhibiting considerable enthusiasm without much attention to business. V. had a pocket edition of canine, as had our host F., which were taken along to take care of us in case we got lost, I suppose, as I couldn't see any other reason.

Faster and faster away went the dogs ahead, and we five pulled along behind easily, while the lone dog in the scrub behind was evidently working up considerable of a fever. The theory was presented that he was working the same trail that the other dogs had struck further on, and that he would work it up to their trail and then rejoin us. This was as satisfactory as anything we could think of, and more complimentary to the dog than if charged with frittering away his time on a hare. Of course all the motions of the dogs must be understood, and each person generally having a different opinion added to the clear solution of the matter. The skirmish line was getting pretty much out of hearing, when we struck a road, one end of which was anchored in Millville, and the other somewhere else. Here we halted a bit, listening for the dogs and making various wild and unsatisfactory conjectures. Then host F. said that he and L. would follow on and F., V. and I could form a picket line along the road, and if the dogs turned the fox back, or the fox led the dogs back, we would be in position to shoot him, perhaps. So the woods swallowed them up, and we moved down the road a way and stopped for consultation, as it was necessary to come to some conclusion as to what the dogs were doing and what the fox would probably be compelled to do in case there was any fox up. Once in a while one would say "Hark!" and then each would stretch his ears away off into the forest and endeavor to persuade himself that he heard the dogs, when an entirely new set of conjectures were called into play.

After a time, during which the rear guard hound had joined the company cheerfully, showing that he had done all that could have been expected of him, V. suggested that we go down to Hance's bridge, across "Painter Creek Branch," that could be seen at a little distance. There being no good reason why we should not, and there being the possibility that we might surprise the fox swimming up the creek, we leisurely reached the bridge, where we paused and looked into the water and speculated about how old the puncheons were and other fox-hunting subjects. V. told of coming along here in winter one day and going out on a slippery log to dip a bucket of water for his horses, and how cold he was when he crawled out from the water and for some time thereafter. He also said that in the cedar swamp, that skirted one side, the stream was a good place to find rattlesnakes, and I mentally resolved that I'd choose some other place to find mine, where the odds would be more even.

F. mentioned that near here was the spot where Mrs. Whatsname dug for gold, having dreamed that there was any amount buried in a certain spot. He also began to tell how in the swamp near the bridge was a jug cache, made by two boys, I believe, who were teaming to and from Millville, and who didn't dare carry the liquor home, and there was more to it, but right here something interrupted him, and I'm in a good deal of doubt as to the sequel—I'll ask him for the rest some time when there is no danger of being interrupted by the incidents of the chase.

We were having a terrible good time and enjoying ourselves immensely, exclaiming "Hark!" every now and then and pretending we heard the dogs. Across the bridge and up the road a little way was a covered wagon in the bushes, denoting the presence of other hunters far or near.

After exhausting the pleasures of this place we easily moved back to our first position, where, after due consultation and much straining of ears, during which we plainly heard dogs in the same direction as before, we decided to follow the advance guard and endeavor to come upon the field of action, convinced that the fox had not yet been started and that if he was he would lead the dogs straight away down across the Dowdy's Tavern road, then doubling back would keep up the other side the swamp toward Bennett's mill and over into the Thick Holes. That was as far as we could safely predict and I couldn't see any good reason for any prediction at all, but when a person wishes to do anything he will generally find a reason. So we started, overtaking ere long a solitary huntsman with a dog chain over his shoulder, going in our direction with a white hound. He was surprised to find that our party was ahead of him on the same trail and before long he vanished in some mysterious way. We halted every two or three hundred yards to listen for the dog music, which began to be a little better defined and served as a mild stimulus. After a while we entered a road going our way, crossed a swamp and rose a hill, where in the sand we found the tracks of our party pointed ahead in the road, as evidenced by the rubber boot track of F. and the small track of L. which we could identify. Here and there we found where they had halted, waiting for the dogs to work out the trail or watching for a shot. The music, however, kept about so far ahead, old Jack of the baritone voice, with supplement of soprano and falsetto mixed, doing the solo part, while the other dogs encouraged him by turns. Of course, we periodically halted during the next mile or two and held a caucus as to the present position and occupation of the pack and what we'd better do in case the fox kept the swamp or took a side shoot to the starboard and a turn over by May's Landing and down Egg Harbor River. Old Jack continued to keep just about so far off, which was just near enough to render it very doubtful whether we heard him at all, though occasionally one or the other would exclaim: "Hear that? I heard him then sure. There! Don't you hear him? That's him." Then we'd all strain a while with more or less doubt or certainty, as we had imagination in the emergency.

Finally as we came to a fork of the road up which the party had gone, we heard unmistakably the dogs in what

seemed to be full cry, a long distance away. Here was a new mix. If we kept on we'd be going directly away from the attraction. So we caucused again and concluded that the fox would now come down the swamp we had crossed, and if we were not there we'd be somewhere else. In order to prevent so dire a calamity we took the back track instant and paddled along lively for a while, and then halted to listen—not a sound. Everything dead. Well, now what? The whole chase was probably heading now for Atlantic county and would probably pull up down by Atlantic City somewhere, but we might as well scup on to the swamp and wait awhile; and so we did, enjoying the sport as only thoroughbred fox hunters can.

On nearing the crossing we found a little open space where some woodchoppers or charcoal burners had once had some little huts. Here we sat or reclined and rested our weary legs, almost exhausted in the hot chase after the fox, while we talked of the pleasures of the sport and enjoyed the mild air of mid-January. A light breeze had arisen, and sighing through the treetops gave once and again momentary sounds in confusion which might have been wafted from the dogs, and might have been from a thousand and one other causes, probably were. After waiting long enough to be reasonably certain that neither dogs nor fox were going to make us any trouble, we resumed our legs and filed along the road for a mile or so until we came to a road, old and disused, leading diagonally to the right from the one we were on. Here we stopped to indulge our ears once more and caucus a little. F. said that right here on this ridge was formerly a noted deer stand, where his father and perhaps his grandfather had slain many a mighty son of a glen, which of course started reminiscences in which we all indulged, while we drank in with quivering ears the "heavenly music" of the fox chase—in the next county, and congratulated each other that it was our good fortune to be enjoying so much sport on such a perfect day in the woods.

Well, should we keep the old road we were on or take the still older one and go somewhere else? It was argued by F. that we were nearer home now than we would be were we to go "callahootin'" off into a new neck of woods, while V. said that the right hand road led nearer in the direction of the dogs' last note and not so far away from the home road; while I, being a stranger in a strange land, opined that if the road in question intersected the Bennett's Mill road at a point equidistant from the junction of Rattletrap Branch and Petticoat Creek we might get there in time to cut the fox off from heading for Thick Holes—in case there was any fox or dogs.

During my argument V. had slowly wandered off down the fork, and F. and I not wishing to break up the procession, slowly and uncertainly followed. In a few yards we came to another old road intersecting this one at nearly right angles, thus making the direction of the last found road S.E. by E. $\frac{1}{2}$ E. Here we stopped from force of habit and listened. The wind softly sighed among the oaks and pines, and away off somewhere where there was life and hope a locomotive whistled for a crossing, and then silence smothered everything again.

"Wonder where this road goes," said V., referring to the almost overgrown track that had just arrived from S.E. by E. $\frac{1}{2}$ E. He said he was going to look it up a little, and was soon swallowed up in the brush. I looked at F., who was looking away, way off into the untrodden realities of the unseen, and I said, says I, "F., the strain attendant on the intense excitement of the past few hours' sport is beginning to tell on me. I'm as a nervous as a cat and—"

"Hello-o-o-o!" came faintly from the dim recess of the brush.

"V.'s in trouble," quoth F. "It'll never do to leave him to suffer out there all alone by himself in the bushes," and off we went to see what the matter was. After quite a tramp we sighted V. standing in the edge of a mile wide clearing, evidently gazing away off into 1900, and when we had nearly reached him he cried, "Hold on! Hear that? There they are. They've got him up this time sure. That's music for you."

We listened some more. It was true. From away across that clearing, and from how much further we knew not, came the rich baritone of Old Jack, accompanied by the voices of the other dogs in full chorus. It did seem as though we were to have a little taste of a fox chase after all. The clearing was thickly grown with oak bushes about head high with branches as stiff as wire, but into it waded V. face to the music, and with considerable misgiving we poked along behind. Pushing the bushes aside, stepping high over brush, zig-zagging this way and that to avoid the more dense portions we slowly forged ahead forestward, and at last the scrub was all behind us and we stood in the Bennett's Mill road and paused to catch a breath and do the listening act over again. Naught but a faint and far "ough" rewarded us. The crescendo with which we had entered the scrub had given way to a diminuendo which in turn had died away into a pianissimo, and we were badly left once more.

"The dogs must have caught that fox again," quoth F. "Yes," I said, "and lucky it is that we were down in this section to head the fox and turn him back. Those fellows wouldn't have had any fun but for us."

It was now nearing the middle of the afternoon and the internal vacuum plead loudly to be filled with something besides dog music, and very little of that, which led, I suppose, to examining the road for tracks, if perchance we might find some leading homeward, and indeed we did find two, one of which we pronounced that of F. with his rubber boots, the other that of C., also the tracks of a large dog, which must have, of course, belonged to the bulldog found. We didn't wish any better pretext than this for a retreat, and forthwith fell in for home arguing that if two who had been with the hunt all day had given it up, we couldn't be expected to hold on. So we left the hounds and such of the hunters (if any there were left) as chose to stick to the forlorn hope, to work out their own salvation, and paddled along the sandy road, with a good deal of ramble in the conversation. After a tiresome tramp, during which we passed through a part of the Italian settlement of East Vineland, we reached the house to find that C. had left for home to attend to some business, and that host F. had not come at all. So easy is it to be mistaken both as to foxes' and men's tracks. Hitching up, we started homeward, skirting the flooded cranberry bog near the house, and so with cheerful chat over the softened road to town, which we reached in the early evening, having had a full sufficiency of fox hunting under existing circumstances, and

perfectly convinced that there are some things just as feasible as attempting to corral a lone fox in a ten-mile square tract of swamp and other varieties of wilderness indigenous to Jersey.

This is the way we went fox hunting. But then we know that it is not all of fox hunting to shoot a fox. To change the proverb slightly, *L'homme propose et vulpes dispose*.

I have learned since that the dogs did really act after we left as though they had started a fox, and tore up the country in great shape, but they begun too late in the day to secure tangible results.

VINELAND, N. J.

Natural History.

FROM A PHILADELPHIA SANCTUM.

"THE MERCURY," Philadelphia, March 31.—*Dear Forest and Stream:* I notice in the issue of the 26th a suggestion by E. L. Carney, of Leavenworth, Kansas, for the extermination of prairie dogs, the method being the use of the fumes of the poisonous and volatile bisulphide of carbon. Can it be that this is the final solution of burrowing pests? I wonder what the answer will be from Australia when the FOREST AND STREAM for March 26, 1891, arrives? The question as to whether the English or the rabbits shall take that continent may soon be decided, or at least be put in a more promising way for the English than it seems to be from the latest advices.

As I sit in my office alone nights, letting thoughts of woods and fields come between me on the one hand and the latest exchanges, the tariff, the wickedness of the Other Fellows, etc., etc., on the other, I have had a singular experience, or at least one singular to me. Eating an apple one night, I threw the core down among a large pile of papers I had been clipping so that it was completely concealed. Within a very few minutes a rat came out of the near office and walking straight up to that pile, dug his nose down into it and fished the apple core first shot and marched off with it. I can only attribute this to extraordinary powers of mind reading on the part of the gnawer; or (who knows?) it may have been a sense of smell so keen as to put our human organs to the blush (that is to say if any organs except those we modest newspaper fellows run, can blush). Have you had any data or information on the point of extraordinary keenness of scent like this among animals of this kind?

I have been using Schultz powder in a .32 Winchester magazine gun. Result: less noise, greatly less smoke, of course, and slightly greater penetration. Can you explain, however, why an occasional bullet should leave no signs of its presence on a seven foot square target at a time when I am making anywhere from 28 to 31 out of 35 (Creedmoor figuring); or what is equally singular to my untechnical soul, that the bullet should in one case appear to have cut a hole in the target, which looked as though I had fired a piece off the sharp end of a lead pencil about an inch long, rounding in point like the bullet, said piece appearing to be three times as long as the bullet and to have turned round broadside to the target, so.

WATER LIFE.

Occasional Observations on the Fishes in the Aquaria of the U.S. Fish Commission.

THE KEEPING OF YOUNG SHAD IN AQUARIA.

DURING the shad hatching season of 1890 a number of shad eggs and fry were placed in a pool in the yard of Central Station, at Washington, D. C. The pool, which is constructed of brick and has perpendicular sides, holds about 4,000 gallons, and in the summer contains a dense growth of aquatic vegetation. During the summer of 1890 it was essentially a small pond, the water not being allowed to run in it except to clear it on two or three occasions, when it became green from the presence of unicellular algae. At times the temperature of the water, which is about 30 in. deep, was taken, and found to be sometimes as high as 85° at the surface and 83° at the bottom, but it appeared to be perfectly satisfactory to the fish, they, however, keeping nearer to the bottom as it grew warmer. The growth of the fish was watched with interest throughout the summer, and they could be seen in schools of hundreds, always in motion. The water was alive with insect larvæ and small crustaceans, such as *Gammarus*, *Asellus*, *Daphnia* and *Cyclops*, and these appeared to constitute their sole food up to September, by which time they had attained a length of 1½ to 2½ in. During this time several goldfish, which had hatched from eggs accidentally introduced into the same pond on some aquatic plants, had grown to a length of 4 to 5 in. The goldfish is a forager for food, while the young shad usually only takes what it finds floating free in the open spaces.

The young shad in September were not so large on an average as those which had been planted in one of the big carp ponds, and they appear to have stopped growing. This was no doubt due to the exhaustion of the natural food supply. They were now tried with bread and crackers, and it was found they would eat them with avidity, catching the crumbs as they descended through the water. From this time with daily feeding they grew more rapidly, and in October, when from 1½ to 2½ in. long, an attempt was made to transfer them to a fresh-water aquarium. Three attempts were made, but although there was no lack of aeration, both natural and artificial, and apparently wholly favorable conditions, except in the size of the tank (about 60 gallons), they did not thrive, and soon died.

In the latter part of October a number of them were brought from the carp ponds in a tub, and instead of putting them in fresh water they were put into brackish water, about 1,005, where they seemed to be more comfortable. The water was gradually brought up to the full strength of the sea water of the aquaria, and some of the shad are yet alive, and are therefore almost a year old and 2 to 3 in. long.

Their principal food is clam chopped very fine and they take it voraciously. This is varied with oyster, mussel, raw beef, bread, crackers and chopped earth worms, all of which they will eat. Most of those which have died have been affected by some form of eye disease, which is prevalent with some species in the aquaria. It is surmised that it is due to the presence of some immature form of a parasite, which is present on some species of

the fishes in the aquaria, but it has not yet been carefully studied.

The young shad would not at first take food from the bottom of the aquarium but would only eat it as it fell through the water. Now, however, they will pick it from the bottom, tossing it up and catching it as it falls.

They are always in motion during the day and, although some times swimming more slowly than at others, they have never been seen, day or night, in a state of absolute rest.

An interesting question yet to be decided is whether the adult shad may not also be kept as easily in the salt water aquaria. With the gizzard shad, which is quite as delicate, it has been demonstrated here that there is no very great difficulty, as some adults of that species have been kept for over a year in tanks of only sixty gallons capacity, but until much larger tanks are provided the keeping of the adult common shad cannot be satisfactorily tested. WM. P. SEAL.

WHY THE GROUSE DRUMS.

THERE has been a great controversy among ornithologists and many conjectures have been formed as to the motives that prompt the grouse to drum. To say "that it is a natural habit" is to say next to nothing. To suppose that he does so for the purpose of obtaining grubs and insects out of dead logs (as some have believed), is to suppose something entirely foreign to what would naturally be looked for in a bird of such superior intelligence and sagacity. The grouse drums from a high not a low motive. If I may give an opinion it will be one formed after many years of observation and study and one born of the woods. The grouse drums:

To announce the approach of day, at dawn.

To announce any approaching remarkable change in the atmosphere, night or day.

To make his whereabouts known to the female.

To celebrate her coming. (The grouse has been seen to drum while the female stood within 6 ft. of him).

To announce a triumph over a rival.

To sound a requiem over a dead mate or friend.

To divert himself. (As we sing or whistle to amuse or divert ourselves).

The tone, cadence or sound made by the same bird varies and changes somewhat at times. This may be due to atmospheric or physical conditions, but I believe it to be due to the power possessed by the grouse to modify, alter or intensify somewhat the sound, as he has the power to modify the whirring roar as he rises from the ground. The all-wise Creator has implanted this faculty in the grouse to deepen the solemnity or feeling of awe and loneliness in the dark, dank, silent and solitary forest. For where the grouse dwells no singing of birds and but few sounds of a musical character are heard. And as the sound comes to the ear, at first slow in measured strokes, and gradually accelerated till they roll into each other, and away through the depths of the woods and over the meadows and streams, we instinctively feel that "there is a spirit in the woods." DORP.

SCHENECTADY.

THE BEAVER'S SUNKEN WOOD.—Duluth, Minn.—In reading Mr. R. V. Griffin's valuable and interesting article on the habits of the beaver in your issue of April 2, ("Practical Trapping"), I find allusion is made to the habits of that sagacious animal in laying in a winter's supply of sticks or saplings for food, and sinking them in caches near their houses; and the question interesting to Mr. Griffin as it must be to every one and certainly was to me before it was explained, is how the beaver manages to make his sticks or saplings sink. Captain Edward Patterson, with whom I undertook to discuss this matter, says that whatever we may think of it, the beaver themselves find it simple enough, for all they do is to draw enough air from the interstices of the fiber of the wood to make it lose its superior buoyancy to water, when it will sink; hence it can be moved on the bottom freely without a tendency to rise, but when raised to the surface, the interstices of the fiber (or the cells if you will) are again filled with as much air as was drawn from it by the beaver, and, having regained its buoyancy, it floats again as unsinkable as before. Capt. P. is the happy possessor of quite a store of forest lore himself, yet credits an old trapper friend of his, Andy Reeper, with at least the knowledge of this curious fact, if not with having made the observation himself.—BERLIN.

EAGLE AND JACK RABBIT.—While hunting antelope on the prairies of Colorado I was the witness of a very interesting chase between an eagle and a jack rabbit. The various circles and downward sweeps of the eagle attracted my attention, and I resolved to ascertain the reason. I put spur to my horse and succeeded in gaining an elevation from which a good view of the chase could be had. The rabbit to all appearances was very much bewildered, and would run first one direction and then another, and sometimes in circles, its pursuer, the eagle, following its every turn. Finally the eagle, as if tired of his sport, with a vicious downward swoop, and a stroke of the wing, laid the rabbit out lifeless on the prairie. At this moment I gave a tremendous yell, and at the same time rode rapidly toward them, which had the desired effect of frightening the eagle away, leaving its victim in my possession, which turned out to be the only game I bagged that day.—W. L. J.

CINCINNATI NATURAL HISTORY SOCIETY.—The officers for the year are: President, Col. J. W. Abert; First Vice-President, A. D. Smith; Second Vice-President, Dr. F. W. Langdon; Secretary, Dr. J. A. Henshall; Treasurer, Davis L. James; Librarian, W. H. Knight; Trustee, W. P. Anderson; Members of Executive Board at Large, T. H. Kelly, T. B. Collier, Alex. Starbuck and W. H. Knight. Curators—Geology, E. O. Ulrich; botany, D. L. James; zoology, Chas. Dury; anthropology, Dr. A. J. Howe; photography, T. B. Collier; microscopy, Dr. B. M. Ricketts; physics, W. H. Knight; chemistry, Prof. Karl Langenbeck.

LONG ISLAND VERMIN.—Minks raided the pens of ornamental wildfowl belonging to Major Frederick Mather, State Superintendent of the Government hatchery at Cold Spring Harbor, one night last week, and killed many valuable birds. They took the original pair of Chinese mandarin ducks imported from China at a cost

of \$50, three pairs of wood ducks, and several teal, wild-geon, and other wildfowl that were in process of domestication. Fortunately all the fowl were not in one pen, and some of each species were saved. Vermin has been very plentiful on Long Island the past winter, and farmers have lost much poultry through their depredations. Notwithstanding the steel traps kept around the grounds of the Fish Commission to protect the trout from minks and the ponds from muskrats, these animals occasionally get in and work mischief. The following is the record kept by Major Mather of the vermin destroyed this season: Opossums 16, minks 9, muskrats 23, weasels 2, night herons 8, kingfishers 43.—*New York Times*.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

OUR GUN CLUB—TURLING.

Editor *Forest and Stream*:

With your permission I will introduce, to such of the readers of the *FOREST AND STREAM* as may care for the acquaintanceship, the members of our gun club. Ours is not a very tony outfit. We have no president, treasurer, or secretary, no spacious parlors and smoking room adorned with trophies of the chase or freaks which have emanated from the imaginative brain of the taxidermists. We have merely got into a habit of gathering around the stove in the rear end of our patient friend's grocery store, where we adjust ourselves as comfortably as possible upon whatever affords a convenient seat, and smoke and chat to while away a dull hour or so every evening except Sunday. Here our hunting or fishing parties are made up and verbal reports of each expedition rendered, with a goodly sprinkling of remarks from the audience and not a few tales of the "That reminds me" order.

The ages of our members, of whose names there is no official list, range anywhere from twenty-five to seventy years, but we don't reckon age by the Gregorian calendar and count our men young as long as they feel youthful and able to fill their store box at the stove fire even though unable to endure fatigue in the field or on the stream. I know of but one point upon which we all can agree, and that is sporting matters of a general character, though even on this subject many small differences of opinion develop. We don't like one another's religion, politics or habits; no two of us have the same daily occupation; we are radically opposed to each other's views on almost everything; don't look alike, and in short, are a misfit all around, except that we all cherish a friendly feeling tempered with charity for all, and are glad that we are so well acquainted.

Fishermen are in the minority, because water is scarce in this section, and the sport is almost exclusively limited to mountain trout and snapping turtles. By the way, the last-named affords us a huge amount of fun and generally an ample reward of real turtle soup. When the water becomes warm enough, a wagonload of turtle fishers may be seen creeping away in the gloom of very early morning on the way to some muddy meadow brook, perhaps some miles distant. Coffee pot, tin cups, canned goods, bread, etc., are stowed away, together with empty coffee sacks to carry the game in, horse feed and fishing clothes; while we will trust to the farmer's wife for good butter and milk. Reaching the stream the party, usually four or five in number, divide; two will fish, two will pack the game and provender, while the odd man takes care of the team and courts all the eligible rural maidens who are so unfortunate as to be forced to endure his presence. A hasty breakfast with hot coffee is prepared over our camp fire, while old clothes are being donned; and this being disposed of, into the waters the fishers go, attired in decolette costumes of the most extreme fashion, and immediately the one whose teeth are chattering informs us that that water is c-c-cold and wet besides. But the chill of the first plunge soon wears off and the fun begins. The fishing is done entirely with the bare hands here, and it is considered cowardly to use any other method; though frequently a turtle which has been disturbed will inflict a reminder which is by no means gentle, and if anything on earth can equal his Satanic Majesty for perseverance it is an angry snapping turtle, bulldogs not excepted.

Groping around under the overhanging sod banks, under piles of drift brush and logs, ledges of submerged rock, roots of trees, among the rank growth of water vegetation, and in muskrat holes, the fisher feels his way; now he gets ducked all over, and now the blazing sun kisses his damp shoulders and leaves a red mark—the mark will assert its importance to-morrow. "He's got one!" a yell from the shore proclaims. Yes, which has got one? Then, accompanied by much grunting, perspiring and evolutions which would put a professional contortionist to shame, the struggle becomes more and more exciting. It is "liberty or death" with the bedraggled reptile, and honor and spoils for the captor. Suddenly there is a change in the tide of battle. His turtleship has broken away and makes a hasty retreat through a muskrat burrow under the bank. Quickly the fisher leaps from the water to the solid ground and once more seizes his prey by the tail as he passes mine host muskrat's back yard door. Behold the spectacle now! The brawny form of the fisherman is doubled, his head and arms are straining to get further into the hole for a better grip, his knees are on the edge, while his, at present, most prominent parts are turned skyward in the attitude of a devout Moslem in the act of making a particularly obsequious Salaam to the Prophet. The strain is terrible and power has almost fled from the contorted muscles of our champion. Hark to a doleful sound which rises lingeringly above the grunts and pants from the hole. Aye, the pants have indeed suffered, and at a most inconvenient place, too, but then with that mighty effort which wrought this havoc, all was not to be discouragement. There lies the quarry on his back, and long and loud is our merriment, while our champion rests himself and attempts to repair the damages to his apparel, but withal well satisfied with himself. Such and many other equally ludicrous scenes are what make turtle fishing one of the periodical sports of our gun club.

Toward the evening of the hunt we get up a good substantial lunch, with plenty of fresh butter, milk and eggs

procured in the neighborhood, and after the fatigue of wading, stooping and kneeling down in the water only to rise up again to move on a little further, this meal is an important part of the programme to the robust fisher, who generally does it justice. Our catch on this occasion was fifty-three.

The turtles are usually found with their heads shoreward in the forenoon and toward the water in the afternoon. They are able to cling to brush and roots with a strength truly wonderful, and knowing this the experienced hunter prefers to seize it by the head instead of the tail, as it cannot then get a hold on the numerous obstructions, neither can it turn and bite.

During the season many parties come from the cities to hunt turtles, and market-hunters do not miss the opportunity of turning this sport into a profitable business.

Having thus introduced a few members of our gun club to the readers of *FOREST AND STREAM*, and hoping that some of them will add turtle fishing to their list of outdoor pleasures, I will defer making them acquainted with the others until some future time. As in all other amusements, care should be taken in selecting companions for the hunt, and a knowledge of how to dress and cook a turtle is also very necessary. DEACON.

GREENSBURG, Pa.

MY LAST EXPERIMENT.

I AM fond of trying experiments. My last one was only too successful, but it might have had a fatal ending. I will give it for the benefit of the readers of *FOREST AND STREAM*.

I was spending a few weeks in Pike county, Pa., in a region where partridges were quite abundant. They sometimes come out by a fence only a few rods from the house. One morning I flushed five not far from the barn. But as most sportsmen know, this is a very difficult bird to secure. One requires a good dog and should be a superb shot. Then it is exceedingly hard to stalk him, and so far as walking him up goes there is no telling where he will rise nor what direction he will take. I found it. I had no dog and a lame leg prevented my rambling in the brush, even had I wanted to.

This time I thought I would try a new plan and see if I could not outwit Bonasa. I did outwit him, though I regret to say I outwitted myself at the same time.

I know that all the birds in the neighborhood had been in the habit of seeing the cattle browsing in the woods and consequently were perfectly familiar with the sound of a cowbell. So it occurred to me that if I should strap old Brindle's neck ornament around my waist, allowing the bell to fall by a string from behind me, so that its sound would not be impeded, the birds would not be frightened.

All this done and out I went through the bars and along the road that ran across the "back lot," the bell meanwhile clanging and jangling in the most approved style. There was no need of treading carefully, nor did I care how many sticks broke under my feet, I just went on, my bell registering every step with a clang.

But not a bird started, nor (much to my surprise) did I see one in the road. It was strange, I thought. There must be some around here, I will stand still for a moment and wait. I did stand, and in a moment the bell ceased its noise.

But my! Whirr, whirr, whirr, behind me, at the side of me, right, left and in front. One went this way and another that. I would turn for one, and another would fly, and not a shot after all! Nothing but brown streaks darting here and there among the scant oaks and pines, and some of them starting not 3 yds. from where I stood.

I must try again, I say, and be more careful when I come to a stand. Can it be, I ask myself, that my "bell attachment" is too great a success? I walk along for a little distance and stop again. I am already now looking toward the left, when whirr off to my right, and I get a glimpse of something brown going like an arrow through the pines. No chance yet. I will turn off on another road more grown up with blackberry bushes in the center. I do this, my bell attachment ringing all the time. No birds fly until I come to a stop, and then another gets up almost in front of me and swings off behind a bush to my right. In a sort of desperation (I am afraid) I fired at a shadow. I only know I heard no thud, nor did I find a feather.

I go a long distance now and no bird flies, I am in a place where I have seen plenty in days past. But this leg is tired and I must rest on this log. I have been sitting here for perhaps half a minute, my gun lying across my knees, and my noisy appendage now quiet, when whirr again, and a bird gets up almost in front of me in an open place and darts into the woods before I get the gun to my shoulder. I begin to despair of getting any now, but will make one more effort. I will keep along this path by the side of the fence, and when I get to the bars go through them and up among the short pines that border a low meadow. The birds at this season are feeding on wintergreens.

No bird flies, and I have passed through the bars and am about to cross the little bridge and make my way up to the pines. My foot is on the bridge. But, hark! Booo-o-o-o. I look through the alders, and here comes a red bull to meet me. One glance is enough. I know he means business. He does not see me yet, and I retreat through the bars and limp into the woods. But bars, I know, are nothing to that fellow, nor gates either.

I cannot run fast and I get laughing at my ridiculous plight, and this renders my race the slower. Then I try to get the bell off of me. It is betraying my whereabouts to the bull, and the harder I run the more it clangs. Meanwhile the bull is coming. His booming is nearer. I guess he is beginning to paw.

But the bell is off. It drops to the ground. I must not lose it, and down I stoop to pick it up, and off again. But, dear me, it still clangs! even worse than it did before, as Brindle when she runs. And the booming is louder than ever. What shall I do? My footsteps on something soft. It is moss. Fill the mouth of the bell is at once suggested to my mind. It is done, and now the bellowing ceases.

I am in a thick undergrowth by the side of a stone fence. I climb over it and rest. My heart is beating very fast and I am warm. But I am hidden and do not hear the bull, and then if things come to the worst I could blind him with shot. However, I would not like to serve my friend's bull in that way.

But now I am rested. I want to see this bull that has caused me so much alarm and interrupted my sport. I

will go cautiously, and wade the stream and come out by the edge of the woods and see what he is doing. Then I will pass up by the side of the fence to another pair of bars and take the moss out of the bell and tinkle it.

This plan was carried out to the letter. I knew there would be a stone wall between myself and the bull of at least 4 ft. high by 4 ft. broad. So I walked to the edge of the woods and looked out, and there was the bull quietly waiting for the strange cow to appear. He was 200 yds. from me now, and when I got to the upper bars he would be 500. Here I determined to have my fun. The moss was taken from the mouth of the bell and I gave it three or four tinkles. That was enough. Again he came as fast as he could, while I plugged the mouth of the bell and made off in very good time. That is the last I saw of him.

The bell experiment is one that I do not care to repeat. It was too successful as a help to stalking partridges and too dangerous to one who has no ambition to engage in a bull fight. STILLABOY.

MAINE'S NEW LAW.

THE Maine Legislature has adjourned, and the game laws have been vastly improved in several respects. Deputy sheriffs, constables and policemen have been empowered to enforce the game and fish laws. Any of the officers or any game warden can arrest without process any person at any time if found breaking or having broken the laws, but he is bound by a heavy penalty to use all diligence in bringing the arrested parties before the nearest trial justice for examination. All trial justices are also empowered with jurisdiction of such cases. The law against bounding is made more plain and stringent, and dogs that are known to be in the State or kept for the purpose of hunting moose, deer or caribou, may be destroyed and the owner fined. Cow moose are protected at all seasons by a fine of \$100. The having in possession of any game in the legal close season is made a penal offence, but provision dealers, having a place of business in the State, may have on sale at retail during the open season, one moose, two caribou and three deer, which they are permitted to retail to their trade. When these animals are used up they may replenish their stock with the same number again. Transportation is forbidden of moose, deer or caribou in the State, except openly and properly tagged with the owner's name and residence. Transportation of partridges from the State is forbidden at all times. These birds can only be had in possession to be used in the State, and then no person is permitted to have more than thirty at one time.

The fish laws have been so amended that the spoon hook, for taking trout or landlocked salmon, is not prohibited, or at least it is not included in the list of prohibited articles, as it was in the old law. The new law gives the proceeds of fines for infractions to the cause of fish and game protection in the State. These fines do not go directly to the wardens or Commissioners, it is true, but the trial justice who imposes the fine must immediately pay the money over to the county treasurer where the case is tried, and the county treasurer must in turn immediately pass it over to the State treasurer, who must accredit to the fish and game fund, to be used in enforcing the laws. This gives the money virtually for the enforcement of the laws, but removes it from the nature of a bribe direct to the wardens and officers. Perhaps this is well, for the reason that there has been a good deal of complaint in the past that the zeal of wardens and officers has led them to commit injustices for the sake of a share in the fines. But the incentive of a reward direct is removed. The game and fish wardens are to be appointed by the Governor and Council, on the recommendation of a majority of the three Commissioners, and they are to hold office for three years, unless sooner removed for cause. They have the same power as sheriffs, so far as the enforcement of the game and fish laws are concerned, and receive the same pay. It is also provided that no person shall use any sort of explosive or poison for the purpose of taking fish, under a penalty of \$100 and two months imprisonment in the county jail for each offense. SPECIAL.

"PA'TRIDGE."

FRANKFORT, Ky., March 22.—*Editor Forest and Stream:* A writer in your issue of March 19, from Kirwin, Kansas, asks the difference between ruffed grouse and partridge or patridge. Your reply, to my mind, "ain't altogether satisfyin'," as Jeems Mackerel would say, after feedin' on pickerel, "it don't altogether fill the aching void."

I've hunted partridge since I was old enough to lift a gun on a straight line—and don't know but what even before that I rested on a stump or rail fence to get a bee line on a squirrel. But the partridges I hunted and the ruffed grouse or partridge you are talking about are not the same thing, by a long jump. In our country—down here in old Kentucky—partridges, except in mating season, go in flocks or coveys from 8 or 10 to 15 or 20. Some people call them quail—that is, people from other States, and what right have they to name our game birds. Hasn't a man a right to name his own children and his own horses, and why not our wild game? If your mind is bent and fixed on calling a ruffed grouse a partridge, and nothing else, why can't I call a partridge a partridge, and nothing else?

Seems to me there is in your reply a scent of boyhood days coming across the clover. That's the way you were born and raised, and that's the way, consequently, you are going to have it. Well, I was born and raised where ruffed grouse were never heard of and where the thing you call partridge were never known—unless it was hiding under the nick-name of "pheasant." May be it was.

Down here we call a little striped animal that is found in the Michigan woods by the thousand—a ground squirrel. Up there they call him a chipmunk. Down here we call a little stream 6 ft. wide a branch or creek—up there they call it a river. Down here we call a pool of water 100 yds. long a pond—up there they call it a lake. Down here we call a brown-colored, long-billed, uneatable bird that hangs about muddy banks a "white-poke"—up there they call it a water-hen. Down here we call a comely, eatable fish with a full optic and golden, hickory or lead color, a salmon—up there they call him a wall-eyed pike. When "Kingfisher" was ruminatin' down in Tennessee a year or two ago he caught a fish known universally down there as a "jack-fish." Sending it to one of your big scientists, he pronounced it a "muscalong."

Now, who's goin' to give way and surrender his natural

born rights? I've seen partridges by the thousand and killed 'em by the hundred—in fact, with the help of another Kingfisher, have killed as many as 20 out of one covey (nary one on the ground) and what's the use saying they weren't partridges? If a ruffed grouse can be a partridge, why can't a partridge be a partridge?

I believe in equality on game matters—equal rights to all and exclusive privileges to none. If a Kansas man calls a certain bird a ruffed grouse and the FOREST AND STREAM calls a certain bird a partridge (in the memory of shootin' days) and a Kentuckian calls a certain bird a partridge—who's right and who's going to win the pot?

It don't make any difference if the birds are not exactly alike. What I'm after is, who's got a right to give the name and call them by the name they give? Aren't we all sovereigns—and can a sovereign be hampered on the matter of partridges? From the time I was born till I got to readin' books published somewhere else, I never knew the plump, neat, shy, quick, toothsome bird we found in the stubblefields, woods and briar thickets as anything else than a partridge. I claim that name as a natural, indefeasible, undyin' right that shall last forever and ever. If a woman on "Hell-for-Sartin" Creek, in Kentucky, calls her offspring that kicks and yells as she spans him, a "brat," and an Indiana woman calls her offspring "a baby," and a New York woman calls hers "an infant," and a Montana woman calls hers a "pappoose," who's goin' to hinder 'em or make 'em afraid? Who's goin' to swear they don't know what they are talkin' about? If there's any discrimination at all, it ought to be given to the one who can show he first named the bird and gave it identity, and let him crowd out the balance. If that proposition is accepted I'm goin' to strike for Dan'l Boone, and Simon Kenton and the other buckskin fellows who came from Virginia, until I reach George Washington, and that ought to settle it. If Noah Webster is mixed on the partridge question, as our Kansas friend says, ain't every other man entitled to his free opinion in this glorious county of ours?

Why, up in Vermont they call a cow a ke-ow; down in East Tennessee they call a regiment a reegement; over in Indiana they call pies cookies; up in Pennsylvania they call a polecat a skunk; over in Connecticut they call a bar a bruin; and in West Virginia they call silver perch by the name of Campbellites. Then what's to hinder me from stickin' to things as they were and callin' a partridge a partridge, or if you want it that way for euphony sake, a pa'tridge? OLD SAM (of the Kingfishers.)

[Reference to a map of the United States hanging on our office wall shows that Rockingham, N. C., lies southwest from Frankfort, Ky., in a beeline less than the width of this line of type. If "Old Sam" will buy a ticket for Rockingham and there hunt up our correspondent "Wells," he will go back to Kentucky and ever after call his "partridge" a "Bob White."]

TO HELP OUT THE POT.

A recent dinner of the Boone and Crockett Club Mr. E. P. Rogers, of Hyde Park on the Hudson, exhibited a very neat device, of his own invention, by which the big game hunter can without change of rifle shoot birds without making noise enough to disturb large game that may be near at hand. All large game hunters know that it often happens that days may elapse after starting into the woods or mountains before any fresh meat is killed. It is therefore the practice of some hunters to carry a shotgun or a small rifle for the purpose of killing grouse, which are frequently met with in hunting. It is a bother to carry a shotgun, which is very noisy, and it is a bother too to carry a second rifle. To do away with the need of a second gun Mr. Rogers invented the attachment which is figured below.

It consists of a solid steel shell with a chamber in the butt large enough to hold a .22cal. shell and a rifled bore, very short it is true, yet long enough to carry the .22cal. ball with reasonable accuracy for a distance of 10 or 15 yds.

Mr. Rogers has used this apparatus with great satisfaction and success, though of course the range of the little ball is comparatively short. This is not important, however, when we consider that in a wild country birds, whether they are ruffed, blue or Canada grouse, are extremely gentle.

With regard to the device Mr. Rogers writes us as follows:

When hunting in the Rockies and Canada, it has been a source of considerable bother to have to lug along an extra outfit for feathered game, generally a .22cal. rifle, and while moose hunting one fall, when there were lots of partridges about, it occurred to me that a reducer could be made that would obviate the above difficulty. The accompanying sketch of a grouse illustrates its success and its execution. The reducer shown herewith is for my .45-85 rifle. It is 2 1/2 in. long and weighs 1 1/2 oz. It discharges a .22 central fire cartridge. I carry 4 to 6 of these steel shells loaded in my belt with the larger rifle shells, and before the last one is fired my Indian can have the discharged ones reloaded and ready again. I have fired over 100 shots from one reducer. I should never think of going after big game without a supply of these useful little fellows to "help along the pot."

SIX YEARS UNDER MAINE GAME LAWS.

IV.—ON THE WASTE OF GAME BY SPORTSMEN.

Editor Forest and Stream:

I think that in my last paper I brought forward evidence enough to show that sportsmen from outside the State have been influential, if not mainly efficient, in bringing into the code of Maine game laws many of their present features. I asserted that, though equally responsible with us for the proposition and framing of these laws, sportsmen as a class had brought discredit upon themselves by inexcusable violations of the laws, involving the waste of large quantities of game and that, moreover, though this was known, they had not been held to account for their deeds in the same way as residents of the State—two circumstances which have aroused bitter feelings against sportsmen, the first because it is a direct affront to our ideas of economy, the latter because of its unfairness.

That laws have been proposed and partly carried through by outsiders no one will have the temerity to deny in the face of the facts that might be furnished, but it may be claimed that I have not proved either the waste of game by sportsmen or the partiality in the execution of the law. For the latter, since the Commissioner's silence may be taken as presumptive proof of the assertion, it is enough to ask if any one ever knew a sportsman, visiting in the summer or fall the section of which I write, to be arrested on evidence that the warden gained personally in the woods without the aid of an informant, excepting only that case at Gassobeeis where the three wardens arrested, by mistake, on a warrant sworn for "Jonathan Darling and others," three sportsmen who gave their names as Doe, Roe and Poe, supposing that they were capturing Darling also, who proved not to have been of the party at all. Rarely wardens have gone into the woods in the fall to make seizures of hides, and a few times to Niatowis to watch for Darling; but none have been stationed at important points to patrol the game country and prevent the illegal destruction of game. Prevention never has been sought, but only the occasional capture of an offender after the harm was done.

On the former of the two points—that sportsmen kill large quantities of game illegally—I can satisfy even the sportsmen themselves. They will hardly challenge the statement that nearly all the game that is wasted is killed by non-residents—in summer, sportsmen; in winter, Canadians. But before taking up this point, a word may be necessary to explain why residents of the State seem to put less stress on the illegality of breaking game laws than on the wickedness of wasting game.

In our eyes, however good it may be, a game law is not founded on moral distinctions; to break it is a misdemeanor, but not a crime nor a felony, and no wrong is attached to the violation when it is done to supply necessities. At the most, it is a transgression of a standard put up arbitrarily, whose violation involves no moral wrong doing, except the technical one of acting differently from the tacit agreement made at the time of its enactment. That this is a wrong is not to be denied; but here comes in one of the bad effects of having laws of doubtful origin. With the increase of the conviction that our laws have been tampered with by those outside the State, has spread the denial of the moral authority of those laws, until at present it is frequently asserted that it is not wrong to break a law which was not made by one's representatives. That the laws are good, in the main, does not materially alter the public opinion on this point. The present situation is sometimes compared to that in Boston just before the Revolution, and it has been not unwittily said that the cause of the discontent is the same as then, *taxation without representation*. Be that as it may, there is very little compunction felt here about breaking a game law when any one wishes to do it—sportsmen and residents are at one in this. But the residents are restrained in one way which does not seem to affect visitors. The people of Maine consider it a sin to waste food. They might break the law with untroubled consciences; but they could not persuade themselves that there is any excuse for wasting what they got, even if they obtained it legally. Sportsmen evidently do not feel so, and here arises a difficulty. To illustrate: We can understand perfectly the temptation to a sportsman who sees a cow moose splashing through the hilly pads a few rods away—how the destructive instinct of curiosity, as in a child, almost forces him to shoot unless there is a wholesome certainty of detection and punishment—that is the temptation to an illegal act. But how a man can shoot at a moose when he knows he can use but 50 lbs. of the meat and that he must leave several hundred pounds equally good to spoil, is beyond even our imagination; that is a positive sin, and if the man is a man he will not do it. We never forgive those who have done it. We never quite trust them afterward. The man who has not sufficient self-control to hold himself from taking life unnecessarily, lacks the poise which makes a man well-balanced and trustworthy, and by a subtle undercurrent of thought is set down as lacking courage a-l-o. He is a "sport" (the word is abominable, but it supplies a lack and tells the kind of man meant and the feeling entertained toward him).

The mistake that seems to have been made by many visitors is that they have paid for the game and are at liberty to get as much as they can—as if it were a lottery, the amount of the prize not depending on the value of the ticket but the luck of the drawer. We claim, and we certainly are right, that they have paid nothing at all for the privileges they enjoy, and have no right to any more of the game and fish than they can use or legally carry away. They have paid the railroads a certain sum—for transportation; they have paid the hotels—for board, which they must have paid at their homes if not here; they have paid the guides—but it was for transportation and personal services. If they had been capable and willing to undergo the hardships, they might have walked hither carrying their own packs and eating wayside berries, with theoretically no expense to themselves. Would they have been paying for the game then? Not one cent has any one paid for the right to fish and hunt; it is a gift from the people of Maine. We say that the sportsman has no more right to kill game on account of what he pays out while he is here, than he has to shoot farmers' sheep and cows when he is on a railroad train on the score that he has paid for his ticket and meals. Whoever owns the game, the man who lives outside the State certainly does not; but he is given the same rights which the prob-

able owners assume for themselves—the right to feed himself economically at a certain season, a limit being set which is supposed to be liberal enough to provide for all his necessities. It is considered here that it is an un-courteous act to take all a man has because he offers all any one wants; and so when a sportsman kills a moose where a deer would serve him, or a deer when trout and partridges would suffice, he is doing a wrong act even though the law allows it, and an outrage to hospitality.

This is the ground of objection to waste of game: First, morally wrong; second, ungrateful. That the charge of sportsmen wasting game is not unfounded will be proved. Instead of giving individual instances for each year, I will abbreviate by quoting from the Commissioners' reports and *FOREST AND STREAM*, when I know that the statements agree with facts that have come to my notice.

The Commissioners' Report for 1883 says:

We have been credibly informed of three moose wantonly shot down in hot August weather by a party of whites (we will not clear them) who have the trophies could not be pleased as a temptation, as but one bore horns. Of other as flagrant cases, committed in the same region, we are in possession. The destruction of this valuable game is greater by residents of other States than by our own, while arrests and convictions are mostly of our own citizens.

The Commissioners' Report for 1884 says:

All the severity of remark that the Commissioners felt warranted in uttering last year in relation to the acts of summer visitors, has been more than borne out, more than confirmed by the experiences of the year. * * * We again repeat, the meanness and infamy of the acts seem to be in almost direct ratio to social position, education and profession. * * * The law has been better observed by our own citizens than by visitors from other States.

This is supported by what "Special" says in *FOREST AND STREAM*, July 10, 1884:

Concerning game protection in some sections of Maine, matters are not just what they should be. * * * Just such sportsmen are causing the friends of game protection a great deal of trouble. They demoralize the worst and lowest class of the guides with their money. They care nothing for the future of the game; they are not citizens of the State; their only object is to kill a deer or a moose and come home to be regarded as a great hunter by their friends.

In *FOREST AND STREAM*, Oct. 30, 1884, "Special" says:

There has been some hunting of deer with dogs, but generally by persons living out of the State, and the law fails to reach a poacher of this class. He kills a deer in close time or with dogs and escapes from the State; his crime is regarded as of too small magnitude to bring him back by requisition, and he steers clear of Maine soil ever after. * * * A few cases are also being worked up by the authorities where deer and caribou have been killed before the season opened. These cases are also generally from out of the State.

Because the Commissioners and "Special," who has always exactly reflected their opinions, have ceased to speak thus plainly, it may have been supposed that the evil has ceased within a few years. It has not. It has increased proportionately to the increase of the visitors if not faster. Fish, it should be said, are not wasted as formerly, but in the palmist days of skin hunting the slaughter of moose sometimes was no worse than it has been this year, and fewer deer and caribou were killed then because there were almost no deer and caribou in the State. Leaving the gap between '84 and '88 because it would take too long to give the history of those years, I may come to what I have seen myself in 1888 and 1889. Of course, my own experience is very limited, and would be worthless if not borne out by the testimony of many others.

We were in the woods these two years in the months of August and September, when it is illegal to kill any game animal. We traveled as rapidly as possible along the main routes, not going into the side streams and remote places where sportsmen were going and were at that time staying in numbers, and where they did most of their hunting. We endeavored to ask no impertinent questions of those we met about their business or what they had seen. And yet in 45 days, of which 5 were Sundays, when we did not travel, 8 were spent in travel on railroad and steamboat, and 7 days' time lost by foul weather or other circumstances which kept us within a few rods of the tent, leaving 30 days of actual travel, we knew of fourteen violations of the game laws, which may be tabulated as follows:

Four deer, wholly saved, by residents of the State.
Two deer, at least partly saved, one by resident, one by non-residents.

One deer, probably partly saved, and probably by residents; the names were left, but not where they lived; the size of the party would indicate that most of it was eaten.

One deer, mostly wasted, by sportsmen from New York.
One caribou, all wasted except one hip, by sportsmen from outside the State.

Two deer, without even a pound of meat cut from them, killed by "sports."

Three deer, moose or caribou, not seen but smelled. From the stench, probably the whole, or nearly the whole, was wasted; from the location, off the line of travel of residents and far off from any houses, probably killed by sportsmen.

All but the last five were actually seen, and of the last three we had sufficient olfactory evidence; the two deer wholly wasted were shot between Aug. 22, when we passed down the West Branch, and Aug. 27, when we returned to Chesuncook, where we were informed of the case by one who had examined the deer carefully, and said that they had no mark on them except the bullet holes. We also saw trout and whitefish left to waste—not even thrown into the water where the eels could get them.

This is my own experience. I have compared it with that of others, and will present some extracts from letters giving the opinions of men whose information is probably as great as that of any man in the State.

This comes from an experienced woodsman, not a guide, living at the foot of Moosehead Lake, and so situated that he knows what is done in the woods at all seasons:

I think there is a great deal of large game killed and wasted by summer visitors. What is killed by our own people is made good use of, which is far better than some of the sportsmen do, as they shoot it down and never touch it. I don't think there are many fish wasted by sportsmen; the guides look after this pretty well.

This is from the head of Moosehead Lake, a point which seventy-five out of every hundred who go into the great game country of the West Branch, Allegash, and East Branch must pass. It contains a good word for sportsmen which I am happy to repeat. The writer's knowledge and veracity cannot be doubted:

It is my opinion that ten times as many moose and deer are killed in the summer months as there is killed in open season and crust-hunting together. There is a growing tendency among the better class of sportsmen to come in the open season. There were more parties left Kineo for the woods after Sept. 25 this year than any two years before.

One reason for this probably was that the full moon came very late in the month, which made moose calling begin later than usual.

This comes from the neighborhood of Chesuncook:

Nine-tenths of all moose killed here and near Chesuncook are wasted except skins. I knew of the last season of more than twenty-five moose skins being taken out to sell and only a part of them were brought out to use.

It may be said that probably most, if not all, these moose hides were taken by one man who stays around Chesuncook. He has killed this year certainly twenty, probably thirty moose, and some reports which investigation has disproved would make the number much higher. This shows who kills the moose? Hardly. As usual the man is not a native of the State, but in this case happens to be a bumner from the Provinces. Our native-born white hunters do not kill game to waste. As the man who wrote the letter quoted from above, says:

People living here, citizens of the State, do not kill to waste, but Canadian hunters do, and most of the moose hunters are Canadians.

A guide who has been a great deal on Passadumkeag waters, writes:

Last summer more than one hundred deer were killed and wounded on the Passadumkeag Stream in the months of July and August, and I saw lots of them rotten on the shore.

Although not so stated, this must have been done principally by sportsmen. The dogs do not go to work so early, and do not run deer into the streams but into the lakes. The fact of the deer being killed on the stream shows that they were shot while feeding in the water. Settlers would not have left the deer to spoil after killing them. I have been told of two sportsmen who went to this region to fish in July, and who killed six deer in spite of all that the guide could do or say against it. When we were in there we saw no sign of waste, except the fore-quarters of two deer which had been skinned out and left. Most guides, it may be said, would not call this waste, because the fore-quarters of a deer are small and light compared with the "saddle," and are not as good meat.

Instead of quoting what I have received from Aroostook, I prefer to repeat what some one who signs himself "Backwoodsman" writes in *Shooting and Fishing* for April 2, 1891: the sentiments are the same:

Almost all of the violations of the law in summer are done by tourists and fishermen while going the rounds of our lakes and rivers. They are armed with repeating rifles, and shoot at every living thing they see, whether it be a nursing doe or a chickadee. This is no fancied sketch, but plain, unvarnished facts, and I claim these are the most despicable of poachers; for what they kill is left to rot; while the native crust-hunter usually takes his ill-gotten gains to his family, and in a good many cases is the only meat these poor folks have through the long, cold winter. The latter class are the ones usually caught, as they make more tracks in snow, while those on the water, in a canoe, with a good bait purse to bribe the guide to silence, go un punished. As a general thing, there has been more poaching the past winter than usual. The law violators attempt to justify themselves by saying if they do not kill the game, the tourist will.

It certainly is true that more game has been killed this winter in close time than for many years, but it has not been by accident nor entirely because the snow has been deep. It is an avowed retaliation for the enormous waste of game last summer and fall by sportsmen. In November I knew as well that it would be done as I do now that it has been done. Any one who was in the woods last fall could not fail to predict it if he knew anything about the waste and the feelings of the people. And next winter the same will be repeated unless sportsmen reform very suddenly.

Concerning the waste of game in 1890 by sportsmen, it is enough to say that it has been unparalleled. Without touching at all upon what has been done the length and the breadth of the State, I will give a few facts regarding what has been done in the immediate neighborhood of Chesuncook Lake. And I will quote from only two men, who write only a part of the cases they have known this year. I asked only these two in that vicinity for information because there was danger, if I asked many, of getting the same instances repeated again and again and thus making the case appear worse than it really was; for, of course, no one could tell whether five independent witnesses going to these different ponds and lakes saw the same cases of waste or different cases, without going into a more extended investigation than the importance of this case warrants. Therefore I call on but two who tell only a part of what they know and confine themselves entirely to cases where the meat was wasted. The first says:

I went to Duck Pond to get some fresh meat myself and I found three moose dead that had been killed some ten days there, only one hindquarter taken. Mr. Hosford and wife went to Cusabaxis Lake on Sept. 23, they found two large ones there left. I saw one left at Mud Pond and at the foot of this lake, and at Harrington other people saw the remains of six.

Here is a perfectly trustworthy man who tells of thirteen moose which he has known to be wasted, and twelve of the thirteen killed on four ponds or lakes lying within the limits of three adjoining townships. He makes no mention of deer or caribou, nor of any cases where only one moose was left in a place, except two which he saw himself. This shows that he is telling the smaller part of what he knows about. But it may be said that, since no particulars are given, a large part, if not all these, might have been killed by Jack Russell, the Nova Scotian renegade, who killed so many last year for the skins. As to the absence of names of the offenders, I particularly stated in asking the information that I wished it for publication and did not want the names; but I think I made it sufficiently clear that I wished to know of cases where sportsmen had done the wrong. We will grant that the above proves only a heartless and inexcusable waste of game; the following shows who was responsible for something similar. This writer knows nothing of what the first had written:

Last August a party camped at Mud Pond landing two weeks. It is a well-known fact that there is not a trout-fishing ground within five miles, but they were within easy reach of Mud Pond, Quaker Brook and Caribou Thoroughfare, three of the best hunting grounds on Chesuncook. This goes to show that it was hunting and not fishing they were after. In Quaker Brook I saw the body of a large deer with only the horns taken and after they left, the body of a moose and a caribou were found in Mud Pond. Near Sept. 1 two calf moose were killed at Duck Pond by a party; they lay about two rods apart. The hides and a small piece of the meat were taken. Near the last of September a party of sports killed a bull and a cow moose on Cancomgomoc Stream near Little Scott Brook. They camped till October and then brought the hides and head out openly as killed in October. The meat was left. I made a trip to Loon Lake Sept. 1 and saw a dead caribou at the foot of the lake, and got the smell of tainted meat in a number of places on Loon Lake and Hurd Ponds. This is only a few cases of a great many that have come to my notice.

Comment seems superfluous. Here are five moose, two caribou and one deer wasted. Four of the eight were

seen by the writer, and all but one are expressly stated to have been killed by sportsmen; for "a party" does not mean Frenchmen, Indians, residents, nor Jack Russell. If they were sportsmen in this case they probably were in the other, for two of the instances referred to by each man are probably inclusive of each other. The three moose which one saw at Duck Pond probably include the two which the other saw a few days earlier. The moose and caribou which one hears of at Mud Pond probably cover the moose which the other saw there. If so, there is no doubt that sportsmen were the murderers. Here are at least eighteen large game animals, principally moose, wasted in the immediate neighborhood of Chesuncook; and if I say that this is one-fifth of the waste on waters that run into Chesuncook last year, I am putting the statement so low that those who know most about it will laugh at the caution shown. This does not include what was honestly eaten whether summer or winter killed.

Besides these thoroughly trustworthy accounts, various reports have come to me from men whom I know to be truthful, but who did not actually see the game. Two different men tell of a moose wasted at Moosehorn Stream on the West Branch above Chesuncook. One of the best guides in the State tells me that his brother saw a cow and a calf sunk in the West Branch between Northeast Carry and Chesuncook, and two others tell the same thing.

Another correspondent writes me concerning what a guide and hunter told him: "—was telling me that he saw a Boston man that was guided by one Joe —, an Indian guide, who shot and killed eight deer in two days and never used only part of one of them, and then he asked his guide if he could not take him where he could find good shooting; and that was last summer. He said that he saw four big moose lying dead just as they were shot by a New York party, and if this kind of work is carried on we know that our game must play out in a short time. There are lots of moose being killed in this section." This account is almost startlingly like a story Darling published; although differing in some particulars, there is no disagreement between them. I do not present it as being absolutely correct, for I have not investigated it further, preferring, since I had the matter at a point where it would be easy to find out the real facts, to treat it merely as an example of the way that the news gets around here. That there is truth in it cannot be doubted.

If enough evidence has not been presented to show that the sportsmen who come here "have brought discredit upon themselves by inexcusable violations of the laws, involving the waste of large quantities of game," more definite evidence with names and dates can be furnished.

FANNIE PEARSON HARDY.

WHITE DEER AND BAD LUCK.—Negaunee, Mich.—In reading your valuable paper of Feb. 5, I was much interested with Mr. Hough's account of the white deer, as I had the pleasure of seeing one at Humboldt Station in this county in 1874—a 2-year-old buck as white as snow. It was shot by a deer hunter by the name of Cundy. An old Indian told Cundy it was bad luck to kill a white deer, and that the Indians never kill them as they are the spirit deer. Shortly after that, Cundy was out deer hunting. Somehow or other his rifle was discharged and shot him in the back. He was laid up a long time and came near passing in his checks. There are a number of people at Humboldt that know this to be a fact.—GRIFFIN.

LOOK HIM UP.—All readers of this department are requested to read the communication in our Trap columns of this week, regarding the mysterious disappearance of E. S. Benscotten, the well-known trap-shooter, late of Shinrock, O. For the relatives of the missing man we bespeak among the trap-shooters of the entire country, and more particularly on the Coast and in the Northwest, every effort to determine his whereabouts or his fate. Let more than idle curiosity govern in this. Will shooters of the Northwest kindly send to this office any information they may have as to E. S. Benscotten, or E. S. "Brown." He must be found.

NEBRASKA WILDFOWL.—Edgar, Nebraska, April 8.—The shooting has been fine in this vicinity for some weeks. We have had more than our usual supply of the game, by reason of plenty of water in the lakes and ponds. Canada geese, Hutchins geese, brant, snow geese, redhead, mallard and pintail ducks have been plentiful, and some of our hunters have made good bags. One of our hunters bagged a fine specimen of the whistling swan. It was quite large, being nearly 8 ft. in extent. We are expecting the dow birds to put in an appearance in a few days.—H.

Camp-Fire Flickerings.

"That reminds me."

IT was in the winter of 1870 that I made my first visit to Florida. At that time railroads were not; the Northern tourists were few in number; St. Augustine was a sleepy old town with no Standard Oil king in sight. The alligator basked quietly on the bank of the St. John, and the white plume of the egret gleamed from every swamp. Bears, deer, and turkey were abundant. At Lord's comfortable cottage at New Smyrna were five or six anglers who filled their boats daily with channel bass, sheephead and spotted sea trout. Almost all those worthies have joined the great and silent majority. New Smyrna then contained three houses and a store, and from the head of the Halifax to the Inlet there were hardly 100 people. Daytona I think was laid out that year. A mile below that hamlet lived a kind of naturalist named Chamberlain, who had a cottage on the river bank filled with skins of beasts and birds, and copper jars of alcohol containing fishes and reptiles, which he had collected for Northern museums. Like that of most men who live close to nature, his conversation was interesting and I often visited him. One day he said, "I think you have not seen my alligator. Come with me and I will show you my pet." We went to a small creek about a hundred yards from the river, winding through a hamak. At one place there was a hole under a high bank into which Chamberlain thrust a pole. The reply was a loud and ugly growl. "He is at home but he won't come out to-day." The pet was a good-sized alligator, seven or eight feet long, which C. had partially tamed by feeding

it with fish and snakes, the 'gator being particularly fond of the latter. C. punched it with the pole to make it come out, but it seized the pole in its teeth and shook it. "I think if I was alone he would come out, but he is a little bashful before strangers," said the naturalist, and we left.

The next year when I visited the region Mr. C. had moved away to some wilder and more congenial spot, where he would have fewer neighbors, and my host at the Inlet told me of the fate of the alligator. After C. left some mischievous boys at Daytona borrowed a mule with plow harness and took him to the creek where the alligator lived. They punched him till he got angry and then dropped the plow chain on his nose. The 'gator seized it at once, as is the habit of the beast, and held on to it, bulldog fashion, while the boys started the mule, a powerful animal, which dragged the alligator from the hole. Now there is nothing which a mule fears more than an alligator, whose musky odor will set him crazy. When the mule smelt this he looked round and seeing the beast at his heels he tore away homeward at full speed, dragging the 'gator after him—and, of course, the faster he ran the faster he was pursued. Up the narrow road he dashed, the 'gator bounding behind him, striking against trees and stumps at every jump, so that before the mule got to his stable the poor alligator was dead enough. As to the mule, his nerves were so shaken that he never could be got down the river road again. He smelled alligators in every breeze and was a ruined mule. S. C. C.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

NEW ENGLAND TROUT WATERS.

THE returns from early trout fishermen are not yet very flattering. The number who tried the streams of the Old Bay State on Fast Day, April 2, was good, but the water was high and the day was cold. Some of the Arlington boys tried the brook, and the result was six trout to about a dozen men and boys. They will try again as soon as the water is lower and the weather is warmer. At Waltham the boys of the club went up to the camp, but the brooks were very high. Indeed, the water was so high that it was not easy to find the brooks at all, especially where they flowed through the meadows, the best positions for trout in fine weather and at low water. Some waded the overflowed meadows, with rubber boots, and two trout were taken. This set those on shore crazy and all went in wading, but the two trout already taken were the entire result of the day's fishing. The same streams will be tried when the water is lower. On the Cape the anglers had better luck, but after all the sport was not quite up to expectations. Sea trout generally did not come to the bait or fly. It was evidently too early.

Reports from the Maine lakes are rather more favorable for an early movement of the ice than at first, though the weather is still very cold, and the last storm, which was a heavy rain in New York and Boston, was snow in Maine, and indeed the same in the western part of Massachusetts. Capt. Fred C. Barker gave me a very pleasant call the other day. He was out from Rangeley by the new route. That is, he came out on snowshoes six miles to Reddington, and from that point by the new Phillips and Rangeley Railroad to Phillips. He is of the opinion that the new railroad will soon be in operation to Rangeley, and the manager of the road, Mr. Rich, has been in Boston, and says that the completion of the road will be pushed to the utmost, and he hopes to have it running to Rangeley by the first of June. Capt. Barker is of the opinion that the ice is going out of the Rangeley Lakes early, and in this opinion he is agreed with by Mr. Bowley, of the Mountain View, and other men of long experience in that region. Billy Soule, of the Cupsuptic, has also been in Boston of late, as well as J. A. French, of the Upper Dam, and they agree that the ice is to leave the lakes early. The recent rainstorm in that region raised the lakes, which had previously been very low, and broke off the ice at the shores with considerable commotion. The rain also took the snow off the ice, and now it is more exposed to the direct rays of the sun. This will tend to melt it rapidly if the weather is warm enough. The body of snow is still very great in the backwoods of Maine, and the waters promise to be very high, a condition favorable to a good run of trout when the water does begin to subside. The best trout seasons in that State have usually followed the deepest winter snows that have caused prolonged high waters in the spring.

Trout fishing is not yet at its full height, though there was a good send off on Fast Day, April 2. But since that time the weather has been cool, and the streams have not been in favorable condition. In the mountain streams the water has quickly run down, and some of them have actually been fished at low water, though the time was early in April. A warm rain is needed to start the fishing in good shape. The best creels noted are those mentioned by Mr. John Fottler, who is authority on fish and game matters in Massachusetts. He says that from a pond in Norfolk county an angler took seventeen trout with a fly on Fast Day, an occurrence most unusual for so early in the season. Other fishermen were generally more successful with the "garden-hackle," a ground fly not altogether unknown to the early fishermen in this region. Two other sportsmen killed thirty-four trout on the same day, one of which weighed 2lbs., a very extraordinary size for this part of the country. The others of the creel were all the way from 2oz. up to 1lb.

Trap Hole Brook, which runs from North Sharon to East Walpole, was thoroughly fished on April 1, and also on Fast Day. The fishermen did fairly well. The water was low, though the meadow brooks were full of snow water. But it was plain that the hillside brooks had run down early. The trout were small that were taken from this brook. President E. A. Samuels, of the Fish and Game Protective Association, has been absent a couple of days fishing at Wareham River. He was accompanied by H. H. Kimball and Dr. J. T. Stetson. They had good sport, though not as large trout as they expected.

About the ice leaving the Maine lakes, the wise ones

have changed their views somewhat. Only 18in. of snow fell in the mountain regions of Maine during the storm of a week ago, which storm was all rain on the sea coast. This has been followed by very cold weather for April, and now some of the guides who prophesied an early departure of the ice at first, say that May 15 is early enough to expect the ice to leave the Rangeleys, while it may depart from Moosehead a few days earlier. It is expected that fishing at Moosehead will be good this year. Spotted trout are protected by statute from the ice fishermen, but the togue may be taken. It is a popular theory with the lovers of brook trout fishing at Moosehead that the togues should be all fished out, even if it were necessary to pay a premium to have them taken by the ice fishermen. But the Commissioners realize the impracticability of such action, even if it were thoroughly established that the togue destroy the small brook trout. SPECIAL.

EASTERN FISH IN CALIFORNIA.

THE current report of the Fish Commission gives a gratifying record of the successful introduction of Eastern fishes into the waters of the Pacific coast. The first black bass taken to California were carried by Seth Green, at the expense of a sportsmen's club, who placed them in Temescal Lake, near Oakland. Mr. B. B. Redding obtained the second lot for the California Fish Commission and planted them in the Crystal Springs reservoir, near San Mateo. In California the black bass will devour even the sticklebacks, which are avoided by most other fish because of their sharp spines. Russian River is said to be well stocked with black bass and it is proposed to introduce the species into numerous lakes and streams, except those which are now salmon rivers.

The introduction of striped bass into California began in 1874, when 150 young fish, from 1 to 1½ in. long, were taken over. In 1889 another shipment of this species, including fish ranging from 5 to 9 in. in length, was brought from the Shrewsbury River, at Red Bank, N. J., and deposited in Suisun Bay, at Army Point. A number of these fish have been taken from year to year until, in 1889, several weighing over 20lbs. each were caught, and in the winter of 1890 an example of 35lbs. was captured. In the spring of 1890 Mr. Woodbury found that thousands of young striped bass were offered for sale in the markets of San Francisco. He immediately secured the passage of an ordinance by the board of supervisors prohibiting the catching of striped bass under 8lbs. weight, but not before from 3,000 to 4,000 young of the fish had been sold. From this it is evident that the striped bass has become acclimated in California and only needs protection to provide the people with a valuable food fish.

The Eastern brook trout was first introduced from New Hampshire in 1876. They were hatched at the first California hatchery at Berkeley. Their introduction and hatching was continued for several years and many hundreds of thousands were planted in the streams of Alameda, Marin, San Mateo, Santa Cruz, Santa Clara and Monterey counties, also in the high Sierra Mountains, above the falls of the Yosemite Valley, on the headwaters of the Yuba and North Fork of the American River, Prosser Creek (a branch of the Truckee) and in Cold Creek at Sisson, a small branch of the upper waters of the Sacramento. In all those short coast streams, which become narrow and diminish in volume as the summer advances, they have not reproduced, but in all the high Sierra streams where they were planted they can now be found quite plentifully. A number of them were caught during the past summer in Blackwood Creek near the Tahoe. About four years ago a few were placed in a small lake on the mountain side back of McKinney's place on Lake Tahoe. Last year Mr. McKinney stated that a number of these trout had been caught in the little lake, one of them weighing 3lbs. He said they were fierce fighters and had a delicious flavor. In the winter of 1889 and 1890 100,000 Eastern brook trout eggs, obtained from Mr. Livingston Stone, of Charlestown, N. H., were hatched at Sisson and yielded 80,000 fry, which were planted in small tributaries of the Upper McCloud, in Deer Creek, and in various tributaries of the Klamath and Sacramento rivers.

ANGLING NOTES.

THE following opinion handed down by the Supreme Court of Fairfield county, Conn., January term, 1891, is of interest to all sportsmen, particularly those who lease lands for the purpose of controlling the fishing and shooting rights.

The Potatuck Club, at Newton, Conn., leased the Cold Spring Stream and adjoining land from John B. Peck and had it posted. A man by the name of Geo. H. Turner was prosecutor on complaint of a grand juror, for having entered the grounds of said club without permission for the purpose of fishing. The Justice Court before which the case was first tried found him guilty and imposed a fine. Turner appealed to the Criminal Court of Common Pleas, the case was given to a jury and the defendant was again found guilty. He then appealed to the Supreme Court of Errors, claiming that as the suit was not brought by the owner of the property, and the posted signs were not signed by the owner, the verdict was wrong and he should not have been convicted.

The court held that Turner's evidence as above stated must be ruled out, as it had nothing to do with the case. The authority of a grand juror to prosecute for a crime committed is fixed by law, and cannot be controlled by the wishes of any person who may have been affected by the crime. Neither did the question of putting in fry or of signboards have anything to do with it. It was proven that the defendant committed a trespass and he must suffer the penalty. The court rendered a lengthy opinion, quoting many authorities, and sustained the decision of the lower courts, holding that there was no error in the judgment appealed from, in which opinion all the judges concurred.

Striped bass are still being taken off Sing Sing in large numbers, one caught the other day weighed 46lbs. The smelt tried to ascend the Croton River in immense numbers, but the river was practically closed by the fykes, so much so in fact that the smelt left in disgust and went up a stream at Peekskill, where they had never appeared before in any quantity. Here they did not know how to handle them and only a few were caught in dip nets. The people of Sing Sing are now afraid that as they did not have a chance to spawn, there will be none next season.

A number of salmon have been killed in the fykes in the Hudson River, three of which were brought in at Sing Sing.

The anglers at Smithtown, Long Island, had excellent luck on the opening day. The largest trout so far reported weighed 3lbs. 2oz., and was caught by James L. Livingston, who brought in 16 trout that weighed dressed 15lbs. 2 oz., and he returned by the afternoon train to the city. The next largest caught the first day weighed 2½ pounds. But all the trout brought in were large and in fine condition. These fish were all taken in public waters.

The striped bass that are now being caught in the Hudson River between Tarrytown and Sing Sing are in remarkably fine condition. Some say that they are following up the smelt, while others insist that they do not feed at all at this season of the year. It seems strange that they should be so fat if they do not take any nourishment. Can any one throw any light on this subject? If they are feeding on the smelt they certainly ought to take the hook.

The New Adirondack Hotel League proposes to join the army of supporters of game laws; this will be a good thing and a radical change of base. If the hotels in the North Woods would only stop buying game and fish, in season and out, it would be much better for their guests. The benefit they derive from having a supply of trout and venison on their tables does not compensate for the skinning of the woods and waters by the loafers that hang around these places. These men resort to all sorts of unlawful methods, and even visit private grounds at night to jack deer and set line ponds, and are getting to be an intolerable nuisance in the Adirondack region. Too lazy to earn a living legitimately, they resort to any method to get money for rum, even to stealing baggage from the visitors if poaching fails. The next question is, will the members of this League take any steps to prevent their guests breaking the law? It is a common occurrence now for visitors to go out after deer before Aug. 10.

SCARLET-IBIS.

THE SILVER PIKE.

Editor Forest and Stream:

The article of "T. H. B." in last number of your paper on the pike family is very interesting, but he does not seem to make any distinction, only between pike and mascalonge. Now there is through Michigan and Georgian Bay country a fish commonly called the silver pike; it is brighter colored than the common grass pike and easily distinguishable from it or the mascalonge. I have had the three together, and from my own observation, as well as that of others who have seen them there is about as much difference between the grass pike and silver pike as between the silver pike and the mascalonge—that is, in looks; for eating qualities I prefer the silver pike to either. While the grass pike has that muddy, soapy taste and the mascalonge its peculiar twang something like the large-mouthed bass, the silver pike has that peculiar flavor of the salmon family which is so delicious. The common grass pike in color is green all over with green fins and green back and sides; the silver pike is generally a bright silver color with reddish fins, streaked with black, and a red dotted line when the fish is fresh caught lengthwise along its side; the mascalonge has the same dotted red line only more pronounced, blood red fins and large round spots on its sides. I sent a mascalonge to Mr. Clarke, of the U. S. Fish Commission, last year, and he pronounced it the true *Esoc nobilior*. I had quite an experience with one of those silver pike last season fishing on a small lake back of here. My companions having gone to look for some bait, and a Frenchman happening to come along that I knew, I asked him to paddle me up the lake and I would get him some fish to take home; he kindly consented to do so. I took my rod, an 8oz. lancewood and got ready, having first secured 4 live minnows. We paddled up the lake and I caught four good sized pike of both kinds and had one minnow left. I laid my rod carefully across the boat and putting on my last minnow I threw it over so as to clear the boat, keshwash! biz! went the reel, the water flew into my face and I nearly upset the boat, it was so sudden. Getting hold of my rod and taking in the slack, I struck and had him fast. My Frenchman by this time having got speech says to me: "Giminy Mr. B. that fellow was watching you put the bait on." He must have taken the bait one foot or more above the water. Having got him under control, I played him hard, forcing the fight all the time. He made one fly in the air and then settled down to steady runs and turns. Coming on to the boat he turned suddenly, and coming to the surface he must have slid fifteen feet like a bird, alighting on the water. "Giminy," says the Frenchman, "he's got his skates on." He was a plucky fellow, but he was two well hooked under the tongue and had to succumb. I landed him and he tipped the scales at 7½lbs. This made 17 I had caught that day, the largest one 11lbs. I mention this simply to show the game qualities of the silver pike. They will almost invariably break water when hooked and I have never seen the grass pike do anything but bore in the weeds and mud. The only place that we get mascalonge is off and in the mouths of rivers running into Lake Huron. I have never seen or caught one in any of our inland lakes. H. B.

ALPENA, Mich.

CALIFORNIA TROUT AT OSWEGO.—A correspondent sends us this report from the Oswego, N. Y., *Times*, of April 11, and having seen the fish pronounces them beauties: "About five years ago a quantity of California rainbow trout fry were deposited in the Oswego River here. Last year a few were taken out, which indicated that the fish were breeding. Yesterday Mr. L. Reiker took out two handsome trout at the high dam, which weighed together about 2½lbs. These fish must have passed up through the fishways, and have reached a size which indicates that these game fish will thrive well in these waters."

CAZENOVIA, N. Y., April 11.—Trout fishing opened here April 1, but only one small catch thus far. The weather has been cold and raw. Smith and Cruttenden, the veteran anglers, have their "wums" dug and packed in sawdust ready for use, and only wait for a day or two of sunshine to visit their old haunts and catch some upon whom they have a claim.—W. H. C.

SOME ST. LOUIS CLUBS.

THE shooting and angling clubs in St. Louis number thirteen with about 800 members. After a week's still-hunt I was enabled to gather the following brief sketch of each club:

The St. Louis Game and Fish Preserving Association. commonly called the King's Lake Club, is located in Missouri at King's Lake north of St. Charles. The association has under its control about 6,000 acres of land and controls one shore of the lake for about two miles. There is a large club house containing about forty rooms, ice house, garden and other conveniences. The membership is fixed at 200, and is nearly filled. There is a wide range of sport, there being both timber lakes and prairie lakes. The shooting consists of duck, snipe, quail, squirrels, and imported cons. The fishing is mostly for bass and croppie, although other fish are caught. The officers of the club are: David Caruth, Pres.; Joseph Specht, Vice-Pres.; John McDonald, Sec'y and Treas.

Grand Pass Shooting Club.—This club is located in Green county, Ill., about 100 miles northeast of St. Louis. The club owns 3,000 acres, and has a fine ten-room club house. The membership is limited to twenty-five and is full. The club grounds afford duck, snipe and quail shooting, and black bass are freely taken in the spring with the fly. The officers are: J. F. Shepley, Pres.; Frank Carter, Vice-Pres.; J. D. Malin, Sec'y.

Calhoun Fishing and Hunting Club.—The grounds are located in Calhoun county, Ill. The club owns about 100 acres of land, upon which was recently erected a new club house, and in addition controls a large slough from the river with about two miles of water front. The membership is limited to seventy-five, the roster now numbering about seventy. The officers are: D. W. McElroy, Pres.; M. Petersen, Vice-Pres.; P. J. Clifford, Sec'y; M. P. Morrissey, Treas.

Kidd Lake Club.—The grounds of this club are located in Monroe county, Illinois, and contain nearly 2,000 acres of land and lakes. The shooting is duck and snipe, while the fishing is for bass and croppies. The lake being clear water, fly-fishing is the only method pursued, and fine scores have been made. The fishing begins in June or about as soon as the shooting is over. There is a club house on the property. The membership is limited to twenty, and the officers are as follows: President, F. G. Huginin, and Secretary, Allen Glaszow.

Murdoch Lake Club.—This club was organized about a year ago under the laws of Illinois, and has a membership of fifty. The officers are: President, Thos. Couch; Secretary and Treasurer, Chas. Smith. The lake is located near Harrisonville, Ill. The club also controls the shore land around the lake, but the shooting is mostly on the water. Angling is good, especially for croppie, for which the lake has long been famous. The club put a stop to seining, and fishing has been much better in consequence.

Gilead Slough Hunting and Fishing Association.—This club is incorporated under the laws of Illinois, with a capital stock of \$7,250. Its membership can reach 290, but at present numbers about seventy. Their grounds are located in Calhoun county, Ill. The club owns 800 acres of land and controls about two miles of water on the Mississippi River and two miles on Gilead Slough. They are now building a fine club house to cost \$3,000, and an ice house is also being constructed and a cottage for the accommodation of members and their families. The shooting consists of duck, quail, snipe and rabbit; fishing, black and striped bass and croppies. Fly-fishing is also done on these waters. The officers are: President, D. Delabar; Vice-President, C. Schweickhardt; Secretary, A. E. Winkelmeier; Treasurer, Herman Schwartz.

Brevatore Shooting Club.—This club owns 4,000 acres in Missouri about 10 miles from St. Charles. It has a fine club house of 10 rooms, and as the club contains but 10 members each one claims a room. The association is what is known as a close one. The president is Joseph Lucas, Sec'y-Treas., David Rankin.

The Cuivre Shooting Club.—This club owns 3,000 acres of land in St. Charles county, Mo. They have a fine club house suitable for the accommodation of the members of the club, which number only 20. They have excellent shooting on their property, on which there are six lakes. The shooting consists of duck, snipe, quail and geese. No fishing in the lakes. The president is Geo. M. Wright, Sec'y, Geo. Dana.

The Dameron Hunting and Fishing Club.—This association, now in its fourth year, holds a State charter from Missouri good for 20 years. It is located in Pike county, Mo., and contains about 5,000 acres, mostly prairie with some timber. There are a number of small lakes and sloughs on the property which afford fine bass and croppie fishing. The shooting consists of duck, snipe, prairie chicken and quail. The membership of the club is limited to 20. There is a comfortable house on the grounds for the use of the members and also an ice house. The officers are: Wm. Clark, Pres.; E. C. Mohrstadt, Vice-Pres.; L. A. Weaver, Sec'y; Wm. Hettel, Treas.

St. Louis Hunting and Fishing Club.—This club has a membership of 100. The grounds are located in Stoddard county, Mo., and consist of 100 acres, but as the region is a very wild one, the range of country for hunting is almost unlimited. They have a fine club house with every convenience. The character of the shooting consists in deer, ducks, quail, turkey, squirrel, woodcock and rabbits. In angling of black bass, croppie, jack salmon, wall-eyed pike, sunfish, pickerel and catfish. The officers of the club are Seth W. Cobb, Pres.; J. R. Claiborne, Vice-Pres.; E. C. Lackland, Sec'y.

The Allenville Gun Club is a sort of a close communion club and has only five members, but they claim to control about 4,000 acres of land and water at Allenville, Ill., near Collinsville. They have a club house and boat house with excellent duck and snipe shooting. The president is C. W. Steinmetz, and secretary, G. Miller.

Current River Fishing and Hunting Club.—This club is located on the Current River, in southeast Missouri, not very far from Doniphan. The officers are: R. C. Barrett, President; J. A. Lee Vice-President, and R. L. Mabrey, of Doniphan, Mo., Secretary. The association was incorporated in 1887. It has spent several thousand dollars in building a club house on the Current River and in other improvements. At one time the membership numbered over 200, but of late there have been many withdrawals, and the future of the club is in a somewhat dubious condition. The shooting and fishing are both excellent in the territory surrounding the club

property, but it is somewhat difficult of access from St. Louis.

Dardenne Hunting and Fishing Club.—This club is located in St. Charles county, near St. Peters. It controls 3,000 acres of land, upon which is a fine new club house with accommodations for thirty guests. The grounds are fitted up with all conveniences for the accommodation of shooters. There is a fine kennel house, ice house, etc. The membership of the club is limited to thirty-five. The shooting consists in ducks and snipe. The club is incorporated under the laws of Missouri with the following officers: President, John C. Noble, the present Secretary of the Interior; Vice-President, Mark Taylor; Secretary, J. Shepley.

The Gilham Lake Hunting and Fishing Club, which was partly organized a few weeks ago, will probably not reach a permanent organization. The property they had in view they have been unable to obtain, and without full control of the lake the property they now have under lease would be of no value, consequently the club will not go further in their organization.

A movement is on foot by prominent sportsmen of the State for the purchase of a large game preserve in southeast Missouri. It is said that about 50,000 acres have already been purchased in the region of what is known as the "sunk lands" of Missouri. The land is mostly swamp, but is full of game of all kinds, and is probably the best hunting ground in the State of Missouri or in the West.

ABERDEEN.

AN ANGLER'S MEMORIES.

AUBURN, Cal.—Our trout season opened April 1, but, alas! 'twas the same old story. When the law-abiding angler went to his favorite stream, he found a well-worn path up and down the banks, formed by the feet of numberless law-breakers who had fished the waters, over and over again, in defiance of all law. It makes the law-respecting man's blood boil, but what can he do? It has all been said a hundred thousand times before, and will have to be said millions of times more, until the end of time—or trout. As long as every petty officer, even down to constable, is elected by the votes of We, the Sovereign People, just so long can the Sovereigns fish, hunt, or do aught else contrary to law that happens to come into their sovereign heads unmolested by any and all official action.

But it is no use "kicking." 'Tis so the world over, more or less; and I try to think with Dr. Pangloss, that "*Tout est pour le mieux dans le meilleur des mondes possibles*"—which, being (il)-literally translated, means, "everything goes."

I received a call the other day from an old Eastern angling acquaintance that I had not seen before for twenty years. He was visiting the Pacific coast and came to see me, and oh! didn't our tongues wag? When we last met it was on the shores of Egg Pond, some two miles back from Spider Lake, in the Megantic region. At that time there was nothing but wilderness in that region, the nearest settler being at Piopoli, on the west bank of Megantic, ten or twelve miles away. We had gone there as members of separate parties, to explore the place, and to ascertain the facts about some wonderful yarns we had heard about the size and numbers of trout contained in that small body of water. 'Twas only a case of "another lie nailed," as the fish were small and in very limited numbers. I bade my friend good-bye that June morning, just twenty years ago this coming June, and we had never seen or heard from each other since. Twenty years! It is a terrible gap right out of the middle of one's life. We were only thirty then, and now we are fifty, and—alas! and alas! our fishing days will soon be over.

What's that? Our fishing days will soon be over? Fie, for shame! For, lo, these twenty more years we intend to "go a-fishing," if life be spared, and when we are doddering old men the click of the merry reel and the ze-e-p of the silken line as it cuts the water, responsive to the wild dashes of his royal highness at its further end, will again send the old boyish enthusiasm bubbling through our senile frames.

And when we get too old to cast a fly in actuality we will do it in our minds and see the line go rolling out across the dimpling water until the flies drop softly down thirty yards away (there is no limit to our cast when it is done in our minds) and his lordly troutship answers with flashing leap. Ah! here comes in an advantage we had not thought of before. When fishing in our minds every cast is rewarded by a rise!

By the way, what can any old man occupy his mind with after he becomes helpless and housebound, who has never gone a-fishing? The glorious memories that store every old angler's attic will be brought out and dusted, and ranged before the mind's eye with ever new delights, and the rapidly descending road to the great unknown will be smoothed and cheered by the innocent companionship of those dear old friends. Not one memory among them all but what is innocent and happy. God bless the declining years of the honest angler!

But this is digression. My friend tells me that the fishing at Megantic has followed the dodo, the Labrador duck and the buffalo.

The advent of the railway brought the world to its doors, and its glories have departed. In the Chaudiere, Lower and Upper Spider rivers, where I have filled a creel in two hours' fishing, the angler must fish all week for the same number, and then be in great luck if he accomplishes so much. But then, "*Tout est pour le mieux*," etc.; and where nothing was once heard but the melancholy hoot of the owl or bellow of the moose, hundreds of our fellow creatures dwell in comfort and contentment.

And where it took me three days to go, in a boat mounted on wheels, the wonderful nineteenth century railway train will transport you to the same spot in three hours.

Now, dear FOREST AND STREAM, all this maundering comes from the awaking of old memories by my angler friend's visit, so you must pardon me. I promise not to do it again—till next time.

AREFAR.

HAD A SECRET.—Columbus, Tex.—Last year a fisherman came into our midst, and every night he would catch nearly a wagonload of catfish, and no one was able before or since to do it. Thinking there is a secret about it I write you to see if you can give me this secret, or put me in position to get it. Our stream has plenty of fish in it, but they cannot be caught, and the turtles and gars are bad.—J. G. B.

KEUKA LAKE.

A DUNDEE, N. Y., correspondent sends us these notes of the fishing in Keuka Lake: We have no good fishing in this immediate vicinity. Our fishing grounds we find in Lake Keuka, "The Queen of the Lakes," about ten miles west of this place. This lake is 23 miles long, and averaging from one-half mile to one mile wide. It is in shape like the letter Y, with the village of Hammondsport at the head of the lake, Branchport at the foot of the West branch and Penn Yan at the outlet and foot of the East branch. This lake is traversed by two lines of steamboats making several trips daily during the summer season, and, owing to the strong competition, the fare for a trip through the lake, or to any point thereon, is only ten cents.

This lake is well stock'd with trout, black bass, pickerel, perch and whitefish, with an occasional glass-eyed pike. Trout are caught trolling with the spoon and "Seth Green" rig, using with the last named tackle, alewives or "saw-bellies," as they are commonly called for bait. This bait is taken from the lake, long minnow seines being used for the purpose. These lake trout vary in size from one pound in weight up to twelve and fifteen pounds, with an occasional "old sander" tipping the beam at eighteen or twenty pounds. To capture one of these "heavy weights" upon the "Seth Green" rig and safely land him in your boat, furnishes an angling experience never to be forgotten. The "Seth Green" rig is made of No. 1, 2 or 3 silk line from 300 to 350 ft. in length, with from 4 to 6 single gut leaders 12 to 15 ft. long. Gang hooks are used, upon which the baits are fixed in a slightly curved position.

The favorite fishing ground for these trout is at Keuka. The season opens April 1 and continues until October 1. At Keuka is situated the Lake Keuka House under the management of Mr. J. M. Washburn, owner and proprietor. It is a well kept hostelry and a favorite resort for fishermen. Mr. Washburn always endeavors to keep a good supply of bait on hand, together with necessary tackle and boats. His charges are one dollar and fifty cents per day, or by the week seven dollars.

Last season a trout register was provided by Mr. Washburn in which the number of trout taken by his guests was recorded together with their weight. Although the season was a poor one owing to the high water and other causes, yet the grand total footed up 1,005 trout weighing 2,591 lbs. The largest trout captured was taken by a gentleman from Dansville, N. Y., and weighed 14½ lbs. No record was made of any other kind of fish. Any inquiries addressed to Mr. Washburn, Keuka, N. Y., will receive prompt attention. Guides are not necessary, though any one desiring an oarsman to row his boat while trolling, can readily secure such help at reasonable prices.

For black bass, the favorite bait are live minnows, the helgramite or "dobson" and the fresh water lobster or "crab." Pickerel and perch also take the same bait. Trolling with the spoon is a favorite way of capturing them with many. The "dobson" or "crab" are not obtainable at the lake, but have to be secured in advance from other places.

Keuka is easily accessible from either Hammondsport or Penn Yan. Railroad guides give full directions how to reach these places. The scenery of Lake Keuka is enchanting and picturesque. Tourists pronounce it the most attractive of all the lakes in western New York. Its shores are lined with cottages, while vineyards cover the slopes on either side for several miles back. The lake has become famous on account of its immense grape industry, and the large wine cellars in connection therewith. Much more might be written of this attractive body of water, appropriately called "The Queen of Lakes."

CASTALIA TROUT IN THE SNOW.

CHICAGO, April 11.—I don't hear of the snipe yet, though it must be nearly time for them to be up here. Along the Castalia stream in Ohio last week I heard of about half a dozen being seen. That is just at the lower edge of Lake Erie. And while so near to that, I must say, in re the close of last week's letter, wherein the prospect of taking a trout was mentioned, that Mr. Sadler, of Sandusky, and myself did go fishing on the club preserve on the following day, and we did catch a trout, and more than one, though the full score of those kept (the smallest fish retained must be 8 in. or over) was only six trout. I had heard so much of fly-fishing for trout on this stream in the middle of a snow storm. "I would dearly love to see a trout taken on the fly when the snow was on the ground," said I to Mr. Sadler. And a few moments later we did see one. In the snow bank then lying along the stream the brilliant fish rolled and struggled, encasing himself in the frosty crystals until he looked like no fish ever seen. But I shall tell much more of this strange stream before we close about it. Meantime the engravers must have a little time to play, they are too busy to make a picture or two of things bearing on that story.

E. HOUGH.

GAME PROTECTIVE SOCIETIES.

Editor Forest and Stream:

The Utica Fish and Game Protective Association held its annual meeting last evening. The reports of the president and secretary showed that much good work had been accomplished during the year, especially on Oneida Lake. The removal of F. P. Drew from the office of chief game protector was deemed unwise. The following officers were elected for the ensuing year: President, I. J. Gray; Vice-President, I. C. McIntosh; Secretary, John D. Collins; Treasurer, Geo. L. Bradford; Directors: I. C. McIntosh, W. K. Gilmore, W. E. Wolcott, Gustavus Dexter, Dr. C. M. Hitchcock, Ebon G. Brown, T. Jay Griffiths.

The Hamilton Fish and Game Protective Association held its annual meeting April 7, in Hamilton, N. Y., and elected officers as follows: President, A. M. Russell; Vice-President, L. B. Crowell; Secretary, E. L. Kingsbury; Treasurer, Wm. Wentworth; Directors: E. L. Kingsbury, C. M. Wickwire, Nicholas Carp, Wm. Wentworth, E. Hoostkotter, A. R. Orvis, L. B. Crowell. Although only one year old the association is doing excellent protective work.

PORTER.

UTICA, N. Y., April 9.

LEASE of St. John River for sale; splendid salmon fishing. See advertisement.—ADD.

CALIFORNIA TROUT STREAMS.

VENTURA, Cal., April 8.—*Editor Forest and Stream:* The trout season opened here on April 1, and there are more fish in the streams about here than has been known for years. It is believed to be due to the enforcement, during the past year, of our screen law, whereby all irrigating and other ditches are screened by 3/16 in. wire mesh before leaving the streams. Vast amounts of both small and large fish were formerly destroyed by being carried out in this way. Our local water supply company first put in screens for their own protection, as the fish were a constant source of trouble to them by plugging up the distributing pipes. The requirement is now a law and is being enforced in this locality.

The largest catch for the season that I have heard of so far was made by myself and two companions on April 1st, when we took out 475 trout, the largest weighing 1lb. and measuring 14 1/2 in. length. They take any of the commonly used flies with avidity, probably preferring of those I used the professor, coachman, stone and grannum.

There are, in this county alone, about 225 miles of trout streams, all teeming with the speckled beauties, many miles of which are virgin to the angler. I am to take an angling for ten days in the early part of May far back into the mountains, a two days' trip out. May tell you something about it when I return.

A. J. C.

SQUETEAGUE is the name of a club of happy lovers of the gentle art who rendezvous at Great Kills, Staten Island, where mine host, the amiable Judge Collins presides. This club was organized a year ago by five men who regularly journeyed to those waters in vain effort to lure the wily squeteague or weakfish from his lair, and the organization resulted from a conclusion these men came to, that in union there was strength—hence the club. The success of the club is proven by its growth, and at the annual meeting held in March last there assembled at the club rooms over twenty of the most widely known of Staten Island's Pilgrims. The present officers are: John M. O'Brien, President; Benjamin F. James, Vice-President; Thomas J. Nolan, Treasurer; Geo. C. Meyer, Secretary; Geo. W. Graham, Sergeant-at-Arms. The members present beside those mentioned above were: Judge Jas. P. Collins, C. R. W. Davis, Peter J. Conlan, Edgar Whitman, Edward Milligan, Harry Kalb, Clifford W. Pullis, John Klockmeyer, George Shapley, Harry W. Graham, Samuel A. Beatty, Fred Jordan, Sim O'Donnell, James Murray, William Kelly, Josh Ward, Esq., all of whom after adjournment proceeded to Klockmeyer's Hall to partake of their annual banquet. Covers were laid for fifty, there being a numerous contingent of the Fishing Bruders, the crack organization of the Eleventh Ward. The hours sped by merrily as the boys congratulated each other on the near advent of spring, but the lionized man of the evening was the "Judge," who has the enviable reputation of having "never told a lie." The Squeteague Club house at the Great Kills adjoins Collins's Hotel, and the members will always be pleased to welcome their similarly inclined friends.—Geo. C. MEYER, Secretary.

ANGLER'S WADING RIG.—Staunton, Virginia, March 30.—*Editor Forest and Stream:* At the risk of telling so experienced a sportsman as Mr. Hough something he already knows, permit me to say in answer to his query in FOREST AND STREAM of the 26th inst., that the wading rig most in vogue in the very rough, stony mountain trout streams of this State consists of a pair of rubber or silesia wading stockings or pants (stockings preferred as they are long enough for all practical purposes and not so hot around the waist and body as the pants) without boots, over the feet of which a pair of heavy cotton or yarn socks is drawn, over which is worn a pair of the coarse heavy leather sewed shoes known as "stitch-downs," the soles of which are plentifully studded with large hob nails. The practice of cutting small slits in the leather uppers of the shoes close to the soles to let the water out has been discontinued by our fishermen, as it has been found that the sand and gravel will work in through the holes, to the serious detriment of the wading stockings. Care should be taken to have the points of the hob nails inside the shoes well clinched, both to prevent them from working out and from cutting the stockings. A light leather insole will be found advisable also. Several years' experience with this rig by myself and all my fishing acquaintances has demonstrated its entire utility and reliability and I can confidently recommend it to Mr. Hough as worthy a trial.—COMMODORE.

Fishculture.

STATE OYSTER POLICY.

AT the public meeting held in Baltimore, March 18, to consider measures necessary for the restoration of the oyster industries of Chesapeake Bay, Hon. Marshall McDonald, U. S. Commissioner of Fish and Fisheries, outlined the policy which the State of Maryland should pursue in establishing preliminary conditions of successful enterprise in this direction. We give the following abstract of his remarks:

"The lands under the tidal waters of the State should be placed under the same conditions as to production that now exist for the farming lands above the tide. As far as practicable, they should be placed under private ownership and control, and individuals should be invited and encouraged to invest their energies and capital in oyster farming by having first assured to them that security of tenure which must constitute the basis of all future development. The man engaged in oyster production should be harassed by no imposts nor special supervision. He should be treated as the farmer, protected in his rights of property, and his investment required to bear equally with the lands above tide the burdens of taxation. The State should seek to derive its revenue not from any special tax or from extravagant prices for sales or entry, but from the vastly increased valuation which would be given to these lands when the opportunity for their improvement is afforded.

"The first step in dealing with this matter intelligently would seem to be an actual careful survey of all the waters of the State—not only of those areas which are now oyster-producing or are planted, but that much larger area from which at present no oysters, either natural or planted, are drawn. The object of this survey should be to make a classification of the grounds into: (1) The natural beds, or those areas of the Chesapeake over which the oysters are now so abundant as to furnish steady production and employment for the men engaged in the fishing; (2) the grounds which

are now available for planting and which are under actual cultivation; (3) that extensive area of marsh and swamp and muddy bottom which now is not oyster-producing, but which, under the intelligent use of capital and the application of improved methods, will doubtless in the future become fully as productive, if not more so, than the natural grounds or those at present planted.

"The area of the natural oyster beds should be carefully limited and defined by law, so as to indicate clearly to all without the possibility of mistake, those portions of the Chesapeake in which the general fishing on public grounds will be permitted. Having thus appropriated to the public use the area so indicated, all the rest of the land under tide should be thrown open to entry under such conditions as the State might prescribe.

"In the case of planted ground, which has at present a market value, the State might consider it reasonable to exact a good price for the privilege of conversion of existing leases or franchises into fee-simple holdings. In the case, however, of that broader area which at present yields nothing to production, it would, in my judgment, be wise on the part of the State to permit its entry under conditions similar to those which are prescribed for the public lands of the State above tide. The great oyster production of the future in the Chesapeake and elsewhere will not be from natural beds, from which, at present, the chief supply is drawn, nor yet from the existing planting grounds, but from those vast mud flats and salt marshes now blank and barren, but which, through the agency of private enterprise, and by judicious investments, will be converted into productive oyster fields, which will yield a harvest more abundant and a usufruct more generous than the richest above the tide.

"When we consider the vast extent of this area which is now valueless, and the possibilities for production which may be realized by judicious exploitation, it does not seem unreasonable to expect that the inauguration of a policy by the State such as I have indicated, and such as Connecticut now observes, would in the end carry the oyster production of Maryland waters to many times what it is, and that the increased revenue to the State which would come from the enhancement of values would be a generous equivalent for the surrender of her right of eminent domain."

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Minhall, Secretary.

April 15 to 18.—Dog Show of the Southern California Kennel Club, at Los Angeles.

April 23 to May 2.—Dog Show of the California Kennel Club, at San Francisco, Cal. H. L. Miller, Sec'y.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.

FIELD TRIALS.

Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. O. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

BOSTON DOG SHOW.

COLLIES.—(MR. WATSON).

Report by Mr. Mason.

If the breed has improved any during the past two years I fail to see in which points the improvement comes in. The infection that rushed to the front a few years ago seems to have gone off on another tack and collies to-day are a one-man show, with Mr. Harrison first and the rest nowhere. He has in his kennel about a dozen dogs that can beat all others and as breeders show not the slightest judgment in mating their bitches he has a walkover for all prizes. Mr. Terry tried to breed good ones and failed. Mr. Shotwell experimented and proved a failure, and so it has been with others. Not until some wealthy person with more dollars than knowledge of dogs steps in and buys up the Metchley Wonders can Mr. Harrison's victorious march be checked. There is mighty little honor in winning for there is nothing to beat; at the same time the fancy owes Mr. Harrison a word of thanks for having set the pace, even though it is too hot to follow. There is good—the best—collie blood in America, but it has not been used with judgment and the same reckless mating that has ruined the type of pointers is doing the same thing for collies. Keep it up another twenty years gentlemen. There is nothing like experience. At this, one of the very best shows in America, there was not a good specimen outside of the Philadelphia Kennels and it was the same thing at New York. What a prospect. But after the thousands of dollars that have been invested in the breed is not this a disgrace? Advice is of little use. It is forgotten as soon as it is read. A man will buy a bitch by the woolly-coated Pomeranian Robin Adair. This bitch he will breed to The Squire. Another will buy a sterling bitch by Scottilla out of Flurry II. and breed it to Old Scot, a mongrel half-bred Gordon, because "my wife likes the color." When the puppies come they are shown and get nothing. Then there is music in the air and the owner rushes around the show for four solid days showing everybody that will talk with him a printed pedigree three feet long and asking how much he (the judge) knows about collies.

Roslyn Wilkes in challenge dogs and Flurry II. in bitches had no competitors and those that tried conclusions with Maney Trefoil and Roslyn Conway in the open class for dogs might just as well have been at home. Robley, third prize, I thought lucky in getting the place. He is called a light sable but is really fawn color, there being no dark shading on any part of him. His head is of Esquimaux character, with wrong expression and ears not properly carried. He falls away very sharply from the hips, has a nasty ring tail and is rather soft in coat at present, but being a youngster will improve in that respect. He has strong legs and fairly good feet, with, light eyes and wrong expression; ears not well carried; not right just before and below the eyes, good muzzle, stifles and hocks not perfect, loin would be improved by more arch, good forelegs and feet, plenty of coat of better than average texture, lacks quality and character. Orphan Boy, he, by Strephon—Flossie, is a much better specimen, but then his right name is Scottilla II. It appears that Mr. Harrison gave this dog to his doctor, who lost him, and the dog found his way to Boston in charge of Ben Lewis, who brought him on for the supposed owner. Jarrett, who handles Mr. Harrison's dogs at the shows and manages his kennel, knew about Scottilla II. having been lost or stolen, and when he saw the dog come into the ring he quickly had what the only German designates his "beagle heyes" upon him and he soon let Ben know that his charge was not an orphan. It was said Mr. Watson did not wish to give the reserve or a prize to a dog that was really not eligible to compete, but about this I cannot say. Anyhow, Scottilla II. was about third best dog in that class, but I thought him very cleverly pressed by Scot II., he, who may yet beat him. Barrington Maney Trefoil this was the best coated dog in the class. He

is rather coarse in skull and cut away too much below the eyes, also defective in feet, but for type, character and other essentials he is far ahead of Robley and Duke. Fordhook Climax, he, is round and coarse in head, cut away too much below the eyes, legs not in good position, length and arch of loin would improve him, ring tail, coat behind withers too short and open, fairly good ears, proper legs and feet, dark sable with white frill. Of the unnoticed ones Silver King is light in eyes, coarse in head, not quite straight in front, coat rather short and too open, ears only moderate, good feet and plenty of strength. Scott is a vicious, bad-headed brute, "date of birth, breeder and pedigree unknown." Lothian Laddie lacks in coat, head and lips, and has terrier ears. Sootson had a fit just before the judging commenced and did not compete. In bitches Roslyn Dolly fairly outclassed all others. Roslyn Primrose, second prize, is a light sable and white. Eyes too light, muzzle near eyes not right, ears not well carried, bad feet, specially the hind, bad stern, not properly coated, scanty in body coat. Flurry IV., third prize, is a sandy black and tan, bad eyes, forelegs set too close, with elbows tied; ears not just right, they are at times almost prick ears; knees showing weakness, do with more bone, fair good body and coat, shows quality in head, undersize. Lucy Locket, vhe., had been sent home and I did not see her. Miss Nancy, second in puppy class last year, might have been second in this class had she been in coat. This was a weak class. In puppies there was only one show dog, Roslyn Dolly. The President's cup for best collie in the show was awarded to Maney Trefoil. After a careful examination of the competitors the judge landed, I think, on the wrong one and it was not until I had given them an equally careful overhauling that I felt sure that both Wilkes and Dolly could beat Maney. The latter was clearly the best-coated collie in the show, but his head, never a very good one, has gone off considerably and his ears were dangling down in poor style. He beats Wilkes in coat and color of eyes, but I think nowhere else. The former is not quite so typical a dog as I expected to find after all that has been said and written in his favor. He is, however, a good one, and only the best of them can beat him. If made to order I would have had him darker in eyes, better in expression, a bit more up in ears, more level in back, more arched in loin and, of course, better in coat, which is his weakest point. He has a good type of head, stands on proper legs and feet, is good behind, weak nowhere, stands well and moves well, is of a useful size, of much better type than Trefoil and shows considerable sheep dog character. But my choice for the trophy would have been the understated Roslyn Dolly, whose exquisite front places her so far ahead of the others that I do not see how they can get back behind what they lose in front. Trefoil beats her in coat and size, but nowhere else, and Wilkes has her in bone and size, and perhaps a little behind the short ribs, but for character and quality of head, expression, set and carriage of ears, she has, in my opinion, no equal in this country. Then how about the "old lady," Flurry II.? She is not quite out of the hunt; in fact with Trefoil's head and ears as they appeared to me I would have placed her over him. Mr. Watson has been breeding collies many years and has seen the best of them. His opinion is entitled to respect. He may be right; but my decision, taking the dogs as they appeared at this show, would have been: Dolly first, Wilkes second, Flurry II. third and the winner, Maney Trefoil, fourth.

BLACK AND TAN TERRIERS.—(MR. LACY).

Report by Mr. Mason.

This was probably the best class ever seen in America, and the judging was done in a careful and painstaking way, the attachment at the lower end of the chain being the thing considered. In the challenge class for both sexes Meersbrook Maiden and Kaiser again met, the result being, as usual, in favor of the bitch, that is more symmetrical than the dog, truer in body, better behind and in markings, also his superior in one or two minor points. The open class for dogs was a hot one for America, where the breed, until recently, has received little attention. Broomfield Sultan, the New York winner over Beaconsfield, failed to show up under Mr. Lacy, who might not have attached any special importance to the awards at that show, so Beaconsfield won. Enough "deadly rot" has been written about this sterling good dog to scare the inmates of an insane asylum. Whether some of these reports have been published to show if the writers know any more about black and tans than they did about Meersbrook Maiden, or whether they were written to make room for somebody else's dog, are questions I cannot answer; but I do know that great injustice has been done by these reports. Beaconsfield is not full in eye, he is not full in cheek, he does not stand "very bowed" in front, he is not all shrunk in loin and crouchy in hindquarters, neither is he utterly devoid of muscle, nor yet a shocking mover. The suspicious looking patches on his second thighs existed only in the reporter's imagination. "It is hard to think how he could have beaten his younger opponent in England recently." Very hard indeed, if he had the defects scored against him; but it is just because he does not have them and never had them that he "beat his younger opponent in England recently." To breeders of black and tans I would say blot out the rubbish that has been written about this good dog and judge him not to make room for others, but strictly on his merits. Head beautifully formed, albeit a trifle short, eyes a shade light; eye, cheek and face markings correct; good neck, with head well set, excellent back and ribs, shoulders putting on muscle, stifles not truly formed, muscle of legs behind correct (a bull-terrier-muscled black and tan is an abomination not to be tolerated for a moment. Old General put on the sort of muscle that some ignorant folks demand, and that ended his career); thumb marks not clearly defined, excellent for a 7 yrs. old dog; foot and vent markings correct; good, short stern carried rather high; stands on excellent legs and feet; getting wide in front, but limbs from the elbows down as straight as they make them; mouth going; good coat; a good dog, but not a Queen II., a Saff or a Belcher, but a terrier that can still hold his own in any company and one that has none of the flat-catcher about him. He was rightly placed first. Salisbury, second prize, is a very fair son of Beaconsfield, but is not nearly so good a terrier. Good length of head, but not sufficiently filled in under the eyes and in front of them, set of forelegs might be better, does not stand quite true in front, gets over at the knees once in a while, too wide between the hocks, rather leggy, tail coarse and has been shortened, good color, clean behind, markings better than average, eyes a shade light. Prince Regent, third prize, was, I think, second best in the class. He is shorter in legs than Salisbury, more truly formed in body, better behind, straighter in front, but is beaten in front of the eyes (his weakest point) where both dogs are deficient. My note book says: Foreface weak, eyes a shade light, excellent skull, stands well in front, legs well set, proper feet, good color, thumb marks not defined enough, stern rather long and not well carried, shows quality, symmetrical. Prince Wallace is a rose-eared wastrel. Soap is a queer little fellow that should always stay home. Queen III., first in bitches, was, all things considered, rightly placed first. Rather weak in front of the eyes, color of eyes too light, a trifle cheeky, feet inclined to turn outward, would do with more depth in body, shows some breeding, stern well formed but too heavily coated, good coat and color, thumb marks not clear, otherwise well marked, truly formed hind parts, moves well. While not up to the high class form of her namesake, Mapplebeck's Queen III., she is a fairly good specimen and one that should quickly reach the challenge class. Louie, second prize, is by Beaconsfield, that is evidently a good sire. Better in eye and foreface than the

winner, also better in ribs, of better size, not so heavy in stern coat, and also better topped, but beaten in set of legs, and above all in feet, which are bad. Chest should be deeper; slightly breeched; would be first but for her feet. Leg markings not perfect. Deedemona, third prize, is an old face that has often been described. Kit, unnoticed, is a bad-headed toy. English Lady was absent and the others outlashed. Salisbury, Queen III, and Louie are owned by the Park Kennels (Mr. Comstock), of Providence, and were sent over by my old friend, Henry Lacy, of Manchester, who at one time could beat the world in black and tans. Queen II., Belcher and General were among those that helped to win him fame.

CHICAGO DOG SHOW.

TO one who attended dog shows held in the Windy City several years ago and observed the limited interest displayed by the public in those ventures, it was indeed a great treat to watch the strides which kennel interests have made in this city since the Mascoutah Kennel Club was organized. The show held last week, from April 8 to 11, proved conclusively that this city is certainly the New York of the West, as far as dog shows are concerned. The only drawback, and a serious one, is the lack of space in the buildings secured by the club. Battery D would just about hold 400 dogs comfortably, but for the whole 830 the adjoining armory, connected by a temporary passageway, had to be, as last year, secured for the occasion, and several of the breeds were benched here with a wing extending from either end of the hall reserved for the dog circus and the whippet racing. The light in Battery D building is very bad indeed, and it would have been better had the judging rings been all put in the armory. The judges were seriously handicapped owing to the smallness of these judging rings in the first hall, and added to a bad light it was simply impossible to properly move the dogs, and I am afraid several bad movers got a little more than they deserved on that account. The judging was not completed till Thursday afternoon, and somehow as usual this spring the pointer judging failed to entirely satisfy the bulk of exhibitors.

When one thinks of the attendance one is afraid of becoming almost too enthusiastic. I thought Pittsburgh had enough, but here in both halls it was almost impossible to move round after 8 o'clock in the evening. The crowd was a well-dressed one, too, and reminded us forcibly of the New York show. Of course the club must have made "barrels of money," as a 50-cent admission fee was charged. The exhibitors and handlers were of course feeling very happy, as plenty of shakels were put up, and some of the dogs could win all the way from \$50 to \$100 each. This bears us out in our assertion some time since that it is not so much the judges who draw, but the amount of money hung up that serves to swell the entry list. Among the members of the club who were particularly busy in attending to the business of the show were Messrs. H. Ives Cobb, the president; G. H. Goodrich, one of the vice-presidents, who seemed to be ubiquitous, here, there and everywhere, making every one feel at home; Wm. J. Bryson, another vice; John L. Lincoln, Jr., the secretary; Allison W. Armour, H. G. Nicholls, W. F. Fox and Dr. B. Lewis. Dr. Withers is well known as a good "vet." and attended to his duties conscientiously. The judges will be named over their several classes in the criticisms. The cataloguing, while well arranged and gotten up, had several misprints, but this, though provoking, is a minor fault and only discernable to those who follow the shows and know the dogs. A marked catalogue was issued on Friday morning, the first since New York. Owing to the crowded state of the benching and other inconveniences, Geo. Hill, the superintendent, succeeded in keeping everything pretty clean and comfortable for the dogs; plenty of clean straw every day. The portly Hill knows how to run a show, for everything goes smoothly, and another thing, he is popular with the boys, and that is a great advantage.

MASTIFFS—(JAMES MORTIMER).

I was quite surprised to see the good entry which the West can show in this breed, and the class of dogs is better, as a whole, than the run of mastiffs we find in most of the Eastern shows, outside of the principal kennels. A good many Minton and Ilford Caution pups have found their way out here, and while there are no real cracks, the general average shows a good running to type. In challenge classes Ilford Chancellor and Lady Coleus were the only representatives. In open dogs the prize fell to Elkson, a dog with a good square-cut muzzle and nice skull, good bone and fair body, eyes a bit light. Eddie, second, was in poor flesh, has a fair head, but rather lacking in character. Ormonde, third, has a fairish head, needs more rib, stands on good forelegs, but behind he is a bit straight. Melrose Don, vhc., is faulty in front, and head could be improved; Ilford Caution III. has a nice body, but is faulty in head and behind; Melrose Caution, in the same division, boasts a nice front and body, head only fair. The others call for no particular mention. In bitches, Caution's Own Daughter, of course, scored another win toward the challenge class, she keeps up well too; Pharoah Queen came next, she loses to her in head, though by no means a bad one, decidedly over the average, she is well known; Karin, third, lacks bone, ears not right, is rather plain-faced, and faulty in pasterns. Mai, fourth, is exceedingly short-faced, but not of good type. Miss Caution, vhc., is small and not quite true in front. Genette, h.c., is weak in muzzle and wants more rib. Fitzgerald's Spera, c., is long-headed, and Lula Minton is light built throughout. Elkson won again in dog puppies easily, followed by Cyrus, whose head is rather plain and long; Moses Duke is only fair. Beaufort Queen, by Beaufort out of Pharoah Queen, shows good breeding, though light in eye and rather plain-faced. Countess Von Moltke is poor.

GREY DANES—(MISS WHITNEY).

A good showing, especially the bitch class. Melac and Irene took care of the challenge classes, and in the open dogs the new one, Imperator, a light fawn, is a big upstanding dog but shown in wretched condition, and evidently all out of sorts; he is well formed and beats Melac in head, but otherwise there is little between them, and in his present condition the special might easily have gone to the darker dog; feet rather broken up, stands a bit too wide in front, is well ribbed with a good loin when covered with flesh. Second went to Grover Cleveland, a bit heavy in head, throaty, but excellent front. Don, third, is light-eyed, too full and round in skull and heavy in shoulders. Major, reserve, is also not clean enough in head and neck; otherwise fair. Prince is lippy, light-eyed, and hardly deep enough in chest. Prince Leo has a good front, too flat in loin, and Hector S. is wide in front, faulty in feet, but has a good body. Minca II., the winner in bitches, is throaty, otherwise nicely formed. Madge, second, is nicely put together, though I think Nevezel is cleaner out in neck and head, is a bit straight behind but well-fronted. Flora S. is throaty, has nice head, but was in whelp. In puppy dogs Don Senator, a rather coarse big dog, is albeit well formed and won easily, with Grover Cleveland second. Black Jack, third, is too broad in skull. Madge won in bitch puppies and the others need no particular mention.

ST. BERNARDS—(MISS WHITNEY).

An excellent showing and nearly all Western dogs. The Melrose cracks were all absent and Folko II., an indifferent one comparatively, was given second in the challenge dogs. A very nice son of Victor Joseph showed up in the dog class, has a good body, bit faulty in pasterns, otherwise good bone, head showing plenty of character and is of good formation. Pretty much the same may be said of Lord Wilton, who would be improved by more stop, but it excellent in bone,

body and coat, not enough volume of skull yet, a very promising young dog though. Monte, third, is light in body, faulty behind, but good bone and fair head. Comte, fourth, is short-backed, but has a very nice head and good depth and volume, excellent bone, his worst feature is his rather curly coat, at present, and straight stifles. Knight, h.c., Jacks markings and Grover Bogart is only fair in head, no shadings and is a peculiar colored one, chocolate nosed. In bitches the nicely-formed Republican Belle just beats Lady Alice, gaining in type of head and markings. Io, third, is a daughter of Victor Joseph and shows a fair head, a bit dishd, but has good bone. Prudence, lacking flesh, could do no better than fourth and Mona K. is a bit straight behind, front might be better and has a fairish head. Nymph, vhc., I did not see. In puppies the dog class order was maintained in first and second, third going to Monarque, who loses considerably in head, marked and promising. One Stickney, a small one, but well marked and promising. Watch, came in for reserve. Grand Marque, vhc., was out when I called and Fernwood Snow is too round in skull and a little too short in muzzle; the others were below the average. In bitches Bedivere Bena is a little straight faced but shows lots of character. Belle, second, is plain in head, weak in pasterns and coat too curly. In the novice class the awards pretty well followed the regulars.

In smooth challenge dogs Lord Hector, looking well, of course, had to give in to Victor Joseph in size and bone. Cleopatra was absent. Watch won easily in the dog class, beating Mascot Royal in everything but comparative form of body. The beautiful Empress of Contoocook walked away from Alpine Queen in head, but is not much if any better in body. Sola, third, loses in head and front. Thusnelda is only fair and below the average. Rehue loses in head and front. Puppies were fairly good as I saw them in the wing, but had been taken out when I came round. Some nice dogs, showing lots of quality and of average type, were brought out, and this shows that Chicago and the West are advancing rapidly in St. Bernardism.

BLOODHOUNDS, ETC.—(JAMES MORTIMER).

Four nice hounds were shown, first going to Jack Shepard, who beats Burniston, second, in length of head, peak and wrinkle. In bitches Metchley Venus and Pembroke Star divided the honors, the former beating in bone and body, but not so good in head, wrinkle and leather.

In Newfoundland old Leo came to the front once more with the redoubtable Dan O'Shea, giving an old-time flavor to the show. The others in the class were of the curly non-descript order, and prizes were rightly withheld.

The Hornell-Harmony Kennels took the prizes in the Barzoi classes, with Vladimir and Princess Irma, both well known.

In the absence of the Hillside Kennel entries, Brock Allen had to uphold the honor of the deerhounds; he has been round the circuit. Fergus McIvor loses in head and loin to him. These were all that were shown.

GREYHOUNDS—(JAMES MORTIMER).

Quite a Western turnout and visions of Great Bend and Jack rabbits naturally arose when I passed through this aisle. Gem of the Season and Harmony took care of the challenge class, both looking well. Then came the open dogs with Lord Neverstill an easy winner over Jolly Ranger, in front, ribs, loin and bone. This dog afterward beat Gem of the Season for the special. His wonderful rib development and short loin is what is wanted and his excellent quarters show that he is well off for the necessary propelling power, and his short back gives him a great advantage in his turns when after the wily jack. Like all of his breeding, he is a bit coarse looking in coat and not let down enough behind. Jolly Ranger, second, is hardly ribbed up enough. Bruno, faulty in hocks, flat-ribbed and coarse and short in neck, third. Little Climber, first in bitches, is a taking hound, beating White Lips, from same kennel, in head, muzzle especially, quarters and pasterns, bone and hocks. Lancashire Lass was at New York and with Liberty partakes of the same quality as the dog class winner in color and coat, losing to the winner in head, front and hind parts. Lady Clare was a bit out-classed, her faulty loin being against her, and so was Lady Olivia, little out in front, weak in muzzle and losing to the others in bone and quarters. Cleo, h.c., is only moderate. Foxhounds were a nice show, but as most of them were at Pittsburgh it is no use going over them again. Mr. Cook, got up in Frenchy style, paraded them down the ring with whip and horn for the edification of the public every evening.

POINTERS—(JOHN W. MUNSON).

While the classes were well filled the quality on the whole was only ordinary, and the scattering round of so many commended cards is no criterion to go by, but on the contrary detracts from the merit of those which really deserved them and were entitled to them. The ring was entirely too small for the judge to properly handle the dogs, and as no weeding out process was gone through it took him one hour and fifty minutes to place one dog class alone, and then naturally several mistakes were made. In the challenge dogs, heavy-weights, Robert Le Diable easily beats Trinker's Chief, though not in good shape, and Belle Randolph had the bitch class to herself. In open dogs, Tory White, in poor shape, was placed over Trinker's Coin, who loses in skull and shoulders. Shotmaster, third, has a fair head, is a bit straight behind, but if better shown could have won. Westminster Drake, faulty in head and throaty, came fourth; he has been described before. Luck of Idstone, reserve, is domy in skull, but good in front. A lot of dogs in the mention division were too ordinary for notice, with the exception of Spotted Boy, h.c., who should have had more, having a fair head and is a bit straight in stifle, but shows good body and front. It is unnecessary to mention the others, as they will hardly be heard of again, this year anyhow. In bitches first went to Dolly C., good in head and neck, a rather catchy-looking bitch, faulty in ribs. Wynette, second, is faulty in muzzle and a bit coarse in build. Nell of Idstone, third, is too round in barrel and straight in stifle, nice head. Lou Brackett, fourth, loses in quarters but has a good head. Sal II., reserve, is throaty and open in feet, round in barrel and altogether too fat, also wide in front, a queer decision for a man seeking field type. Josie Brackett, too heavy in shoulders, vhc. Pride of Idstone the same, throaty, flat-faced and wide in front, worth about c. Cicely, good in front, well known, should have been higher up. Others call for no mention.

In light weight dogs, Duke of Hessen had to go under to Tribulation this time, though he beats him in most points; still Duke was a little off in condition and that may have done it. In bitches, Fan N. beats Queen Fan in head, but loses a bit behind. Open dogs saw the neatly put together Glenmorgan, fully described before, the winner, Springbok coming second, though numbered as Shot S. in the judge's book; he is a bit throaty, but well put up in body and legs. Trinker's Champion, too heavy in shoulders, faulty quarters and coarse tail, third. Rock II., fourth, loses in head and legs. Wonderful Lad, reserve, is nicely put together and can beat several of those ahead of him. Bing of Kippen, well known, was left without anything; should have had three letters. New Bright's Tom is faulty in head and stern; same owner's New Bright's Dick is a better dog. Inspiration, just about the winner, was shut off with an h.c.; more than likely obscured in the crowd. In open bitches, Phantom caught the judge's eye; she has a good head and body, but is a bit straight behind. Juliette, second, is a bit dishd-faced, nice body and front, ribs faulty. Chicago Peggy, third, I could not find. Fan Fan, fourth, is faulty in head-muzzle. Reserve went to Lady Graphic, who, though losing in head, should have been higher up; she is well known,

Pearl's Dot, too round in barrel and poor in muzzle, vhc. Bloomo III. could have done with another letter; a better bitch than the last mentioned. In puppies, Dictator was about the only good one, fair in head, has excellent neck, chest and shoulders. Tempest Beppo, second, is only moderate, and Tinker, third, will hardly be heard of again. The others do not merit particular mention. In bitches, Queen of Spades, out at elbow a bit and stright behind, otherwise fair, was placed over Nell of Naso, faulty in stifles and body. Hester of the Elms has a poor head, and Hedwig of the Elms is too long cast.

ENGLISH SETTERS—(JOHN DAVIDSON).

Here was a fairly good show of these dogs, and most of them new ones. Monk of Furness was the only entry in challenge dogs, and looked much improved on his Pittsburgh form. No challenge bitches. In open dogs a rather nice one in True Blue came to the front, is a bit long cast, and might be better ribbed, head, pretty good; second went to Ben Hur of Riverview, faulty in ribs and chest, good head and front; Diamond was third, is almost a cripple behind, falls right down, no doubt the crowded ring hid this from the judge; Carleton Pero, described before, coming fourth. King Gladys, reserve, short in muzzle and heavy in shoulders, fair head. Gippo II. is well made and should have been higher up; Dashing Kent deserved his letters, and so did Tony Gladstone. In bitches Albert's Nellie was again ahead, second going to Lilly Hill, a nicely-built bitch, better than winner in head; Idaho of the Elms, third, is light in bone and short in neck, fair head; Monk's Fan, fourth, is long-cast, but fair otherwise; same owner's Forest Heather, a much better bitch in body and head, vhc.; and his Canadian Lilly, though faulty in stop, might have changed with the third winner, as she has a good body, legs and feet; Bess Noble, vhc., is faulty in muzzle, and Stell is faulty in stop, good ribs; Lady Zoe, vhc. too, while faulty in head, is a well-built bitch. The others call for no particular mention. In dog puppies Pembroke's Blue Don was rightly well in front, though a bit straight behind; Darby J., second, loses in shoulders and pasterns; Blade's Boy, third, is light in muzzle and throaty. The two bitch puppies were fairly good, the winner, Silk, is light in muzzle; and Nushka of the Elms is also young there.

IRISH SETTERS—(JOHN DAVIDSON).

Certainly the best challenge dog class of the season put in an appearance here. With such typical dogs as Elcho, Jr., and Mack N. to lead them, the quality was of course the best that we can show. It was said that Elcho looked as well as he did five years since, and he certainly keeps his age wonderfully. There is little to choose between the two named, Mack M., perhaps losing in muzzle a trifle to the other. Max A. took the reserve over Kildare and Beau Brummel. In bitches Ruby Glenmore was placed ahead of Molly Bawn, Winnie II. falling far in "reserve" to these two. The open dog class filled the ring, and I certainly wonder how the judge managed to get through with so few mistakes; the light was bad, and it was almost impossible to move the dogs. Inchiquin was picked out for the winner, and Ben C., coarse in head, came in second, third went to Minstrel, all well known. Prince Nino, fourth, is hardly straight in front and also loses in ribs, fair head. Rancho, reserve, from the same kennel, is faulty in quarters, has good shoulders, legs and feet. Western Elcho, vhc., is a bit dish-faced and Trump S. in the same division is wide in front and thick in skull, but has good body. The others did not show much Irish setter type, most of them being on the English order. The bitch class was another large one and gave the judge much unnecessary trouble in such a small ring. Edna H., by Elcho, Jr., was the winner; she is a bit out in front and light in bone, but has a new type of head. Nora Blythe, second, is deficient in stop, nice color. Eudora might have been higher up; she is well known. Flora H., fourth, has an English setter head, has a fairly well-ribbed body, but falls away in quarters too much. Anna H., reserve, has a poor muzzle. Nino, vhc., is faulty in coat and muzzle. Jessie is a bit throaty, faulty in ear, nice in front. The others call for no particular mention. Puppies were only fair the winner in dogs, Elcho of Claremont, beats Terry S. in head, though much younger.

GORDON SETTERS—(JOHN DAVIDSON).

As usual, most of the winners in the challenge classes are too well known to need describing, and their order will be found in the prize list. In the open dogs, Rexmont took the ribbon, beating Reginald H. in head and front. Foreman B. is faulty in skull and a little out in front, otherwise good. In bitches, first went to Fly, who has a nice head and good tan, but hardly stands true enough in front. Floss IV. loses in stop, is too wide in front, but has a good body and nice tan. Countess of Richmond, third, has been before us at other shows. The other entries were absent, and the puppies call for no mention, though a fair one by Beaumont was shown.

CHESAPEAKE BAY DOGS—(JOHN DAVIDSON).

Quite a good lot were shown. Dick, a dog of good color but a bit snipy in muzzle, had the challenge class to himself. In open dogs, a well-known winner in Barnum, who has been the subject of one of Mr. Tracy's best efforts, won easily; he is, we believe, a little too dark for the accepted standard. The Osceola Kennels claimed all the prizes in the bitch class with some nice specimens.

SPANIELS—(CHARLES M. NIELLES).

Patsy B., who was returned the winner in the Irish water dog class, is lacking somewhat in topknot and curl, but has an excellent front and body. Patsy O'Connor, though out of shape, came in for second, and Barney O'Connor, third, has a nice head, deficient in curl, and front not so good as the others. Denis O'Donoghue, vhc., is short-faced, and Jack loses in type of head, has a nice front and loses again in fineness of tail and curl. In bitches, Irish Flora's best part is her well-boned front, muzzle faulty but nice coat. Queen Vic is plain-faced, woolly-coated and stands too wide in front. Marguerite, in puppies, beats Jerry in length of head and especially in skull, and also in coat. Jack A., described above, won in novice class. This was the best display of the breed yet seen on the circuit.

In Clumbers the four circuit dogs from the Clumber Kennel had four classes, and took the four prizes, no others being on hand.

In challenge fields, Baron and Lady took the challenge honors in their classes. Beverly Negus had an easy win in the open dogs over Samson, both are well known, third going to Dude, who has a head on the Irish water spaniel order, with quite a topknot. Saybrook Lad had another win in the next class, followed by Dorothy, who is too pinched in muzzle, but has a nice body, is faulty in front. Any other color saw Saybrook Dolly the winner over the black and tan colored Fancy, beating in muzzle and front. Workman, third, is not very good in front, but has an excellent body, head and coat.

Cooker spaniels were nicely represented, and Mr. George Belle writes us the notes on them:

In challenge dogs Rabbi and Black Duke were the only entries. Black Duke being absent gave Rabbi a walkover. In bitches there were no entries. In open black dogs Oban was first. Cannot agree with this award. Nice formation of skull, right type of body, slightly undershot, light in eye, showing too much haw; front legs not straight, is rather light in bone and a little low at the shoulder, has well-sprung ribs, a good stern, coat too wavy. Black Dufferin, second, is weak in muzzle, ears carried too gay and is rather out at the elbows, ribs badly sprung, is weak in loin and tail carried too gay, coat good but very short. Obadiab

IRISH SETTERS.—CHALLENGE—Dogs: 1st, G. H. Covert's champion Elcho, Jr.; 2d, W. N. Kuhns's Mack N. Reserve A V

action of Mr. E. H. Morris, my setter bitch, Katie Howard recovered from her attack of pneumonia contracted at Boston, and while distemper has set in, her condition is improved, as to warrant every hope of a speedy recovery. I wish also to congratulate you on the grand reports of the New York and Boston shows, written by Mr. Chas. H. Mason. It is a great relief to find in them the absence of those vague generalities so common in other reports. The merits and faults of the various classes of dogs, and all the entries are placed so clearly and fairly, no hedging, that they go far toward quieting and reassuring breeders who may almost become demoralized by the inconsistencies of some of our judges and writers.—R. R. MOORE.

DOG CHAT.

THE roundheads are conspiring to form a club. On Tuesday evening of the Boston show they held an enthusiastic meeting and judging from the earnestness with which the admirers of the breed are entering into the subject, there is little doubt that this smart little dog will soon aspire to a recognized standard of its own. Dr. J. B. Saunders was elected president and H. J. Harris secretary. Messrs. C. F. Leland, C. C. Kammerer, Rudolph Weimer and S. D. Parker were elected a committee to form the constitution and by-laws and Messrs. Leland, Hook, Newman and Hughes had the serious task assigned them of wrestling with a standard. The next meeting of the club will be held at 266 Washington street, Boston, April 7 at 8 P. M.

The Beagle Club dinner to which we briefly referred to last week was a great success and served to tighten the bonds of good feeling now existing in the club. President Brookings sat at one end of the long table and secretary Chapman faced him at the other. Among the lovers of the merry little hound whom we noticed were Messrs. W. Stewart, Diffenderfer, Robert Leslie, W. F. Rutter Jr., W. A. Power, W. H. Childs, C. H. Innes, H. L. Krueger, A. E. Ledyard, F. E. Williams, Joe Lewis, J. A. Peabody, H. H. Brown, H. V. Jamieson, John Jarvis and several press representatives. The dinner was served in Young's best style but in kindness to our readers we refrain from tantalizing them by publishing the menu. Pretty nearly every one gave voice to their sentiments when cigars came along, and the club received congratulations enough to turn its head. Mr. Childs as a member of the old club said that a successful club must have the sinews of war, and that \$1.50 cups and dog dollars would not accomplish the object for which the club was formed. He also wished the trials could be held nearer the Mason and Dixon line and so do we, as the country down in Maryland and Virginia is so much better adapted for a clear view of the running. The company broke up amid hearty cheers and mutual good wishes.

Genial Bob Leslie, president of the Massachusetts Kennel Club of Lynn, writes us of his ill luck since their show. His pointer bitch Cora Lynn, which was so harshly treated by the judge at that show, died last Thursday morning from internal injuries received in a collision with the St. Bernard John Bonivard while out exercising. This pup was the apple of his eye and he intended running her in the trials. He had picked her out of a litter of seven when only seven weeks old and she turned out to be the only good one in the lot. Never mind, better luck another time. In speaking of their show he tells us they are just about \$20 out, owing to keeping the show open on Saturday. They will not have another show until a more suitable hall is available.

We understand that the Ottawa show committee, after a protracted meeting on March 31, decided to invite Mr. Kirk, of Toronto, to judge the spaniels, greyhounds, deerhounds and foxhounds, and Mr. Lacy the balance of the classes, at their show in the fall. While fully appreciating the honor, it is more than likely that this arrangement may be upset, owing to the inability of the latter to accept. They expect a good show, especially as they have abolished all puppy classes, and for this they deserve the thanks of the members of dogdom. It is the thin end of the wedge of common sense.

Mr. Mercer's Clumber bitch Lady Holmes has just died in England. Her sister, Lady Lancaster, will be bred to Hotpot before crossing. With four dogs in the challenge class it was rather hard lines that this kennel could not have a class provided at Boston. The best interests of the breed would have been better served had such a class been provided, considering the specimens that were shown.

The premium list of the California Kennel-Club show (San Francisco, April 29-May 2) is received. There is provision for 105 classes, with diploma for first, second and third, and a long list of specials.

Miss Anna H. Whitney was the recipient of a very pleasing present from the Mascoutah Kennel Club. Fastened to two strips of satin something after the style of the ordinary judge's badge, was a cross bar of four swallows on the wing. Hanging from this by two chains was the club's silver medal with this inscription:

PRESENTED TO
MISS ANNA H. WHITNEY,
Judge
ST. BERNARDS,
GREAT DANCES AND FUGS,
CHICAGO,
1891

The table in the ring was covered with a fancy table cloth and a large bowl of tulips stood in one corner of it. Certainly a most pleasing attention and showed that the club, while admitting that Miss Whitney can judge as well as any man, remembered that she is still a woman.

It was a great disappointment to Mr. Covert to have Dick Swiveller down with pneumonia just as the Chicago show came on, but in Elcho, Jr. he had something still safer to pin his faith to. At last accounts Dick was progressing favorably.

This gentleman's new Irish setter Blue Rock arrived in fine shape on Saturday evening at the show, having come over on the City of New York, arriving on Thursday last. He is rather a coarse dog, but is well built, with a strong intelligent looking head, and seemingly a dog full of life and vigor; he has excellent bone and color. He is a workman, too, having at the Irish Setter Field Trials last year won the St. Leger Stakes for all comers, pointers and setters; second in the Puppy Stakes, and fourth in the All-Aged. After this he was sent to the Birmingham show in November, and won first and the Irish Setter Club's cup for best Irish setter in the show. Mr. George E. Gray will take charge of him in the trials this fall, together with several other dogs from the Killarney Kennels.

Mr. John H. Naylor—"Diehard"—will take on a team of about 27 dogs to Denver, Colorado, for the Continental Kennel Club's show. Good luck!

Spratts Co. had a nice display at the Chicago show, but Mr. Babbitt was feeling very wrath when we came across him, as after having secured the exclusive right to put up posters, etc., in the building, and after they had plastered the walls in the usual style, some person during the first night tore them all down. Next day he had to have canvases ones printed and put up. Rather a small piece of business on somebody's part.

A. G. Spalding & Co. had also a good display, and we noticed the old champion English setter Gladstone set up on their counter, though the mounting hardly does the old dog justice.

Elmwood Kennels have, we understand, sold their challenge smooth-coat dog Beauchamp to Dr. L. N. Ward, of Newark, N. J., and this kennel will now try for roughs as far as possible.

The Northfield Kennels sold during the Chicago show th e

well-known Yorkshire terrier Fishpool Gem to Mr. John L. Lincoln, the secretary of the show, for \$200. They also sold Minnie York to Dr. Ellis Oliver, of Chicago.

The Chestnut Hill Kennels sold Wellesbourne, first in novice class for collies, to Mr. George S. Sheldon, of Chicago. Also Roslyn Tory to Mr. Howard of the same city, at good prices.

Mr. Gibson, of the firm of McKewen and Gibson, the well known collie breeders of Byron, Canada, had several of their dogs at the show and succeeded in disposing of Carmen, Elora, Clover and Mora to different parties at excellent prices.

On Friday afternoon last the following gentlemen interested in the new United States Field Trials, met in the show building at Chicago: Chas. G. Stoddard, Gustav Pabst, Taylor Williams, B. E. Seitzer, P. T. Madison, Andy Gleason, Wm. Keer, James Freeman, John W. Munson, Chas. Proctor, J. W. Patterson, Paul H. Gotzian, H. Hulman, Jr., Wm. Titterton, Geo. M. Lier, J. H. Perry, Bert Crane, S. B. Dilley, R. B. Morgan, John Bolus, W. H. Childs, Major Taylor and Dr. N. Rowe. The club was organized and a committee appointed to draft constitution and by-laws, and with power to lease land at Bicknell, Ind., for from one to five years. A committee was then formed after discussion to confer with other field trial clubs with a view to a uniformity of field trial rules. It was decided to have the trials Nov. 2. There will be a pointer Derby and one for setters. Also an All-Aged pointer and All-Aged setter stake. \$500 will be given in each stake with \$200 for each absolute winner.

A good many dogs were disposed of at the show. Fred Kirby placing three Skyes to advantage, and also his bull-terrier White Pete.

It was estimated that something like 20,000 people attended the Chicago show, and judging from the immense crowds the estimate cannot be far wrong, as the management of course had the sold tickets to go by. It is said the club has in view the idea of starting a kennel and going in for several breeds.

The Maryland Kennels (Messrs. Diffenderfer) purchased the fourth prize winner in the open rough St. Bernard dog class, Comte, from the Dacotah Kennels, of Jamestown, N. D. This dog is rich in Bonivard blood and will no doubt prove a useful purchase.

The boys pretty well owned the train which left Sunday evening for Cleveland on the Chicago & Atlantic R. R. A certain number of tickets having been guaranteed the management provided a special car which landed the dogs in good shape at Cleveland about 1 P. M. Monday. All of the exhibitors and handlers had been treated well at Chicago in the way of prize money and they were consequently very happy. Those who traveled on the sleeper (?) were: Chas. P. Diffenderfer, J. E. Cody, S. L. Boggs, Harry Twyford, German Hopkins, J. H. Pritchard, George Bell, H. B. Meyers, A. Hart, J. G. Williams, B. F. Lewis, Joe Lewis, Joe Hill, Fred Kirby, George Thomas, C. S. Wixom, E. H. Morris, C. O. Ferry, Prof. Parker and the writer. A pretty "dogly" crowd. At Leavittsburg a change of cars was made and a wait of over an hour ensued which was taken advantage of by two amateur "photogs" to group mementos of the occasion. FOREST AND STREAM had its "Hawkeye" on them, but whether the machine will be permanently damaged or not time only will tell. Geo. Bell, giving "our only German" practical points on cocker spaniel winning, was also caught in the telltale box, and will be used for future reference.

Mr. J. H. Winslow has sold his noted pointer bitch Golden Rod, by Beaufort out of Zuba, and winner of six prizes, to Mr. Chas. Clippinger, Lansing, Mich., who reports himself as highly pleased with her.

The Clumber Kennels, of Ottawa, Canada, have sold their Clumber bitch Lady Joan, who has been winning on the circuit, to Mr. W. S. Cobb, of Chicago.

The show at Cleveland promises to be a good one. A good many dogs arrived to-day (Monday) and though arrangements at the hall are not altogether in order yet no doubt everything will be ship-shape by morning. This is the last show of the circuit and there is hardly any one, who has been connected with it, who is not heartily glad it is over. Some different arrangement of dates will have to be made next year or some of the clubs will surely suffer a loss, as it is too great a strain on both men and dogs.

IRISH SETTERS AT LYNN.—Cambridge, Mass.—*Editor Forest and Stream:* The result of the judging of the Irish setter puppies at Lynn is very discouraging to the exhibitor of young dogs. There was a strong class in the open dogs, and my puppy Duke succeeded in getting a vhc. in that class, winning over a dog who received second at New York. Duke was also entered in the puppy class and only received vhc., the first prize being withheld. It seems but reasonable to suppose that if he had sufficient merit to deserve a vhc. in the open class, that the dog beating him in the puppy class deserved first and that he should have received second. As there was no money prize offered in the puppy class the withholding of first cannot be attributed to any economic scheme on the part of the club, and the blame can only be placed upon the judge. I should like to see, through the intervention of your paper, a censure on such judging.—J. A. GARLAND, JR. [We spoke of the matter in our report of that show.]

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 20 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application. Prince Trefoil. By Barnes Bros., Wellsville, N. Y., for black and tan collie dog, whelped Dec. 17, 1889, by Bobbie (Bobbie—Nellie) out of Trefoil's Beauty (Young Trefoil—Imported Mt. Beauty). Canadian Kennels. By A. M. Trebilcock, Toronto, Ont., for his kennels of toy spaniels.

BRED.

Prepared Blanks sent free on application. Brunette-Crip. Mrs. R. Bralve's (New York) Newfoundland bitch Brunette (Bruno II.—Mirza) to M. Burke's Crip (Nap-Daisy), March 2. Jennie—Baumont. Prof. L. P. Bralve's (New York) Gordon setter bitch imported Jennie (Dash—Pam.) to Dr. J. H. Meyer's champion Beaumont (Ronald III.—Floss E.), Feb. 7. Luna T.—Duke of Vernon. G. T. Corman's (Cochituate, Mass.) pointer bitch Luna T. (Wm. Tell—Rosa Croxeth) to L. Gardner's Duke of Vernon (Glendale—Spotless), Feb. 27. Quinta Lomond—Hesper II. John Van Veson, Jr.'s (Buffalo, N. Y.) St. Bernard bitch Quinta Lomond (B-n Lomond—Duchess of Heathfield) to his Hesper II. (Hesper—C-Jerne), April 8. Black Renah—Little Lad. J. E. Weston's (Utica, N. Y.) cocker spaniel bitch Black Renah (Black Dash—Renah W.) to his Little Lad (Newton Abbot Beau—Dinah Bennett), March 29. Gypsy Girl—Little Lad. S. E. Morgan's (Johnstown, N. Y.)

cocker spaniel bitch Gypsy Girl to J. E. Weston's Little Lad (Newton Abbot Beau—Dinah Bennett), March 29. Black Meg II.—Little Lad. J. E. Weston's (Utica, N. Y.) cocker spaniel bitch Black Meg II. (champion Black Pete—Black Meg II.) to his Little Lad (Newton Abbot Beau—Dinah Bennett), Feb. 8. Nell W.—Little Lad. J. E. Weston's (Utica, N. Y.) cocker spaniel bitch Nell W. (Koko W.—Phyllis D.) to his Little Lad (Newton Abbot Beau—Dinah Bennett), Feb. 4. Ruby—Romeo. R. P. Forshaw's (Toronto, Ont.) King Charles spaniel bitch Ruby to his Romeo, March 23.

WHELPS.

Prepared Blanks sent free on application. Black Meg II. H. S. Reynolds's (Poughkeepsie, N. Y.) cocker spaniel bitch Black Meg II., March 27, six (three dogs), by J. P. Willey's champion Black Pete; all black. Gladys B. R. H. Burr's (Middletown, Conn.) Irish setter bitch Gladys B. (champion Finn—L. dy Edith), April 12 nine (five dogs), by J. W. Gale's Blaze (champion Chief—Bizreen). Countess of Devonshire II. Harry Malcolm's (Baltimore, Md.) Gordon s. ter bitch Countess of Devonshire II. (Stubble—Countess of Devonshire I.), April 8, nine (three dogs), by his Rap (Meadow Thorp—Meadow Thorpe Blossom). Maggie B. R. W. Eddy's (Detroit, Mich.) English setter bitch Maggie B. (Kings—Lucy Bee), March 30, ten (seven dogs), by Toledo Blade; two dogs since dead.

SALES.

Prepared Blanks sent free on application. Marquis of Stafford. White rough-coated St. Bernard dog whelped May 10 1887, by champion Save out of Miss Plinlimmon, by Jas. F. Hall, Philadelphia, Pa., to Geo. Moore, same place. Little Red Rover—Neil W. whelp. Liver cocker spaniel dog, whelped March 26, 1890, by J. E. Weston, Utica, N. Y., to Geo. Miller, Jr., Toledo, O.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

W. B., Philadelphia.—I have a spaniel puppy 8 weeks old, that has a dry scale all over his body, and when he is combed the hair comes out very thickly. He is lively, eats well, and has good evacuations. What is best to do? Ans. Rub in a little sulphur ointment daily and give 3 drops of Fowler's solution of arsenic in the milk once daily.

W. H. G.—I have a pointer pup six months old which is growing very rapidly. Of late she limps on one hind leg, and when she gets up sometimes cries out as though it hurt her. Her eyes are blood-shot and her appetite variable, she will moan when sleeping. She was awkward in playing, which she did a great deal of, and sometime ago I thought she got hurt in playing with a hound dog; it is in the small of the back or kidneys, I think. What is good? Ans. It is impossible to tell without a more particular diagnosis.

J. L. P., Essex, Conn.—It is canker. Get the following: Bromo-chloral..... 3i To opil..... 3i Ag..... 3i Mix. Sig. A few drops in the ears night and morning. Wash out ears with warm wat r and castile soap and dry thoroughly before dropping the mix'ure in the ears.

F. M. K., Reading, Pa.—I have an English setter puppy, four months old, which I desire to raise successfully. I will be obliged to you if you will recommend something which it would be well to give a puppy of this age, from time to time, to prevent worms. Will you kindly state the first symptoms? Ans. Symptoms: Hunching up the back, groaning and twitching in the sleep, diarrhoea, general gastric and intestinal disturbance, presence of worms in the stools. Keep bowels easy with half teaspoonful doses of syrup of buckthorne if necessary. Do not feed meat. Exercise in open air daily.

T. E. C., New York.—My English setter is in poor condition, continually scratching, which causes red blotches all over his body, more especially on his legs. The nose is very dry, rough and appears chapped; the hair is fast falling off, and whenever exercised coughs and sneezes, but has an excellent appetite. The eyes run a little every twenty-four hours. I am inclined to think the dog has worms. Ans. The dog is out of condition and has one of the forms of mange. Open the bowels by giving 2 or 3 compound cathartic pills concealed in a morsel of meat. Wash once weekly with carbolic soap and give 5 drops of Fowler's solution of arsenic in the food once or twice daily for three weeks. Exercise regularly and do not feed meat, or very little, if any.

E. W. O., Newport.—My setter dog has had a bad diarrhoea for about two weeks, which I have yet been unable to stop. His appetite is very poor and he has lost flesh terribly. He has no fever but yesterday he began to slobber; and to-day, when I gave him a piece of meat, he dropped it and shook his head for about a minute, throwing the slobber in all directions. I thought from his actions that he had got a bone stuck in his throat, but on examining him found nothing. This is his first sickness; he is 9 months old. Ans. Stop the diarrhoea with Dover's tablets, giving one every three hours in a bit of meat until diarrhoea stops. Give 5 grains of quinine three times daily in pill or capsule. If he has fever give aconite tincture 2 drops every hour, or anti-febrin, 5 grains every 3 hours. It looks like distemper.

"Birdo," of Port Royal, Tenn., offers some of his celebrated Llewellyn setter puppies for sale. See his adv. in another column.—Adv.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE REVOLVER CHAMPIONSHIP.

THE number of inquiries for the trial targets prepared by us for those who would improve their skill with the revolver in anticipation of participation in the revolver championship match convinces us that the affair will be a complete success, and that when won the trophy will go to a very excellent holder.

Carefully enough there has been some adverse criticism launched against the conditions as they were first proposed by us and approved by Mr. Walter Winans, the donor of the emblem. Some of the talk, where it is not so obviously the result of disappointed interest, is so utterly ridiculous as to be scarce worth attention, and were it but criticism pure and simple would receive none by us. But it goes a step further and makes positive mis-statements with the evident intention of confusing those who may be unlucky enough to read these publications. Harper's Weekly critic speaks of the shots "limited to six." This is simply not true. There is no such limit and this writer ought to have known it, and probably did. The conditions call for five scores of six rounds each, the record to stand on the aggregate of three of these scores or eighteen shots in all. So this clever all-round critic, but not quite a square critic, just got one-third of the truth. It is not demanded or required that the shooting shall be indoors or even that the contestant stand at twenty yards. The shooter may, if he chooses to be guided by our critical friend, pick out the gustiest day he can strike, take possession of a lot where there is no end of weather, and back away from the target as far as he pleases. He may do all this and get gloriously left by those who prefer to shoot when trying for a record under more favoring conditions.

These conditions are quite difficult enough to shoot under though so very easy to talk about with glibness. A shooter who can average inside of an inch a shot for his 18 counting rounds is making a very good exhibition of his shooting ability and the merits of his arm, and is good enough to be classed as an expert and possibly as a champion. If distance is to count and endurance, of which so much is prated, then let us get a thousand-yard range, with a big duffer target, of course, and make it a "drop and out" match, each to bang away until his pistol arm falls ex-

ALTHOUGH thirty years have passed since the subject of a Naval Reserve similar to the National Guard of the various States was first brought before Congress and an effort made to secure aid from the Government; but little has thus far been done. Several of the States, among them New York and Massachusetts, passed laws intended to encourage the formation of voluntary military and naval units, in payment of prizes and but under discouraging conditions. The results by no means satisfactory so far as New York is concerned. Within the past three months a new movement has been started, which has recently taken definite shape through the organization of an incorporated body under the title of the Naval Reserve Association of the State of New York. The promoters of the new scheme are, principally, naval officers and naval reservists, among them being Messrs. Herbert L. Satterlee, T. C. Zerega, J. W. Miller, Wm. Whitlock, E. B. Renwick, W. Butler Duncan, Jr., Aaron Vanderbilt, E. C. Weeks, E. D. Morgan, A. Bryan Alley, C. W. Wetmore, Archibald Rogers, Robert Coater, W. C. Browne, Henry Stanton, August Belmont, W. E. Iselp, S. D. Pomeroy and others of equal prominence. The officers are: Herbert L. Satterlee, Commodore, U. S. Navy, and President; J. W. Miller, P. & S. Co., Pier 59, N. R., late Lieut. U. S. Navy, vice-pres.; Edwin C. Weeks, 13 Wall street, Weeks & Co., bankers, treas.; E. B. Renwick, 19 Park place, Larchmont Yacht Club, recording sec.; Wm. Whitlock, 10 West 37th street, corresponding sec. The Association has adopted a constitution and by-laws, and has established its headquarters at No. 9 West 29th street, New York. The Association has a grand and august object in view, being regularly proposed and balloted for as in any club. The first object of the Association is to form a battalion under the present laws of the State of New York, and to secure a suitable vessel for regular drills and practice. In the meantime the room on 26th street form a rendezvous for all about New York who are interested in naval work. It is not probable that the members of the association shall join the battalion thus formed, nor that members of the battalion shall also be members of the Association, but in most cases men will belong to both.

He had been a Union man, and bitterly opposed to the secession movement, and, like many other Union men in Virginia, he was not drawn into the vortex of secession in the great storm of '61, which swept over the fair land of the South, but remained steadfastly loyal to the Union through all the long dark years of fire and devastation which followed. He could not fight against the Union, nor could he help the invaders against it. His own kindred, friends and neighbors, so he had to quietly slip down the valleys and over the mountain passes, leaving death and devastation in its trail. His place was repeatedly overrun with the troops of both armies; and, in common with all the other isolated land, he was stripped of his barns and crops. Here it was that Jackson emerged from the pass of the Blue Ridge Mountains during his memorable campaign, and crossed the Shenandoah, to fall upon the devoted Banks in a whirlwind of fire and iron hail at Front Royal and Strasburg, and here the furious rush came sweeping down with his blue-coated host in full view of the eyes of the rebels on the mountains and head Jackson off in his flight up the broader valley. He never gave an eye upon the still smoking ruins of the bridge, but just fled before the fleeing cavalry of the great strategist, as under the impu-

petuous Ashty—so soon to fall at Cross Keys—they went scurrying up the river for this purpose ahead of both armies; and back over this same ground came these same troops in a broken, torn and shattered mass a few days later, after the doughty Shields had accomplished his desire and overtaken and met Jackson upon the bloody field of Port Republic, forty miles above.

At the close of the war he went to work, with every one else throughout the desolated, impoverished South, to repair his broken fortunes.

We found the character of the river from here on down to Riverton, some fifty miles or so below, quite changed from what it had been above. The bold, open rapids were replaced by long lines of "saw-tooth" ledges or reefs; which stretched across the river from shore to shore in irregular, parallel lines instead of running lengthwise with the stream, as they had generally seemed to do above. An observation of the underlying strata of the valley shows that these lines of reefs (which are not by any means confined to the river bed, but may be found cropping out in the fields, along the hillsides and across the roads) appear to run generally lengthwise of the valley or parallel with the mountain ranges; and as the river, in its descent from Massanutten to Riverton, is simply a series of zigzag curves or loops from west to east and from east to west in search of an outlet through the mountains to the sea, and nowhere presents the approximately straight course that had irregularly characterized its flow from Port Republic to Massanutten; it followed that the ledges were invariably found not parallel with, but crossing the river; sometimes in a straight line, forming a literal cataract or waterfall of several feet; but more often in a series of parallel ledges a few yards apart, extending frequently for miles down the river; each reach, or bend, from one side of the valley to the other being more or less filled with them; while, as a consequence of these obstructions in these reaches, the "eddies" or still pools were as invariably found in the angles of the bends where the river made its turns to recross the valley in its interminable series of letter S loops.

There were no more wild, exhilarating dashes down long, open stretches of rapid—nothing but these series of reefs or falls, as they are not inaptly termed. The river was literally terraced, the water in each terrace between the lines of reefs being still and motionless. Large parts of each reef—particularly in the present low stage of the river—stood out above the surface of the water; and the black and jagged masses of stone, some of them of great size, and in many cases matted with a tangled, stunted growth of bushes, vines and weeds, that presented themselves to view, scattered irregularly over the surface of the river as each new reach was entered, added to the wildness of the scene; and with the dull, menacing roar of the river as it fell over the ledges in countless little cascades, were not calculated to allay our apprehensions of unknown perils and difficulties in our watery path as we threaded our way through their mazes.

As may readily be surmised we found this sort of cruising to be quite difficult and not unattended with danger to our frail craft, if not to ourselves, and indeed but for the friendly ever present boat channel it would have been impossible to safely navigate many of these falls. We did not take to it quickly and eagerly, but rather loathly, the channel on reaching the head of a fall. We speedily discovered that the channel was almost invariably close up against one bank or the other; and it was an easy matter to find it by one of us coasting along close to one bank, another close to the other, while the third remained in midstream to watch for the occasional exceptions to the rule, when the channel would be found in midstream; and when found it was a delightful and comparatively easy matter to shoot swiftly down the narrow little road of water, past all these formidable obstructions, a sharp lookout being kept for occasional stray rocks and the ever-present fish dams. However, if the falls proved particularly long and intricate we had to watch sharply for the channel, for it not infrequently took advantage of the still, watery terraces between the ledges, and crossed from one side of the river to the other.

The country was much wilder also and more thinly settled, and the mills were much less numerous along the river. However, as there was a corresponding scarcity of their necessary adjuncts, the mill dams, we bore their absence with great equanimity. We were also gratified to note that most of the dams had shoots in them, which, while invariably crude affairs and more or less steep and rough in place, especially for small boats, still saved us the trouble of portaging, and afforded us exciting sport in pitching down their steep slopes and plunging violently through the big foam-crested waves at the bottom of each shoot.

The day proved most intensely hot, by far the hottest we had had on the cruise, and after successfully negotiating the unusual intricacies of "the pig path," which we accomplished by entering the channel close to the right bank, following it as it veered to the middle of the river, and wound through the labyrinth of ugly grinning reefs and small but brown islands, and finally emerging with it from the sharp-pointed "sawtooth" ledges into the still water below, close over to the left bank. We were fain to lie by for several hours on a shady bank close to a fine cold spring, while the sultry heat of the day passed by before resuming our cruise.

We camped that night by a little spring on the side of a steep bank 20 ft. high. There was not a foot of level ground between the water's edge and the top of the bank, and we braced the canvas up alongside of the bank with stones. The gunwale of each boat on the upper side of the bank was fastened to the bank, while on the lower side it was so high above the ground that Lacy declared he would have to get a step ladder to get into bed.

A platform of stones was soon heaped together by the side of the spring, upon which the camp stove was placed, and a fire started in it; and in a very short time the appetizing odors of bacon and coffee were diffusing their fragrant aroma about us.

A countryman, who was passing along the bank, while the lower side of the bank was so steep that one or two out of a procession of four horse wagons loaded with the principal commodity of this section—bark—passed by before we were observed; but finally we heard the inevitable yell, "Gosh, Bill, look down yer at these fellers campin' under 'th' bank!" and in a minute we were surrounded by half a dozen of the primitive, bare-fisted, shirt-sleeved drivers, who examined everything with wonder and interest, the canoes in particular attracting their notice because of their unusual model and construction.

"You two fellers went down yer a couple o' year ago, didn't ye?" asked one, after gazing intently at me for a short time.

I admitted the fact. "Me and Bill yer was for'din' the river right up there with a couple o' loads o' bark, an' a couple o' them dad-blamed little boats shot by ahead of us an' you two fellers was in 'em."

"I reckoned it 'd 'mus' a ben us," as I recalled the incident to George, how we had narrowly escaped being blockaded in the boat channel through the rapids above by the foremost wagon, which was slowly bumping its way across; how the dam and stone of the ford and how we made a dash for it—as the condition of the water and the swift rush of the current would not admit of much tarrying on our part while they leisurely crossed—and shot by just under the noses of the foremost team of horses, who were disposed to be restive and frightened until quieted by the reassuring cuss words of the drivers.

After we had finished our supper and had gotten the club tinware out of the wagon, and while we were enjoying our evening smoke, a stylishly dressed, nice-looking young man scrambled down the bank into the camp and conversed with us for a while. He was engaged in getting out ties and rafting them down the river. He proved to be quite familiar with the river, and gave us considerable useful information in regard to the situation of the boat channels and the rapids and falls below.

Strange to say, we found his information to be quite correct; for it is proverbial among canoeists that the natives along the rivers know little or nothing of the streams along which they live, and but little reliable information can be obtained from them, particularly in regard to distances; a man, when asked, almost invariably giving the distance to the desired point by the nearest road, and seeming to have no idea of the possibility of any difference existing by the river.

About noon the next day, after threading our way along the narrow little boat channel close up along the left bank through the three or four mile wilderness of reefs and ledges constituting Bungardner's Falls and Keyser's Falls, we found ourselves paddling through the short, backed water below the dam.

"Say, Commodore!" George stammered as we approached the dam, the Frankle leading; "this is that ugly shoot we went down last trip, don't you recollect?"

"Well, I should say I did," I replied, "the water is lower this year and I do not believe it is so rough. I'll land on the dam and take a look at it, as I see the top of it is above water."

The shoot was close over against the left bank and I approached the dam with the view of landing to reconnoitre. I got a look down it and at once saw that it was practicable, although as the construction of the shoot consisted in merely leaving off the top course of timber in the short rising of the dam next the bank, over which the water poured in a smooth cataract of some 4 or 5 ft., with an enormous wave rearing itself up on end at its foot and flaunting its white crest at us followed by a long line of lesser waves, and a tremendous plunge, so I resolved to take it and abandoned my idea of landing and made at once for the shoot.

SAIL PLAN OF CANOE YAWL.

"Look out, Commodore!" yelled George, "you are not going down there again!"

"Certainly I am!" I replied, snapping my hatchets lightly down and pulling the waterproof apron up to my chin. "Come out it's all right!"

My canoe swooped down over the fall with a dizzying plunge. Her bow went straight out over the edge of the dam until nearly half the boat's length was out of the water and then it dropped with a thud and a shock right into the breast of the huge roller at the foot of the fall, whose white, curling crest loomed up to my astonished eyes apparently as high as the bank.

That full, high bow, as usual, proved its efficacy, and although a shower of spray flew all over me the water did not roll over my decks any further than to the front end of the forward hatch and I did not slip a drop of water, nor did a single drop shimmer on the blistering hot deck behind me.

I gave a yell of delight as my heavy canoe swooped buoyantly down over the big waves below, and I backed in under the trees close to the bank, and held on by the overhanging branches to see George and Lacy make the passage. Down they came with a slap and a plunge, George in the lead and Lacy following. Each of the sharp-nosed, narrow little Rob Roy's dove bodily through the big wave at the foot of the shoot, and the water rolled in a solid sheet a foot deep clear over each canoe from stem to stern.

"Great Scott! Commodore, that's a rough plunge!" What do you want to go down such places as that for?" said Lacy, as he and George swung in alongside of me and wrung the water out of their funnel sleeves and mopped their dripping faces. "I took a tub full of water there and I'm wet from head to foot," he continued.

"Me too," said George, as both opened their hatches and proceeded to dip and sponge the water out of their canoes.

"Haden't you better buy this canoe this winter, Lacy, when I sell her?" I asked. "Look at my decks! perfectly dry from the hatches back, and I didn't snip a drop of water. How about that full high bow now, eh?"

"Oh, she's got her good points," he admitted.

"Say, fellows," said George, "I notice that in shooting places like that, if instead of driving your canoe briskly over, you hold her back by pad paddling steadily, and let her slip gently over, she don't ship anything like as much water."

"Yes, I've noticed that too," I replied. "The water seems to slip out from under the canoe and she floats up gently over the waves; whereas, if you push her ahead, she shores her nose right through them."

"I'm hungry! let's lunch somewhere," said Lacy, who was always the first to propose lunch.

"Well, we'll lunch at the old Cedar Point camp ground just around the bend below," I replied, as we got under way again. We easily dropped down over the lower fall and paddled slowly along under a burning sun over the deep, still pool below the dam, and around the high, heavily-wooded point to the left, and beached the boats on a bar of glistening white sand putting out from the point upon which the burning rays of the sun beat fiercely down. We then opened all the hatches and removed the cargoes, throwing the canoes wide open, and placing the provisions in the shade, while the tents, blankets and extra clothing were spread out on the hot, dry sand to give them a sun bath, (than which nothing is so refreshing to blankets, tents, etc., and to air and dry out the canoes). We then took the mess chest, our camp stools, hooks and smoking materials and repaired to a nice shady bank, where we proceeded to make ourselves comfortable for the next three hours or so, for it was entirely too hot to think of pushing ahead during the heat of the day.

The true canoeist is never in a hurry. He takes things easily and does not measure a cruise by the number of miles made in a day. He spends more days on the cruise even to the extent of shortening his objective point if time be limited. If the heat is great or a strong headwind prevails he seeks a shady nook and lies by and goes a fishing, or reads an entertaining book, or takes a nap, or does anything except to obstinately push ahead through the heat or work like a cart horse battling against a headwind. He takes time to explore the attractive little brooks and creeks along the river, frequented only by the muskrat, the duck or the contemplative turtle. He visits places of interest along the river, climbs lofty bluffs and gets a view of the country for days if the fancy suits him or the fishing is good. In short, canoeing is not a rapid sport, like bicycling or driving or riding, but is a quiet, lazy, dreamy sort of existence where just to drop quietly and calmly down the stream, or linger reposefully under breezy, shady trees and listen to the musical splash of the water, the rustle of the leaves and the twittering carols of the birds, in the great big out-of-doors, seems all there is of life for the time being—albeit plentifully interspersed with sport of the most exciting character, if the river be full of rapids and falls, as is the lovely Shenandoah; and the true cruiser takes his cruise as it really should be taken; and avoids that false idea of canoeing—any attempt at making time.

"Boys, although not strictly in the line of my official and professional duties," said I, "I'm going up the hill to the house, there on a foraging expedition, and will bring back a bucket of water with me for lunch."

"That's a laudable enterprise, and one that should meet with all possible encouragement," said George.

"Thanks, yes; you go ahead and open the mess-chest and prepare the lunch while I am gone," said I, picking up a camp-kettle as I spoke and starting off up the hill toward the large handsome white house on its summit.

"Well, what have you got?" said Lacy, who was always hungry, as I reappeared in camp presently, laden with all I could carry.

"Ice water, by Jove!"

"And cantaloup!" exclaimed George.

"And fresh bread!"

"And tomatoes!"

"And pies!" I yelled Lacy in delight.

"Yes, and I've arranged for five dozen nice fresh biscuits, which we can have in an hour." I continued as, assailed by the boys, I relieved myself of my load, and we attacked our noon-day lunch with a will, for Lacy was not the only hungry one in the party.

Our afternoon's cruise was thorough as wild and apparently untroubled as a section of country as though we were completely out of the confines of civilization. For hours we saw no sign of human habitation or presence, and the vast, green solitude of forest and mountain which hemmed the river in on all sides hung over us oppressively with its solemn, majestic repose, broken only by the occasional splash of a fish, the mournful cry of a loon or the far off scream of a fish hawk and the ever present, hoarse, menacing complaint of the river, as it tripped and fell over and among the ledges and rocks that continuously obstructed its progress.

At rare intervals a small house or hovel would appear, surrounded by a barren, rocky clearing on the slope of the mountain—the home of some mountaineer, and generally swarming with slatternly women and dirty children, who eyed us with dull curiosity as we passed by—or a bit of the weather-beaten, moss-grown roof or side of a mill would glance out at us from the dense surrounding mass of green as we shot by—like a familiar face seen hurriedly in the crowded street of a strange city.

We picked our way cautiously through the three miles of falls that extend for that distance above the massive yellow-stained cliff known as the Golden Rocks, and skirted our way along its base over the deep black waters, on whose reflective surface we seemed to float like bubbles in mid air.

A gigantic trestle bridge, stretched its spidery filaments seemingly half way to the clouds, across the deep gorge at the head of the cliff (the railroad returning to the river again), and as we approached it, dancing down on the rapids above, a heavy freight engine came hustling out of the depths of the forest, craved like a ponder fist, and went roaring across it, outlined boldly against the deep blue of the sky, and screaming a salute to us as it shot by, which we returned by waving our helmets. This rushing, meteor-like fragment of civilization so suddenly and unexpectedly projected across our vision in the midst of the dense solitude was quite like meeting with an old friend, and we felt our oppressed and drooping spirits quite revived by the incident.

"I wonder how far it is," I exclaimed an hour or so later, as we were paddling along close together in a little bunch over a long, smooth "eddy," our hatches open and our helmets lying before us upon them as we enjoyed the cool shadow of Massanutten, behind whose wall-like crest the sun has dropped. "What's the matter with a canoe club? The Shenandoah Canoe Club, for instance?"

"What's a splendid idea," exclaimed George. "You'll be commodore, of course, in virtue of your having already enjoyed that distinction. I'll be secretary and treasurer, while Lacy will be president and janitor."

"We needn't have any initiation fees nor dues," said Lacy. "Consequently you needn't trouble yourself to give bonds, as your duties and responsibilities will be light."

"I really think it an excellent idea," continued. "There are two or three other canoeists at home, who of course will be included; and as our club house will be in the river itself, and each man takes care of his own canoe and outfit, I do not see but what your duties, Lacy, will be about as light as George's."

"Well, consider the club duly organized and officered then," said George. "By the way, it's high time we were looking out for a place to camp; it's getting late."

"It is that," said Lacy, "and it's getting—"

A SINGLE HAND CRUISER.

WE are indebted to Mr. F. W. Martin, formerly of Clayton, N. Y., for the accompanying handsome designs of a single hand cruiser; the boat though intended for sailing and day cruising only, being built to the full limit of the class of the St. Lawrence River International Skiff Sailing Association, whose headquarters are about Clayton, Brockville and Ogdensburg, on the St. Lawrence River. The lines show a very stylish and serviceable cruiser of the canoe yawl type, of moderate draft, 24in., and with very good internal accommodations. The boat was designed by Mr. Martin for his own use, sailing by day about the river, with no special regard for cruising and camping out, and the well is very shoal, being above the centerboard trunk; but ample stowage room is provided on each side and in the closed compartments fore and aft, as well as below the floor. Large air chambers are also fitted in the ends. For regular cruising with a crew of two or even three, a different arrangement might be made into a deep well; while the floor would also be lowered on each side of the trunk, and forward of the latter a large cuddy could be fitted up, for bedding, stores, etc., the air tank being dispensed with. In this way, and with a tent over the well, there would be plenty of room by day and night. For long cruises the boat would be still further improved by the removal of the board and the addition of 6in. of keel, making an extreme draft of 2ft. 6in., and giving still more room inside. The rig is very peculiar, but it is designed with the purpose of securing short booms to which the usual hand reefing gear may be easily fitted, which cannot well be done with a very long boom such as is used on the racing skiffs. The three sails are of the same size, 80 sq. ft. each, and can be very easily set, reefed, trimmed or stowed by a crew of one. The details of construction are very neatly and carefully worked out, and if followed the result will be a very stylish and shipshape craft. The dimensions are as follows:

Length over all.....	22ft.
L.W.L.....	22ft.
Beam extreme.....	4ft.
L.W.L.....	3ft. 8 1/2 in.
Least freeboard.....	1ft. 2 in.
Sheer, bow.....	10 in.
Stern.....	4 in.
Draft without board.....	2ft.
With board.....	4ft. 4 in.
Fore side of stem to	
Foremast.....	1ft. 3 in.
Mainmast.....	9ft. 4 in.
Mizenmast.....	17ft. 4 in.
Bulkhead No. 1.....	7ft. 1 1/2 in.
Bulkhead No. 2.....	9ft. 2 1/2 in.
Bulkhead No. 3.....	15ft. 4 in.
Bulkhead No. 4.....	17ft.
Fore end of coaming.....	7ft. 8 1/2 in.
After end of coaming.....	16ft. 3 in.
Centerboard slot, fore end.....	9ft. 4 in.
After end.....	14ft. 4 in.
Well, width.....	2ft.
Spars and sails	
Mast, deck to head.....	11ft. 8 in.
Boom.....	7ft. 9 in.
Yard.....	9ft. 8 in.
Battens.....	7ft. 4 in.
T. W. Cunningham, C. B. Vaux, F. L. Dunnell, L. B. Palmer, G. P. Douglas, H. H. Smythe and Wm. Whitlock.	7ft. 6 in.
Area.....	80 sq. ft.
Total area.....	240 sq. ft.

MASSASOIT C. C.—The Massasoits turned out in good force on Fast Day, practically opening their season. Aline, newly built by her owner, J. L. Ball, capsized off the South Boston Pier, and Vee Bee (Y. B. Johnson) going to Aline's rescue met with a similar disaster. Allan Hurd's Sappho ultimately came to the rescue, and the men paddled over to the Low Pasture and got somewhat thawed out from their one hour's immersion. A close call; but we prefer to have our disasters at the beginning of the season.

A. C. A. MEMBERSHIP.—Eastern Division: J. A. Apollonio Winchester, Mass.; Herbert S. Clarke, Holyoke, Mass. Northern Division: The names credited to the Central Division in our issue, of March 26, elonged, with one exception, to the Northern Division. Atlantic Division: Jas. N. Fuller, Passaic, N. J.

THE ZEREGA SAIL COMPETITION.—The following entries have thus far been received for the hoisting sail competition, for which prizes have been offered by Mr. Zeraga: C. J. Stevens, W. T. Winttingham, C. B. Vaux, F. L. Dunnell, L. B. Palmer, G. P. Douglas, H. H. Smythe and Wm. Whitlock.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

C. H. E., Syracuse, N. Y.—We do not understand your question.

A. S., Mand. Pa.—We will be glad to publish your claim of name. To qualify your dog for exhibition he must be listed with the A. K. C. It will not hurt the puppies to give the mother worm medicine.

F. E. C.—Where is a good place to go for a day's sport, fox or coon hunting? Ans. In its season fair sport at these animals can be had near almost any back town in Connecticut or Massachusetts. Write to J. L. Pratt, Essex, Conn.

SOUTHERNER, Charleston, S. C.—In Woodcraft, "Nessmuk" speaks of "well cleaned angle worms," and says "Do not go in the woods fishing with out a stock of well cleaned angle worms." Will you kindly give manner of cleaning earth worms, and state if they are as lively after cleaning as before? Most of our fresh water fishing here is done with bait, or earth worms, minnows and spinners. Ans. Leave the worms over night in moss. See No. 240 of your "Hints and Points."

J. B. G., Columbus, Texas. Can any thing be put on hooks to attract fish? What is the best way to catch buffalo fish? What are the best and cheapest works on fishing? Ans. 1. The only thing known to us for taking fish is proper bait and tackle. Give us the names of your fish and we will state methods of capture. The catfishes can be readily taken with earth worms, raw liver and most other animal substances. Mr. Albert Turpe, of Brackettsville, Texas, can give you information about your fishing. 2. Buffalo fish do not take the hook freely; they belong to the sucker family and, like the others, are usually caught by seining or spearing. A correspondent has caught buffalo on a minnow or fly-hook baited with bread, fishing on the bottom. The fish, however, is say and hard to catch. 3. See our advertising columns for list of works on fish and fishing.

D. J. M., Grant's Mills, N. Y.—Does the game law now in force prohibit a mill owner from letting sawdust in a flowing stream of water, the mill having been in use on said stream for a period of 20 years? Ans. Chap. 534, Laws 1874, Sec. 25, as amended by Chap. 430, Laws 1881 (given in the Book of the Game Laws), reads: No person, association, company or corporation shall throw or deposit, or permit to be thrown or deposited, any dye stuff, coal tar, refuse from gas houses, sawdust, lime or other deleterious substance, or cause the same to run or flow into or upon any of the rivers, lakes, ponds, streams, or any of the bays or inlets adjoining the Atlantic Ocean within the limits of this State. Any person who shall violate this section, or any member of any such company, association or corporation who shall authorize and direct such violation, shall be guilty of a misdemeanor, and in addition thereto shall be liable to a penalty of fifty dollars for each offense. But this section shall not apply to streams of flowing or tide water, nor to the town of French Creek, in Chautauque county, which constitutes the motive power of the machinery or manufacturing establishments, when it is absolutely necessary for the manufacturing purposes carried on in such establishments to run the refuse matter and material thereof into such stream.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanite," "Glean," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—4 ct.

22-FT. CANOE YAWL. DESIGNED BY MR. F. W. MARTIN.

1st Angler with broken rod;

"Where do you get tackle that will stand such fishing?"

2d Angler;

"At Abbey & Imbrie's, 18 Vesey Street, New York, they are the only people who make first-class tackle at a reasonable price."

NOTICE TO LIMIT CREDITORS.

To the Creditors of the F. L. Sheldon Company:
Notice is hereby given that on the tenth day of February, 1891, an order was made by the Chancellor of the State of New Jersey, that the creditors of the F. L. Sheldon Company present to the undersigned, the receiver thereof, and prove before him under oath, to his satisfaction, their several claims and demands against said corporation within two months from the tenth day of February, 1891, and that in default thereof, such creditors shall be excluded from the benefit of such dividends as may hereafter be made and declared by the court upon the proceeds of the effects of the said corporation, and notice is hereby given to all the creditors accordingly. STEVENS SPECIAL FIRE ARMS.

Wherever shooting is done, in all parts of the world, the Stevens Rifles and Pistols are being introduced, and on account of their superior accuracy are preferred.

STEVENS PISTOLS have made more brilliant records and have done finer work than any other pistol ever made.

STEVENS RIFLES have made records which were considered impossible.

STEVENS POCKET RIFLES are carried by ladies, anglers, tourists and hunters. They are marvels of accuracy, compactness and beauty.

STEVENS LADIES' RIFLE is the proper rifle for ladies. It is wonderfully accurate and has no recoil.

The .22 long rifle and the .25 rim-fire cartridges, the most accurate small-bore cartridges made, were originated by this company. These celebrated rifles and pistols are manufactured by

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND—It will wind up the line slowly if the angler chooses.

THIRD—No fish can ever get slack line with it.

FOURTH—It will save more fish than any other reel.

FIFTH—It will prevent tangles, lines and snells from being broken by large fish.

SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

Angell's Pat. Metal Revolving Flies,
FOR TROUT AND BASS.

Revolving Metal Wings on a Feather Fly.

Revolving Wings and Body.

These flies are of light metal, of attractive colors, in nickel and bronze. When trolled in the water the body and wings revolve, giving them the appearance of live flies in the water. The difference between these flies and the artificial feather fly is this: One is a dead fly in the water and the other is a live fly. These flies have been well tried. The Angler has only to put one on the end of his leader to find out that it is the best trout fly in the world.

You can fly-fish at the bottom of deep water by letting the metal fly sink and drawing it up rapidly catch large trout that won't rise to the surface.

The metal wings shown in the lower cut are made to fit all sizes of artificial feather flies for trout and bass. The angler can vary his flies by slipping on various colored wings over a single feather fly, as shown in the center cut. A pair of nickel wings with bronze body, fitted to a "Professor" will be found a killing fly under all conditions.

Price of Wings or Flies, \$1.00 per dozen.

On the River St. Lawrence

TO BE LET.

The fishing privileges of the Trinity River about 250 miles below Quebec on the north shore will be sublet for the ensuing season. There are comfortable houses on the ground with accommodation for a party of four. The fishing in this river has been steadily improving since it has been in the hands of the present lessee, the catch of last year being 150 salmon. Besides the common sea trout, which are in great abundance, there are the rare and beautiful salmon trout, sometimes weighing over 8 lbs., both affording excellent sport close to the camp.

The Trinity River is open 24 hours by weekly steamer from Quebec, or 15 hours from Rimouski. All the canoes and most of the men required can be obtained on the spot. For further particulars apply to P. MACNAUGHTON, P. O. Box 512, Asheville, N. C., or to I. D. GILMOUR, Ottawa, Canada.

SALMON FISHING

FOR SALE.

Lease of St. John River, Gaspé, Canada. Nine years to run. One of the best salmon rivers in the world. For particulars, apply to A. F. CARRIER, M. P. P., Quebec, Canada.

Breeder, Shipper and Dealer in Chester White, Berkshire and Poland China Pigs, Fine Setter Dogs, Collies, Fox Hounds and Beagles, Sheep & Poultry. GEO. B. HICKMAN, West Chester, Pa. Send stamp for Circular.

BERKSHIRE TROUT HATCHERY HAVE for sale healthy brook trout, ranging in size from young fry to four pounds weight, suitable for stocking public and private waters. For information and price address C. H. SAGE, Sec'y, Gt. Barrington, Mass.

WILDFOWLING—FOR SALE CHEAP—A new double 8-bore goose gun made to order for owner by Greener. Apply to A. G. ROSS

ap19,3t 147 St. James street, Montreal, Canada.

FOR SALE—A SMALL FISH FARM AND feed mill, one mile from a beautiful city in S. Wisconsin. Address DR. SWAN, Beaver Dam, Wisconsin.

Valuable marsh for sale.—Controls the best canvasback shooting in America. For particulars, address J. L. HOFFMAN, Monroe, Mich. 1mo

ANSWERS TO CORRESPONDENTS.

A MARINE RESERVATION.

THE recent establishment of the forest reserve adjacent to the Yellowstone Park, which was brought about largely through the efforts of Secretary Noble, has been welcomed with the warmest interest by a very large class of people. This is a matter which appeals strongly to the naturalists, a small class, to those interested in forest preservation, and finally to the agriculturists and stock raisers of the West, whose business must be ruined unless measures are taken to provide for them a never-failing water supply. It is to be hoped that as time goes on other forest reservations may be established in the Rocky Mountain region. There can hardly be too many of these. We may feel sure that Secretary Noble will do all in his power to forward such action.

It will greatly interest those among our readers who are naturalists—and should interest the sportsmen as well—to learn that the Secretary of the Interior—following out a suggestion made by Professor Langley—has in view the reservation of certain portions of lands and waters subject to the jurisdiction of the United States in the Pacific Ocean so that a chance may be given some of the great ocean animals to be preserved in the future. It is well known that many of the marine animals of the North, especially those which afford valuable fur and oil, are being destroyed at a rate which foreshadows their speedy extinction. While most of these animals are prone to wander great distances from land, and so are exposed to a thousand dangers which would not threaten a land animal on a reservation, and more or less local in its habits, it is nevertheless true that an asylum such as would be furnished by an island or a group of islands might do much toward preserving species which are on the verge of extinction.

Animals soon learn to resort to a place where they are

never disturbed, and when they are assured of safety in such a locality they become singularly tame. This is shown by the conduct of the elk, deer, sheep and antelope in the National Park, whose lack of fear has been witnessed by many of our readers. We are glad to print the following letter and memorandum, which set forth the plan so far as it is yet developed. Viewed from the standpoint of the biologist, the matter is one of great interest, and it may be hoped that it will be fully discussed in these columns by naturalists.

The position of Amak Island is stated in the memorandum which we print. The Farallone Islands lie in the Pacific Ocean nearly due west of the entrance to San Francisco Bay and about 35 miles from land. These islands have often been visited by naturalists, and recently by Mr. W. E. Bryant, who published an interesting paper giving an account of his visit there. The following letter and memorandum explain themselves:

SMITHSONIAN INSTITUTION, Jan. 14, 1891.

The Honorable John W. Noble, Secretary of the Interior:

SIR—Referring to a late conversation, in which you expressed an interest in a suggested plan for enabling the Government to secure a place of refuge for many of the marine mammals now threatened with extinction on our Pacific coast, I have the honor to present to you a memorandum laid before me by some of the most competent experts in the country upon the matter, recommending the reservation of Amak Island, a small, rocky, treeless isle of a few square miles, bordering the Alaskan Peninsula near latitude 55° north, and the well-known Farallone Islands near latitude 38° north. The latter is already, I believe, occupied by the Treasury Department as a station of the Lighthouse Board.

I have not addressed the Honorable the Secretary of the Treasury in the matter, though, if you should think it desirable, I will do so.

I inclose a map showing the exact position of Amak Island, and am, sir, yours very respectfully,
(Signed) S. P. LANGLEY, Secretary.

Memorandum on the establishment of Natural History Life Reservations in American waters, to prevent the extinction of certain well-known forms of amphibious mammalia.

1. A northern station might be established for the preservation of the walrus (*Odobenus rosmarus*) from impending extinction by the reservation of Amak Island, in Behring Sea, Alaska.

2. A southern station might be established for the preservation of the northern sea lion (*Eumetopias stelleri*), and the California sea lion (*Zalophus gilgissii*), from extermination by a prohibition of the right to kill these animals on the Farallone Islands, off the entrance to San Francisco Bay. These islets are special reservations of the Government to-day, and occupied only by the Lighthouse Board servants.

REMARKS.

With reference to the reservation of these stations above located, it may be stated that the title of the land is now held by the Government, and the order of the Secretary of the Treasury, supplemented by that of the Secretary of the Interior, whenever the United States land laws are extended over Alaska, will be all that is required for their control.

It would be necessary on Amak Island to build a keeper's house, supplying him with a small sailboat, provisions and fuel. The cost would be perhaps some \$1,200 annually. The cruising of the Revenue Marine cutters would give this keeper his supplies and enforce the prohibition of killing walrus on this island. These cutters cruise every summer and early fall in these waters of Behring Sea, charged with the duty of protecting the Seal Islands.

On the Farallones the Lighthouse Board has a perfect establishment, and its keeper of the lights might have the extra duty devolved upon him of looking after the preservation of the amphibians above cited.

The sea elephant (*Macrorhinus angustifrons*) of California is now believed to be extinct. This animal, under the circumstances of its breeding, could not very well be saved to-day, even if a few breeders survived.

The sea otter (*Enhydra marina*) of the northwest coast and Alaska is also at the limit of extermination. The reservation of Amak Island would save a few breeders and the species from utter elimination.

With reference to the other forms of marine mammalia in Alaskan waters, it may be truly said that they are not, any of them, in sufficient number or of value enough to tempt the cupidity of the white man. It is unnecessary to attempt saving them, since there is no real danger of their extermination in the present, or the future, as far as we now know. The conditions which operate to save the fur seal from destruction we well know, though they are at the present moment being taxed to their utmost to attain the object of their creation.

The waterfowl of the Pacific Ocean coast and Behring Sea have so many practically inaccessible rocks and cliffs to breed upon, that they are beyond all danger of extermination—there is no helpless bird among them like the extinct giant auk of the Atlantic.

JAN. 14, 1891.—The preceding memoranda are prepared from the statements of naturalists personally familiar with the marine mammals and the Pacific coast, and I recommend them as worthy of confidence. (Signed) S. P. LANGLEY, Secretary.

The islands proposed to be reserved in the plan outlined are valueless from any commercial standpoint, yet, for the purpose indicated, they may be of great benefit to science, and the act of setting them apart as reservations where animal life shall be protected may result in the pre-

servation from extinction of some most interesting mammals. Just as to-day in the Yellowstone Park the visitor may see a few individuals representative of the hordes of buffalo which once darkened the Western prairies, so on these tiny islands of the Pacific—if set aside—the naturalist of the future may study forms of ocean life which but for this reservation would have been swept out of existence.

SNAP SHOTS.

THE bill prepared by the codifiers of the New York game laws still hangs fire in the hands of the Senate Game Law Committee, and no man can tell in just what shape it will ultimately reach the Upper House of the Legislature. It is understood that the Senate Committee has determined to amend the section which legislates the present Fish Commissioners out of office, leaving that body as it now stands. They have also decided to leave the deer and the trout law substantially without change. It seems altogether probable that the day of adjournment for the Legislature is not far off, and it is important that this bill should be put in proper shape as soon as possible, so that action may be taken on it before the closing days of the session. As the bill if it passes the Senate must go back to the House and be acted on there, no time should be wasted. It is certainly to be hoped that the bill with proper amendments may become a law. As may be seen by a reference to the *Book of the Game Laws*, the statutes of this State with regard to fish and game are at present a disgrace to a civilized community. Something should be done at once to straighten out and render intelligent and intelligible the obscure, confused and contradictory hodgepodge of enactments which at present are supposed to protect our game and fish.

The account of Mr. Austin Corbin's game preserve in New Hampshire, published in FOREST AND STREAM a short time ago, has excited a widespread interest, and been extensively copied in the newspapers of various towns and cities of the East. It is not strange that this should be the case, for the general public takes a real and lively interest in the preservation from extinction of American wild animals. It is for this reason that the public feels so deep a sentiment about the Yellowstone National Park, but to many people the National Park seems so far off that they feel that they may never get far enough west to see it, while New Hampshire on the other hand is at our very doors, and it may fairly be hoped that when Mr. Corbin's park is fully stocked and in fair running order the general public may be afforded an opportunity to see some of the great mammals of this country in a state of nature.

The enterprise of Californians in all matters affecting the welfare and happiness of the people of their State is proverbial and has been rewarded with most gratifying results. In no respect is this more strikingly manifested than in the efforts to stock open waters with choice fish. The shad and the striped bass now swarm in California bays and rivers, while the black bass and the brook trout have found congenial permanent haunts in the fresh waters. We give in our columns an account, drawn from the last report of the Fish Commissioners, concerning the introduction of several well-known Eastern game fishes by State and individual coöperation.

The dog world of this city and vicinity are watching with interest the progress of the Vredenburg—Peshall libel suit, which as we go to press is being tried before Judge Martine in the Court of General Sessions. A brief report of the proceedings will be found in our kennel columns, but any extended consideration of the matter must be postponed until the case has been decided.

The present month has been marked by an unusual mortality among well-known sportsmen, several of which we chronicle this week. The list includes the veteran who has completed the span of life allotted to man as well as the young man just entering his prime.

Any subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

The unavoidably delayed index to Vol. XXXV, is sent out with this issue.

REMINISCENCES OF THE LATE GEN. STRONG.

IN the death of Brevet Brig.-Gen. William E. Strong, of Chicago, as announced last week, the sportsmen of the country, and more particularly of the West, which was his home, sustain a lamentable loss.

His services in the war were briefly referred to last week, but to what was said then may be added the statement that he was with Gen. McPherson from the organization of the Seventeenth Army Corps until Gen. McPherson took command of the Army of the Tennessee and was killed before Atlanta. When that ill-fated officer fell before the fire of the twelve ambushed riflemen upon whom he had blundered while making a reconnaissance, he was accompanied by Gen. Strong, who had at the moment started off in obedience to an order. It was Gen. Strong who caught McPherson's wounded horse, which later died, and it was he also who recovered and brought in the dead body of his commander. Throughout the war he showed himself the noble man and soldier.

It was in January, 1867, that Gen. Strong came to Chicago. He did not resume his law practice, but became connected with the Peshtigo Lumber Co., a large concern operating in the pine forests of Wisconsin. He leaves a widow and three children. He died possessed of considerable property, though he was not so wealthy a man as was generally supposed.

It is in his capacity as a sportsman, however, that he attracts most interest for these columns, and in nothing was he more conspicuous than in his ardent love of field sports and for his proficiency in them. Any weapon fitted his hand. He was a skilled angler, and as a combination rifle and wing shot he had no superior among the amateurs of the West. He pursued birds or big game with almost equal eagerness, and spent a great deal of time in long hunting trips. His outfits for his different lines of sport were very elaborate and well chosen. He was a rover years ago of the mountains and plains of the West and has killed many sorts of big game, chiefly buffalo and elk. He was an old companion of Gen. Phil Sheridan in the West after the war, and the two spent many a week in camp together in successful chase. Gen. Crook was another hunting comrade of his, and when the latter died the loss cut Gen. Strong deeply. Mr. Wirt Dexter, one of the wealthiest and most prominent shooters of Chicago, who died within the year, was yet another shooting friend of General Strong. It is now only about a year ago that Gen. Crook, Gen. Strong and Wirt Dexter made a big hunting trip together to the Indian Territory. To-day not one of these men is alive.

If, however, we wish to find the dearest friend, the esteemed companion and the most frequent comrade on the hunt that Gen. Strong ever had, we shall find him alive to-day, in Chicago, himself gray but still vigorous, and even to-day hardly able to talk of Gen. Strong's death. This is Mr. Alex. Semple, one of the oldest shooters of this city. He was fairly a brother to Gen. Strong, and these have hunted together almost exclusively. On receipt of the news of the General's death a FOREST AND STREAM representative called on Mr. Semple. The latter spoke most feelingly.

"I hunted with Gen. Strong for over 25 years," said he, "and he was the perfect sportsman in every day of all those years. He was a tall, well-made man, strong and vigorous. He was the best all-round shot I ever saw. I don't think his equal existed. He had hunted all over the country. We used to get most of our deer up in Wisconsin, but he had shot all over the Rockies, and killed elk, buffalo, antelope and deer, all through that country. He was as pretty a field shot as ever you saw, and a great duck hunter. He was a member of Tolleston Duck Club, and one of the best of them. He shot all the game birds well, and used to fish a great deal also. He seemed to just naturally love the woods and fields, and he took naturally to all such sports. Many and many is the happy day we spent together. I never knew a friend like him.

"The last hunt we had together," said Mr. Semple, "was in Kansas, the 20th of last November. We went out to Alma, Kansas, and were with Mr. Gleason, who took out some of his dogs for us. We got a good many birds, but the General was not shooting well. I never saw him do so poorly. He was not himself at all. He never expected to get well, and we both knew it, though he did not talk much of it, on my account. I knew what was his trouble. I knew all his family matters. There is no use saying anything except that a good man has left the ranks of sportsmen.

"When the General felt his health failing rapidly, he wanted to go to Florida. His doctor thought he would better go to southern Europe, and I advised him to do this, and got him to take his nephew along. The General's wife and two daughters had been in Europe for some time, and he was to join them and keep to the warmer climates. It broke my heart to see him start, for we both knew he would never come back. When I saw him get on the train, I said, 'That's the last. I will not see him again.' I have the last letter General Strong ever wrote to anybody, and the last telegram he ever sent. He sent them to me from New York before he started across the ocean. I carry them in my pocket. You won't find a kinder letter anywhere than this one he sent me, when he knew it was all up."

By courtesy of Mr. Semple FOREST AND STREAM gives this letter. The sportsman spirit shows through it, even to the last. It reads precisely as follows:

"MURRAY HILL HOTEL, New York, March 13, 1891.

"My Dear Mr. Semple:

"We arrived safely at 7:30 o'clock yesterday afternoon. The trip was rather tiresome, but I stood it fairly well. I think I notice some improvement in my condition. I am a trifle stronger than when I left Chicago, and my appetite is a little better. I hope when I get on the ocean I will notice still further improvement. I believe I shall.

"We go down to the ship (La Gasconne) in the early morning tomorrow, and sail at 8 o'clock. I will write to you from Italy, or wherever I may be, and keep you advised of my condition. I think I am going to get well and strong again, and expect to be back in Chicago on or before June 1, fully restored to health. I want to have another shoot with you, anyway, perhaps several.

"I want to thank you for all your kindness, thoughtfulness and consideration during all these years that it has been my pleasure to know you. We have had some glorious times together which I shall never forget. You have done very much to cheer me up and make my life happy. I remember it all with pride and pleasure. Your warm friendship and close companionship are treasured in my memory. I send you my heartiest best greeting and my wishes for your health, happiness and prosperity.

"Remember me kindly to Mrs. Semple.

"Yours ever sincerely,

W. E. S."

On the next morning Gen. Strong sent the following telegram to Mr. Semple: "8:09 A. M.—We are about to sail. Feeling better. Good-bye.—W. E. STRONG."

Unquestionably he wrote thus cheerfully to cheer up his old friend. A few days of travel, a few days with his family, happy ones, we hope, and his life was over. A cablegram announced the

fact to the papers in this country. His remains will probably be brought to Chicago, where he has a son living. He died at the age of 51 years.

D. W. CROSS.

VERY many of our readers will learn with keen regret of the death of Mr. D. W. Cross, a veteran sportsman, whose genial, kindly nature and deep interest in all that pertained to his favorite pursuit had endeared him to the wide circle of friends that he had made during a long and honored life.

Mr. Cross died in Cleveland, Ohio, April 9, at the age of 77. He was born in Pulaski, Oswego county, N. Y., Nov. 17, 1814, was educated at Hamilton Academy, where he was prepared for college, and in 1836 went to Cleveland, where he entered the law office of Payne & Willson, the senior member of the firm being the Hon. H. B. Payne, of Ohio. In the year 1837 he was appointed deputy collector of the port of Cleveland, which position he held for eighteen years. Soon after this he was admitted to the bar and practiced successfully up to the year 1860. In 1855 he began to take an interest in commercial pursuits and gradually devoted less attention to the law and more to business, and as the years went on was prominent in various industrial enterprises in and near Cleveland. A few years ago Mr. Cross suffered from a stroke of paralysis which has confined him to the house ever since. Our last shooting with him was done in the winter of 1884 and '85.

Mr. Cross was a most enthusiastic sportsman, and it would be difficult to mention any man in this country who has done more to raise the tone of sportsmanship. In the old days he was a great deer hunter, and for thirteen successive seasons from 1838 he devoted his vacations and what time he could spare to this fascinating pursuit, in which Oliver H. Peirry was his favorite companion. He was one of the founders of the Winous Point Club, and to his wise counsels the club owed much of the good shooting which its members enjoyed for so many years. He founded and was president of the Oneida Club of New York, and was a member of the Castalia Club of Ohio, the Narrows Island Club of North Carolina, and of many other similar associations. He did much

D. W. CROSS.

for fishculture, and was one of the first to plant the California trout in Ohio waters. In 1881 he purchased three hundred acres of land in Oswego county, N. Y., in the waters of which he planted several hundred thousand California trout.

Mr. Cross studied carefully the food of wildfowl, and did much to introduce the wild rice and the wild celery in regions where they had hitherto been unknown.

The preserves of the Winous Point Club are at the head of Sandusky Bay, and at the mouth of the Sandusky River, and comprise several thousand acres of marsh and feeding grounds adapted to every variety of wildfowl, especially of canvasback and redhead ducks.

Soon after the establishment of this club, Mr. Cross began the careful study of the habits of the different species of water fowl that resorted to these extensive marshes. He soon discovered that the food that attracted them here and that made it a resort of such vast numbers of game birds, both in spring and fall, was the bulb and tender leaves of the wild celery. He learned, too, that the seed of the wild celery could be gathered in October, and when planted in suitable water with mud bottom would grow well and attract the ducks in their annual passage to and from the breeding grounds. This food is found in many places in this country, especially in the Chesapeake Bay and in Currituck Sound in North Carolina, on the extensive preserves of the Narrows Island Club, where the canvasback, redhead, widgeon, wild goose, brant and swan resort to feed and fatten on the succulent bulb. Of this latter club Mr. Cross was long a member, and there at the age of seventy years he brought down a wild swan.

Among the attractive food for the geese, swan, canvasback, widgeon, pintail, teal and mallard, aside from the wild celery, Mr. Cross noted in the water of Sandusky Bay the marsh potato or the bulb of the arrow head, and the tender water plant known as the *anacharis*, found also in abundance in the preserve of the Narrows Island Club.

Having made the food and habits of water fowl a successful study, he utilized it in his pursuit of game, and at the request of his sportsmen associates he was induced to compile his knowledge in his book, "Fifty Years With Rod and Gun," published in Cleveland. In this book he approximated the flight of birds per second, and the projection of different sizes of shot at various initial velocities, which in the tables prepared would show very nearly where and how to hold to enable the hunter to kill his game.

He devoted much time toward perfecting the game and fish laws of Ohio, and was always an uncompromising advocate of fish and game protection, believing that the sportsman of the era of abundance should yield something unselfishly to the sportsman of the future. He believed fully in artificial culture of food fish, and was in favor of stringent laws for its advancement and protection. He invented sandals studded with hob

nails, to be worn on rubber boots in fishing on rapid and stony trout streams, as a protection against slipping and to preserve the boots. He also devised a mode of safely carrying an extra tip in a water-tight copper tube, inserted in the hollow staff of his landing net, which has been quite extensively used by anglers.

Mr. Cross was a versatile writer, mostly in the interests of sportsmen; but among his most noteworthy productions was his personal reminiscences of the Canadian rebellion, during the administration of Sir Francis Bond Head, while Governor of the provinces of Upper Canada, which was published in the *Magazine of Western History*.

Personally Mr. Cross was a most charming man. He took the readiest interest in all matters pertaining to sport, and was always glad to assist others with his great stores of information. His death leaves a vacancy that it will be hard to fill.

The Sportsman Tourist.

IN MY BOAT HOUSE.

STAUICH old canoe,
We've had some pleasant times, we two,
In autumn days when Nature's book
Was bound in gold and blue.
What rocky cove or rushy bay
But saw our lazy shadow stray
Over the languid grass,
Or flashing of our silver hook
And now and then a sullen bass
Come, fighting all the way.
Ah, mel old boat, how swiftly speed
Our yellow Indian summer days.
How soon the tawny gold and red
That made the maples all ablaze,
In rain of withered leaves was shed;
And autumn time was dead.
Would that to-day as swiftly flew
These laggard hours so long and slow;
For many a month must come and go
Ere I set sail again with you,
Stout old canoe.

Brave old canoe,
I shall not soon forget, nor you,
That day of all our autumn days
When she was with us too.
Ah! still I see her sitting there,
The yellow sunlight in her hair,
As in and out the dimpled bays
We drifted, careless where.
Our lines were never even wet—
You thought it quite absurd, I knew;
Mayhap it was, and yet—and yet
Though she forgot and went her way,
The queer thing is I can't forget.
Ah! well-a-day!

Hereafter we will go—we two—
Dear old canoe.

M. M. CASS, JR.

BETWEEN TWO RIVERS.

THERE is a vast deal of wilderness in Sullivan county, N. Y., and will be when the people of these United States outnumber the population of China. The surface conformation affords great variety, with hill and rock for the predominating features. To one whose acquaintance with the region is limited to the vicinage of Monticello and the lakes this may seem like libel, but the upper crust of the town of Thompson is not the whole of Sullivan county, and even here the stubborn soil demands of the farmer something more energetic than implied in the phrase, "tickling with a hoe." Excepting more or less soft spots here and there, sister townships present a face of adamant to the agriculturist. Great boulder-strewn barrens, thousands of acres, are sacred to scrub oak, sweet fern and huckleberry bushes, sentinelled with rock pines, jagged, starved looking and consumptive.

These dismal barrensternminate when a more ambitious growth rises, generally in a straggling manner, to forest height and girth. Woods extend over hill and dale for miles, little of which is now forest primeval. The increasing demand for sleepers, ties and telegraph poles, promotes close inspection of the hard wood growth, oak and chestnut especially, and often when the game seeker is indulging himself with the fancy that he is an explorer he meets with a stump on which the axe has left its destructive seal.

Occasionally one meets with natural groves of rock maple, lifting aloft their foliage crowns until they seem strangely small for the nourishment of such mighty boles. Wide areas are studded with giant evergreens, a few pines, but mostly plebeian hemlocks. In many of the hollows lie extensive laurel swamps, swales and bogs, surrounded by wilderness so utter that the bellow of a moose, or the sight of one digging for pond lily roots on the margin of a peaty pool, would seem in keeping with the rest.

A few stout hearted sons of toil have their clearings here and there, and wage endless battle to keep wild nature sufficiently subdued to grow at least a portion of their sustenance, usually gleaned amid a stout annual growth of oak and hickory shoots.

During the early decades of the century when as a boy the poet Saxe was helping to extend his father's clearing near Monticello, the population of the county increased rapidly. Almost every man was a woodman and hunter, and the woodland life shrank before them, some species quite disappearing. When our people learned of the great wealth that lay in the fertile bosom of the West, a reaction came. The young men of the hilly East relinquished their assaults on the forests, tired of struggling with stumps and stones, they began an exodus to the alluvial timber bottoms of Ohio and Indiana, and to the inviting sward of the prairie.

At the same time, the diversifying and rapidly growing volume of national industry attracted the brain and brawn of old Sullivan to more profitable employment than the tillage of their native fields.

As might be expected, this reaction had a marked effect on the native fauna. By confining themselves to the forest they enjoyed comparative immunity from pursuit by human foes. Adaptation to change in environment due to the presence of civilized man took place. Many localities in the Eastern and Middle States now swarm

with wild beasts, when such animal life was almost exterminated there sixty or seventy-five years ago.

Between the Mongaup and Neversink rivers, with Thompson township on the north, and Deepark, Orange county, for its southern boundary, lies the township of Forestburgh. It is a natural game preserve, where thrive in relative abundance deer, two varieties of black bears, "hog-backs" and "racers," the latter occasionally attaining a weight of seven or even eight hundred pounds. Foxes, lynxes and wild cats prey upon two kind of hares or rabbits as popularly called.

The streams team with trout, the numerous ponds with pickerel, perch, eels, etc., while muskrats, mink and otter are frequent near the water, the latter sometimes attaining a weight of fifty pounds. Here also resort numerous water-fowl, including heron, cranes, geese, ducks and loons. One or more pairs of the latter (great northern divers) haunt every considerable pond to the terror of the camper-out unfamiliar with their weird night cries.

Within recent years the foxes have so multiplied that as their tracts in the snow reveal, the woods are fairly overrun with them, and the word is that they are exterminating the gray rabbits. Apparently the large white rabbits are too much for reynard, since he passes over their trails with indifference, but meeting the trail of a gray rabbit he follows it up. Sometimes the victim is caught napping on the lee of a bush or boulder, or allows himself to be entrapped in the hollow end of a rotten log. The white rabbit is both swift and alert; he lies on the slopes, and when pursued scuds down into the laurel swamps. If a dog be in his wake he circles about wildly and is easily shot.

Two years ago grouse were plentiful, but for some reason their scarcity was remarked last winter. The foxes are charged with being their wholesale destroyers during the nesting season; doubtless the foxes do their share, but two mild winters in succession had the effect of multiplying the number of rodents and snakes, and grouse nest on the ground. Inference is easy.

This between-rivers wilderness is a favorite retreat for hunted game from all quarters. Bear and deer frequently cross the Delaware to the New York side, a large proportion of them find their way into the region lying between the Neversink and Mongaup and remain there.

The bears of Forestburgh are not easily brought to bag. In the first place they are excessively timid. They are not hunted with much success until snow falls, after which they hole up for winter or confine their movements to the center of some almost impenetrable swale, whence they are not easily expelled. In case a routed bear persists in the fatal desire to return to its quarters he soon falls a victim, provided the hunter understands his business. One of the best hunters in Forestburgh, after routing a "racer," pursued the quarry for three days and gave up, his nearest approach being at the outset.

The slaughter of deer by hounding them in the deep snow, especially when the rivers are frozen over, is a thing of the past in Forestburgh. That clause of the New York game laws which closes the season for deer hunting on November 1 prevents the cruel practice. The law is a great mercy to the deer, and is generally satisfactory to sportsmen, but the backwoods folk who were accustomed to fresh venison throughout the winter feel differently.

A short time ago a party from Port Jervis spent a day in Forestburgh searching for bear tracks. They were accompanied by "Lu" Boyd, who now rejoices in the title of "Chief Game Keeper of Hartwood Park." Lu had his hound in leash. A light snow had fallen during the preceding night, and the party crossed the trails of five deer, two of which they saw standing within easy rifle range, while the dog was yelping and plunging to get after them.

"Act as if they know the law is on," said Boyd, "By hang! if I were alone," he muttered. Even the lawyer had to struggle against temptation. By the way those Jersey nimrods who invaded Hartwood Park on or about Thanksgiving, capturing a deer or two, will eventually pay well for their venison. The sheriff of Sullivan county has in hand certain papers, the service of which it will be hard to evade.

The popular notion that the deer flies terror-stricken before the hounds is a misconception, at least as regards the deer of this region. "By hang!" declares Boyd, "I've seen 'em fairly play with the dog." However that may be, they do not seem to be much afraid when followed by a dog. The hound is a rather stupid fellow and goes baying and floundering with nose down, stumbling into all sorts of tangles and has to push his way through the low scrub. A pursued deer passes over all these obstacles without difficulty, and sometimes he will wait until the dog approaches within a few rods, then bound lightly away.

If the hound catches a glimpse of the quarry and attempts to follow by sight he is soon hopelessly left behind. Frequently the scent is lost at the same time, and the humiliated canine has to face the anger of his disgusted master. A good many dogs have died young in the wilds of Forestburgh for failing to stay by the game.

When the dog cannot be thrown off in this way, the Forestburgh deer proceed to play a trumphy which, if not shot down on the runways, he usually secures the winning trick. He turns in the direction of one or the other river and crosses the Mongaup into lumberland or the Neversink toward Mamakating. After a sojourn of a few days he returns.

It is easy to start a deer in Forestburgh but it generally requires "head work" to effect a capture, and each one slain represents, on an average, a deal of toil and woodland science as well. The man who does the killing may not be in it. Yet those stationed on the runways have need for quick eyes and must be ready for a snap shot. When the man who has been doing the hard work is met with the solemn assurance that nothing has passed it is exasperating. On the other hand it is extremely mortifying when the man who was relied upon to do the killing is forced to admit that a stag just went by without being seen by him. It happens so often enough.

Within recent years a species of animals of foreign origin and fearful ferocity have taken up their quarters in Forestburgh. These are the descendants of the Black Forest boars that a few years since escaped from the Plock estate on the side of the Shavangunk Mountains near Port Jervis. The known presence of a genuine mountain cat could hardly make the mere deer slayer more uncomfortable in Forestburgh than does the fact

that "wild hogs" are prowling around. The animals whose ancestors the Cæsars were wont to chase in the forests of Illyria, are reputed no less dangerous than the mountain lion.

The boars of Forestburgh, however, have thus far proved excessively shy. Last November a sow weighing two hundred pounds was shot on the margin of a big swale into which the numerous drove to which she belonged plunged immediately afterward. Food is plentiful at present, but doubtless when their numbers press on the margin of subsistence their native savagery will reveal itself, for these creatures have come to stay.

PEOPLE AND THINGS.

LET us stop an instant in the middle of these tales of sport and adventure, tales of hotel life and of the lonely camp-fire, and talk about the people that we meet. "The noblest study of mankind is a man" is a quotation as trite as it is true, and the traveler or sportsman who fails to study the specimen of humanity with whom he comes in contact loses some of the profit and much of the pleasure of life.

I have been going through a portion of the country where the stranger is seldom seen, where customs are quaint and curious, where the people know little or nothing of the great outside world,

"Where every prospect pleases,
And only man is vile."

One evening I stopped at a little mountain settlement and put up my faithful Rosinante at the only farmhouse in the neighborhood where a poor wayfarer could look for accommodations. The napkinless board, the fat bacon, and the half dozen children that clambered over the table took away my appetite and after supper I "took in" the dance, the only amusement that the place afforded. The hall was rough and the crowd rougher, but there was enjoyment in the scene. In one corner of the hall there was a box fenced off and this I was informed was the "baby bin." Its use was subsequently discovered. Soon the people began to arrive. The country, for miles up and down the valley, turned out *en masse*. There were women in calico, men in overalls and blue flannel shirts, babes in short dresses and babes in long dresses, and "kids," not boys and girls, of both sexes, all ages and every condition of servitude. The floor of the baby bin was rapidly covered with shawls and coats, and as the little tots became sleepy they were unceremoniously tossed within the inclosure to sleep until the revels were over.

The bishop entered and there was silence for an instant while he implored the divine blessing upon the revels. Then the accordions screeched and the fiddles shrieked and one barbarian yelled, "Come on Susan, let's raise hell," and they raised it literally. I wondered whence the whisky came, as there was no saloon in the settlement, but all the men were gloriously full, and the little boys stole the bottles and soon were in a more maudlin state of intoxication than were their elders. I afterward ascertained that a woman, near the bridge, purchased a barrel of \$1.25 whisky just before Christmas, and her profits, on Feb. 1, amounted to \$600 and the liquor was not half consumed. That was great whisky. An old Frenchman near by had inflammatory rheumatism and determined to take an alcohol sweat. He got a quart of the spirits, put it under his chair, wrapped blankets about him and applied the match, but the fluid would not ignite. Then his wife put in a shovel of live coals. They sizzled and went out. Frenchy lost patience.

"Marie, Marie, tak out de co-als! Ah'll trink de stuff."

The dance went on, hour after hour, quadrille following quadrille in monotonous succession. When all the men were intoxicated or played out the bishop returned thanks and the party broke up.

The next afternoon I walked up Bullion Cañon. It was a six-mile, uphill tramp, but it was one of the most delightful walks of my life. Beside me the brook roared, danced and flung itself into a foaming fury. The lofty rocks stood like black sentinels in the outlying waste of the snow and the great pines were silver with the frosts of winter. Now the trail was crossed by the sharp-cut hoof print of a deer and now the sprawling mark of the mountain lion was imbedded in the drift. Beside me a noisy crowd of Rocky Mountain jays quarreled and chattered, and snow birds flitted in and out among the bushes.

At length I reached the mine and asked for Mr. Ferguson. He was pointed out to me. By the way, I looked as seedy as a thoroughbred knight of the road, and if I had presented myself in FOREST AND STREAM'S sanctum in such a condition, I would have been kicked out as an impecunious book agent.

"Mr. Ferguson?" said I.

"Yes, sir."

"Can I get a job?"

"I'm not going to put on any more men for a month."

"Fine mine you have here."

"Pretty fair."

"How far in is your lower tunnel?"

"About 1,100ft."

"How about that native silver strike that you made last week and that you've been keeping so quiet?"

"Oh! there's nothing in it."

"Well, now about that 60 per cent. galena lode in the 220-foot level?"

"See here, young man, what paper do you represent?"

"What makes you think I'm a newspaper man?"

"Oh, I piped off those gold specs and that long lead pencil in one pocket and the note book in another, and you don't want a job any more than I do. Now what's the paper?"

"The Salt Lake Tribune."

"All right. Go down to the bunk house, get your feet warm, and after supper you'll go home with me and spend the night."

He gave me his own horse and walked down the cañon while I rode through the gathering gloom. Three miles down the creek we stopped. The exterior of the house was not different from others I had seen in the Southern settlements, but within—I had seen nothing like it in six weeks. It was a home. There were Eastern papers and magazines on the table and there were the comforts of life, and when we sat down to a late supper there was snowy linen and no greasy bacon, and more than all, there was a hostess in every sense of the word. Why, it

was almost as enjoyable as a trip East to meet once more with people who could think and talk and who knew something.

After that I wandered often up the cañon. Sometimes the blinding banks of snow would drift down from the mountain and then there would be warm days, and bye and bye I saw a flock of geese fly northward through the Sevier Valley, and behind them were a pair of sandhill cranes. In the leaveless sarvice berries sang a thrush and before me hopped a robin, and I knew that the winter was going and that soon I could get through the lofty passes of the Rockies and down to the Grand Cañon of the Colorado. But if I can I will camp for a month this summer on Bullion Creek and catch the gamy trout and hunt the deer and the bear and fill my herbarium with the beautiful flowers that grow on alpine summits and follow the receding snow.

It was the last Sunday night of my stay in the Bullion district. The morning had been spent in the assay office and my mind was a confused whirl of grams and milligrams, of sulphates and nitrates, of chlorides and bromides, of antimonial and galena compounds, and I wanted a change. I rapped on the door of Mr. Ferguson's house. Around the fire his family was sitting and the conversation drifted to the ever enjoyable subject of game and fishing. Mrs. F. told of the beavers that she had seen just up the creek. An irrigating ditch had been taken out and the diversion of the water almost drained a pool where the beavers lived. They went up above the ditch, cut stakes about 2ft. in length, drove them vertically into the ditch, made a dam and ran the water over the bank right down into their old haunts.

Mr. Holderman then told of his first experience with a bear. When he first came out to the wild country he went on a deer hunt with a man named Callaway. Just at night a storm came up and they had to camp against trees with their blankets over their heads for protection against the rain. About midnight the dog charged into the brush and commenced to bark furiously.

"I can tell that it's a bear by the way that dog acts," said Callaway. Holderman tried to light a fire while his partner stood guard with a rifle. Nearer came the noise. They crouched behind the big pine, a rifle pointing out at each side. At length the dog ran whining to them, behind him was a small animal no bigger than a cat. It had no protection but its own quills and was commonly called a porcupine.

At another time Holderman went out and saw a bear. He succeeded in wounding it, but it escaped and he gave it a long chase. Finally he thought he had found it. He heard a rustling in the bushes and fired at the sound. As a result he had to pay for a poor widow's only pig. But practice makes perfect, and to-day Mr. Holderman is one of the most expert and successful sportsmen in the whole region.

BULLION CAÑON, Utah, Feb. 19.

SHOSHONE.

THE IMITATION SPORTSMAN.

BT THE AUTHOR OF "THE BRIDAL TOUR OF THE KENNEDYS."

THE other evening I was sitting by Henry's side at our comfortable hearthstone sewing, and looking over at him I saw he was reading the FOREST AND STREAM, and my thoughts naturally took me back to our first housekeeping in a tent, and by the time I had about reached the doxology of that episode, "How good, O Lord, that we commenced our life in the Garden of Eden," Henry gave a great snort over his paper, and I knew he must be having a little fun while his suffering family was stitching its eyes out in patient silence. So I went and looked over his shoulder and saw him reading the "Answers to Correspondents." Now, Henry is an irreverent man and sometimes laughs at things his superiors seen no fun in. There was only a little question about whether or not sportsmen's axe No. 2 was well liked by the fraternity, and I am sure this was one of the things Henry did wrong to laugh at, for you, Mr. FOREST AND STREAM, answered in your gravest, courtliest manner that it was. I asked Henry what a sportsman's axe No. 2 was, and he said it was a little sawed off axe about as big as a hatchet attached to a leather belt trimmed with Hamburg edging.

After little he asked me if he had ever told me about George Devoy. And then, when I replied that he had not he laid down the paper and began to tell me about him. I wish to preface his story by saying that I think Mr. Devoy a very nice gentleman, and that my husband took advantage of his credulity as he has done with others equally as good as himself, although I name no names.

"Many years ago, my dear," he said, "when you were a little girl in short dresses, I met Mr. Devoy through my clerical connection with the office of a great railway magnate. My position on that railroad was humble—Third Past Assistant Keeper of the Book of Car Numbers—my salary was small, and my office on the top floor in a back room at a plain open-front desk; whereas Mr. Devoy was private secretary of the Supreme Grand Master himself, he of the frowning glance, the set eye, the iron jaw and the special car. His salary was commensurate with the reflected glory of his office, and he sat in a swing-back office chair with a red velvet cushion and made out passes with an air that has never been equaled since Hector was a small child. Now, there was a fellow in my office named Warner, who used to go hunting with me when he could get away and spent his other time doing some of the real work of a railroad, but who was never so busy but that he was ripe for mischief, especially when the Supreme G. M. was out on the road in his car. And one day he brought me Mr. Devoy and gave him to me body and soul for eight delicious weeks. He introduced me to him with an unwarranted tribute to my skill as a sportsman, which gave me a suspicion that something was in the wind, and in the course of conversation Warner, who was my superior in years, position, sportsmanship and all things else save goodness, paid such studied deference to my opinion, my slightest suggestion on matters of the chase, that I was not wholly off my guard when he finally explained that himself and Mr. Devoy were planning their fall vacation, and had concluded to try and get me to accompany them on account of my knowledge of the game resorts, skill with the shotgun, etc., etc.; and I said that I would think it over.

"Well, I thought it over in Warner's company, and the result was that I named a deep pine forest in northern Michigan as the objective point, the paradise of all the paradises of the sons of guns of the earth. Quail? The

Natural History.

BIRD NOTES FROM MISSOURI.

THE past winter with us here along the great Mississippi has been a season of peculiarly high temperature, and is the third one of consecutive mild winters. The mercury has remained above zero most of the time, and another uncommon feature of the season is the absence of snow and rain. For three years we have had very dry weather, and all the rivers, lakes and ponds have remained low. Some inland lakes have gone entirely dry, and thus the feeding grounds of thousands of ducks have disappeared. And this leads us on to the question that is being asked in many parts of our land: What has become of the wild ducks? All along this splendid valley of the Mississippi there were, but a few years since, thousands of all kinds of ducks, but now they are seen only in reduced flocks. Lately I have observed gangs of a dozen or more mallards flying along the Des Moines, and I recently saw eight canvasbacks sailing up the Mississippi. Wild geese reappeared in February. One flock which remained on the wheat fields here must have had three or four hundred fowls in it.

Some time ago FOREST AND STREAM asked if quail ever collected in great flocks. My observation and study of bird and animal life justifies the statement that almost all species of birds at times unite their companies into one grand brigade. This may be due to certain laws of migration, or owing to peculiar seasons. In early December I saw a vast flock of grouse which must have numbered two thousand birds. This truth is followed by another one no less apparent that there are but very few flocks of small numbers. Quail in this region used to form themselves into immense aggregations. I have observed several flocks in one, and have counted as many as fifty-five birds in one body.

While visiting in several counties in this State this winter, I found that in some localities there were scarcely any rabbits, while in other places more favorable for their existence and protection these animals were flourishing in plentiful numbers.

The winter has been rather kind to all bird life in this latitude, 40° north. Some kinds that are migratory have remained here all winter. I have seen many red-headed woodpeckers, robins and bluebirds. Some February days were of summer warmth, and a few birds that forsake this region for a warmer clime, made the mistake of undertaking the return journey too soon. On the 26th of that month I saw the first meadow lark of the year. There was a freezing cold storm from the west, and the poor lark was seeking shelter on the warm side of an embankment. How I pitied it. The lark is the very earliest migratory bird we have to return from its southern home. Other birds are influenced by these severe changes of the weather, and many of them perish of cold. This is particularly true of the swallows which are deceived by the early warm days of spring, followed by cold storms. Upon several occasions I have found many swallows and other small migratory birds which had perished from storms and cold.

Aside of the climate we now now have an additional enemy of our native birds in the English sparrow. They should be killed without mercy. I have raised the black flag in dealing with them, and I have enlisted for the war in exterminating this pest.

ALEXANDER, Mo.

JASPER BLINES.

SOUNDS OF WOODCOCK AND SNIPE.

HALIFAX, N. S.—*Editor Forest and Stream:* In your issue of March 5 a writer quotes as follows: Remembering that the bleating of the snipe is only heard when the bird is rushing downward, with quivering wings and spread tail, I think the evidence pretty good that the sound is not vocal, and extracts are given, from Darwin, to explain why the feathers make the noise.

Now, with all due respect, quotations and extracts and theories are all very well in their way, but actual, personal observations are, I think, much better, and with your kind permission I wish to make a few remarks that I trust will be taken by your readers in a kindly manner, as they are intended by me.

Before me is a bound book, printed in London, in the old English style, called the "Universal Sportsman," in 1799, and turning to page 540 I take the following: Woodcock: "It is common to see them in pairs at the morning and evening flights and to hear them, when flying, make a small piping noise, although at other times they are quite mute."

Here, you will note, is authority that 93 years ago it was conceded that the woodcock did make a piping noise and, without doubt, it is meant for a vocal sound.

Now, regarding snipe, with quivering wings, spread tail, etc., I claim the booming is made at dusk; and long after dark, when the birds are flying around in circles overhead (just as the chimney swallows act in the daytime), and that it is impossible for one to see the snipe with the naked eye, let alone to be able to describe "the quiver of the wings and the spread of its tail," and that you may judge I will mention a few scores from my journal so you may see how fairly plenty the birds were and what chances I had of taking notes:

Aug. 8 and 9, '84—Major Walker and self, at Saint Julian's marsh, killed 33 snipe, 6 cock, 1 rail; Aug. 29 and 30—15 snipe, 4 rail, 5 bittern, 27 yellowlegs; Sept. 20 and 21—Capt. Lousada and self, at Saint Julian's, killed 73 snipe, 3 rail, 1 bittern, 1 teal, 1 cock; Sept. 27, 28 and 29—62 snipe, 9 yellowlegs, 2 rail, 5 bittern, 1 cock.

Now, in the evenings, when the shooting was over, guns cleaned, and things fixed up for the morning, I would go down to the marsh, sit myself down, light my pipe, and lay me back and pass the time in listening to the snipe, flying round and round overhead, going *who—1, 2—who—1, 2—who—1, 2—who—1, 2*, and they would keep up this booming, I call it, continuously (count 1, 2 between the sounds, which gives pause made by birds between them), and although the birds would sometimes seem to be close above my head, yet I can honestly say that I never saw one of them, and any one who has laid out on the marshes after dark to shoot the dusky duck when they are coming down from the fresh-water lakes to feed will back me up that it takes a keen eye to see them, and quick eye and hand combined to get on and bring them down, and if big objects like these are so hard to detect, I fail to see how such a small one as the snipe can be placed and the spread

of wings and tail noted. Here, too, you will hear the squeak of the great blue heron as he slowly wends his way to some favorite fishing stand, and if he should come within range, well overhead between you and the dark sky, a charge of No. 4 shot intended for a dusky duck will double him up, and down he will come with a dull thud to the marsh below.

Many and many an evening have I spent up to my knees in water, crouching down among the reeds and flags, waiting for the duck, and hearing the snipe, circling about, with their slow monotonous *who, who, who, who*; and any one who has listened and heard this sound would never for an instant confound the noise with the movement of their wings, as it goes far too slowly. The wings could not make this peculiar vocal note, and the bird would have to flap or move them with more rapidity or else he could not keep himself up in the air, and if moved rapidly the sound produced would be a whirl or rushing noise, and not by any means of the same description as the vocal *who, who*. If some of us agree that the snipe is able and does produce or make one vocal sound, which is *sneep*, and which we are able to note, as it is done in daylight and under our eye, why insist that the other notes he may utter, must be caused by the wings. Surely, if the bird makes one vocal sound he is quite capable of making others. I have seen them in the daytime in whisps, flying about and going *sneep, sneep*, and marked them pitch right down in front of me, in the flags and rushes; but I have yet to hear them bleat or boom when descending in the daytime. On the contrary, all the sounds that I have ever heard in daytime has been their vocal *sneep*, except that on Aug. 11, 1885, when shooting on the marsh—our shooting began then Aug. 1—I heard about and around me *who, who, who*, only not in very loud notes, and for quite a while was puzzled until I found running about at my feet three tiny young snipe, which must have been a very late or possibly second brood.

Something new in bird life and nature is cropping up every day. A short time ago one of your esteemed correspondents was astonished to find that the woodcock could and did actually "cock his tail up over his back and strut." Another was delighted to find that this wonderful bird had a "song equal to the lark," and yet another testifies that he saw the bird flying about in the daytime uttering vocal notes like *creeke, creeke*, and all these gentlemen were quite right.

I sincerely trust they and others will continue their interesting notes taken in the fields from nature, and not from books and theories.

H. AUSTEN.

HABITS OF THE RACCOON.

Editor Forest and Stream:

In Zs. G. Lathrop's article in FOREST AND STREAM, entitled "Coons Catch Rabbits," he says he would like to know if others have noticed "anything like this." Some time ago I was talking with a man who used to make a good living by trapping fur-bearing animals and shooting ruffed grouse for the market.

In speaking of the habits of the coon he asked me whether I knew that they sometimes caught rabbits in the snow. I told him if they did it was something new to me. He said he came by the knowledge in this way: One winter about five years ago he was up in Mt. Discovery (a mountain north of Boquette River, below Elizabethtown, New York) looking for coons that might have come out during the warm days. He followed one coon track, which left the rocks of the mountain side and joined a rabbit runway, which led into a swamp. At a place in the swamp beside the runway were the remains of a rabbit that had been killed and eaten by the coon. I asked him whether he thought the coon had run by scent or sight. He said it was his opinion that the coon had followed the runway into the swamp and waited for a rabbit to pass by. The rabbit, probably being overcome with fear, fell an easy victim to the coon, just as we have seen rabbits terror-stricken when suddenly confronted by a dog. He set a trap here at the remains of the rabbit and caught a coon soon after.

This coon had not carried his prey off to water for the purpose of washing it before eating, as there was no open water anywhere near.

What tactics the coon employed in taking his prey remains for some one else to tell us.

C. M. DUBOIS.

ESSEX, N. Y.

Editor Forest and Stream:

In FOREST AND STREAM of March 26 Mr. Burnham expresses the opinion that coons do not eat during the winter. Having had a little experience with coons I want to tell what I know about them.

While hunting rabbits this winter I tracked a coon to a hollow tree, and as it was but a short distance from home I caught him alive and took him home. I put him in a box with a hole in the side and chained him to the box. He could move about 6ft. on either side of the box, and would come out every night except on very cold nights. He never stirred from the box in the day time, except two or three times on rainy days. Food was placed in the box and would be eaten every night except on very cold nights. I do not think a coon becomes really torpid when lying up in cold weather, for no matter how cold the weather is when you find a coon in a tree he is always sufficiently alive to put up a good hard fight. When this coon of mine was lying apparently asleep it was only necessary to touch him to cause him to spring up business end to the front, ready for a fight.

In regard to their catching rabbits I am sure it is not common for them to do so. I have hunted rabbits since I was a foot high in a locality where coons are plenty and have never seen or heard of coons disturbing them. As coons will eat meat of any kind I have no doubt they would kill rabbits if they "got the drop" on them. They couldn't catch them otherwise. A pet coon will clean out a poultry yard quicker than a mink.

EAGLE ROCK, Pa.

EARLY BIRDS.—A son of Mr. E. S. Balcome, of this town, found on his father's farm last Friday—April 10—a ground bird's nest with four little chicks in it. Everybody can have the first robin—they are so common that we never care to lay claim to them—but a whole nest full of young birds on the 10th of April certainly entitles the mother of that family to "the worm."—Canton (N. Y.) Commercial Advertiser, April 15.

ground was covered with them. Ruffed grouse? They weighted the branches of the trees to the ground. Deer were plentiful and to be had for the asking; and fish—knowing that here I had a foundation of real fish to build upon I straightway put more fish in the northern peninsula of Michigan than there is water there to hold them.

"In the course of our talks about the trip he told me about his gun; and I will say right here that if some evil influence had not possessed some old uncle or grandfather of Devoy's to leave him that old Westley Richards, with its combination rim-fire hammers, you might have known him all your life and never have suspected he was eloquent; you might have passed him every day and admired his fine face and faultless attire without knowing that the real attractiveness and fascination of the man lay in his graphic descriptions.

"I confess to a somewhat hyperbolic reference to the game preserves of Michigan, and trust my sin will be remembered against Warner; but when Devoy turned loose that old sway-back, mule-eared, scatter-bored shotgun at me, he made me feel as if I hadn't told enough, and that I owed it to myself to inform him that buffaloes were frequently seen near Kalamazoo. He lied for himself up to eighty yards, and from there up to a hundred and fifty put it on to his poor old uncle. And it was pathetic to notice that even when it was beyond the eighty yards boundary he would tell you what kind of a dog it was.

"In my peregrinations up and down this vale of tears I have heard many explanations of why a man missed a bird, but I never heard such truly plausible ones as he gave in his preparatory practice at glass balls. And if, at any time, he fell short, Warner loomed up with arundel-tinted spectacles to shoot through to overcome the sunlight, or changed his position at the score into that of a man in the act of making a sneak on to a grizzly bear.

"Every morning he would loom up with a portentous air and the gratifying announcement that he had loaded a hundred and fifty shells last night with sixes, or that he had sent on for a pair of Vermont moccasins to wear around camp in the evenings. He also bought one of those little battle axes with the Hamburg edging. I remember that Warner let him in on the ground floor for a gunshy puppy, and he immediately put him in the hands of a trainer. I always thought that was going a little too far, although Warner said the dog was all right until the \$25 trainer took him in hand. When, however, Devoy came into the office one morning and told us that he had been sleeping on the floor lately to get himself hardened, and intimated that he was having some trouble in his household, we abandoned all our scruples and advised him to get a suit of corduroy of the color of the inside of a rabbit's ear, and one proud and happy day he wore it down to the office.

"We were unable to go with him after all. Warner, with an old trapper, a bag of provisions and a rifle, disappeared in the forests of Elk county, while I took my old Parker and went out on the Platte. He found a couple of kindred spirits, however, and brought back glowing accounts of their trip, and I do hope they were justified, although, as I said a moment ago, I lay the blame of whatever he was led to do upon Warner."

As usual, I find it advisable to follow up Mrs. Kennedy's remarks with something in extenuation and explanation of the imperfect manner in which she reproduces my utterances. Of course we all know how hard it is to do justice to truthful and modest souls when we undertake to quote them. I have been made to admit that I had a certain share in what was done to poor Mr. Devoy. Perhaps in the abandon of a rambling fireside reminiscence I may have intimated as much; but I hereby disclaim any and all part in the affair other than what I was compelled to perform by Warner, who was my superior officer and very fierce when crossed.

Seriously, though, our hero, while he is a real personage whom I have not slandered in the least, is typical of your half-caste sportsman. Trifling over his uniform like a conceited guardsman; lying about his prowess; whose gun is the best in the world, and whose dog is without spot or blemish; who never misses but by reason of some extraneous circumstance which you have to listen to with a straight face; who, when you come to sift him down, is never so nearly a person of any note whatever as when, rising out of his obscurity and insipidity, he goes a hunting and assumes the airs and graces of a person of cunning and skill, engaged in an employment the most momentous of a man's earthly existence, instead of a plain, unassuming man, descended, for the moment, from the really important and manly function of his kind, work—plain, hard, dignifying, elevating work—to the simple operation of children of a larger growth, play—none the less necessary to his well being, perhaps, but still only play. How ridiculous, how more than childish, would it appear to us were children to sit around devoting their time and energies to lying about their bats and balls and trying to outdo each other in the perfection of their outfits, rather than trying to outstrip each other simply in the enjoyment to be derived from their use. Should we not conclude that they were only enjoying themselves because they were having to do with great things, commonly resorted to by their elders and superiors?

I am going on a train with a dog and am accosted by one of these people with the overpowering announcement that he too is a hunter. Now, if he only hunted for play I might enjoy his enthusiasm and his experience; but I soon find that it is the greatest agony he can put on and that his gun has all the old time-worn supernatural qualities, and his dog does all the acts—backing off his point and coming to notify him, uniformly retrieving birds by their toes and the tips of their wings, and so on to the end of the string; and I say to myself, "You are a curious mixture of a boy and a man, combining whatever qualities of either go to take away your dignity, and you make a laughing stock of those who love the sports of the field and river."

And in this connection I want to just say in passing that last week while snipe shooting my pointer broke off in chase of a rabbit, and when I brought him back to be punished he would not let me lay my hands on him, but kept moving in front of me in a circle. Finally I strode to the middle of the ring, grabbed my gun, pushed up the safety and leveled it at him and exclaimed: "Now you stop or I'll blow your brains out!" And, sir, he just stood up and held up his forepaws as plain as anybody was ever "held up" in his life, and waddled up to me and lay down.

ABOUT THE BEAVER.

INDIAN ROCK, Me.—*Editor Forest and Stream:* I send you some notes on the beaver, what I know from actual observation, and also what I have learned from trappers whom I know to be reliable. There are many curious traits in all wild animals, and I am satisfied that many statements made in regard to them as facts are merely guess work. The information I can procure of the beaver does not extend back more than thirty years, except in the case of one solitary beaver which was caught thirty-five or forty years ago, and hardly any one knew what it was.

In the winter of 1862 a party of five went moose hunting. After following the track of the moose for a few miles we came to where another party had turned up the track, so we left it and started for camp at foot of Winnebago Lake. We followed the main inlet most of the way to the lake. While on the brook we came to a hole in the edge of the bank, made by what is called a bank beaver: there had been a light snow which showed the track of an otter which had gone into the hole, and as we could see nothing of beaver tracks, we concluded the otter had killed the beaver and eaten it. About one mile below we came to another hole, and found the beaver was out after food; he was but a short distance away. We killed him and carried him to camp. That was the only beaver seen that winter, yet there were then old works such as dams and houses, made years before, but for some cause or other the beaver left this part of the country years before, and did not put in an appearance until about 1862.

Since then they have become quite plenty. It was supposed by some that a bank beaver belonged to a species different from the house beaver, but I am satisfied they are one, and the only difference is when one gets strayed from his family he finds a good location on some brook where there is a spring (and the water does not prove very hard), and digs a hole in the bank (under water), makes his nest in the ground above high water mark, and whenever he wants food goes out after it, instead of laying in a supply as the house beaver does. Every mark about a bank beaver is the same as a house beaver; a solitary or bank beaver never builds a dam or house; whenever you find a house or dam, you will find a family of two or more.

Beavers are first-class engineers, they know the exact spot to build their dam and the height they must be built, so as to have about one-half of the floor of their house under water. They eat and sleep on the same floor, which is on the ground, they (sometimes) build their house on the bank of a stream where the water is 5 or 6 ft. deep and having a hole run from the stream to their house. Their dams are built in three different forms, sometimes the lower side is concave, some are convex and some straight across the brook or stream. They keep them in good repair as long as they have any use for them, they never leave houses (in winter) except to go into their pond to get their food, which is sunk near the house, unless there is an open place not far distant and there is a warm spell. A person not acquainted with their habits and houses might pass them for days (after snow had covered them) and think the house a boulder or pile of brush, nearly the shape and size of an ordinary haycock; they never come outside their house (in winter) to show any sign of their being in that vicinity.

I have read a statement that whenever a beaver cuts a tree it invariably falls to the ground; such is not the fact, as I have seen several that were lodged in other trees, and one in particular, a white birch, which a bank beaver had cut in the winter, that it could not fall. When the beaver had cut it off it slipped from the stump and stood as straight in the snow as it did before it was cut; the beaver cut it four times and the four sticks stood as straight side by side as any man could place them.

What I have written can be proven by reliable parties. There are many traits that I have heard mentioned that would not be believed. In my estimation the beaver is the nearest to a reasonable animal of any in the Maine woods. C. J. RICHARDSON.

AS TO RATTLESNAKES.

Editor Forest and Stream:

For the last four years I have spent the most of the summer in Pike county, Pennsylvania, a county in which, according to some accounts, are abundant rattlers, and during that time have met only four. In some of the dry and rocky places, especially on dry and scrubby ridges, they are undoubtedly quite numerous. But unless a person goes on a regular hunt for them he will not often meet one. In midsummer, July and August, they come down from the high ground and go into the swamps and bogs, and remain there until early fall.

In all my encounters with them I have found them to be peaceable when not molested, and to act entirely on the defensive. Moreover, they nearly invariably give warning when approached. I killed two last summer, one of which was 4 ft. 4 in. long, while the other possessed three fangs instead of two; two on one side of the upper jaw and one on the other.

Could the editor, or any of the readers of FOREST AND STREAM, give a reason for rattlesnakes' color varying from as black as a blacksnake to a handsome yellow with chocolate markings? Some hold that it is sex; but I do not credit this at all; as the yellow in some species fades into light or dark brown, and in others the reptile is dull black.

The popular belief that these snakes have a new rattle each year is also, I think, erroneous; as a 3 ft. snake will often have as many rattles as a snake 4 ft. long. Of course they may lose or break off rattles occasionally, but I do not think the theory to be correct.

NEW YORK CITY.

THEODORE MONELL.

"WOODCOCK."—Brewer, Maine, Jan. 30.—*Dear Sir Antoine Bissette:* We heard what you been wrote it woodcock. We want for tell it you, you don't been know it those bird name what you call him woodcock. He logcock. Logs, he's big trees; wood, he's chop it up for fire. S'posin' you gone woods you seen it those bird on log—big tree—hang it side tree just like pitchman side person; never you see him little bush for fire, 'cause he's logcock, don't go dar. Very much we s'prise you call him woodcock. What for you don't know logs—'cause Frenchmans? When you seen him next time dose bird, you call him logcock, like what is. We like what you wrote it

letter. We think so ourself. We decent man, don't kill leetle bird, only once, that time we gone 'splorin' birds' egg, for collecting. I tell you we got pile those egg—quabird, alabama bird, great many bird we got it that time. We don't thought no harm, 'cause did it ourself. Friend Fannie P. Hardy she wrote it dis letter. S'pose don't spell well don't be blame it us. Your truly friend, BIG SEBASTIS MITCHELL.

REPORTED DEATH OF J. C. CAHOON.—A dispatch from Halifax, N. S., dated April 20, says: "A special from St. Johns, N. F., says: 'J. C. Cahoon, an American naturalist, was killed while gathering eggs at Carslett, Placentia Bay. While under a nest overhanging a cliff his strength failed. He let go his hold on the rope and dropped 70 ft., and struck on the rocks. His body rolled into the sea and has not been recovered.' Mr. Cahoon was well known among bird men as a collector of skins and eggs."

A 10 FT. SPONGE.—There is on exhibition at a store in Pearl street an enormous sheep's wool sponge, which is said to be the largest one ever obtained. It measures 10 ft. in circumference, and is 2 ft. thick, being quite solid throughout. It was fished up near the Bahama Islands by the crew of a vessel engaged in that trade, and, judging by the stories of the fishermen, they had a tough time in getting their prize aboard. Being in a small dinghy when the hooks fastened themselves in the sponge, the men nearly upset their boat in the effort to haul the sponge to the surface. When it was finally secured, the iron prongs of the hook had become straightened out under the tremendous weight. When thoroughly soaked this monster sponge is said to hold ten pailfuls of water.—*New York Times.*

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws.*

WILDFOWL IN OREGON.

Editor Forest and Stream:

When man was young on this little world of ours, and it was a struggle between him and other species of animal life to determine the question propounded at a later date by Darwin as to which was the fittest to survive—in those days when books were neither written nor read, when the flint was made to do that which at a later date could not be done with anything short of Schultze's powder and a hammerless gun, all mankind, regardless of "age, sex or previous condition," lived out their lives in the open air, and hunting and fishing were not so much a pastime as a necessity; and necessary labor, generally speaking, seldom has much of the charm of sport about it. A man's reputation in those days depended on his ability to capture game and fish. Our love of field sports is simply an inheritance handed down to us by those early ancestors, a taint of the free and easy life led by that assumes in us the importance of instinct. So we find the best men and some of the best women going to the duck lakes and trout streams for their sport and recreation. The green woods, the smiling lakes and the sparkling streams infuse new life and vigor into the stiffening sinews and hardening clay. The heart throbs quicker and its energy draws from the pure, fresh, balm-laden air a new lease of life. The eye sparkles, the blood dances, and we forget that time has already commenced to foreclose its mortgage on our dust. If women were encouraged to take this tonic instead of the doctor's pills, our race would grow healthier and better instead of weaker and more vicious. My wife has her own little No. 16 breechloading shotgun, her own shell-sack, rod, reel, creel, etc., and knows how to use them, and you can see the effect in her cheeks. The pride in casting a neat fly and making a good shot does not seem to interfere with her household accomplishments, and she can cook canvasback and trout to the queen's taste. But like all hunters she has her experiences, and in this connection I will relate one of them.

Probably the most famous canvas lake in this country is Greene's Lake on the Washington side of the Columbia, near Knapp's Landing. The lake is about one and a half miles long by half a mile in width, and is almost a solid bed of wapatoes—the great food of canvasbacks in this country. At this season of the year the wapato tops are not yet down, and there is only a comparatively narrow strip of water through the center of the lake where the water is too deep for them to thrive. Last November my said wife and I went there for a hunt. I will tell it straight. We left Portland at 9 A. M. on the Lucia Mason, landed at Knapp's at 11 A. M., walked across the meadow half a mile to Lake River, which we crossed, walked a hundred yards to the shanty, where duck boat and decoys were stored, launched the boat with the cargo and crew made up as follows, viz.: In the bow of the boat four sacks of decoys, then two shell sacks, next two guns, next wife, next dog, and lastly your humble servant with barely standing room in the stern of the boat. The wapatoes were so rank that I had to pole the boat out to deep water. The good ship had just reached the edge of deep water when the pole broke, throwing me off my balance. Now, all hunters are agreed that if ever an accident occurs the dog is just where he ought not to be and does just what he ought not to do. As I said, I lost my balance, and throwing my right foot back to re-establish my equilibrium, stepped on the dog. Of course he did what any educated dog would do under the circumstances—jumped. I fell on the side of the boat. The boat did what any staunch duck boat would do under the circumstances—dipped and filled. I don't propose further to disgrace my family by describing the scene that followed, or relating how we got out, but the dog swam ashore, sat on the bank and for about an hour and a half watched one of the most remarkable exhibitions of very civil engineering, on a small but interesting scale, ever seen.

My wife was too proud a hunter to get hysterical and would not acknowledge much, but I noticed that she afterward questioned me closer than usual as to what I would do without her. Honestly, I believe she thought she was going to drown. Our soundings showed 13 ft.—

3 ft. of water and 10 ft. of mud. Kind-hearted Mrs. Knapp with dry flannels and generous care soon made her forgetful of the shipwreck, but I observed that during the rest of our stay she amused herself in the swales with the jacksnipe. Her confidence in me as a navigator seemed to have diminished.

Speaking of jacksnipe I wish to be understood as simply adopting the name for this very gamy little bird by which he is universally recognized here. I am doubtful, however, whether this is his correct name; but I would rather bag one than a goose. They are very plentiful, particularly during the months of November and December, but the ordinary hunter's bag is seldom conclusive evidence of that fact. Many hunters who are considered dead shots on duck find great difficulty in getting "on to" them. The best bag I ever made in one day was of fifty-two, on what is known as the Wapato Lake, about two miles above East Portland; but two gentlemen gathered in 150 in one day not long since among the marshes at the mouth of Scappoose Creek, about twenty miles below Portland, on Willamette Slough.

The jacksnipe is regarded as among the finest of our feathered game by all sportsmen, and as potting them is out of the question the small boy and pot-hunter turn from them in disgust, as they do from the wonderful Mongolian pheasants, of which more anon. Two hunters secured a very nice bag of jacksnipe last fall within the limits of the city of Portland, at the south end of Guild's Lake. As a rule hunting jacksnipe is hard work. They use that part of the lake where the water is not deep enough to float a duck, just about that part where the cows browse on the juicy wapato stems or tops during the hot summer months when the water is very low, as you will observe when you look for the snipe in November. As every Oregon hunter knows, the snipe has a disagreeable habit of flushing just as you step in to one of these aforesaid cow tracks, and my experience has taught me that at this interesting moment (if you shoot at all) the chances are two to one that you will hit your dog instead of the snipe. This malicious habit of the jacksnipe is distressingly irritating to fat men with short legs.

On the 21st day of November, 1885, the Oregon Legislature made it unlawful for the term of six years from that date to injure, take, kill, expose or offer for sale or have in possession, except for breeding purposes, any ringneck Mongolian pheasant, any green Japanese pheasant, any copper pheasant or scholmeringu, any tragopan pheasant, silver pheasant, or golden pheasant, being the species of pheasants imported into this State by the Hon. O. N. Denay, ex-United States Consul-General to Shanghai, China; the penalty upon conviction being a fine of not less than \$50 nor more than \$100, and in default of payment of the fine imposed imprisonment in the county jail at the rate of one day for each \$2 of the fine imposed.

The best citizens and various clubs put forth great exertions to enforce this law and protect these beautiful birds; but there is a class of people in every State and in every community who have not the fear of the law in their hearts, and that resort to mean and despicable methods to subvert and render inoperative these beneficent laws which were enacted as much for their ultimate pleasure and good as for that of other and better people. These people would be indignant if accused of being petty-larceny thieves, and yet proudly boast of bagging three or four dozen of these lovely birds; in open violation of a good law and a sportsman's honor. But the Mongolian pheasants are hardy birds, and have learned to put their trust in their own cunning and activity rather than in the statute laws of the State, for protection.

They have come to stay in spite of the unmanly efforts to destroy them, and they are prospering and becoming pretty well distributed over western Oregon and Washington. They are beautiful beyond description; the cocks boasting the most gorgeous plumage of all the feathered tribes of earth. Their stunning loveliness would make a rainbow turn pale with envy.

But I must tell you of the characteristics and peculiarities that not only preserve these magnificent birds from annihilation but make them the gamiest of all game birds. Unlike the common grouse and pheasant, they never "tree" (in the parlance of the country urchin). They will lead the dogs not only a long chase but a lively gallop before flushing, their flight is irregular and strong, they light on the dead run and "keep a-runnin'," and will carry off a handful of No. 6. They are very pugnacious and often visit the neighboring barnyards just for the fun of licking the boss rooster; in fact their well-known pugnacity has been turned to good account in capturing them alive. I have been told by persons, whose reputations for truth and veracity in other matters have never been questioned, that they have witnessed something like the following: Tie a barnyard rooster out in a "burn." The rooster crows, the pheasant accepts the challenge (his answer much resembling the crow of a spring chicken) and comes forth to fight. Unless he kills his antagonist early in the fight he will become so infatuated with his job and so oblivious of his surroundings that he can be easily taken.

This generous country with its equable climate seems peculiarly suited to them, and they have readily accommodated themselves to their new home. Other wildfowl might profitably take a few lessons from the Mongolian on various points. The Willamette Valley farmers say that the female will lead her brood to the field of ripening grain and, flying slowly close over the wheat, whip out with her wings a fat breakfast for the young long-tails in a few minutes. This is undoubtedly an innovation upon the time-honored custom of pulling down the stalks—the only plan in general use adopted by other grain-eating fowl.

Those that have eaten the Mongolian pheasant unreservedly declare him to be the best of all wildfowl.

PORTLAND, Oregon.

S. H. GREENE.

FOREST AND STREAM, Box 2,833, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanli," "Gloan," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject that.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 250 pages, price \$2.50. For sale by FOREST AND STREAM.

CHICAGO AND THE WEST.

CHICAGO, Ill., April 15.—To-day the duck season closes in Illinois, and the trout season opens in Wisconsin. One continuous round of pleasure. As for the duck season now ended there seems little reason to call it anything but a changeable and capricious one in shooting, though perhaps that is all that can be said for any duck season. The birds have certainly been seen over our marshes in unusual abundance. That is the main and cheering fact, and I am glad we have so few heavy spring bags to report. I have shot ducks in the spring myself, and I know many goodish sort of men who do the same, but the practice is falling off as it should very well do. Anything to save the birds. I believe that the spirit expressed in that wish is on the increase in this country. There is getting to be more of a popular interest in game laws. The whole people must be convinced of their necessity. The voices of a few sportsmen make small noise, but the voice of general protest against the destruction of our fish and game was never so apparent before in this region.

As to the ducks, more specifically. On Cumberland marsh more ducks have been killed than in any one season for five years. On Mak-saw-ba marsh the shooting has been hard, but the birds abundant. There are not very many hard-working shooters in Mak-saw-ba Club, but those who did work got birds. At Lake Senachwine, in the Illinois River country, the feed seems to have been good, and the shooting has been pretty regular. On Tolleston marsh, Little Calumet, the fowl have been abundant as usual and more so. This is choice property. A year ago last fall Mr. Alex. Semple shot on Tolleston marsh on seven consecutive Mondays, stopping at about 3 P. M. on each day to take the train in to the city. His bag for the seven days was 331 ducks and 93 snipe. This is within 80 miles of Chicago. I think this a record not often beaten. This spring I do not hear definitely much from Tolleston. You have to hunt hard for Tolleston news, though why this should be I am sure I don't know.

Beyond all question the feature and the chief cause of wonder for this season has been the prolonged and tremendous flight of ducks in that much derided and much settled up locality, the Fox Lake region. They tell me this passes belief. One of the market-shooters there shipped 500 ducks, the product of his single gun in three days shooting. Everybody who went up there within the past two weeks seems to have hit it right. Billy Mussey is just back. He got 61 in two days. Charlie Burton had several good bags. Fred C. Donald also got a fine lot. Al Knox got 73 one day. Ed. Cleaver, Will Price, Charlie Carhart, Frank Floyd and numbers of others also had fine shooting. At the opening of this week there were about 3,000 canvasbacks working on Fox Lake, and probably 15,000 bluebills.

From Hennepin Club I do not hear much, except that Geo. Davis got a good lot there a little while back. This is in the mallard country, but the mallards seem to have been scarce all this spring.

April 18.—Snipe were chiefly absent before this week, but are now coming in. They are all over the Cumberland, Water Valley and Koutts country on the Kankakee to-day. Earlier in the week they were at Gilman, on the Illinois Central road. Last Wednesday Percy Stone and Rolla Heikes picked up fifteen right around Wheaton. To-day is soft weather with warm rains, and unless appearances are very deceiving we shall hear of heavy bags of jacksnipe made to-day and to-morrow. I should try it myself down at Shelby, Ind., if there were not a previously formed arrangement, by which my friends Hirth and Harryman and myself are to open the bass season for ourselves at Momence, on the Kankakee River, to-morrow afternoon. From now on the fishing interests will be looking up as compared with field shooting.

The executive committee of the Illinois State Sportsmen's Association have been busy lately in their arrangements for the annual spring shoot, June 9 to 13, inclusive. The cash prizes already foot up a greater total than at any previous shoot here, and will go so much larger still that it is likely the aggregate will show larger than at any shoot of the entire circuit this year. Comparatively little merchandise will be offered in prizes, though I notice Secretary Shepard came around to ask about that annual missionary copy of *FOREST AND STREAM*. But then *FOREST AND STREAM* isn't merchandise. It's more like currency. By the way, Mr. Wm. J. Starr, of Eau Claire, Wis., was in town the other day. He visited a sporting goods house here, and reporting his conversation later the gentlemanly salesman who supplied his wants said to me, "I have a compliment for your paper. Mr. Starr says it is the only gentlemanly paper published in the line of field sports. It's clean." That's about so.

I see that my friend Charlie Budd fell down against Jim Elliott's hill in Kansas City the other day, in a little entanglement about a "championship" cup. Charlie only got 46 and James A. R. got 49 out of 50. The latter therefore retains the "championship," in spite of six recent Waterloos. Six Waterloos are a good many. But then, 49 out of 50 are a good many, too.

That sweet thing, Harvey McMurchy is not, it appears, on the coast at all. He was here last Tuesday, enjoying himself with the "grippe," but promised to start for St. Paul that night and to be back in Chicago in time for the Illinois shoot. It seems that Mr. McMurchy and Mr. Haggerty got into a little entanglement last week, down in St. Louis. Mr. McMurchy 96 out of 100 live birds, Mr. Haggerty 85. This was a strictly private, social race, scores suppressed. Mr. Haggerty kept his suppressed all right.

Mr. A. G. Spalding has retired from baseball and now says he intends to get acquainted with his business a little. The sport of baseball is much a scheme, and is up and down, always a matter of fight and faction. The spirit of field sports is sweet and undisturbed, perennial and pleasant. I sincerely trust that some one of Mr. Spalding's lieutenants will sell him a gun and a fishing outfit and make a reformed man out of him.

A week ago Chicago had a baby lion, born at Lincoln Park. Last Wednesday evening it died. Its mother was Maggie, the big and popular lioness known by all visitors of the Park. Maggie died on the same day of the birth of the little fellow, and the keepers smothering their regret for the loss of the old pet, put the lion kitten in the charge of an Irish setter female. The setter and the cub took to each kindly, and for a time seemed to flourish in their strange relation. The cub was about as large as a full-grown cat. Soon, however, the baby lion began

to pine away, and passed in his checks last Wednesday. The setter made a great outcry over her foster baby's death, and fought those who came to take it away. Since then she has been inconsolable, for she had been very proud of her baby lion, as indeed the keepers and all Chicago had been. So the animals have tragedies, too.

Last week I sent to *FOREST AND STREAM* a copy of a game law bill passed by the Senate April 9. This bill is not a law, and we hope it cuts no figure, for it is not the bill introduced by our sportsmen's committee, but one presented in the Senate by Senator Hamer. The sportsmen's bill was introduced in the House Committee, and it passed the committee favorably, though it will doubtless meet opposition on the floor of the House, on account especially of one clause attached to it, which exempts a warden specifically from action in damages for a wrong seizure or prosecution. This clause may or may not be constitutional, but is probably unfortunate. At this date we cannot learn what the fate of the sportsmen's bill will be, though it is thought that by next Tuesday something will be known. Recent developments point to an adjournment of the Legislature at an early date, and it can only be hoped that the measures wished by the sportsmen shall go through.

It was really very pretty, so says Dr. Bartlett, our State Fish Commissioner, to see how the sportsmen's committee tangled up and got away with Col. Bond and his game dealer cohorts before that House committee. There were Mr. Wolfred N. Low, of this city, for the State Association, and Mr. Clarence Knight, the able attorney who assists the Fox River Association, and Mr. F. A. Baird, also for the latter body, and Mr. Hawley, of Dundee, all agreed for the sportsman's bill, which, of course, includes the clause shortening the selling season for the dealers. Against these Col. Bond made certain statements as to the dates in other States, but the boys were loaded for him—had a copy of the *Book of the Game Laws*, I believe—and could quote dates a shade better than he could. "Col. Bond was knocked out," said Dr. Bartlett, "and the boys beat the dealers altogether, in a square fight before the committee. I never heard a more diplomatic, able and convincing effort in my life than Mr. Low made. And the bill went through with the committee right there." Pity it doesn't become a law, as it deserves to be. The point taken by the speakers for the sportsmen was just this: The only way to prevent the destruction of game is to prevent its sale, and the effort at that should be in cutting off the inducement for the killers to kill. This is just the doctrine so often presented in these columns. It goes beyond the warden system pure and simple, for the latter means to stop the killing while the inducement to kill still exists. And on this very basis the dealers were beaten by our men. We ought to remember that.

I regret to announce publicly what has been known privately for a time as a certainty—the closing out of the Jenney & Graham Gun Co. Since coming to their new location they have made but little over their heavy expenses, and having a chance to sell their three years' lease at a profit of \$6,000, they took it and will close. This was voluntary and not forced. E. HOUGH.

NOTES ON DEER HUNTING.

CHELMSFORD, Mass., March 23.—*Editor Forest and Stream:* A late experience in fox hunting, coupled with the article of Mr. Geo. H. Wyman on "The Traits of the Virginia Deer" in *FOREST AND STREAM* of March 19, has suggested a few remarks. One of the pleasures of perusing a sporting journal is the comparing of notes with the experience of other sportsmen. Your Boise City correspondent struck the key note of the spirit of sport in remarking that "it is not the killing of deer that makes sport, but the chase, and I am as well contented without the killing as with." His idea of sport in that line is shooting on a runway before a deerhound in company with his friends. This statement will accord with the feelings of experienced huntsmen in every section.

That the hounding of deer is especially "a slaughter of the innocents" is a mistaken opinion, and I agree with Mr. Wyman that one good still-hunter can arrange to kill more deer in a week than a party of several will get at different runways before hounds. There are exceptions to all rules. While agreeing with the general tenor of Mr. W.'s article and as to the time a deer takes to water when pursued by a hound, will say that in the backwoods of Ontario I have known a band of six red deer take to the lake in ten or fifteen minutes after being started by the hounds. The hunter in this case made a potslaughter by killing five of the six with gun and paddle. As an offset to this, a friend of mine killed seven deer on a still-hunt in Michigan in one day, not over three deer being seen together at any time.

Regarding the destruction by deer hounding much depends upon the caliber and training of the hounds. With the average hound pitted against the average four-year-old doe or buck, the latter are able to protect themselves, in a great degree, by sagacity, flight or fight, unless the hounds are aided by a large scattering of hunters stationed at various runways. The pleasurable excitement of the chase holds good either with deer or foxes. The deep baying of the deerhound when on the scent, changing to the glad, eager cry when in sight of its quarry is appreciable music to the patient waiter on the ridge, runways, or in the canoe.

The foxhound commences baying and barking from the moment of striking a fresh fox track, and the cry is increased in rapidity and volume as the scent gets stronger and the pace more rapid. It is marvelous how they supply wind for so much noise and action.

The hunter, understanding the habits of the fox and the corresponding action of his hound, will know from the voicing of the latter about where to station himself to intercept the wily fox, who has, perhaps, been started when himself on the trail of a partridge. Unless very hard pressed Mr. Fox will either circle round or by some stratagem take the back door to the point of starting, and the alert sportsman will at times be kept in lively motion to speedily gain desirable positions when the chase is nearing him.

Mr. L. Douglas, of this place, who during the past winter has secured with dog and gun nine foxes in this vicinity and two on the borders of New Hampshire, invited me last week to try my luck with him at fox hunting, which invitation was gladly accepted. Starting early, when we came to a fork of two main roads with a newly made timber road near by, and an open field and

swamp on the right, he showed me where, by stationing himself at this point, he had shot three foxes within a month.

On reaching the swamp, which was frozen over sufficient to traverse by using care, we found tracks of rabbits, partridges, mink and fox impressed in the newly fallen snow. The morning was too cold for the hound to scent well, and after trailing several different tracks by sight, he invariably returned to us without getting up a full cry. At a certain intersection of two brooks we found numerous mink tracks, some of which were so large that D. concluded to return in the afternoon and set a couple of traps for them.

While indulging in a rest, a lunch and a chat regarding the habits of the fox, my friend spoke of one that watched him. Seeing his tracks repeatedly at a certain crossing of the road in angle line with a stone wall, he had for several mornings started out early to try and intercept him. As the fox did not "show up," and as his tracks led up to a large rock on the hillside overlooking the road, D. concluded the fox could also play at the game of intercepting; consequently to beat his game, an unusually early start was made one morning, and D. stationed himself where he could overlook the rock, and soon Mr. Fox came trotting along and sneaked up on the rock where he sat watching for the usual coming of his hunter. A charge of BB shot from the rear stopped his watching. This reminded me to remark that bears will indulge in similar watch meetings at times.

Last spring, while walking with Sam Crowle from his shock to the crossing of the Illicilliwaet near its junction with the Columbia, he was complaining of the bears who were constantly chasing and sometimes killing his pigs. There were fresh tracks along the trail, and Sam remarked that quite likely some of the bears were then watching us. After he had rowed me across the river I proceeded on my way to Revelstoke, and he had not gone over a quarter of a mile on his return trip, when after passing a large fallen tree he heard a slight noise, and on looking around he saw a black bear on top of the wind-fall facing him. As bruin quickly turned to jump down Sam sent him a .44-caliber bullet as a salutation, which traversing his body from flank to shoulder laid him out quivering. This bear had evidently lay within ten feet of us when we passed him on the trail.

After lunch, Douglas said we had better go on a mile or more to a fox borrow he knew of, and then if the dog did not strike a fresh scent we would defer the hunt until the next flurry of snow. From the present outlook that will be a long postponement. WAYLAND.

SHORE BIRD SHOOTING.

BOSTON.—The spring shooters along the Massachusetts shore are making some good bags this year, though not all are fortunate. Mr. Gordon Plummer, of the Boston Leather Co., is a lover of spring shooting, as indeed he is of any sort of shooting, and many is the trip for shore birds that he is the author of. Indeed he is on record almost every season, fall and spring, for going shooting, and generally with remarkably good luck. This time it was a good company that went down to Nantucket, a little over a week ago, composed of Mr. Plummer, E. S. Grew, W. H. Rothwell, W. E. Plummer, all of Boston, with Will Mason, of Providence. They were away about a week, and came back with a score of 187 birds, 100 of which were brant geese. They brought home 87 brant, having used several at the house where they stopped. These birds, together with several eider ducks, black ducks and sheldrakes and old squaws in abundance, they had on exhibition for their friends the other day. It was a bag seldom seen in these days of scarcity of game, and only brings with the pleasure of the hunters the pity that they killed so many birds on their way north to breed.

The spring shooting is also reported to have been excellent in the vicinity of Portland, Me., and more especially at Pine Point. Geese and woodcock were taken with a number of brant and an abundance of lesser birds, such as sheldrake, old squaws, etc. A large number of local sportsmen took part in the shooting. In the vicinity of Biddeford Pool good shooting was also reported. Altogether the spring shooting has been better than usual this year. SPECIAL.

ROCHESTER AND VICINITY.

Editor Forest and Stream:

Some very practical people may be glad to know that canoe and yacht clubs are of some other use occasionally than causing men to fool (?) away their time several weeks in the year, and may approve of the action of the canoe and yacht clubs of this city in holding a joint meeting lately for the purpose of enlisting the members in the project of the Government to form a lake naval organization for the protection of the lake cities in case of war.

The snipe are here and several fair bags are reported, the best being that of E. O. Sage and Dr. Stoddard, of this city, who brought in ten as the result of a day's shooting. The only trout fishing heard from so far is that of the Caledonia Club on the opening day, when several members made good scores. The dealers in tackle report trade very brisk for this season.

The Monroe Sportsmen's Association has put out the following quantities of fish: In Oatka Creek 50,000 brook trout; in the tributaries of Irondequoit Creek 50,000 brook trout; in the tributaries of Oatka Creek 50,000 brook trout; in Burned Swamp Creek 10,000 brook trout; in Old Allen Creek 25,000 brown trout; in the Hoffman Creek 5,000 brook trout; in the Genesee River above the city 100,000 wall-eyed pike; in Irondequoit Bay 1,000,000 wall-eyed pike; in Black Creek 50,000 wall-eyed pike; in Lake Ontario in the vicinity of Rochester 12,000,000 wall-eyed pike; in Irondequoit Creek above Float Bridge an indefinite number of channel pickerel; in the Genesee River above the city a large number of native black bass from six to eight inches in length; in Irondequoit Bay an indefinite number of Oswego bass and in Long Pond a very large number of bass, channel pickerel and wall-eyed pike. At the meeting when it was decided to do the work just detailed, Monroe H. Green, of Caledonia, brother of the lamented Seth Green, was present and presented some very interesting points; also advised as to the waters to be stocked and the kind and quantity suitable for each. Since April first, game protector Schwartz has captured and destroyed seventeen gill and fyke nets. This is a good showing and added to his past record marks him as one of our most efficient protectors,

Since writing the trout fishing notes, I have learned that Dr. E. M. Srantor and Charles Ballard, of this city, have been on a successful trip to Wyoming county, and caught about forty nice trout, but owing to county law were unable to bring them home. OSCEOLA.

CREASING GAME.—Windsor, N. C.—*Editor Forest and Stream:* I read in *FOREST AND STREAM* of April 9 what "Old Man" says about creasing an elk, which reminds me of a circumstance I have heard my father relate. He was a very successful deer hunter. His manner of hunting was to ride through the forest with two trained deer dogs; when they showed signs of game he would cock both barrels of his gun, and when the deer got up he was quite sure to kill it before it could get out of range. But on this occasion the game was an old and wise buck which got up and off before a shot could reach him; and, therefore, the only way to kill him was to put spurs and head him at a runaway, which my father did just in time to shoot him down. Dismounting, he at once proceeded to cut the old fellow's throat, but just as the knife was about to enter the neck the buck became very lively and began to rise; but father held on, and with the assistance of the dogs (which arrived by this time) succeeded in cutting his throat. On examination it was learned that only one shot had hit the deer, and this had cut the skin just back of the horns.—CASHIER.

GROUSE CHOKERS.—"Coll" Richardson, one of the Square Pond grouse "chokers," was fined \$20 and costs by the Tolland county Superior Court yesterday for snaring two partridges in September last—before the law was off. It will be remembered that Richardson was captured in the act of taking partridges from his snares by one of Detective W. C. Fielding's men, who was in the employ of the Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish of this city. President A. C. Collins prosecuted Richardson at the Justice Court at Ellington, and Attorney Charter, of Rockville, appeared for the defendant. Justice Leonard imposed a fine of \$15 and costs and Richardson appealed to the Superior Court, with the result as above stated. Rather than pay his fine Richardson went to jail. It would be well for all persons to obey the game and fish laws.—*Hartford (Conn.) Times, April 16.*

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

SHEDDING TEETH IN SALMON.

AN interesting observation of Mr. Dennistoun on the loss of teeth in the Atlantic salmon while in fresh water was brought to our attention by Mr. Clarence M. Roof in connection with the following letter:

Editor Forest and Stream:

Mr. Alexander Dennistoun, the former president of the Labrador Company, and probably one of the most expert and experienced salmon fishermen of the present day, sends me from Edinburgh the inclosed article in relation to the Labrador salmon, which must be of great interest to all anglers. The writer, one of the lessees of the Romaine, to which he refers, was a guest of Mr. Dennistoun's at the Mingan at the time spoken of in the accompanying article. The score of the Romaine alluded to was made by the other lessee, Mr. Chas. Fitch, president of the Waltham Watch Co., Newton, Mass.

It may be of interest to add that in the pool above the falls on the Romaine there has been for several years during the season a salmon that the Indians say is "as big as a canoe." He used to roll about every day in the most aggravating manner and show his immense proportions above water, but could not be induced to take a fly. One day, however, while Mr. Fitch was getting out his line preparatory to making the cast from the rock above what is known as the "Ladies' Pool," he hooked the fish above mentioned, which jumped entirely out of the water, showing his immense size, scarcely the length of the rod from Mr. Fitch; this unexpected turn of affairs so excited Mr. Fitch that he failed to take his thumb off the line, and the result was that the leader snapped and the fish was gone. The whole thing transpired in a few seconds. There is no doubt that this salmon would have weighed 60lbs. Only a salmon fisherman can appreciate Mr. Fitch's feelings as he sat upon the rock thoroughly exhausted. The fish in the score alluded to by Mr. Dennistoun average 12 to 25lbs. and the largest one taken was 38lbs. CLARENCE M. ROOF.

From Mr. Dennistoun's article, which was published in the *London Field*, March 21, 1891, under the title of "Labrador Salmon Problems," we make the following extracts:

"During my annual salmon fishing excursion last summer to the rivers on the Labrador coast flowing into the Gulf of St. Lawrence, a discovery was made by me which seems to be an important contribution to the natural history of salmon frequenting these waters. Notwithstanding my having made some twenty fishing excursions to these magnificent rivers, landing on an average not less than five clean fish for every day's fishing during these years, I only last summer accidentally learned a very interesting fact, which I record for the information of all who are interested in the subject.

"In the first week of last July we left the river Mingan, my fishing headquarters for the season, to examine and explore a small river named Tupitagan, and to test its fly-fishing capabilities.

"The Government lessee of the net fishing for salmon in the tidal waters near the mouth of the river was a very intelligent French-Canadian, named Girard, who came to my tent near his house to have his usual chat about fishing matters. During our discussion as to the fact whether salmon which had once entered the fresh water of the river often returned to the salt water again before making their final ascent to their spawning grounds, he asserts that such was undoubtedly the case; that he had completely proved the correctness of this statement, judging not only by the color and general appearance of the fish, but by a more efficient test. He stated that, as soon as

they entered fresh water they began to lose their teeth, and when they had been some time in it, they had lost all of them. He said, if he had fifty salmon handed to him in a dark room, some from the river and some from the sea, he could easily separate them into two lots—those without teeth from the river, and those with teeth from the sea, and that the color and general look of the fish, when examined by daylight, would confirm his selection.

"Having caught with the fly more than 2,000 salmon on that coast; having previously known or met most of the gentlemen who for the last twenty years had fished various rivers of that territory; having come in contact with many lessees for net-fishing salmon, and read most of the books on the natural history of this fish, without hearing or reading any statement to this effect, I thought the man was chaffing me, and probably intimidated as much to him. He then good-naturedly called one of his children from the adjacent house, and told them to bring from his salmon storehouse the two fish they had that morning taken from his nets. This was done, and when examined, one, bright as silver, evidently from the sea, had a formidable mouth full of sharp teeth; the other, which had lost much of its brightness, and had all the signs of having been in the river, had scarcely a tooth in its head—a few quite loose old teeth being all that were visible. My next question to him was naturally, 'How did you make this discovery?' His answer was curious, showing in how simple a manner such problems are often found out. His statement was this:

"One Saturday afternoon, some three years ago, I went to tie up my nets for the weekly close time, and found in them two salmon, just such as are lying there before us. I gave one of them to my ten-year-old girl, who had accompanied me, to carry the fish home. Presently she remarked, 'Dad, this fish has no teeth!' This led me to examine it carefully; it was evidently, by the color, a fish that had been some time in the river, and it was toothless. Since that time I have carefully examined all fish caught in my nets, and found the result always the same."

"The following day we left that river for the mouth of the St. John, and after a delay of two days ascended it in canoes some twenty miles to its noted pools. We had at this time twenty-four hours of welcome heavy rain, which raised the river 2ft., and brought down the temperature of the water, giving us a splendid chance for the next ten days, during which my nephew and self landed 160 fish, and hooked and lost some forty or fifty additional ones. All these were most carefully examined, with the result that nearly all were quite toothless. A few of them, evidently later from the sea, had some straggling loose teeth. These pools we fished were between twenty-five and thirty miles from the sea, and salmon had begun to reach them five or six weeks before the date of our visit. Some of those we caught had therefore been a long time out of the sea. We then returned to the Mingan River, and caught some forty more fish. A careful examination of them gave the same result as on the St. John. Before leaving Mingan for the Tupitagan we had caught there some fifty fish, in addition to some half a dozen kelts, but being then ignorant of the toothless problem, the mouths of none of them were examined, and as we were at that latter season unable to obtain any kelts, could get no evidence as to the regrowth of their teeth.

"At the Mingan Post of the Hudson's Bay Company there was an opportunity of examining a number of the hunters of the Montagnais Indian tribe, who all confirmed the statement that salmon lose their teeth soon after entering fresh water. When cross-questioned on the subject they answered, 'It is just the same as deer lose their horns, bears, martens and other animals their fur, and lobsters change their shells every year.' It seems almost incredible that this fact, of which we obtained such ample evidence, and which a slight amount of observation would have easily detected, has been overlooked by so many experienced professional and amateur fishermen. I have conversed with many of both classes on the coast, and since my return, but none were aware of this peculiarity. This in the case of fly-fishermen may in some measure be accounted for, when a fish has been gaffed or landed by a net they leave the detaching of the hook to the gaffer, and therefore do not see the mouth of the fish.

"It is to be hoped that during the coming fishing season in Canada and elsewhere this problem will be thoroughly investigated and reported on, especially in the case of kelts. What may be the case of salmon in the rivers of Great Britain others must demonstrate, but if found to correspond in any measure with those of the rivers of Labrador the fact may have a most important bearing on the much-argued question, 'Do salmon feed in fresh water?' The mouths of the toothless salmon we caught could have no holding power over small fish—one's hand could be rubbed hard along both upper and lower jaw without the least obstruction, while salmon, if caught in or just out of salt water, would in like circumstances cut the hand severely."

In the above description Mr. Dennistoun has apparently brought out an exceptional condition of the teeth in breeding salmon, and the subject deserves careful and continued investigation. It has long been known that salmon and charr frequently shed their teeth and as often renew them by others which appear from below or on one side of the deciduous teeth. The number is much reduced as old age comes on, and, especially in sea-going species like the Labrador salmon, the tooth-bearing surface shrinks rapidly in extent. Males in the breeding season have the jaws greatly produced and bent; the teeth of the intermaxillary bone become much enlarged, so that they are fully four times the size of the corresponding teeth in females. There is, however, usually no serious loss of teeth during the spawning period. Dr. Günther's description of a male Irish salmon in full breeding condition, and measuring 3ft. in length, contains the following remarks as to the teeth: "The dentition of the jaws and of the palatine bones almost perfect, the teeth of the intermaxillary being stronger than those of the mandible, which again are larger than the maxillary and palatine teeth; the series of intermaxillary teeth does not extend across the forepart of the snout, the intermaxillary bones themselves being separated by a deep notch. Of the vomerine teeth three only of the anterior ones are left; they form a triangle; most of the teeth of the tongue are lost." Breeding males of the Penobscot salmon agree with the above description and males of all the Pacific salmon show the same characters. As we have remarked, therefore, the peculiar condition of Lab-

rador salmon is worthy of further study, and will no doubt have the attention of anglers who may visit the region.

NEW ENGLAND TROUT WATERS.

THE run of salmon in the celebrated pool at Bangor has not yet been of any considerable proportions. Following the first one caught, already mentioned in the *FOREST AND STREAM*, only a few have been taken. In one day, Saturday, April 11, six fish were hooked, but only one was landed. The trouble seemed to be with the tackle in use, or with the inexperience of the fishermen who were fortunate enough to get the rises. In one case, where the salmon was hooked and secured, the fish came out of the water to the casting of one gentleman, and would evidently have risen again to the same cast, but another fisherman near by put an end to the hopes of the owner of the cast. The fisherman above evidently saw what was going on and ordered his guide to paddle him across the pool. Either intentionally, or otherwise, the guide allowed the boat to drift slightly down the stream, with the cast of flies of the fisherman trailing in the pool. The salmon rose to these flies, was hooked and landed. It is explained by those who have been there this spring, that the fishing ground has changed, or appears to have changed, in that the best fishing has been on the Bangor side, whereas on former seasons it has been on the other side, where the shore is controlled by the club.

Moosehead Lake sportsmen are preparing for a good season with the brook trout in those celebrated waters. It is reported that the ice is liable to go out early. The water is unusually high, and the ice is broken from the shores, indications that are supposed to suggest an early breaking up. But this is by no means positive evidence that the ice will go out early. For after all the ice has to thaw and become thin enough and weak enough for the wind to break it up, since it is but the work of a few hours for one of those great Maine lakes to clear of ice. It gradually grows thinner and weaker till it is weak enough to rise on top of the waves, or rather to be moved by the wind, starting at the shore. An old hermit, who formerly spent his winters at the South Arm of Richardson Lake, once explained the matter of the going out of the ice to some ladies in these words: "I was here when she all went to smash." He said this with a vacant stare up the lake. Then he added, "I looked up the lake and she was all solid. The next time I looked up she had all gone to smash!"

The latest indications and suggestions do not point toward the clearing of the Rangeley Lakes previous to the 10th of May. Last year these lakes cleared on the 8th and 9th, at the same time Moosehead cleared. The Rangeleys cleared in 1889, on the 29th of April, which was about the earliest on record. The average is about the 13th. It is announced that the railroad from Phillips to Rangeley will be completed by the first of June. This will be too late to catch the best of the travel this spring. It is now completed to within seven miles of Rangeley, but the unfinished part is through a wilderness, and the road will not be of any use to the public till completed.

A trouting party of three went from Boston up into Barre, Mass., last week and returned with a creel of some 70 trout. They found many of the streams still very high from the effects of rain and snow water. One of the larger, and about the best stream, they did not fish at all by reason of high water. The tackle people mention a good trade with the fishermen, getting their outfits ready for the Maine waters. It will be legal to fish the streams there on May 1, in fact, any waters, but the lakes are not likely to be open, as mentioned above. Portland, Saco and Biddeford sportsmen are getting ready for the landlocked salmon fishing in Sebago, as soon as the ice leaves. They are expecting a good run. SPECIAL.

At the last business meeting of the Loon Club of Monson, which is an organization of local sportsmen, letters were received from O. A. Denner, of Kineo, and other gentlemen who had been elected honorary members.

Among them was one who has in former years often enjoyed the pleasure of angling in many of the numerous lakes and ponds in Monson and vicinity.

It is unnecessary to add that this pleasant missive from Maine's honored citizen and one of the nation's great statesmen was highly appreciated by the members of this club. It is as follows: "BANGOR, April 10.—E. R. Haynes, Esq.: I have your notice informing me that the Loon Club had elected me an honorary member thereof. The club will please accept my thanks for the compliment. I shall endeavor to meet the club at some time during the coming season. Very truly yours, HANNIBAL HAMLIN."

As it is an autograph letter entire it will be framed and hung in the club house.

Every indication is that the ice will be out of the lakes and ponds earlier by several days than usual. J. F. S.

MONSON, Me.

ICE FISHING FOR PIKE.

Editor Forest and Stream:

I have read with pleasure the articles on the pike in your issues of the 2d and 9th inst. Your correspondent is misinformed when he places a fish weighing 16 or 17lbs. as being upward of 4ft. in length. I inclose a photograph (flash light) of a part of a day's luck in fishing through the ice; the catch was made by a friend and myself on Feb. 23 last. The three large fish weighed 22, 21½ and 18lbs., being weighed immediately after capture. The one bass (bigmouth) shown weighed 4½lbs. The rule standing between the two large pike is 4ft. in length, the rounds of the ladder are 1ft. apart. The tails of the fish became somewhat broken by freezing. We use a different method in preparing the lines and hooks here in Kalamazoo from that used anywhere else in the country; our hooks are different, we fasten the bait differently, we coil the lines so they will surely run out—in fact, we are successful always in the capture of the pike. B. O. B.

KALAMAZOO, Mich.

[The authority for the length and weight of the large pike of Lake George is named in the article on the "Pike Family," in our issue of April 2. As the pike spawns in winter, perhaps some of the big ones referred to were gravid females, and consequently much heavier than usual for their length. The ratio of length to weight, however, is a variable quantity.]

FISHING IN EAGLE LAKE, TEXAS.

READER, have you never been met with the cheery "Hello! where are you going?" from a friend when rigged out with basket, rod, etc.? Well, I have. Just two weeks ago, while waiting for a delayed train, I was approached by my friend and brother sportsman, Dan H., who asked the above question, to which I replied, "Fishing, you chump. Can't you see?" "What do you expect to catch?" "Fish," I answered; "want to go?" "Betcher life. How much time have I got to get ready?"

"Just 50 minutes; the train is 40 minutes late, so run home, pack up, and come on." So off rushed Dan, and in about half an hour he came into the Grand Central Depot, puffing and blowing like a porpoise, and then found out that, between his haste and anxiety to reach the depot in time he had forgotten his flies.

"Well, I will be blankety blank! Damn a fool anyhow," exclaimed Dan, and was only comforted when I opened my heart and basket and "whacked up" with him.

"Where do we go?" He had not thought until that late moment to ask my destination. "Eagle Lake," I replied, "and put me down as a disciple of Annanias if we fail to make a good catch of bass and croppies. R. (Little Lord Fauntleroy) joins us at New Philadelphia."

"Are you sure?" asked Dan. "Sure," I replied. "Bully," quoted Dan, "then we catch fish to-morrow, for R. is a real live mascot."

Just then the delayed train came thundering in and the welcome "All aboard" from the conductor, caused our hearts to leap with pleasure and soon we were being hurried through the darkness toward our haven of sport, the reed-lined and lily-padded waters of Eagle Lake.

Dan and I were both fast asleep when we pulled into New Philadelphia, but were soon awakened by Little Lord F., who came tearing through the coach, banging his fish basket against the heads of several of the unconscious occupants of the car.

We reached Eagle Lake station about daylight, where we were met by P. H. Bunn, the veteran guardian of the lake, with a team, and were soon bowling over the broad prairie at a lively rate and reached the lake about 6 o'clock A. M.

Reader, is there anything that so stirs the feelings of a sportsman, or fills his soul with greater delight, than to stand beneath the spreading branches of a great live oak, his brow fanned by a gentle spring morning's breeze, laden with the fragrance of wild flowers and prairie grasses, listening to the singing of the meadow lark, the bark of the festive fox squirrel and last, but not least, gazing with longing eyes on the placid surface of a grand expanse of water that fairly teems with bass, white perch and bream? I guess not.

After a breakfast of corn cakes, bacon and black coffee we hurriedly jointed our rods and prepared for sport.

Now for a toss to see who shall secure the services of Mr. Bunn. R., with his usual luck, won and announced his success by a demoniac yell. So off we pushed our boats, R. and Bunn in the first and Dan and I in another. They go directly across while Dan and I pull lustily up the lake to a place known in these waters as the "deep hole," I acting as guide, as this was Dan's first trip to Eagle Lake.

I seat Dan in the bow of the boat, rod well in hand, and as soon as we near the edge of the lilies quietly say, "Now, Dan, play your fly close to the lily pads," which he does, and at the second cast a heavy splash and he has one hooked. Lord! How he pulls, rushing hither and thither, leaping high in the air in his vain endeavor to loose the cruel hook. Dan, all excitement, plays him carefully and the beauty soon lies gasping in the bottom of the boat.

"Five pounds if an ounce," shouts Dan.

"Naw," I reply, "about three."

"Betcher the drinks," he replied.

"Done." Scales are then produced and the fish weighs 3½ lbs.

"Must be something the matter with those scales," says Dan, who passed the bottle and we proceed to liquidate.

Soon the fun grows fast and furious and in about three hours we have 11 fine bass to our credit, ranging from 1½ to 5½ lbs. each. The bass now cease to feed so we conclude to try for white perch (or croppie) and pull for a tall bunch of reeds about a half mile away.

These fish, I notice, in Texas waters have different habits in different localities. For instance, in the lakes of the Brazos and Colorado bottom lands, white perch are found only in pairs, while in the lakes that border the San Jacinto and Trinity rivers they are found in schools, in very deep water, and most always at the extreme end of a fallen tree top, and when found can be taken in large numbers. They grow large, are frequently caught as high as 2 lbs. in weight, and afford rare sport.

Soon we reach the reeds, drop anchor and proceed to fish. I open the ball by landing a fine specimen of croppie, above ½ lb. in weight. Then Dan's float sinks gracefully beneath the placid waters, he strikes, and evidently has a large fish. Dan grows excited, cries "Another bass!" and nearly swamps the boat in his wild endeavor to land his fish, which he does after a hard fight, but alas! no game and beauteous bass meets his gaze, but the detested grindel (or fresh-water shark), the greatest enemy of game fish that inhabits our waters. "What is it, Irish?" addressing me. I solemnly inform him that he has caught a cypress trout, one of our rarest fish that swims, and this being the first specimen that he has ever seen, of course he believes me and places him gently on the string.

We now pull up stakes and make for another spot about a quarter of a mile away, much to the disgust of Dan, who did not then know it would have been folly to stay where we were. Soon we cast anchor and once again try with more success. This time we catch bream, croppie and goggle-eyes; moving from reed to reed, picking out one or two here and there, until we show a magnificent string of 15 croppie, 9 bream and about a dozen goggle-eyed perch.

After counting our catch Dan took the rear of the boat, standing on the seat, intently fishing, while I was busy with the anchor, when one of the most amusing (to me) accidents occurred I have ever witnessed. All at once I heard a splash, so light that I thought Dan had a strike. Glancing hurriedly around, to my horror no Dan was in sight. "Good Lord!" I exclaimed, "he has fallen overboard!" I tore frantically at the anchor and pulled the boat around to where the water was disturbed.

Now Dan wears glasses, and the first thing I saw when he arose was the glasses. He fairly churned the water in his wild effort to reach the side of the boat. He climbed in the boat, and found that as he fell overboard he broke his rod, lost his spectacles as he reached the edge of the boat, and split his pants. Hokey, how he cursed. The whole thing was so ludicrous that I fairly roared with laughter; but when Dan said, "Just think. Broke my rod, lost my glasses, and busted my breeches all at the same time; who ever heard of such cursed luck?" I laughed until the tears rolled down my cheeks. But not until B. and R. came in was his cup of sorrow filled. He had put on Bunn's Sunday vest, Dan is 4 ft. and Bunn is 6; of course R. and B. laughed and called him Santa Claus, and when their merriment subsided Dan triumphantly produced his string of fish. R. picked up the grinell and exclaimed, "Dogfish!" Dan dropped the fish and started for me, but I proved too swift. All jokes were then declared off, and we proceeded to count the catch of B. and Little Lord F., and found that their take exceeded ours: showing 15 bass, 19 croppie, 23 bream and 6 goggle-eyed perch. Our total catch was about 58 lbs.

Eagle Lake is situated in Colorado county, on the Colorado River, and is about 1½ miles from a station of the same name. It can be reached from almost any point in Texas by either the Southern Pacific or the San Antonio & Arkansas Pass Railways. The lake is 4½ miles in length and from 1 to 1½ miles in width, and is entirely surrounded by large magnificent liveoaks. It abounds with fish of all kinds, and it is not an infrequent occurrence to catch from 40 to 50 bass a day, to say nothing of croppie and several varieties of perch.

During the winter months ducks and geese can be found on and in the vicinity of the lake by the thousands. Quail, jacksnipe and squirrels are plentiful, with deer further down in the bottom. Verily this is a sportsman's paradise.

Families from all parts of Texas visit this lake, bringing their own tents, etc., remaining from one to three weeks, renting a boat, which costs only 50 cents per day, or \$1.50 including the services of Mr. Bunn, who has a cabin on the lake and is untiring in behalf of visitors.

At 7 P. M. we board the east-bound train and reach Houston at midnight, healthier and happier for our one day's outing.

HOUSTON, Texas.

THE LUMP FISH.

Editor Forest and Stream:

A salt-water fish obtained from the Philadelphia markets has been upon exhibition for several days without being named. I send you a rough description from a casual glance with the desire that it may be lucid enough for the purpose.

It is 16 in. in length, 7 in. in width or depth, for three-fourths of its length very heavy in structure, the tail and fins being small in proportion to the apparent weight, 6 lbs. In cross-section (transverse) it is triangular or trefoil, the base being 4 in. In color it is a glossy blue black, the fins being darker in color, a small area on the stomach being a dirty white, rapidly shading into the prevailing

color. The upper surface is apparently without scales except two or three longitudinal rows on each side far apart of triangular scales or warts touching each other. The heavy upper portion upon which is the dorsal fin is of jelly-like consistency. The head is not defined; that end is rectangular and flat on the end, with a transverse mouth opening 2½ in. long near the bottom, with the eyes set near the front on the sides. There are apparently no gill covers.

It is evidently a bottom feeder and an odd looking creature as it lay upon its stomach, having about as much shape as a wooden jack plane. We would be pleased if you can name it and give its habitat.

[We think the fish is the lump fish of our East Coast (*Cyclopterus lumpus*). This species is figured on plate 70 of the "Fisheries and Fishery Industries of the United States," and its natural history is well set forth by Dr. Goode in the accompanying text. The lump fish is a very common inhabitant of New England seas and north to Greenland, occurring also in the eastern Atlantic in large numbers. It ranges south to Chesapeake Bay, but is comparatively rare in the southern portion of its range.]

ROCKY MOUNTAIN GRAYLING.—Salt Lake City, Utah, March 29.—Please send me a cut and description of the grayling, as some of our local anglers think that in some of the waters of Idaho, whither we occasionally take a trip, they have found the same, and I wish to have the means of identifying it.—T. J. S. [In Idaho and the Rocky Mountain region of some other Western States two fishes are known under the common name of grayling. One of these is a true grayling (*Thymallus tricolor*), the other is a small whitefish (*Coregonus williamsoni*). The grayling may be easily distinguished from the whitefish by the presence of distinct teeth in the jaws and by its very long dorsal fin, which contains about twenty rays. The whitefish has no teeth in the jaws and the dorsal fin is short, containing about twelve or fourteen rays. The whitefish again is plain silvery in color, while the grayling has the sides purplish gray with numerous black spots. The dorsal fin is beautifully marked with blackish and rose-colored streaks, besides rows of dusky green and rose-colored spots. The belly fins are also variegated with rose-colored lines crossing diagonally over a dusky ground. There is no difficulty about distinguishing the two fish with specimens at hand for comparison. The very small toothless mouth of the whitefish alone would distinguish it readily from the comparatively large mouth and tooth-bearing jaws of the grayling.]

ANGLING NOTES.

THE anglers of the Tuxedo Club are having fine sport with the brook trout they turned out last winter. Their fish run larger than usual this spring and are in fine condition. The catches average ½ lb. each, but so far none have been killed over 1½ lbs. It is comparatively easy to catch the limit in any of the private club waters at the beginning of the season, but after the trout has been fished over for a month or six weeks they seem to become educated and very shy; then the real sport begins and only those fishermen who are good anglers can hope to fill their creels.

Many persons will be disappointed to learn that the best part of the east and west branches of Broadheads Creek, at Henryville, have been taken up by a club of anglers. Every year free waters are getting more difficult to find and trout fishing, like all luxuries, must be paid for.

A Canadian fly-fisherman gives us the following interesting occurrence which happened to him last summer in one of the lakes back of Quebec. He was casting with a light rod along shore, when he struck what seemed to be a heavy fish. After a long fight he found that he had on two trout instead of one. In landing the upper one the bottom fish tore loose and took the tail fly and part of the leader with him. The one he saved weighed a trifle over 2 lbs. and was a very handsome specimen; the lower one he only got a glimpse of, but he saw enough to convince him that it was a much larger fish. The next morning he went bright and early to the same spot and soon was so fortunate as to hook that identical trout with the fly and leader still fast. It weighed 3 lbs. 7 oz. During that day he killed among many others twelve speckled trout that weighed 80 lbs., none of which were wasted.

The lake trout fishermen are looking at their gangs and making ready for their annual raid to the Adirondacks and Maine waters. The ice on Raquette Lake is reported to be 2 ft. thick and it will probably not break up before the first or second week in May. Most of the veterans arrange with their guides to keep them posted, and when the long looked for telegram flashes the welcome news to them that the ice has gone out, they are off. Last May was unusually wet and cold and the water was too high for good fishing; this season promises to be much better.

Anglers and sportsmen should make the most of it while there is any game or fish left in the old North Woods, for in a very few seasons the new railroad will cut the Adirondacks nearly through the center and spread fire and destruction along its path.

The New York Association for the Protection of Game, at their April meeting, refused the offers of Morello and the Hotel Brunswick to compromise the suits, and their counsel was ordered to proceed against them as soon as possible. Morello seems to have kept right on serving quail. Game Warden Kidd has commenced a suit for ten quail served to him and a party of friends a week or two ago.

Mr. Archibald Mitchell writes that four salmon were taken at Bangor on Friday.

SCARLET-IBIS.

PENNSYLVANIA TROUT WATERS.

MECHANICSBURG, Cumberland County, Pa., April 18.—The opening of the trout in Pennsylvania was inaugurated in the Cumberland Valley by the banks of the many trout streams being lined with hundreds of noted fly-casters from this and adjoining States and a full complement of the members of the local angling brotherhood.

For days before the open season the outlook for good weather was discouraging, as March closed with a snow-storm which beat the largest in the memory of the oldest inhabitant. But the fifteenth opened with a sky and a wind that gave joy to the heart of the angler as well as many fine trout to his creel. Among the many streams which vein this beautiful valley the famous "Big Spring" at Newville is the most noted for the excellence of its trout fishing. The well known fly-casters of the Eastern and Middle States have oftentimes wet their lines in its silvery stream, and year after year make pilgrimages to its shore in quest of the speckled denizens which populate its waters.

This year they gathered in on the afternoon and evening of the 14th, and the evening was spent at the only inn in the town talking of the trouting of "auld lang syne." Long before dawn on the 15th the banks of the stream were dotted with anglers, who faithfully whipped the stream until the sun went down. On this stream the catch numbered over 3,000 trout, the "stone fly" being the taker, and those who came provided with this fly were the most successful. Among those whom fortune favored with good catches were Mr. E. S. Osgood, of New York, who caught the famous 9 lb. trout in the Rangeley Lakes. This gentleman took a great many trout of large size. Marbough Keedy, Esq., John U. Adams, editor of the *News*, and Dr. Murray, of Hagerstown, Md.; R. M. Sturgeon, of the *Telegram*, H. W. McAlamy, of the *Evening Telegraph*, Dr. Vallerchamp, Dr. Moffit, Alderman Fager and Mr. Lutz, of Harrisburg; Mr. Bech, of York; Theo. Rakestraw and R. W. Short, of Mechanicsburg, and Mr. Mell and Mr. Loy, of Newville. At Shipensburg the Dykeman ponds were fished hard, anglers paying \$1.00 per pound for the trout caught. The Letort Run and the net work of brooks in the south mountain out from Carlisle yielded many fine fish. Harry Noble and the Messrs. Heckman were successful in these waters. Many fine trout were taken also at the "Bonny Brook" preserve near Mt. Holly. This preserve is owned by the venerable Johnson Moore, who is the pioneer fly-caster of the Cumberland valley.

The stream near New Kingston was not fished hard, but some big trout were taken by local anglers. Cohochon Run was in fine condition, and the fishermen who fished it with worms got the big fish and a large number of them.

Trout Run, as in former years, was a favorite, and good returns came from that water. Commissioner Levi Hertzler took 16 that weighed over 18 lbs., Major S. N. Emminger took 13 fine fish, and John Ulrich took 16. Hoge's Run was neglected by the anglers who formerly fished it, and no returns are reported from it.

Trindle Run showed up well, and many excellent trou

were taken. A. G. Hade caught 9, John Coover brought to basket 26. Chas. Murdoch, of Columbia, Lancaster county, captured 9 in this stream, four of which weighed 9lbs.; the largest weighing 2lbs. 5oz. Harry Mayer took one that weighed 2lbs. 9oz., and a young Titian it surely was. Over at the well known "Silver Spring" dams remarkable success was had by the anglers who gathered on its banks to try their favorite sport. Chas. Metzgar, Jacob Haehnen, Geo. Boyd, W. E. Seiler, Prof. W. F. Seiler and T. B. Robinson took 110 big trout, running in size from 13 to 18in. in length. Good success was had by the fly-fishermen who went to Cedar Run. Dr. Jones, of Harrisburg, had a well-filled creel of 23 trout, among them several two-pounders. Mr. Miller and Mr. Schroeder also took some trout from this brook.

The brook-veined mountains north of this place were given the "go by" so far as Cumberland county visitors were concerned, but were fished by anglers from the Juniata Valley. A gentleman in town from that section to-day reported many fine fish taken from those mountain streams.

All of the above-mentioned streams, from the Big Spring down, have been stocked with trout from the State hatchery of the Pennsylvania Fish Commission, and the success of the planting is manifest by the unprecedented catch of opening day this season. The California rainbow trout (*Salmo irideus*) are showing up well and take the fly greedily. Mr. Thos. Adams took one at Newville from the Big Spring that tipped the beam at 1lb. 9oz. and measured 17in. in length. But the fish pirates are alert and active. On the night of the 14th a party of trout hogs and fish pirates drew off the water at the middle dam in the Big Spring and simply murdered hundreds of trout. Some of them were exhibited the next day that weighed 3lbs. and 4lbs. 8oz. respectively. Both of these fish had their heads smashed with some hard instrument. No effort has yet been made to mete out justice to these violators of the fish laws of the Commonwealth.

For a number of years "Silver Spring" was thus plundered by fish pirates, but a wholesale prosecution by parties interested placed the pirates in a pillory of public contempt and a quietus on fish robbery in the lower end of the county. With all the joy which the rapid growth of fish planted in the streams gives our local angling brotherhood, yet our hearts are sorely troubled because we have a "farmer Legislature," and there is a disposition on the part of the majority to tamper with the present excellent fish laws and make fish piracy respectable. Still more grievous is it to know that the Senator and member of the lower House of the Assembly are heartily in favor of the change—indeed they pronounce themselves, it is said, as in favor of doing away entirely with the fish laws. The honest anglers of our grand old Commonwealth have need to lift up their voices against this iniquitous measure now before the Legislature.

ROBERTA.

CHICAGO AND THE WEST.

CHICAGO, Ill., April 17.—Dr. Bartlett, Fish Commissioner for Illinois, lives at Quincy, when he isn't somewhere else, but lately has branched out and now has an office in Chicago. I found his desk to-day, just at the left of Mr. Geo. E. Cole's, in the big establishment of the latter gentleman, at 86 Dearborn street. Mr. Cole, as everybody knows, is president of the Fox River Fish and Game Association, and any one knowing that will know why the Commissioner's office is where it is. The two work together, and that very well indeed.

Dr. Bartlett is highly encouraged by the improvement noticeable in his lines of labor in this State. He rejoices in the system of fishways which now let the fish from the Mississippi clear on up to the Fox Lake waters. At the La Grange locks, once much dreaded as a barrier, the Government has made one of its stone abutments suitable as the wing of a good fishway. The wardens all over the State are doing well. Hundreds of nets have been taken up in the Illinois River country this spring and an entire new era inaugurated in a once lawless region. The Commission, as will be remembered, has a steamer of its own and by means of this steamer it carries out a pretty smooth scheme about these nets. Of course, the Commission has no authority to destroy a net without legal process after its removal, though some of its wardens have burned a few without protest from the owners who lately used them unlawfully. They do not destroy the nets therefore, but acting under their legal right to remove them, hitch a long drag rope to the end of the net wing, put on steam and drag the net bodily from its moorings. Of course, it may tear, but that's in the "removing," and, of course, after it has been dragged down stream a mile or so it sinks and in due time gets covered with mud and sand, but that isn't destroying property, it's only removing illegal nets. A great many have been so removed and the work is constantly going on.

There will be a good-sized planting in the Des Plaines River soon, 1,000,000 German carp, 1,000,000 pickerel, 500,000 black bass and 500,000 pike, all of which fry will be placed in the river near Riverside. There have been three attempts made to stock the Des Plaines within the past six years, but the stream has no fish worth mentioning now. It is speared, netted, dynamited and otherwise depleted constantly, and no one of the angling guild thinks of fishing there. There is no fishway in the dam at Riverside, but one is to be put in this spring, it is said. The Des Plaines, if properly protected, would be a good stream for pickerel and big-mouth bass, and it is the most accessible stream about Chicago, being only about a dozen miles out. It is hoped the new plant will give the Dutch, Polish, Irish, Bohemian, Russian, Italian and other delectable "American" element a chance to net, poison, spear or blow up a few more fish. The warden of Riverside says he will stop illegal methods there.

Warden Buck, acting for the Fox River Association along the Fox River, sends President Cole the following report on his work. He has gone clear from Fox Lake on down, and this is what he says:

ELGIN, April 5.—Geo. E. Cole, 86 Dearborn Street, Chicago. Dear Sir: I went to McHenry Wednesday night, and Thursday morning at 4:30 I was at the Johnsbury Creek. I waited there until it was light and then commenced to look for nets. I dragged the creek as far as I could go up it and all around the mouth, but could find nothing, nor any stakes where a net could be fastened. I then went to the lakes and looked along up Nippersink Creek and found nothing there. The water is so roily they can't see to spear there yet. On Friday I came down the river. I found one

net opposite Bain's place below Burton's bridge, but could not find the owner. Bain said he did not own it, but I think he does, as he had a gill net last year and it was not in his shed where he kept it. I have got it stowed and think I will be able to prove who owns it. I found a large gill net in Courtney's Bayou and Mr. Courtney said some boys were there last week from Ringwood and he thought they left it. I have got that put away and will try and find the owners. I came on down to this place and got here last night. I found everything all right at Algonquin, but at Carpentersville the fishway was all stopped with some pieces of stumps that had been put in there. I notified Mr. Edwards and will go there in the morning and see that they are cleaned out, and then I will go on down the river and see that every fishway is in shape. Mr. Edwards said the fishway was all in working order when he got my notice, and this stuff must have been put in last week. Yours, respectfully, F. L. BUCK.

Beardstown, on the Illinois River, is one of the old offenders, and one of the hardest of places to straighten out into lawful ways of fishing, the waters thereabout having been unrestricted for years. Yet there are good men there in plenty, and now there is a good club there, which will break up the lawlessness. Mr. A. A. Greene was the inaugurator of this movement. He wrote up to Mr. Cole about by-laws, etc., early this spring, and was duly answered. On March 16 he wrote:

The by-laws and your letter reached me in good time, and I am happy to state that we organized the Beardstown Rod and Gun Club yesterday, with some 55 or 90 members. We elected 10 directors, who have called a meeting for Friday for the election of president, vice-president, secretary and treasurer, and adopted your by-laws, and will incorporate also at an early date. Will send you copy of by-laws and proceedings as soon as printed. If you can assist any in having Dr. Z. T. Smith, of this place, appointed deputy fish warden it will help out; he is one of our members and assures me that he will watch the matter closely, without fear or favor from any one, and is the right man in the right place. We are going to see the law is obeyed from this out regardless of everybody. Fraternally yours, A. A. GREENE.

The next letter from Mr. Greene was as follows:

BEARDSTOWN, Ill., April 5.—I take pleasure in making you an honorary member of our club. Our membership will number near 100 when we get thoroughly canvassed, and I hope to do good work and have a good report when you come down in May. I propose to go for 'em tooth and nail—let the chips fall where they may—prompt and vigorous action in movements of this kind is the only way to win. In addition to officers on membership card we have Jno. H. Hazener, treasurer, and G. L. Van Doren, vice-president. We will incorporate, and have adopted your by-laws.—A. A. GREENE

This is the way the Fox River Association has built itself up, by the constant accretion of clubs whose members live right along the Fox River and Illinois River tract. Its membership is growing and it cannot grow too large. Now here is another new little club which I have just got track of and which I recommend for early action upon to Mr. Cole and Mr. Wilkinson. I met Mr. Wood and told him all his club should certainly join the association, as that will help their fishing. They are on the Fox River, well up, not far below McHenry.

I believe we are going to have a big fishing season out here this year, both in sales of tackle and in actual angling. Our game will go, we may be ready to say, but it is easy to see that the fish can be protected and kept forever to afford sport. Angling is growing in favor in Chicago and the fishing is growing better, and not poorer, around Chicago.

It is a strange fascination this that angling has, both for the old hand and the novice; and hereafter I have found something in one of our dailies here. It is good reading, and not bad writing, though the writer is impersonal, and I have a notion to ask room for it:

Yesterday morning two men were strolling up the lake shore drive. The lake rippled and shimmered under the warm sun in a really inviting kind of way. The grass looked much greener than it has on any previous day this year. There was a hint of balminess in the air. One could feel the sap starting in the trees. The men walked very leisurely to the end of the drive and across a corner of Lincoln Park to that new causeway. At the lower end of it for a few rods a row of tall pilings makes a sort of piling at the water's edge. Two or three boys were sitting there. They had a long piece of scantling projecting over the posts. Near the land end of this scantling was a huge reel, from which a rope ran out over the end and down to the water. The men leaned over the piling and watched. Presently one of the boys wound up the reel, lifting from the water a four-cornered seine held by a frame of two oaken bows—empty.

"Pooh!" said one of the men as he tossed the stub of his cigar contemptuously at the unsuccessful apparatus. "An intelligent occupation! Fishing's about the stupidest thing anyhow. I never could imagine any fun in watching a string dangling in the water all day. Here's the end of 'em" (indicating the fish line) "and then tossing out his line). "It's 9 now—these fellows will be at it till noon."

They loitered along over the granite blocks. A little further up an old man was pulling a fish from the water—a small fish that flopped and squirmed amazingly.

"Jove," murmured the contentment of Walton, surprisedly, "this man's caught a fish!"

He stooped, half mechanically, while the patriarch stooped down and pulled from the water a piece of cord, at the end of which three other small fishes flopped and squirmed, and put on it the new captive. Then he watched the ancient sportsman bait his hook and toss it out again. Presently he shifted his weight to the other leg and took his case in the other hand. Every now and then there came a twitch and tautness at the end of the line. The fisher pulled his old slouch hat close over his brows to shade his eyes, and moved his line a little once in a while. The watcher cast a hurried glance about him, selected a smooth and comparatively clean stone and sat down upon it. He lighted a fresh cigar and rested his elbows on his knees, and smoked lazily and kept his eyes on the bobbing line. The water lapped against the posts in a soft, grateful sort of way, the birds over in the park sung, and the sun climbed higher.

Presently the other man said, "Well, it's after 10—let's go back."

The observer jumped up hastily, "After 10, by Jove—yes, let's go." He dusted his coat-tails and glanced back and stopped. "Had a mighty strong bite then," he said. "Let's wait just a second. I want to see him land this one."

After a while the other man said again, "Well, I have got to go." "Yes; hold on—I'm going," said the scoffer. He cast one hesitating, lingering glance backward, then set his face resolutely cityward.

As they passed the boys with the seine he said, "Where'd be a good place to run out to next Saturday and go a-fishing?"

That question is becoming a common one now, and I hope we shall have abundant answers to it after a while.

April 19.—A number of friends respond, I see, to my inquiry for good wading gear. I have even had marked advertisements sent me. The heavy stocking and the stitch-downs I have never tried, though I have found heavy rubber-soled canvas tennis shoes good to wear over the rubber foot. My trouble isn't about that, but about the rubber or silecia stockings or trousers. I have a couple of pairs that leak, always did leak, always will leak. No matter what I pay I always get stuck in wading trousers and that's why I am not stuck on them. In my family they sprinkled and didn't dip, and I'm dead

against a portable bifurcated rubber bath tub that only leaks one way and goes under the trade name of waterproof wading trousers. E. HOUGH.

CHEAPER FOOD FISH.

Editor Forest and Stream:

I was much pleased with your editorial of March 19, on stocking Lake Ontario, and hope you will refer to it again. The subject is receiving very much attention and we are encouraged to believe that results will soon come from the agitation. The United States people have shown a disposition to assist, but ask that our State first protect the water by laws and regulations well enforced. We are in hopes this will speedily be done, from the fact that the life of the Game Law Codifying Commission has been extended for the purpose of conferring with Canadian authorities on this subject.

New York State has done well in fishculture, and can view with pride the shad and game propagation; but there is a growing sentiment that in the matter of food fish, which are natural to the Great Lakes, she is far behind the other States and Canada, and that the time has come when New York should turn her attention to the restocking of the vast water farm on our northern border, thus affording a cheap and very desirable fish food for the rapidly increasing population and at the same time fostering an industry now monopolized by our neighbors. If the coming conference above mentioned could be extended so that Pennsylvania, Ohio, Michigan and Wisconsin be represented, I believe much better results would be arrived at. Our Association favors uniform laws for all the Great Lakes, and joint action, both State and national, and working harmoniously together, is what we desire to see accomplished. Cheap fish food is sure to receive more attention in the near future. Legislative bodies are beginning to perceive its importance, political and industrial. What is first needed is wise protective laws thoroughly enforced, followed up by liberal artificial planting. One good practical result we are in hopes may come from this conference mentioned is a finding, after careful consideration, what would be wise laws to enact and enforce, and as there is much difference of opinion on this subject, we would like to see it include the other States; and at the same time we would suggest that the people now engaged in the industry—fishermen and fish dealers—be given a hearing. This class we find, from extensive correspondence, are fully alive to the importance of the subject and more anxious than any one else for proper protection.

F. J. AMSDEN.

TAPE WORM IN ROCK COD.—Whatcom, Wash., March 7.—Editor Forest and Stream: The specimen of morbid anatomy which accompanies this letter, was this day taken alive from the stomach of a small fish weighing nearly 1lb., of the variety which is known here and at other points on Puget Sound as rock cod. We have heard of tape worms being found in trout in northern Scotland, but never credited the report. This looks, however, as if some fish in this country might have a touch of the complaint. Can any of your specialists on fishculture give us any light on the subject? H. E. HENDERSON, M.D., M. MOIR PICKEN. [The parasite referred to in the above letter is a tape worm and we have referred it to a specialist on fish entozoa for identification. It is a very common thing to find intestinal parasites in fishes, and among them tape worms are rather abundant. Professor Edwin Linton, of the Washington and Jefferson College, Washington, Pa., has written several important articles upon fish entozoa for the Report and Bulletin of the U. S. Fish Commission. Some of these papers have been separately issued and can probably be obtained by writing to Hon. Marshall McDonald, Commissioner of Fish and Fisheries, Washington, D. C. By reference to these monographs it will be evident that intestinal parasites are among the commonest and most varied afflictions incident to fish life. The rock cod of your locality is a species of *Sebastes*, of which you have so many fine representatives; it is related to the rose fish of the Atlantic waters, but is very different from the true cod.]

BAHIA FISHES.—We have received from the U. S. National Museum an extract from Vol. XIII. of its Proceedings, being a list of fishes obtained in the harbor of Bahia, Brazil, and adjacent waters, by Dr. David Starr Jordan. These fishes form a part of the scientific results of explorations made by the U. S. Fish Commission steamer Albatross. They were obtained during the cruise from Norfolk, Va., to San Francisco. The principal collection was made in the harbor of Bahia and includes 112 species. Two of these are flounders which are described in this paper as new to science, and one of them is made the type of a new genus. One of the first things that strikes the attention of the ichthyologist is the large number of species possessed by this locality in common with the East Coast of the United States and the Gulf of Mexico. More than one-fourth of the species mentioned in the list occur as far north as Cape Cod. Among them are the well-known lady fish, thread herring, anchovy, lizard fish, half-beak, trumpet fish, Spanish mackerel, mackerel scad, big-eyed scad, look down, gray snapper, moon fish, flying gurnard, spotted sea robin, common file fish, orange file fish, blue-striped trigger fish, trunk fish and spotted swell fish of our waters. The number of specimens procured was only about two hundred, and as Dr. Jordan remarks: "It is evident that the results which would have come from extensive collecting might have been exceedingly valuable." We note the presence in this lot of four species of snappers, but unfortunately the coveted *Aya* or *Gavanha*, which Dr. Jordan believes to be the same as our famous red snapper, is not among them.

CODFISH IN CANARSIE BAY.—On April 16 John Roeklein, a Brooklyn youngster of twelve years, who was fishing for flounders in Canarsie Bay, Long Island, caught a 5½lbs. codfish, a capture reported by old habits to be remarkable for the locality.

LEASE of St. John River for sale; splendid salmon fishing. See advertisement.—Ado.

"I will see you some time after April 1," said the angler to the trout. "How will I know that you are coming?" queried fontinalis. "Oh, I'll drop you a line,"—Undenbified.

Fishculture.

CALIFORNIA FISHCULTURE.

THE biennial report of the Fish Commissioners of California for 1888 to 1890 has just been received through the kindness of Mr. J. G. Woodbury, superintendent of hatcheries.

The Commissioners are Joseph Rontier, Sacramento, J. Downey Harvey, San Francisco, and Charles Josselyn, San Francisco. The report announces that sturgeon are steadily diminishing on account of the slaughter waged upon them by Chinese fishermen. Trout are rapidly increasing in number in the rivers and lakes, owing to fishcultural efforts. Black bass have been introduced in various places and their multiplication at Crystal Spring has been sufficient to constitute a base of supplies for future stocking. Catfish have become abundant in most waters and have met with popular favor. Seals and sea lions continue to destroy the incoming salmon and their depredations are so seriously felt that the Legislature is asked to abate the nuisance.

The hatchery at Sisson, on the headwaters of the Sacramento River, has achieved a great success.

The annual appropriation for the work of the Commission was \$10,000. In disbursing the \$2,000 appropriated for the purchase and importation of certain game birds difficulty was met in obtaining most of the species mentioned in the act. Chinese quail and Oregon pheasants were bought and distributed in suitable localities. Forty pairs of pheasants were obtained at \$15 per pair and 1,300 Chinese quail at the rate of \$20 per hundred.

The Commissioners recommend the passage of a law requiring the use of close-meshed screens at the ends of all irrigating ditches within the State. This is to prevent the destruction of millions of fish, which pass from the streams into these ditches and are left to perish when the water is exhausted.

The close season for salmon, says the report, should include the months of August and September. At the present time September covers the entire close season for this fish in California.

It is also recommended that the killing of deer be entirely prohibited for the next two years. This is necessary on account of the loss of deer through the severity of the last two winters.

In beginning operations at Lake Tahoe trout were found to be scarce in several streams which a short time ago were famous fishing waters. The decrease is attributed to torch-light fishing, and in one stream to the serious pollution by sawdust, as well as to the building of dams in Truckee River, which prevent the trout from making their way into Tahoe Lake. A new hatchery was built at Lake Tahoe, near Tahoe City. The species of trout abounding in this lake is one of the forms of the red-throat or Clark's trout, and has been described as *Salmo henshawi*. It is a beautiful and excellent food fish, which of late years has been rapidly diminishing in numbers.

In March, 1890, a small hatchery was started on Shovel Creek, a tributary of Klamath River, for the propagation of rainbow trout.

In taking trout for the Tahoe hatchery in March, 1890, the seiners frequently caught as many as 300 lbs. of suckers at a haul, and also whitefish. As the suckers were very plump it was thought they must be full of trout spawn. On opening them, however, not an egg was seen. The whitefish, on the other hand, were found to be full of trout eggs. The largest trout caught in Blackwood Creek weighed a little more than 16 lbs. Some of the females furnished 5,000 eggs each.

The total number of salmon, trout and black bass distributed in California during the period covered by this report amounted to nearly 9,500,000, and the Sisson hatchery contained 3,000,000 salmon eggs in the fall of 1890.

The report concludes with a paper on the food fishes of the fresh waters of California by Dr. C. H. Eigenmann. The list of fresh-water fishes now known in the State includes only 47 species, not counting those which have been introduced from other localities. There are two kinds of lampreys, two sturgeons, six species of suckers, twenty representatives of the carp or minnow family, one whitefish, four kinds of Pacific salmon, four black-spotted trout, one red-spotted trout, two species of sticklebacks, one member of the sunfish family (the Sacramento perch *Archoplites*), one species of the viviparous perch family and four species of fresh-water sculpins or miller's thumb. One of these strangely enough has received the common name of catfish. About one-half of the species enumerated are used for food. The fresh-water sculpins have no interest to the angler or fish consumer, but to the fishculturist they are among the greatest pests of the fresh waters on account of their extensive destruction of the eggs and young of the salmon family. Dr. Eigenmann gives us a grain of comfort by stating that one of the species of garter snakes subsists chiefly on these troublesome fishes.

TROUT PLANTING IN PENNSYLVANIA.

Editor Forest and Stream:

We are going to make an effort to improve the fishing in the few streams that are left to us in this locality by artificial propagation. I speak of the streams as the few that are left, for they are few indeed now, thanks to the many sawmills and tanneries that dump their fish-exterminating refuse into them. Only a few weeks ago a bill to oblige owners of mills and tanneries to adopt some less destructive method of getting rid of their refuse was defeated in our State Legislature.

There are few things more exasperating or saddening to a fisherman than to arrive at the stream he has fished for years and knows so well and find sluggish, discolored water, filled with sawdust and sour, soggy banks of the same material. The loss is never forgotten.

In response to applications made to Mr. Streuber, of the State Commission, we recently received from the Corry hatcheries several cans of brook trout fry in excellent condition. These will be cared for till attaining a length of about 4 in. before being placed in the streams. I intend to try Mr. Wm. P. Seal's arrangement of trough as given in your issue of Feb. 19.

In removing the fry from one of the cans I noticed two little fellows that seemed to be stuck together. On closer examination I was astonished to find them possessing a well developed head apiece, but only one tail in common. They grew into one body at a point about midway in their length. They could not navigate as gracefully as some of their companions, but would lie on the bottom and take things easy. They are over three weeks old now, but I have no hope that they can hold their own for a very much longer time, as they do not appear very robust.

TITUSVILLE, Pa.

Angling Tackle. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price \$2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price \$1.50. American Angler's Book. By Thad. Norris. Price \$5.50.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will make an application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—Ado.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

April 14 to 17.—Fourth Dog Show of the Cleveland Kennel Club, at Cleveland, O. C. M. Munhall, Secretary.

April 15 to 18.—Dog Show of the Southern California Kennel Club, at Los Angeles.

April 28 to May 2.—Dog Show of the California Kennel Club, at San Francisco, Cal. H. L. Miller, Sec'y.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.

FIELD TRIALS.

Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

CLEVELAND DOG SHOW.

THE last show of the circuit has come and gone, the Cleveland Kennel Club having the honor of bringing up the rear last week. Shows in the Forest City have heretofore been anything but a success, for in the two shows previously held something like \$1,500 having been dropped. It was therefore with a little trepidation that the club issued their invitations this spring, and naturally they did not feel very much inclined to go to any extravagance in the way of prize money and et ceteras. I have already given in last week's issue some particulars of the building and the opening of the show. Contrary to expectations, the crowds poured in and the building every afternoon and evening was comfortably filled, and on Thursday night it was especially crowded and with a most respectable gathering, the admission fee being 50 cents. The club members were soon in good humor, as they are sure to be well on the right side, and next year promise us a right good show. Among those present whom we noticed were: Miss A. H. Whitney, Miss Lancaster, J. H. Winslow, N. H. Child, Geo. Bell, C. M. Nelles, T. K. Bull, Chas. G. Cook, Jno. R. Daniels, German Hopkins, H. Twyford, J. Shelley Hudson, Major Taylor, C. S. Wixom, Al Eberhart, Howard, Edgar Hudekoper, J. F. Pritchard, J. E. Dager and Mrs. Dager, B. F. Seitzer, Joe Lewis, L. F. Whitman, Jno. Moorhead, Mrs. Nicholson, Chas. R. Diefenderfer, B. F. Cody, E. Probert, Jno. Poag, E. H. Morris, George Thomas, Ben Lewis, Fred Kirby, etc. Mr. L. F. Whitman, of Chicago, superintended the show, and though things were rather muddled at first, owing to the delay of benching, everything soon worked in good order, and a very enjoyable show was the result. The only drawback was the entrance spoken of last week. This will be improved another year, but more of this in "Dog Chat." Mr. C. M. Munhall bore the brunt of the show on his shoulders, and as secretary he had to arrange everything with little or no help from the others of the club, in fact, Mr. Robison, the president, and a model one he is, and Mr. Munhall were the only club officials with whom any one had any dealings. One pleasant feature of the show was the entire absence of "kickers," decisions being received with that spirit of complacency which tends to make the judge have a good opinion of himself.

Judging did not commence till about 2 P. M. Tuesday, and the awards up to the time of our going to press were published in last week's issue. Our task will be an easy one this week, as many of the winners have already been described. As only two small rings were provided, judging was not completed till Thursday morning, black and tans and the spaniels having been left over till a good light could be had. Spratts Co. fed and benched in their usual good style, and by the way, we may mention the fact that an entirely clean set of benches had been sent on from New York for this show, so that the fears of some of the exhibitors that it followed too close on the Chicago show for the health of the dogs, were groundless. The names of the judges will, as usual, be found at the head of the breed criticised.

MASTIFFS.—(B. W. LACY).

The classes were poorly represented on the whole. The open classes are the criterion to go by as to the quality displayed in any breed. Ilford Chancellor and Lady Coleus were present in their respective challenge classes. The bitch needs some little attention now, and the end of the circuit must be welcomed by these dogs, though they have certainly stood it well. In dogs I found nothing but Ormonde, and so withheld everything but first, which fell to the dark dog. Something better came forward in bitches, Caution's Own Daughter repeating her Chicago victory over Pharoah Queen, Miss Caution getting vhc., losing in size to the other. Some fair puppies were shown, first going to Beaufort Queen, who boasts a nice body, but head and expression are faulty. She will hardly make a good one unless she improves in skull. Second went to Dictator, who, had he been straight in front and not so weak in pasterns, would have been placed first; he has an excellent head and immense bone for his age, about 3 mos., judging by the appearance. The decision was a popular one, as this son of Beaufort, if he raises well, has a future before him. The others were only fair. Lady Constance, hc., lacks substance, and Talisman is faulty in skull and weak in pasterns. Hesper is black-faced.

ST. BERNARDS.—(MISS A. H. WHITNEY).

With the cracks out of the way, some of the other kennels have been able to improve their prize records at the Western shows, so it is an ill wind that blows no one any good. There were no challenge roughs entered. In open dogs a fairish class appeared. White Chief, who has been described before, winning easily from Neumann, whose best points are bone and skull, muzzle is light, good coat, is a bit straight behind, but is a dog that shows a good deal of quality. Cherokee Bruce, reserve, beats Chequassett II, in head and markings, for the latter has a snipy muzzle, lacks blaze, is light in body and a bit straight in stifles and out of coat; bone and skull good. Mox, hc., is light-colored and no shadings, light in eye and poor expression. Odin is too short-faced, sour in expression, and faulty in pasterns. Major, also hc., is long in ear, light in body and rather slab-sided. Republican Belle repeated her Chicago win with less competition, to belong her nearest opponent; both were at Chicago. Prudence, reserve, owes this to her want of flesh. Victory, c., is a pretty dog but not a St. Bernard, like an overgrown setter with St. Bernard markings. In puppies Mount Zion Guy, who has a promising future before him, and especially so were he belton colored, again beat his kennel mate Noble who was reported on at Boston. Lion, reserve, I did not see. Tim H., vhc., is long and narrow-headed, no blaze, curly-coated, and is weak in pasterns. Albert and Charley were nicely marked small ones. Victor Joseph, as before, beat Lord Hector in smooth challenge dogs, and Empress of Contocock had little difficulty in disposing of that nice little piece of quality Thisbe in size, head and bone. Open dogs were rather good, not taking into consideration Watch at all; he stands alone in such a class. Lord Clifton, from Baltimore, who was described in my report of that show, took the red ribbon, and this he must esteem honor sufficient to such a dog as the first prize winner. Count Lazzio, reserve, has a long, plain, bloodhoundy head, is a bit straight behind, but has a good body and plenty of

size. Cato, Jr., has a poor-expressed, long head and excellent front, but it is faulty behind. Keystone Monarch is also too long in head, turns his feet out, has good bone and nice coloring, but is wretchedly straight and weak in hind-legs. Barry de Berne, c., has a small, snipy-muzzled head, good front, but is peculiarly ticked all over in body like a pointer. Prince Wentworth has a nice shaped head, but is spoiled by a light eye. Two old friends in Alpine Queen and Reka took the prizes in the bitch class, the latter, while having a better head, stands very much bowed in front, and is small, the other being far ahead in bone and body.

BLOODHOUNDS, GREAT DANES, ETC.—(H. W. LACY).

A fair specimen of a bloodhound was shown in Bruno, rather coarse, head of good length and formation, but lacking wrinkle; good bone and leather. The Newfoundland shown was one of those curly apologies, and the prize was rightly withheld by Miss Whitney. Melac was absent and so was Imperator, though entered in the great Dane division. In the open class two poor ones and one very moderate specimen in Caesar, Jr., showed up, and after the grand display at Chicago it would have been an outrage to award a first; so the judge gave Caesar second and withheld other mentions. Caesar has a fair head, but is all wrong in body and tail; the others were rank bad 'uns. The Hornell-Harmony Kennels showed their two wolfhounds, and Vaidimir beat his kennel mate Princess Irma, better now in ribs, head and body development, both want more flesh, and need a little "kidding to," as "Cheerful Horn" puts it.

FOXHOUNDS.—(MAJOR TAYLOR).

An excellent showing of the improved American type, the Cook Kennels being strongly represented. Brave and A. Bernhardt took care of the challenge classes. In dogs Roderick beat Drum II, reserve going to Trolia, a bit out in front and coarse in shoulder, shown in excellent condition. Jolly Joe, faulty in head, throaty and rather light in muzzle, and stern carried wrong, vhc. Brave Boy, c., is only fair. In bitches two from the Cook Kennels, Fly and Fanny, were placed as named, with Primrose hc., too fine in muzzle, a little out in front and small sized. A rather good shaggy hound was shown, this is a true shag and partakes much of the type of an otterhound, excepting the ears.

GREYHOUNDS.—(H. W. LACY).

Mr. Thayer's entries in deerhounds were all absent. In greyhounds Gem of the Season and Harmony were on hand to instil a little quality into the display, which, with the exception of the winners, was very poor. Jolly Ranger out-classed any thing in the open dog class, he was at Chicago, and Cycloze, given c., second withheld, is altogether too much of a good thing, nearly as big as Chieftain, the deerhound, but fairly well formed. Lady Clare proved herself the winner over Lady Olivia in the bitch class, losing in front, bone and quarters.

POINTERS.—(J. H. WINSLOW).

This was Mr. Winslow's first appearance in the ring this year, though I know he has been invited. His judging proved more careful and satisfactory than any yet done in this breed throughout the circuit, and this proved to be the opinion of most of those who exhibited. In heavy dogs (challenge) the heavily-fronted Pontiac beat the coarse-headed Lord Graphic in head, body, bone and hind parts, Revel III, also accounting for Belle Randolph with something in hand. In the light-weight challenge Tribunal again shut out the hopes of Launcelot, and the decision seemed popular. Sally Brass II, was alone in her division; all these dogs have been so repeatedly gone over that exhibitors, reporters and the public need a rest. Count Graphic was picked out as the winner in heavy-weight dogs, boasting a niceish head, though light in eye, is a bit faulty behind, but has good legs and feet. Shotmaster I spoke of last week; he came second, with Luck of Idstone reserve, as at Chicago. Thinket's Coin, faulty in skull and shoulder, vhc., as was Col. Purcell's Jupiter. I am not sure about the latter name, as the entries from this kennel were telegraphed and no names given. Barry H. is throaty, faulty in muzzle, open in feet, but has a good body. Rex might be better in muzzle and feet, but legs are good; these were all hc. In bitches Nell of Idstone, third at Chicago, was the winner, second going to Wyannet, who loses in head, eye and bone to the other. Pride of Idstone, reserve, got a little more than she deserved; her faults were detailed last week. Cicely, in the vhc. division, is well known, and Purcell's entry, poor in head, was also in this lot, as was also Jennie, bad in front, good head, but shown in poor shape. Minnie-ha-ha, hc., has a long, plain head, good ribs and loin, and nice front; ought to have been higher up. Nellie, also hc., had a litter of pups, and I failed to see her. In dogs under 55 lbs., Ossining beat Inspiration again; their merits and demerits have been fully described. Yellow Dock, reserve, is light in loin, faulty in skull, but boasts some nice legs and feet. In the vhc. division June is a poor one, light and shelly, and wrong in muzzle. Rock II. is now well known. Purcell's entry is snipy in muzzle, body not well ribbed, faulty in feet and pasterns. In the hc. lot came Springbok, whom I noticed last week, and who might have had another letter. Graphic Duke is wide in skull, and Wonderful Lad lacks a well-ribbed body, is fairly good in front, is a bit broad in skull. In bitches Miss Meally, well known, won nicely over Thinket S. in head, cleanness of throat, legs and feet. Lady Graphic is quite her equal, reserve. Phantom, vhc., was at Chicago, and so was Fan Fan. Lord Graphic's Gem, hc., loses in ribs, has a fair head, legs and feet, and Karle is heavy in shoulders and bad in feet, head fair, though ears are faulty. In dog puppies Dictator was again a winner, with Spot second, feet turn out, but he has a nice head, reserve going to Rex, a well-built youngster showing good bone. Cleo won in bitches, is a bit dished-faced, nice skull, and good bone, legs and feet. Dixie, second, loses in head and is straight in stifles. The classes throughout were well filled, and in the small ring it was no easy matter to place the dogs.

ENGLISH SETTERS.—(MAJOR TAYLOR).

In these classes the entries were good, but the quality has been better. In the challenge dog class of course Cincinnati won, Dad Wilson getting the reserve. It is no use going over them again. Bohemian Girl was alone in the bitch division, she has been described fully in these columns. In open dogs Toledo Blade, rather dished-faced and light-eyed, but well made in other respects, excepting that his tail is carried too gaily, won, with Ben Hur of Riverview occupying the same place as at Chicago, loses in ribs and chest to the other, but head is better. Edgemark took reserve. Zippo II. is coarse in head, and Don S. is faulty in head but good in body and legs; Dashing Count, also vhc., has a plain head, is a nicely-bodied dog, but there is lack of quality about him; Benzine, vhc., is not straight in coat, not quite straight front, but a nicely-made dog nevertheless; Dad Wilson, Jr., is wrong in stop and wide in front, nice body, legs and feet; Rodstone, hc., coat not straight enough, nice head, but, like his kennel mate, not true in front. The bitch class was a large one, Lady Zoe proving the winner, her head is her worst part, being a well-built bitch; Lilly Hill, second, is Roman-nosed, and at times stands quite bowed in front and out at elbows. Tube Rose, reserve, much better in this respect, but long and straight-faced and faulty in quarters. Stell, vhc., has a nice head, and should have been higher up; and Albert's Nellie, that has been winning a good deal lately, could do no better than vhc. Daisy B. has a poor head, is light in bone and straight behind; Susan B. is coarse throughout, but stands on good legs and feet, and Sunshine loses in muzzle what she gains in skull; these were all given vhc. In the hc. lot Patti Gladstone II. is too short in muzzle, not straight in front, and is small-sized; Lady Pitt I did

not see. Bessie Marshall, c., is faulty in skull and muzzle, too long. Blade's Boy was the winner in puppies, he needs a good deal of filling out yet and is too fine in muzzle; Count B., second, has not much to recommend him, and the others will never be heard of again. Sam's Girl, winner in bitches, has a good head; and Dashing Kent had been removed when I got to her stall, the others were poor.

IRISH SETTERS—(MAJOR TAYLOR).

My task in these classes will be an easy one, for, the list of good Irish setters, unlike pointers and English setters, is limited, and shows follow so quickly that most of the winners are simply a repetition of other shows. In challenge dogs, in the absence of Kildare, Mack N. had a walk over. In bitches, Winnie II., who loses to Jeannette in head and front, but gains in color, took the blue ribbon. The well-known Inchiquin won again in dogs, Seminole coming second, losing in forelegs and head to the winner, Iowa Prince taking reserve. Prince's faults are in muzzle and ribs, good otherwise, but a bit coarse. Minstrel, vhc., is now well known, and Rancho was at Chicago, and so was Prince Ninon, c.; the others need no mention. Though in numbers few, the quality in bitches was good, Edna H. furnishing the winner, beating Claremont Meg, although she has not, as our printer got it last week, a new type of head. Eudora, reserve, is too well known to need description. Dolly, vhc., loses in muzzle and is not quite right behind. Here was another poor bitch sucking puppies; what folly and cruelty at the same time, to subject a bitch to this ordeal. Nino, vhc., is well known and was rightly placed. Nora Blythe, a peg or two higher up at Chicago, had here to content herself with the three letters. This comprised the class. A rather coarse-skulled pup with a snipy muzzle but good in color and body won in the dog class; second was withheld. A very nice, promising bitch pup was shown in the bitch class, a good head, excellent color and shape.

GORDON SETTERS—(MAJOR TAYLOR).

Ivanhoe and Leo B. occupied their usual places in the challenge class. In the open, Rexmont had nothing but Reginald H. to beat, who this time did not impress this judge so favorably as Mr. Davidson at Chicago, for second was withheld and he was only given a commended card. The open bitch class was better. Janet, the winner, is but a pup, has a nice head though rather on the Irish order, good rich tan, nice body, but ears don't hang right, she also won in the puppy class for her sex. Flomont has been described before, she took second, and Countess of Richmond, reserve, I have also spoken of before. Gyp loses in front and ribs. Jess was leniently treated, having a short, plain head. In dog puppies Pilot of Lorain was alone. A fair Chesapeake Bay dog was shown in Duke. The entries were, as usual, poor in this breed.

SPANIELS—(C. M. NEELES).

The same judge and pretty nearly the same dogs in the classes makes criticism easy this week. In challenge field dogs Baron and Lady were placed as named. Samson was alone in the open dog class, and so was Saybrook Lass in her division. In any other color Saybrook Dolly again proved herself superior to Fancy. In cockers, Rabbi again took the blue, Bene Silk not being for competition. Oban won in the open dogs, beating Mardo, who has but one eye to get along with, the other having some sort of a film over it. Reserve went to Black Dufferin, well known. Obadian, vhc., could easily have changed with Mardo. Lad O., he., is too long and fine in muzzle, and has a dachshund front. In open bitches, Amazement and Lady Obo shared the honors, though how Oban can beat either for the special is hard to understand, losing to them in mouth, front, body and quarters. Rosedale Bessy in this class received the reserve card. Cleo II. from the same kennel, getting vhc., she is a bit undershot and not straight in front; Kate W. is just a light-bulb field spaniel, with little cocker type. Any other color saw Silverton an easy winner over Bambo, who, though he has made up a bit since the fall, is still far away from good form. Silverton has a good head, nice body, legs and feet, but is light in eye. Clumbers were the three which have been winning all along the circuit. The Irishmen were sustained by the immortal Patsy O'Connor and Patsy B., the former looking the shadow of his former self, in the challenge class, and the latter in the open dog class—only two shown.

COLLIES—(H. W. LACY).

It is not often one sees such a good collection of collies outside of the principal shows. In the challenge dog class poor old Scutilla, I regret to say, received his last blue ribbon; and now that the old dog is dead, one feels some satisfaction that in his last appearance in the ring this grand collie was able to carry off the blue ribbon, Roslyn Dandy, in good shape, getting reserve. Flurry III. was alone in her class. In open dogs competition was keen, and Roslyn Conway only just won from Golden Clipse, beating a little in skull and quarters. Prince Para, vhc., fair head, light eye, soft and rather ragged in coat and not quite straight in front, was not up to the form of the winners. In bitches Jakyr Deane had all she could do in beating Golden Flirt, a bit light in body, wide in skull, but coat first-rate, though a bit soft. Nancy, vhc., is rather coarse in head, soft in coat, but nice front and shows quality. Hera, the dam of the two second prize winners, is rather short-faced, soft and open in coat, but has a nicely formed body and good legs. The puppy class was a hot one, Golden Clipse's lengthy head pulling him to the front over Golden Flirt, reserve going to Roslyn Tory, who loses in coat and head to them, vhc., Golden Prince is a little domy in skull, faulty in quarters, but has two good coats, though they are soft, as are all the dogs in this kennel. Golden Charlie is not so good in front, but of the same type as the winners. These are all from a litter by Prince Charlie out of Hera and certainly a very good lot.

POODLES—(H. W. LACY).

Competition lay between Berri and Nell, both well known and placed in that order at Boston. There were no bulldogs shown.

BULL-TERRIERS—(H. W. LACY).

Jubilee was absent, as were all Mr. Harris's entries. Attraction therefore did the honors in the challenge division. In open dogs a well-made young dog, Keno, with poorly cut ears, was placed over Topsparkle, who loses in muzzle and front to him. Keno had one of the best natural and well-carried tails I have seen in many a day. King of Hearts, vhc., well known, and Master Dick, short necked and faced and rather cloddy, hc. Rogue, c., is coarse. The bitch class was a hot one, with not a good one in it, Queen Bendigo winning from Lady Melville in body and front and showing more quality. Loumont Kit stood wretchedly out in front, reserve, and Venus, vhc., loses in head to the others. Lill, hc., faulty head and front. A rather good pup in Luce won in the puppy class, Stanley Rose being absent.

BEAGLES—(H. W. LACY).

A fairish Basset was shown in Fanshon, and three dachshunds turned up. Gyp, the winner, is better in head, crook and chest than Erdman. Waldman, hc., got his letters for body, not crooked enough, but fine head. Three good ones turned up in challenge beagle dogs, the ribbon eventually falling to Hyla Krueger, better in head and shoulders than Little Duke, who was run close by Rattler III., whom he beats in front and skull. In bitches Una beats Bonnie in neck, loin and hindparts, though Bonnie shows a little more quality and type. In open dogs, Tricotron, though he carries his brush too gaily, had no difficulty in beating Fleetwood in body, front and head, Bugler, vhc., losing in bone and size to the others. In bitches Twintwo had a hard

go with Elf for the blue ribbon; both are a bit long in body, but Twir beats in front, coat and loin. Merry Maid is snipy-muzzled and not true in front. Pearl of Hollywood has a good front and coat, but loses in head, and is a bit coarse. The two puppies were runts and the prizes were withheld.

FOX-TERRIERS—(H. W. LACY).

The challenge class at first sight seemed a hot one, but with Baby Mixer and Dusky Trap among the absent ones the fight lay between Lucifer (as in present, vide catalogue) and Blemton Volunteer, which made the proper placing of the ribbons an easy matter, in the order named. In bitches the struggle was, in the absence of Richmond Dazzle, Consequence and Brilliant, short and sharp between Rachel and Dona, the former's excellent front and head placing her well to the fore. People may try as they may to pick the old bitch to pieces, gone off and so on, but there she stands to-day as truly fronted as any terrier now on the bench. In open dogs Blemton Victor II., though he had been bitten through the knee by his kennel mate Valour II., still showed himself so superior that, though a bit lame, he took the ribbon, with Valour II. next, not so good in head, but better at present in body, Victor having naturally lost flesh a bit owing to his mishap. Le Logos, better in head, took reserve over Baby Trigger, who is faulty in ears and skull. Endcliffe Spice, also vhc., is coarse in head, good body. Beverwyck Rebel, hc., is coarse in skull, too full in brow. In bitches, owing to the absence of several well known animals entered, competition narrowed down to Dominica and Hillside Gaudy, and it was not long before the former walked out with the blue ribbon, a better all round bitch, the other being light and shelly looking. Out of six entries in the puppy class only two turned up, Rogue and Rival, the former winning; has a much better shaped head, but is hardly so good in front as the other. No wire-hairs were shown.

IRISH TERRIERS—(H. W. LACY).

A challenge class was made for Mars and Dunmurry and the bitch was placed over the dog. Is better in front. In the open a leggy, shelly specimen in Brick Bat was shown but hardly deserved the prize. Sir Stafford was shown in the Skye class, and having no competition, won, the other entry being one of those fluffy nondescripts which may be anything from a bad poodle to a Yorkshire. Mr. Russell's Jack was the only entry in Bedlington, and, of course, took the blue ribbon.

BLACK AND TAN TERRIERS—(H. W. LACY).

This was about the strongest class yet seen. Beaconsfield, Sultan, Prince Regent and Prince. After careful handling, Beaconsfield I found the better dog, more true to type, better in head; the other is long and narrow enough to suit my Philadelphia friends no doubt, but there is not enough terrier in it. There is such a thing as getting a head too greyhoundy and losing all character and expression. Beaconsfield has brain room and the other has not, and though his head looks a trifle short to the others, it is better formed. Sultan beats in cleanness of neck, but in everything else excepting, perhaps, in color, the older dog is going off a bit in this respect, still his markings and pencilings are truer. He is also much better in front, deeper in chest, shorter in body and immensely better in tail. Prince Regent has a better muzzle and were he better filled out in body would also beat Sultan, but the whippet style of black and tan is not the correct one, and now that we are "learning" we may as well start right as not. Prince was out of this company. In bitches Matchless, though small and a little light built, but well marked, nice head, fair front, and showing quality all through, won easily over Buttercup, English Lady being absent.

YORKSHIRE TERRIERS—(H. W. LACY).

Toon's Royal George I placed over Toon's Royal, it is near, but George has it in coloring. Bob, reserve, though short of coat and coarse in head, has the best tan I ever saw, it quite made George Thomas's eyes sparkle. In bitches Venus was alone. A fairish toy terrier was shown and given first.

PUGS—(MISS A. H. WHITNEY).

Bob Ivy and Treasurer met in the challenge dog class, the former winning in head. Vesta was alone in her class. Open dogs saw some good ones, the struggle lying between Eberhart's Cashier and Penrice. The latter beats the other in size and is shorter and more cobby in body, Cashier gaining in head, general condition and front. In the bitch class Cabbage won this time over Mint, who was second at Chicago under the same judge, and Cabbage reserve. Midget loses in front and head to the others. Low, vhc., is black-faced and pinched in muzzle; Sarah Bernhardt, in the same lot, is well known, and Daisy, hc., is faulty in ear and muzzle. Mable E. and Banjo G., winners at Chicago, were placed as written in puppies, with King Leah, quite a fair one, by Kash, given vhc. Midget, that charmed the hearts of the ladies by her cuteness, was given hc., too small yet, but though three months old, is no bigger than a month old puppy, and paraded the ring like a Bradford Ruby with chain and collar on; it is a credit to its sire, Penrice.

TOY SPANIELS—(H. W. LACY).

Calumet Ben d'Or won over Ben d'Or, Jr., in skull, shortness of face and loin, in King Charles dogs. In bitches, Calumet Alice, the winner at Chicago, was here alone. In Blenheims, Calumet Cromwell, faulty in skull, muzzle and eye, was alone in the dog class, and Exeter Beauty, though smothering Calumet Lula in head and coat, had to give place to the latter, owing to her inability to walk, some weakness in the loin.

ITALIAN GREYHOUNDS—(H. W. LACY).

Lavander beats Nellie in size, front and head, "Nellie being too much cut out before eye.

MISCELLANEOUS—(H. W. LACY).

Kilston, the Scotch terrier, and Nellie Gray, the whippet, were given the money, and letters were distributed generously to two German Wachtels that look like very bad cockers, a Leonberg, etc. This brings the spring season of 1891 to a close, and no one is more pleased than H. W. L.

The following is the list of awards made after we went to press last week:

MASTIFFS.—CHALLENGE—Dogs: 1st, Flour City Kennels' Iford Chancellor. Bitches: 1st, Flour City Kennels' Lady Colerus. OPEN—Dogs: 1st, C. E. Bunn's Ormonde. Others withheld. Bitches: 1st, Flour City Kennels' Caution's Own Daughter; 2d, C. O. Cook's Pharoah Queen. Very high com., Flour City Kennels' Miss Caution. Puppies: 1st and 2d, C. O. Cook's Beauport Queen and Diadem. High com., H. A. Luther's Lady Constance, J. M. Horner's Talisman.

GREAT DANES.—Dogs: 1st, J. C. Krehl's Caesar, Jr. Others withheld. Bitches: No entries.

RUSSIAN WOLFHOUNDS.—1st, Hornell-Harmony Kennels' Valdemir.

FOXHOUNDS.—CHALLENGE—Dogs: 1st, The Cook Kennels' champion Brave. Bitches: 1st, The Cook Kennels' A. Bernhardt. OPEN—Dogs: 1st and 2d, The Cook Kennels' Foderick and Drum II. Reserve, C. O. Cook's Troller. Very high com., D. E. Peters's Jolly Joe. Com., Oriole Kennels' Brave Boy. Bitches: 1st and 2d, The Cook Kennels' Fly and Fanny. High com., Oriole Kennels' Primrose. STAFFORDS—1st, T. N. Bright's Sailor.

GREYHOUNDS.—CHALLENGE—Dogs: 1st, A. W. Purbeck's Gem of the Season. Bitches: 1st, Hornell-Harmony Kennels' Harmony. OPEN—Dogs: 1st, C. E. Ireson's Jolly Ranger. Com., J. M. Clisette's Oyclone. Bitches: 2d, C. W. Sarvis's Lady Olivia.

COLLIES.—CHALLENGE—Dogs: 1st, Chestnut Hill Kennels' Scutilla. Reserve, Seminole Kennels' Roslyn Dandy. Bitches: 1st, Chestnut Hill Kennels' Flurry III. OPEN—Dogs: 1st, Chestnut Hill Kennels' Roslyn Conway; 2d, E. Huidekoper's Golden Clipse. Very high com., C. M. Munhall Prince Para. Com., Wm. Taylor's Wood Green Rover and P. E. Sears's Glence II. Bitches: 1st,

Chestnut Hill Kennels' Jakyr Dean; 2d, E. Huidekoper's Golden Flirt. Very high com., H. P. Harrison's Nancy. High com., E. Huidekoper's Hera. Puppies: 1st, 2d, very high com. and high com., E. Huidekoper's Golden Clipse, Golden Flirt, Golden Prince and Golden Charlie. Reserve, Chestnut Hill Kennels' Roslyn Tory.

BULL-TERRIERS.—CHALLENGE—Bitches: 1st, Wm. Mariner's Attraction. OPEN—Dogs: 1st and 2d, Crockery City Bull-Terrier Kennels' Keno and Rogue; 2d, F. E. Dole's Topsparkle. Very high com., North Field Yorkshire Kennels' King of Hearts. High com., J. Morehead's Master Dick. Bitches: 1st, John Morehead's Queen Bendigo; 2d and reserve, F. W. Moulton's Lady Melville and Loumont Kit. Very high com. and high com., Crockery City Bull-Terrier Kennels' Venus and Lill. Puppies: 1st, Crockery City Bull-Terrier Kennels' Luce.

BASSET HOUNDS.—1st, Istone Kennels' Fanshon.

DACHSHUNDE.—Dogs: 1st, T. N. Bright's Gyp; 2d, H. Kaase's Erdman. High com., H. Kaase's Waldman.

BEAGLES.—CHALLENGE—Dogs: 1st, Hornell-Harmony Kennels' Royal Krueger. Reserve, H. Bennett's Little Duke. Bitches: 1st, Hornell-Harmony Kennels' Una. Reserve, Hollywood Kennels' Danie. OPEN—Dogs: 1st, Hornell-Harmony Kennels' Twintwo; 2d, F. E. Ogier's Fleetwood. Very high com., Hollywood Kennels' Bugler. Bitches: 1st, Glenrese Beagle Kennels' Twintwo; 2d, Hornell-Harmony Kennels' Elf. Reserve, F. E. Ogier's Merry Maid. Very high com., Hollywood Kennels' Pearl of Hollywood. High com., C. W. Fromm's Piney. Com., W. S. Gates's Mage. Puppies: Prizes withheld.

FOX-TERRIERS.—CHALLENGE—Dogs: 1st, Blemton Kennels' Lucifer. Reserve, Oriole Kennels' Blemton Volunteer. Bitches: 1st, Blemton Kennels' Rachel. Reserve, Oriole Kennels' Dona. OPEN—Dogs: 1st and 2d, Blemton Kennels' Blemton Victor II. and Blemton Valour II. Reserve, Oriole Kennels' LeLogos. Very high com., Ohas. D. Bernhardt's Baby Trigger and North Fields Yorkshire Kennels' Endcliffe Spice. High com., C. Rathbone's Beverwyck Rebel. Bitches: 1st and 2d, Oriole Kennels' Dominica and Hillside Gaudy. Puppies: 1st and 2d, Oriole Kennels' Rogie and Rival.

IRISH TERRIERS.—CHALLENGE—1st and 2d, The Park Kennels' Dunmurry and Mars. OPEN—1st, Geo. Bell's Brick Bat.

SKYE TERRIERS.—1st, C. A. Shinn's Sir Stafford; 2d, withheld.

BEDLINGTON TERRIERS.—1st, Wm. H. Russell's Jack.

BLACK AND TAN TERRIERS.—OVER 7 LBS.—Dogs: 1st and reserve, North Fields Yorkshire Kennels' Beaconsfield and Prince Regent; 2d, H. Pooter's Broomfield Sultan. Very high com., Blake & Herbertson's Prince. Bitches: 1st, North Fields Yorkshire Kennels' Matchless; 2d, Blake & Herbertson's Buttercup.

YORKSHIRE TERRIERS.—Dogs: 1st and 2d, North Fields Yorkshire Kennels' Toon's Royal George and Toon's Royal. Reserve, E. Etzenperger's Bob. Bitches: 1st, North Fields Yorkshire Kennels' Venus.

TOY TERRIERS.—1st, E. Etzenperger's Midget.

PUGS.—CHALLENGE—Dogs: 1st, H. M. Cryer's champion Bob Ivy. Reserve, Seminole Kennels' Treasurer. Bitches: 1st, H. M. Cryer's champion Vesta. OPEN—Dogs: 1st, Eberhart Pug Kennels' Eberhart's Cashier; 2d, Howard Bros.' Penrice. Bitches: 1st, M. H. Cryer's Cribbage; 2d, G. H. Hardy's Mint. Reserve, E. F. Farnell's Midget. Very high com., Eberhart Pug Kennels' Sara Bernhardt, M. H. Cryer's Low. High com., G. D. Gordon's Daisy. Puppies: 1st and 2d, Eberhart Pug Kennels' Mable E. and Banjo G. Very high com., Seminole Kennels' King Leah. High com., G. H. Hardy's Midget. Com., G. D. Gordon's Dick.

KING CHARLES SPANIELS.—Dogs: 1st, Calumet Kennels' Calumet Bend Or; 2d, F. G. Boeger's Bend Or, Jr. Bitches: 1st, Calumet Kennels' Calumet Alice.

BLLENHEIM SPANIELS.—Dogs: 1st, Calumet Kennels' Calumet Cromwell. Bitches: 1st, Calumet Kennels' Calumet Lu La; 2d, Mrs. B. F. Lewis's Exeter Beauty.

ITALIAN GREYHOUNDS.—1st, J. S. Rockwell's Lavander; 2d, D. S. Davis's Nellie.

MISCELLANEOUS.—1st, North Fields Yorkshire Kennels' Kilston; 2d, Campbell & Blake's Nellie Gray. Very high com., Miss Marie Adair's Oyez, G. Klepper's Spot. High com., M. Reinhard's Rolland, Campbell & Blake's Benbow.

SPECIALS.

MASTIFFS.—Best dog or bitch, Iford Chancellor; best bitch in open class, Caution's Own Daughter; best puppy, Beauport's Queen.

ST. BERNARDS.—Best dog or bitch, Watch; best American-bred dog or bitch, Io; St. Bernard Club medal best American-bred rough bitch, Io; best in open class, Republican Belle; best under 18 months, Mount Zion Guy; best smooth owned by a lady of Cleveland, Count Tazior; St. Bernard Club medal best American-bred smooth dog, Lord Hector; best smooth bitch, Empress of Connecticut.

GREAT DANES.—Best in show, Cesar Jr.; best under 18 months, Leo. Best foxhound dog or bitch, Brave.

GREYHOUNDS.—National Greyhound Club medal for best in show, Gem of the Season (2).

POINTERS.—Pointer Club of America for the best pointer owned by a member of the Pointer Club, Istone's Spot Master; a similar prize for the best pointer bitch, Nell of Istone; Danie, prize, Nell of Istone; the best get of Lord Graphic, Count Graphic; best kennel of American bred pointers, Istone Kennels; the special for the best field trial record dog or bitch, Tribulation; best kennel of pointers entered from Cleveland, John R. Daniels; the pointer with the best field trial record owned in Cleveland, Lord Graphic.

ENGLISH SETTERS.—Club medal for best bitch and two of her produce over 12 months old, Nellie T., with Bob and Dan Beaumont; breeder of the best three dogs or bitches over 12 months old, J. Shelley Hudson; best dog or bitch with public field trial record, Cincinnati; best in open classes, Toledo Blade; best dog puppy owned in Cleveland, Count King; best with best field trial record, Toledo Blade; best bitch, Bohemian Girl; best brace sired by Beaumont, Dan Beaumont and Dashing Count; best brace, Cincinnati and Toledo Blade; best kennel, J. Shelley Hudson.

IRISH SETTERS.—Best dog or bitch, Mack M.; best dog in open class, Inchiquin; best bitch ditto, Edna H.; best kennel, Claremont Kennels.

GORDON SETTERS.—Best dog, Ivanhoe; best bitch, Duchess of Waverley; best brace owned in Cleveland, Gyp and Jess; best kennel, Dr. Dixon.

SPANIELS.—American Spaniel Club specials, best field, Baron; best cocker, Oban; best cocker bitch in open class (Lake Shore Kennel special) Amazement; best brace (a hat) Amazement and Lady Obo; best spaniel dog or bitch, Baron; best Irish water spaniel, Patsy B.

COLLIES.—Collie Club medal, best not over two years old in open class, Roslyn Conway; bronze medal for second best ditto, Roslyn Tory; bronze medal best dog in puppy class, Roslyn Tory; best collie in show, Flurry III.; best bitch in open class, Jakyr Deane; best entered from Cleveland, C. M. Munhall's Prince Para; best kennel, Chestnut Hill.

BULL-TERRIERS.—Best dog or bitch, Attraction; best bitch in open class, Queen Bendigo.

BEAGLES.—National Beagle Club specials (3): Best kennel of four, Hornell-Harmony Kennels (2); best dog Royal Krueger; best bitch (2), Twintwo; smallest puppy over 4 mos. old, Mrs. White's Silver.

FOX-TERRIERS.—Best dog or bitch in open class, Blemton Victor II.; best in puppy class, Rogue; best dog, Blemton Victor II.; best in show, Rachel, best brace, Rachel and Blemton Victor II.; best kennel, Blemton Kennels.

PUGS.—Best dog in open class, Eberhart's Cashier; best bitch ditto, Dr. Cryer's Cribbage; best in show, Bob Ivy.

Best black and tan terrier, Beaconsfield, Best Yorkshire terrier, Toon's Royal George. Largest dog in miscellaneous class, Roland. Best German Wachtel, divided; handler with largest team, Ben Lewis's kennel making largest number of entries. North Fields Yorkshire Kennels. Best stud dog, any breed, with six of his get, English setter Beaumont.

IRISH SETTER FIELD TRIALS.—*Editor Forest and Stream:* I see by a Western paper that the committee appointed to make arrangements for the field trials of the Irish Setter Club have recommended to the executive committee the date of Nov. 23 for the trials. If such be the case they have made a bad start, and one I am very much surprised to see advocated. The trials should be held at such time that they will not interfere with any of the other large field trials, for all the best handlers are already engaged for the larger trials and could not therefore take any Irish setters. The Irish trials should be held so as to bring out the largest and best field of Irish setters. The date recommended by the committee will not do this.—MONT CLARE.

DOG CHAT.

MEETING Mr. F. E. Lamb, of Baltimore, on our way home from Cleveland, he told us he had sold his two St. Bernards, Lady Bedivere and Keepsake, to John H. Francis, Jr., Peoria, Ill. Keepsake is now in Melrose to be mated to Plinlimmon, Jr. We understand Mr. Francis is negotiating with Mr. S. W. Smith for his crack dog Aristocrat, by champion Plinlimmon out of Adela. Mr. Lamb is importing the bitch Marguerite, in whelp to the one-eyed dog Polyphemus. She is by champion Plinlimmon, and won first and cup at Dundee, only time shown.

While we are talking about Baltimore we might as well add that Hepsey is completely recovered and has now been moved to Mr. Diffenderfer's country kennels. The pups are doing well and are beautifully marked.

On our arrival home from Cleveland we were rather exercised over the non-appearance last week of a paragraph which we had sent regarding the purchase of Scottish Prince by Col. Ruppert. Somehow it had gone astray, and perhaps just as well, for we hear, from a perfectly reliable source, that Mr. Smith has not sold Scottish Prince, though nearly all the dailies had the circumstances of the sale very pat. Mr. Mann was to go over May 2 to bring him home together with another young bitch that Mr. Smith swears by, if one could imagine the "Greek professor" guilty of such an act.

In referring to our advertising columns we find that Sir Bedivere has been placed at stud, and this, in addition to a letter from Mr. Green, the kennel manager, leads us to suppose that the crack is all right again, and so is Hesper, therefore Mr. Sears must be congratulated on his lucky escape, and all's well that ends well just fits his case, but it would be wise not to tempt Providence again.

The old English Mastiff Club intend holding another of their club shows this summer and Mr. Taunton was instructed to negotiate again for the Crystal Palace accommodations.

There were several exciting races on Friday last at Cleveland between the greyhounds Gem of the Season and Jolly Ranger. A course of about 150 yds. was cleared and the results were very even. Ranger won two out of three by a neck and the last one was a dead heat. Considering Gem has been doing the circuit for nearly two months, while Ranger has had some racing in Canada, Gem's work was very satisfactory.

The Toronto Kennel Club now numbers 31 members and it has been decided to hold semi-monthly members' shows, only members' dogs to be admitted, and the first show will take place in May. They also pledge themselves to do all they can for the Fair show in the fall.

America is a great country. Instead of having to keep his pack eating their heads off during the summer, the master of the Penobscot Hunt, Mr. Mitchell Harrison, had an offer from Forepaugh's circus to sell the pack for exhibition drag purposes if they could show a good performance in the ring on a drag, this they did and the sale was consummated.

It is not usual for strangers to become attached to Patsey O'Connor and we were therefore surprised to hear that the sheriff at Cleveland had laid hands upon our old friend of the topknot. It seems that a Mr. Chisholm claims the dog was stolen from him two years since. This ought not to be difficult to disprove, as we believe Patsey must have been for three years, at least, a circuit rounder.

There is quite a little storm raging in Canadian papers over the selection of Mr. Mason to judge at Toronto. They should bear this in mind that with Mr. Mason judging there last year, the entry list exceeded any other show by nearly two hundred entries.

We hear that the cockers Amazement and Lady Obo will be sent to England next month to try and snatch some of the prizes from the clutches of the Boultons, the Farrowes and the Jacobs. We wish them luck, for they are both worthy specimens of the breed.

Canadian breeders have put in circulation throughout the country a petition for the Minister of Customs for such alterations in custom regulations as will put dogs on the same level as swine, and so be allowed, as registered stock, free admission into the country.

The Cleveland Kennel Club is to be congratulated in having such a whole-souled president as Mr. Robison. He understands the peculiarities of dogmen instinctively. On Tuesday evening, after the show closed, several of the boys were rounded up, among them Messrs. Winslow, Childs, Diffenderfer, Moorehead, Munhall, Nelles, Cody and the writer. At the invitation of the president we adjourned to one of the restaurants, and in a private room spent about the pleasantest evening of the circuit. Dog chat mingled with the Moët, interspersed with songs from the only "Bert" and others. Mr. Robison in the course of conversation proposed that the kennel clubs of the country should subscribe \$100 each toward an annual pigeon shoot, three members from each club to shoot at 50 birds each. For the first meeting Mr. Robison said he would supply the birds and have it on the track at Cleveland. It was thought that three would surely enter from the Philadelphia Kennel Club, and no doubt the Westminster and other clubs would also join. The plan is a good one and the meeting would be very interesting.

There is to be a Sängerst at Cleveland, next year, and a permanent exposition building is about to be put up in time for the gathering. This building the kennel club intends to secure for their next show, and as it will of course be well situated they have every intention of making their next venture a notable one. Though the club numbers some 100 members, owing to the losses on their last two shows the other members were not willing to incur much risk and left everything to Messrs. Robison and Munhall, who must be congratulated on their pluck and their courteous treatment of the visitors.

We have received the premium list of the California Kennel Club's show, to be held April 29 to May 2, in San Francisco. There is no regular prize money given, only diplomas, but the classification is very liberal. The special prize list is certainly interesting reading, as the prizes range all the way from hard cash, Peerless steam cookers and carpet sweepers to sides of spring lamb and "pants," the latter being singularly appropriate to the occasion. One novelty is the first payment on ten shares of a building and loan association. Mr. Davidson will judge all classes, and A. Russell Crowell will superintend, and with his Eastern experience this is a good selection. "Honest John" we all know. The secretary is H. L. Miller.

Mr. C. A. Stone, the secretary, writes us that the indications are that the coming Industrial Exhibition Association International Bench Show of Dogs, to be held in the city of Toronto Sept. 14-18, will be the grandest ever held in Canada, and will compare favorably with the largest show in the United States. The general Committee of the Industrial has granted about \$1,500 more cash to be added to the amount offered last year, besides a large number of their very hand-

some silver and bronze medals. Miss Whitney and Mr. Mason have both accepted the position of judges, and it is more than likely that it will be necessary to appoint another judge to take some of the classes. The committee are now hard at work on the premium list, which will be published shortly.

Mr. Charles N. Symonds, owner of the North Field Yorkshire Kennels, has, we understand, formed a partnership with Mr. Richard Toon, of 216 Fitzwilliam street, Sheffield, England. That Mr. Symonds has made a wise move there is little doubt, Mr. Toon being a thoroughgoing fancier, and with the increasing interest now being taken in Irish, black and tans and Yorkshires, a man with good judgment on the ground to pick up the coming cracks is a great advantage to any kennel. The combination will now be known as the Anglo-American Terrier Kennels. George Thomas will sail with Prof. Parker next week for England, and will then with Mr. Toon attend the summer shows, taking along with him Beaconsfield and Kilston, the Scotch terrier, together with Lady Belle, the Clumber.

One of our advertisers, who has a boarding and training kennel, writes us, in making an addition to his advertisement: "My advertisement in FOREST AND STREAM has been very satisfactory; judging from the many points from which I have received letters, its circulation must reach almost every hamlet in the land." It does.

At a meeting of the board of directors of the Eastern Coursing Club, held March 27, the following officers were elected for the ensuing year: H. Q. Pope, President; J. H. Watson, Vice-President; C. M. Fitzgerald, Secretary; A. L. Pape, Treasurer.

After reading a chatty letter, which the noted Irish setter breeder, Dr. Jarvis, sends us, the reason he was prevailed upon to part with Elcho, Jr., is not far to seek. It seems he has purchased a young dog, Duke Elcho, from Mr. T. H. Sherman, Augusta, Ga. The Doctor sold the pup when 10 mos. old to that gentleman, and he is now nearly 2 yrs. old and has been trained by friend Titus of West Point, Miss. He was shown at Augusta, Ga., in 1890, taking first and special for best puppy of any breed. The Doctor says he is more like Elcho, Jr., than any dog he ever saw, and when he exhibits him he expects to carry all before him. He bought him back for his field qualities and hardly expected to find such a bench dog. He will run him in the Irish setter trials together with Edna H., the young bitch that has won at the last two shows. She was trained by S. C. Bradley and will handle his dogs this season. Closing his letter he says: "I sold Elcho, Jr., but I am still 'in it.' I don't think I have lost my knowledge of Irish setters and can still breed winners." We are sure that all setter men will be pleased to see this well known "red" man taking an active part in Irish setterdom again.

Owing to lack of space we cannot devote much time to the English Kennel Club show, of which the English kennel papers this week are full. There were 1,877 dogs benched, just 7 more than our New York show—we are speaking of numbers, not quality. The show is said to have eclipsed all previous ones in both respects. Royalty made several entries, the Queen and the Prince of Wales being among the exhibitors. During the show the noted bulldog Cardinal York was purchased from Dr. Snow by Mr. Alfred George for an American buyer. He is now on the way over. British Monarch still showed himself cock of the walk, defeating Bedgebury Lion. Col. North showed his crack greyhounds Fullerton, Simonian and others and they were, of course, a center of attraction. Black and tan terriers were good, and personally we were pleased to see that Mr. Henry Lacy won the team prize against Mr. Ellis' formidable kennel. Will history repeat itself? We shall go through the breeds more extensively next week for the benefit of our readers.

"Namquoit" intends to boom the St. Bernard interests on the Pacific coast, and has brought out the dog Republican, by Duke of Wellington out of Restless.

The Barzoi Elsie is seriously ill, but hopes are entertained of her recovery, as she is under Mr. Sewell's care.

A speaking likeness of Mr. Geo. Raper appears in a late issue of *Canine World*, but we can hardly compliment that enterprising journal on the picture of Princess Florence in the last issue to hand. It is not in their usual style by any means.

If "Pater" will kindly send us his name we shall be pleased to publish his letter on the spaniel judge question.

Mr. Shillcock, the owner of Lord Bute, purchased for \$2,000 the noted St. Bernard sire Marvel. He is a son of champion Pouf. It seems he has sired a wonderful pup out of Princess Florence, which simply out-herods Herod in head properties according to *Stock-Keeper*. By the way, Keeper won the St. Bernard Club's 100 guinea challenge cup at the kennel club show.

The English Bulldog Club's show will be held May 13 to 15 and the prizes are said to be especially rich. It must be remembered that a ten-guinea cup is to be competed for, for the best dog or bitch owned by a resident of America. The American club will also offer a silver medal to the breeder of the best dog or bitch owned by a resident of America. We shall therefore expect to hear of something going over from this side. We believe Mr. Geo. Thomas would take a dog or two over with him if the A. B. C. people feel like showing.

Poor old Scotilla. It is bad enough for an old favorite to die in his kennel with those he loves best around or near him, but to think of his dying of suffocation like a rat in a water hole, is very distressing. Coming home from Cleveland show the dog was found dead when he reached Jersey City Sunday morning, and Ben Lewis was very much troubled, though it was no fault of his. Scotilla, a champion many times over, was Dublin Scot's best son and out of Flurry II. Mr. W. R. Dockrell, of London, England, bred him, and he was whelped Oct. 28, 1885. He was shown two or three times in England and then imported by Mr. Harrison in 1887, and since then, till the Baltimore show last year, he had had an almost uninterrupted run of first prizes. Roslyn Wilkes, his son, being the first to take his number down. Since then he has lost his bloom and has never looked the Scotilla of old. It will be long ere we meet with another collier that can keep such a strong head as he had without getting coarse. Mr. Harrison has our sincere sympathies, for, however many winners he might breed, he still had the tenderest spot for Scotilla and his dam. Just before going to press we received a letter from Mr. Jarrett saying that Scotilla had died from poison. An analysis is being made of the stomach contents. He says: "The whole thing seems a mystery," and promises us further news on the subject.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price \$2. Kennel Record and Account Book. Price \$3. Training and Breaking. By S. T. Hammond. Price \$1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

VREDENBURGH-PESHALL.

THE trial of the Vredenburg vs. Peshall case was begun last Friday, and is still in progress. Assistant District Attorney McIntyre appears for the prosecution, and Mr. Peshall is conducting his own defense. Judge Martine, before whom the case is being tried, is presiding with distinguished ability, unflinching patience, and an evident desire to be exactly fair to both sides. If the rights of the case are not determined, it will not be the judge's fault.

A. P. VREDENBURGH.

The first witness for the prosecution was Mr. A. P. Vredenburg, who was subjected by Mr. Peshall to a cross-examination lasting through Friday afternoon, all of Monday and into Tuesday afternoon. Mr. Peshall was bent on getting the items making up the famous balance, \$1,228.28. Mr. Vredenburg testified to the correctness of his accounts throughout, but did not satisfy Mr. Peshall on this point, and by the time the cross-examination was concluded the jury appeared to be more muddled about the A. K. C. finances than dog men themselves have been. The two sums named by Mr. Vredenburg as making up the \$1,228.28, were those mentioned by Dr. Perry in our issue of July 17, 1890, namely:

Club dues.....	\$285 59
Stud Book account.....	942 89
	1,228 28

This was supplemented on the following day by a more detailed account, as follows:

DETAILED STATEMENT OF ITEMS MAKING UP THE BALANCE OF \$1,228.28.

Statement from Jan. 10, 1888, to Jan. 11, 1889.

Receipts.	
Balance on hand Jan. 10, 1888	\$650.04
Received for members' annual dues.....	310 00
Registration of prefixes.....	42 00
Traveling expenses.....	100 00
Registration of dogs.....	100 00
Sales of Stud Book.....	2128 00
Tabulated pedigrees.....	54 50
Advertising.....	425 25
Incidentals.....	7 90
Total receipts.....	\$4714 69
Less total disbursements.....	3486 41
Balance on hand Jan. 11, 1889.....	\$1228 28

This account embraces 47 pages in cash book, January, 1887, to April, 1888, and 97 pages in cash book, April, 1888, to April, 1889.

Disbursements.

Jan. 10, 1888, to Jan. 11, 1889.

Paid Dr. N. Rowe.....	\$25 00

Salary A. B. Lewis.....	1,651 01
Printing to Rogers & Sherwood.....	\$3,486 41

All the books of the club were put in evidence and Mr. Peshall announced that he would go through them with an expert and after his examination would then, if permitted

C. J. PESHALL.

by the Court, renew the cross-examination. The trial has been converted by Mr. Peshall into a "fishing excursion," as the lawyers call it; that is a quest for evidence to be used in the civil suits which are threatened. This was manifest in the cross-examination of James L. Anthony, who was made to testify that he was one of those who in secret meeting of September, 1890, voted to suspend Mr. Peshall. Messrs. A. C. Wilmerding, James Watson, James L. Anthony and one of the staff of FOREST AND STREAM were

called by the prosecution to testify respecting Mr. Peshall's connection with the article on which the indictment was based, and at 4 o'clock Tuesday afternoon Mr. McIntyre rested for the prosecution.

Mr. Peshall opened for himself Wednesday morning. It appeared that his defense, as then outlined, would be that the money received by Mr. Lewis for the Stud Book belonged to him and not to the club, and therefore could not have been put into the club. Secondly, that the article named in the indictment was a reply to other articles, and further that the statements contained in the article complained of were true and their publication was justifiable, as the subject was of general interest to the public.

We are indebted to the courtesy of the New York *World* for the portraits here given and we publish them after having taken advice of counsel that such publication is not libelous.

BLACK AND TANS AT BOSTON.

Editor Forest and Stream:

There are times when friends must agree to disagree, and even the oldest and best of friends must not forget those little courtesies which they owe one to the other. Mr. Lacy's notes on the mixed terrier class at Boston contain the following statement: "Black and tans will be reported by Mr. Mason at my request. In looking them over again on a clean board floor and in good light I preferred Prince Regent to Salisbury, though as they were shown in the ring Salisbury was truer in front." My first intention after reading this was to ask you not to print my report of black and tan terriers at Boston, which report, long with the report on collies, reached you too late for publication last week. But as Mr. Lacy is from home and you cannot get a report from him this week, it might seem that in canceling what I have written I was acting unfairly by you, and this I could not do. So let it go this time.

It was to oblige Mr. Lacy (who had been requested by certain exhibitors to have me, if possible, report the black and tans) that I took the class off his hands. After having gone over the competitors very carefully, I told Mr. Lacy that he had, in my opinion, made a blunder, and on an unprinted leaf of my catalogue I showed him why Prince Regent should have been second. Then is it not in bad taste for Mr. Lacy to forestall my criticism by saying that "in looking them over again on a clean board floor and in good light I [he] preferred Prince Regent to Salisbury"? If Mr. Lacy had said that after I, and not he, had examined the dogs and showed him that he was in error, he preferred Prince Regent, he would not now be guilty of an act of discourtesy to one who took the class merely to oblige him, lessen his task and give your readers a report of a breed which, since New York, has been clumsily butchered in Chicago and almost unnoticed in New York.

CHARLES H. MASON.

New York, April 13.

Editor Forest and Stream:

Mr. Mason is in error. Long before Mr. Mason had finished taking his notes I expressed myself to Mr. Thomas and another I forget who it was now, as satisfied that Prince Regent was the better dog in front, and that was the particular issue, though he did not show himself so in the ring the day before. I think friend Mason is stretching a point, for as I was not writing a report of the breed I had no other way to correct my award to some extent. However if I have been guilty of any discourtesy in the matter I will freely apologize, as it was not my intention in any way to usurp the credit of the best report on black and tans we have yet seen in this country. I would also draw the attention of terrier men to the very full report on this breed at the late Manchester show in *Canine World*, written by "Anglo-Saxon."

H. W. LACY.

EDGAR SHEFFIELD PORTER.

IT is our painful duty to record the death of one of the most popular members of our kennel world, E. Sheffield Porter, of New Haven, Conn. The news of his death will be a shock to many of his friends in the fancy, not only on account of its suddenness but from the feeling that his death is a distinct loss to the kennel interests of this country. He died of heart disease on Thursday night at his home on Hillside avenue and was only thirty-three years old. He studied in several departments of Yale; devoting a good deal of time to the study of medicine at the Medical College, he was well versed in the use of drugs. Mr. Porter belonged to several New York clubs, among them the St. Anthony Club and the New York Y. C., also to several clubs in London. He was the son of the late John A. Porter, a grandson of Joseph Sheffield, and a nephew of William Walter Phelps, late Minister to Great Britain. His brother is John A. Porter, editor of the *Hartford Post*. He took great interest in athletic matters, especially those of Yale. It is rather as a fancier that we know him best. Fond of dogs, his fancy led him toward bull-terriers and bulldogs. The bull-terriers President and Victoria, among others, occur to us as having been shown by him, also the bulldogs Lion, Carisbrooke and other winners. He was also well known as a fearless, conscientious and capable judge of these breeds, having officiated several times at New York and no longer since than last February, when we all saw him apparently in the best of health. As a prominent founder and officer of the Bulldog Club his loss will be keenly felt. Soon after the organization of the A. K. C., he was elected secretary but resigned from office after a short time. Genial and pleasant in his manners, his tall, familiar form will be sadly missed from many a show in the future. Our sincerest sympathy is tendered the family in their bereavement.

OTTAWA DOG SHOW.—Ottawa, Canada.—*Editor Forest and Stream:* The newly appointed bench show committee have commenced work. Mr. P. G. Keyes has been appointed chairman. The Fair Association have been asked for an increased grant for this year's prize list, and also for a larger and more suitable building. Last year, it will be remembered, the committee extended the age of some of the puppy classes; this year they have gone one better, and have decided not to make any puppy classes. Mr. Kirk, of Toronto, has been asked to judge spaniels, deerhounds, greyhounds and foxhounds, and Mr. Lacy all the remaining classes. The undersigned has been appointed superintendent, to whom all communications relating to the show should be addressed.—ALFRED GEDDES, Supt.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

BRED.

Prepared Blanks sent free on application.

Miss Boots.—Dan O'Connell. Prairie Mound Kennels (Detroit, Mich.) Irish setter bitch Miss Boots to their Dan O'Connell, March 24.

Laura Elcho.—Dan O'Connell. Prairie Mound Kennels (Detroit, Mich.) Irish setter bitch Laura Elcho to their Dan O'Connell, April 20.

Petrel IV.—Forest Tatton. A. E. Davis's (Worcester, Mass.) English setter bitch Petrel IV. to his Forest Tatton, March 29.

WHEELS.

Prepared Blanks sent free on application.

Virginia. P. C. F. Hoffman's (Rockville, Conn.) beagle bitch Virginia (champion Lee-Dorsey's Venus), April 19, four (two

dogs), by F. W. Chapman's champion Bannerman (champion Marchboy-Dewdrop).

Fraulein Waldeck II. W. S. Gates's (Chagrin Falls, O.) dachshund Fraulein Waldeck II. (Waldman II.—Fraulein Waldeck), April 9, seven (four dogs), by J. Grech's Jerry.

Forest Belle. Geo. M. Johnson's (Birmingham, Conn.) English setter bitch Forest Belle, March 22, seven (four dogs), by Gene; one bitch since destroyed.

Escapes Gladstone. David Francis's English setter bitch Escapes Gladstone (Rake Gladstone—Mina), April 6, eight (four dogs), by Colin's Dan (Colin—Mistake).

Maggie Bee. F. M. Eddy's (Detroit, Mich.) English setter bitch Maggie Bee (Kink—Lucy Bee), March 30, ten (seven dogs), by J. E. Dager's Toledo Blade; two dogs since dead.

SALES.

Prepared Blanks sent free on application.

Spot F. Orange belton English setter dog, whelped Oct. 18, 1890, by Phil F. out of Petrel IV., by A. E. Davis, Worcester, Mass., to A. G. Wordsum, same place.

Phil F. Jr. Orange belton English setter dog, whelped Oct. 18, 1890, by Phil F. out of Petrel IV., by A. E. Davis, Worcester, Mass., to M. M. French, same place.

Dan O'Connell—Lalla Rookh whelp. Red Irish setter bitch, age not given, by L. N. Hilsendegen, Detroit, Mich.; also presented to same party dog pup Elsans.

Prairie King. Red Irish setter dog, age not given, by Dan O'Connell out of Biddy Clare, by L. N. Hilsendegen, Detroit, Mich., to J. D. Hough, Lowell, N. Y.

Bonnie Obo. Black cocker spaniel bitch, whelped March, 1889, by Pete Obo out of Floss B., by A. S. Aborn, Wakefield, Mass., to Fred H. Henry, same place.

Prairie Tim. Dark red Irish setter dog, whelped Jan. 14, 1891, by Dan O'Connell out of Biddy Clare, by Prairie Mound Kennels, Detroit, Mich., to T. F. Foley, Jackson, Mich.

Blackthorne. Dark red Irish setter dog, whelped Jan. 18, 1891, by Dan O'Connell out of Lalla Rookh, by Prairie Mound Kennels, Detroit, Mich., to Jas. Murphy, Bad Axe, Mich.

Prairie Lily. Dark red Irish setter bitch, whelped Jan. 14, 1891, by Dan O'Connell out of Biddy Clare, by Prairie Mound Kennels, Detroit, Mich., to Joseph Millenbach, same place.

Punch C. Dark red Irish setter dog, whelped Jan. 18, 1891, by Dan O'Connell out of Lalla Rookh, by Prairie Mound Kennels, Detroit, Mich., to M. B. Curtis, Berkeley, Cal.

Prairie Rose. Dark red Irish setter bitch, whelped Jan. 14, 1891, by Dan O'Connell out of Biddy Clare, by Prairie Mound Kennels, Detroit, Mich., to Jas. Hanley, same place.

Judy C. Dark red Irish setter bitch, whelped Jan. 14, 1891, by Dan O'Connell out of Biddy Clare, by Prairie Mound Kennels, Detroit, Mich., to M. B. Curtis, Berkeley, Cal.

Prairie Girl. Dark red Irish setter bitch, whelped Jan. 18, 1891, by Dan O'Connell out of Lalla Rookh, by Prairie Mound Kennels, Detroit, Mich., to Alb. D. Millard, Windsor, Ont.

Prairie Tip. Dark red Irish setter dog, whelped Jan. 18, 1891, by Dan O'Connell out of Lalla Rookh, by Prairie Mound Kennels, Detroit, Mich., to Geo. H. Martz, same place.

Prairie Flame. Dark red Irish setter bitch, whelped Jan. 18, 1891, by Dan O'Connell out of Lalla Rookh, by Prairie Mound Kennels, Detroit, Mich., to Geo. H. Kemko, Mexico, Mo.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

M. S. Leland's Mills, N. Y.—I have a puppy that has a very bad humor, scratches himself most of the time. The hair is nearly all off, and he is in very bad condition. Please give me your advice about him. Ans. Mange very likely. In our advertising columns you will find a mange cure that will no doubt put him all right.

G. W. P., Chicago, Ill.—Please prescribe for my English setter bitch, aged 11 months. Some time ago I found she had worms and gave her a nut, followed with castor oil, and succeeded in getting quite a few away from her, also a few pieces of tape worm. I repeated the dose in about three days, but was not successful. I notice she has an abnormal appetite, eating the dropping of horses, cats, etc., and still think she has tape worm. Ans. Fast the bitch twenty-four hours, and if bowels are constipated give a spoonful of castor oil. Then in a pill of lard give half a drachm of area nut, and in one hour repeat the dose, if in twenty minutes there is no result, give a dessertspoonful of the oil. Feed soft food, such as soup, etc., for a week or so after.

W. J. W., Montreal.—I have a cocker spaniel pup, 6 months old, that is suffering with some trouble with his head or ears. He will sit down and scratch his ears terribly, and then shake his head at a great rate. At times it seems to pain him to even scratch his ears. There are no signs of any soreness, nor are his ears inside at all inflamed. The dog has every attention and is kept perfectly clean. He is in the best of spirits otherwise and very lively. He had distemper when but 2 months old. Will you kindly advise me of the trouble and what to do? Ans. Canker. Use the following:

R Bromo chloral.....3 i
Tr. opil.....3 i
Aq. ad.....3 vi

Mix. Drop in ears night and morning after washing with warm water and castile soap and drying thoroughly.

ANXIOUS, N. Y. City.—About two months ago I had given me a valuable Irish setter, about 18 mos. old. At the time I received him he was suffering badly with distemper and worms, and his eyes were running badly. I doctored him for the two former, and after three or four weeks of serious illness, during which he was at times at the point of death, I succeeded in bringing him round so that now he seems perfectly well, except that he appears partially blind. I can see nothing the matter with his eyes, as they do not run and seem to be perfectly clear and natural. Shall I do anything for them or trust to nature to effect a cure? His general health and spirits now, could not be better and his coat is in fine condition. Ans. Wash the eyes with borax and water, tea-spoon of borax to one quart of water. Amaurosis is not uncommon as a sequel to distemper. Get some "Iron and strychnine" pills or tablets and give morning and evening hidden in a bit of meat.

Rifle and Trap Shooting.

RANGE AND GALLERY.

GARDEN CITY RIFLE TEAM.—Chicago, Ill., April 15.—April 7, at 25yds., 25 shots each, open sights, off-hand, Massachusetts paper target, possible 800 points: Al Sorenson 275, W. J. Gibbs 268, C. A. Hankle 268, Geo. McCune 265, W. J. Meyers 257, Thos. Ford 250, Joseph Hosie 247.

SYRACUSE. April 15.—These scores were made at the Syracuse Rifle Club shoot this afternoon, Leighton and Taber doing remarkably well in the rest match. **Off-hand:**

Ball.....	3	6	3	8	7	5	8	7	6	10	—62
Leighton.....	6	8	8	9	4	6	4	7	9	—68

J L Fowle.....	83	A G Stevens.....	71		

THE REVOLVER CHAMPIONSHIP.

THE progress of the Amateur Championship match in revolver shooting is all we could desire. From every direction come inquiries for particulars and demands for the new ready measurement targets prepared for the preliminary preparation. By using these a shooter can at once gauge his skill and measure his progress. The cut below will show the target for each shot full size. The outer boundary is just the size of a current postal card. This is amply large enough to be hit by any one who has the proper

revolver and who has any claim to the title of expert. Line shots in this kind of shooting are of more moment in actual work than shots having good elevation and away on either side. The concentric circles are $\frac{1}{10}$ of an inch apart. This arrangement facilitates counting up the total score into inches and tenths of an inch. One shot only should be fired at each card in order to have no possible dispute owing to the cutting up of the previous shot hole. **FOREST AND STREAM** wishes each week to give samples of good targets made and would invite our shooting friends to send in their best targets for that purpose.

Early in the fall we will begin fixing times and places for the various final competitions. By that time enough targets will have been published to enable all to form some idea of the degree of skill probably required to gain a place. We shall accommodate competitors as far as may be in naming locations and date for the shoots, of course making them public in advance through our columns.

CHAMPIONSHIP MATCH CONDITIONS.

In accordance with the instructions of the donor we would fix the following as the conditions of the match for the Amateur Revolver Championship of America, open to any American citizen or permanent resident:

Any revolver, maximum length of bore, including cylinder, ten inches.

Any trigger pull.

Any sight, both sights to be on the barrel or forward of the grip of the pistol hand.

Any fixed ammunition.

Cleaning allowed only between scores of six shots.

Distance, 20yds.

Position standing, free from any artificial support, the revolver held in one hand only with the arm free from the body and unsupported in any way. The rear sight shall not be nearer to the eye than twelve inches.

Target—Ready measurement disks, one shot on each disk and the measurement to be taken by mechanical Vernier scale from center of disk to the center of the shot hole.

Scores—Aggregate of best three in five scores, each score to consist of six consecutive rounds. The five scores to be fired consecutively.

Amateur Standing—The standing of a contestant as amateur and professional to be determined in each individual case by **FOREST AND STREAM** rules.

Where not in conflict with conditions herein, the rules of the Massachusetts Rifle Association for revolver competitions to hold. The decision of **FOREST AND STREAM** to be final on all points.

Places of holding the competitions will be fixed, with consideration to the convenience of contestants, and one month's notice will be given of exact time and place. It has been already determined to have competitions at New York, Boston, Philadelphia and Chicago. These finals open to all comers, and will be in charge of the shooting editor of **FOREST AND STREAM** or his representative.

Preliminarily to the final shoots for the championship, which will be held several months from date, and in order to develop shooting ability, **FOREST AND STREAM** will open a season of trial shooting. The targets for this test may be had free of cost on application to the office of **FOREST AND STREAM**. By their use the revolver shot may fix his progress, and the ready measure-

Frankie reposed comfortably by them.

CATARINA, steam yacht, is reported sold by J. W. Sullivan, to Jos. Pulitzer, of the New York *World*, for \$63,000.

IROQUOIS, schr., Vice-Com. Ellis, S.C.Y.C., has returned from her Southern cruise and is at the Atlantic Basin.

KATHLEEN, Mr. Whitlock's 30-footer, was in commission last week.

YACHTING IN FRANCE.

Of all peoples who have contended for the supremacy of the seas, in war, in commerce or in pleasure sailing, the English speaking nations have always held the lead; the Anglo-Saxons have proved their superiority to the Latin races, and the battle for first place has for the past century been between the United States and Great Britain; the results in the main being decidedly

THE BASIN AT ARGENTEUIL.

satisfactory to Americans. After these, the third place must be conceded to France both in war and in pleasure sailing, and though on the whole she has never led her two rivals, she has always shown a most creditable progress, and at times pre-eminence, in some directions. In the old days of wooden ships, France was noted for the skill of her naval architects and designers, and in the matter of model she was often ahead of all rivals. Though

PROFILES OF YACHTSMEN.

her shipbuilding to-day will not compare with that of Great Britain, there are yards and shops and skilled constructors who turn out vessels of the first rank. The strong point of the French has been in the theory and practice of shipbuilding, in the more complicated and abstruse branches of the science of naval design, while the weak point has been in the handling of the vessels afloat. While in yachting France is still a long way in the rear

ROYAL YACHT SQUADRON—COWES.

of America and England, having always been to a great extent dependent on the two, at the same time she has won an honorable place as the third of the great yachting nations, and the possessor of a strong and firmly established system of yachting. Unfortunately French yachting has thus far developed no strong individuality, the inland waters are in the main very shoal, and the craft that navigate them have been imported from

the United States, while the rougher waters of the seaboard have developed no national type, but the narrow racing course so long in the ascendancy in British waters has been transplanted to the French coast. In these two different types, each modified more or less in time, but still preserving its most distinctive characteristics, a great deal of racing and sailing has been done by French yachtsmen, the number of yachts, of yacht clubs and of individual yachtsmen having increased in a very gratifying manner; but at the same time the fact that the boats are all practically of foreign origin has proved a hindrance to the advance of yachting to the place it should occupy as a national sport.

This state of affairs has of late attracted considerable attention among the leaders of French yachting, and as a result a most practical and we hope successful movement has been started. During the past winter a body under the title of the Committee du Yacht has been formed, its object being to encourage French

UNDER SPINAKER.

yachting on a home basis, to promote the designing and building of yachts in France, to encourage French yachtsmen to enter their craft in international races, to build up a pleasure marine of skilled French skippers and sailormen to form the crews of French yachts; and in short, to place French yachting in the same independent position that the sport has long enjoyed in England and the United States.

Among the leaders in this work is Mr. Philippe Daryl, a French yachtsman who has done much with his pen to enlist the aid and interest of Frenchmen generally through the public press, and who has also chosen this opportune time for the publication of a most exhaustive and comprehensive treatise on yachting. This work is a large octavo volume of nearly 400 pages, handsomely printed and containing a number of excellent illustrations. Though at the risk of giving a rather unfair and frivolous idea of a work whose technical value and patriotic aims cannot be over-

A CORINTHIAN.

rated, we cannot refrain from reproducing some of the most amusing of the many sketches from the skilful pencils of Messrs. Brun and Vallet. The former is well-known through his work in the French yachting journal *Le Yacht*, as one of the cleverest of marine artists in pen and ink; while the spirited sketches of the latter speak for themselves.

The book opens with a hearty eulogium of yachting, which should move the veriest landlubber to venture afloat; Mr. Daryl is an enthusiast, and speaks most earnestly in praise of his favorite sport. In the same chapter are some figures relating to the cost of yachting and also to the French fleet, from which we learn that the number of steam yachts is 537, with a tonnage of 11,165 tons; the sailing craft number 712 yachts of a total of 8,970 tons, French yachtsmen each claim a chapter, and from the first we learn that the word yacht is of French origin, though derived

A PROFESSIONAL.

from the Dutch "iacht" signifying chase. The author discusses the various modes of pronunciation, and decides in favor of "yak" as in accordance with the best usage; but at the same time he recognizes the claims of the English terms yachting and yachtsman as well established by custom, though expressing a preference for the form "yaktling" as more logical.

After describing the earlier vessels and the galleys of the ancients, the author takes up the origin of yachting in France, the date of which he places at 1838, when the international regattas of Havre were established. This date is very near the beginning of organized yachting in America, being but a few years prior to the foundation of the New York Y. C., 1844. In 1847 the first American centerboard was imported, proving very successful and leading to the general adoption of this type on the Seine and other rivers where draft was the first consideration. An interesting chapter on racing yachts reviews the great racing events of various periods, following which are two chapters descriptive of English and American yachts and yachting, each fully illustrated by views of the principal yachting stations, pictures of the yachts, and charts of the leading courses, such as around the Isle of Wight and that of the New York Y. C. The

THE PROPRIETORS.

very spirited picture of the "man at the wheel" forms the heading to the chapter on American yachting. The other picture, of a "Yachtsman Yankee," was evidently taken at Newport on Goelet Cup day, and not at Larchmont or Marblehead; we are glad to say that the monocle has not yet come into general use among genuine yachtsmen, but is confined entirely to the elegantly attired gentlemen who ornament the decks of the larger steam yachts on a few grand occasions in the height of the season if the weather is fine. The earlier American races, the development of the centerboard yacht, and the progress of American

A FRENCH YACHTSMAN.

A FRENCH YACHTING LADY.

yachting are treated very fully, while the America's Cup is honored with a separate chapter with excellent portraits of the most famous competitors.

The next chapter deals with the purchasing and building of yachts, the nationalization of foreign yachts in French waters, the survey and registry and similar details. Chapters IX. and X. take up in detail the various rigs and parts of yachts and the instruments of navigation, the compass, log, lead, etc., the explanations being very clear, and aided by many cuts, a chapter on interior arrangements is also very practical. The cost of yacht-

SOME PROFILES OF YACHTING LADIES.

ing, the question of measurement and allowances, and the management of regattas are each treated at length in separate chapters. Deep and narrow yachts are discussed in another chapter by the aid of lines and diagrams. A chapter is also devoted to steam and electric yachts, and another to the French clubs and to *Le Yacht*, the journal which has done so much for French yachting. The discipline of the ship and nautical education occupy two other chapters, following them being an interesting summary of single-hand sailing and canoeing. A special

THE SCHOONER ALINE.

chapter, with many excellent illustrations, is devoted to the steam yacht *Sunbeam* and the late *Lady Brassey*, followed by a chapter on "Some Famous Voyages."

The book concludes with an earnest and stirring appeal for French yachting, in which the author not only insists on the necessity of action, but lays down a positive policy, which if carried out is likely in a few years to place French yachting on an equal basis with that of America and England as possessing distinctive

national characteristics and an individuality of its own, in place of being a mere reflex of other nations. The appeal concludes as follows:

"Let us not allow the world to believe any longer that if we do not build yachts it is because we are not able to do so. Let us build one at first, big or small, if it were only to call the attention of the country, which is not yet awakened to a question of vital

A YACHTING LADY.

importance. Let us form a society of sailors, architects, yachtsmen and even of laymen. Let us pay our addresses to the public powers, to the chambers of commerce and to the governments of our cities. Let us intrude to a skilled board the business of designing our yacht, and then let us enter her in the lists for the America's Cup.

"We shall be beaten perhaps once or twice. What matters it? There are defeats which bring better results than victory. There is no disgrace in being beaten in a peaceful and gentlemanly con-

A YANKEE YACHTSMAN.

test. The disgrace is for our country while it bears the name of France to fail to enter a tournament gotten up in the interest of science and art."

The author has at least done his part of the work thoroughly in winning for France a place in the literature of yachting beside those hitherto occupied exclusively by America and England. We know of no single work in the English language with which Mr. Daryl's can properly be compared, as he has treated the subject from a broader and more comprehensive standpoint than

DECK OF YAWL ZAMPA.

other writers. As a history of yachting on both sides of the Atlantic, the work has a special value to the casual reader or for purposes of reference; while it is no less valuable to the tyro and the yachtsman as a technical guide, the leading points being brought out clearly, although the author has not attempted to cover the field of designing and construction with the detail that Messrs. Kunhardt and Dixon Kemp have devoted to it. Apart from its historic and technical features, the book has a special value from the high purpose of the author, which is evident throughout; and should the present attempt of the Committee du Yacht meet ultimately with the success which it deserves, a large part of the praise will be due to Mr. Philippe Daryl.

KILL VON KULL Y. C.—Officers: Com., Geo. Ross; Vice-Com., F. B. Huyler; Trustees, C. M. Sterling, Frank Foggin, A. W. Applegate, L. M. Pulz, C. A. Ingalls, L. Deille, C. J. Jones and A. Greenwald.

CORINTHIAN NAVY.—New members enrolled during March 1891: Dr. E. J. Ranhofer, 237 West Thirty-fourth street, New York; Wm. Gardner, 1 Broadway, New York; R. M. Blatchford, Sackett's Harbor, N. Y.; Wm. A. Marsh, 16 Ceanties slip, New York; Joseph Rudd, Jr., 758 St. Mark's avenue, Brooklyn; Morton V. Brkay, 92 William street, New York; New York Bay Squadron, Jas. R. Thompson, 55 Bay street, New York; R. E. Lowe, 421 Rodney street, Brooklyn, East River Squadron.

SAN FRANCISCO Y. C.—At the annual meeting of the San Francisco Y. C. held on April 7, the following officers and directors were elected: Com., Wm. K. McCarthy; Vice-Com., L. B. Thomas; Sec., Fred B. Chandler; Fin. Sec., Geo. W. Reed; Treas., Chas. W. Kellogg; Meas. Capt. Matthew Turner; Directors—J. Gutte, G. F. Davidson, Henry A. Bowen, E. C. Bartlett and John W. Pew.

MASSACHUSETTS Y. C.—The committee on lectures has announced a course of lectures on "Emergency Surgery," under the auspices of the Massachusetts Emergency Society, at the winter quarters, 270 Boylston street, Boston. The course will consist of four demonstration lectures by an eminent surgeon, assisted by a live model, and will be concluded by an examination entitling those in civil life, who pass successfully, to a diploma, and those in the M. V. M. to a medal which they are authorized to wear. The entire course, the commencement of which will be duly announced, will be given for the nominal charge of \$2.50 for each member.

THE NEW AMERICAN COAST PILOT.—We have received from the author, Wm. A. Pratt, Deep River, Conn., a copy of the new edition of the "American Coast Pilot, or Yachtsmen's and Coasters' Book of Reference." This well known book has lately been revised and extended in accordance with the latest charts and surveys. It covers the entire Atlantic coast, from St. John, N. B., to Mobile Bay, giving courses, distances and bearings, with full directions for entering all harbors. It is printed in clear, legible type, and bound in enamel leather, being specially intended for use in bad weather when it is difficult to handle a chart on deck.

STEBBINS' COAST PILOT.—Mr. N. L. Stebbins, the yacht photographer, has just published a novel and useful book under the title of "Stebbins' Illustrated Coast Pilot." The volume contains about 300 photographic views of the lightships, lighthouses and beacons of the New England coast, from New York Harbor to Eastport, Me. Sailing directions are also given for a portion of the coast. The book is intended for the use of yachtsmen and coasters, and will enable them to quickly identify the various aids to navigation. It makes a neat oblong volume 11x8 1/2 in., bound in canvas.

PAINE AND FIFE.—There is a big difference between the Paine 46 and the Barban. The Paine boat looks bulky and powerful all over, and shows a belief in "brute power and ugliness" as a method of winning. Fife, on the other hand, has gone in for fine lines. If anything, the Fife cutter looks too fine on the ends, especially aft. Fife has the neatest looking construction of all the designers. His boat is tied together the whole length with neat diagonal struts. Five courses of oak planking are already on the bottom.—Boston Globe.

PAYONIA Y. C.—The contract for extensive improvements at the new station at Atlantic Highlands, including a wharf 600 ft. long, with a bulkhead forming a basin and a large landing stage, has been made with Ross & Sanford. It is intended also to build a pavilion on the outer bulkhead and bath houses on the shore bulkhead. The club races can be started off the Communipaw house and finished off the new station.

VOLUNTEER—PHOENIX.—The work of demolishing the famous Volunteer is still going on at Lawley's yard. The Boston Globe is responsible for the statement that not even the name will be left, but that Gen. Paine has chosen a new one, Phoenix. The Globe also quotes a yachtsman as suggesting Pensioner, as all the old volunteers are pensioners now.

THISTLE—METEOR.—The Field states positively that Emperor William has changed the name of his new purchase to Meteor. This does not speak well for the originality of Imperial Majesty if the name is such a yachting chestnut in Germany as it has long been here. The price is quoted as \$4,500, \$22,500.

YARANA.—Mr. M. B. Kennedy, owner of the Maid Marion, yawl, has bought Yarana from Mr. Paul Ralli, and will race her this season. Mr. Ralli has lately taken a great interest in the new class of small open boats, 1/4 raters.

NORMA, steam yacht, Mr. Horace Daniels, grounded in a fog on the night of April 17 on the Long Island shore, two miles west of Greentort, when on her way from New York to Providence. She had run ashore to anchor on account of the fog. She lies in good position, and though leaking slightly will probably be hauled off without serious damage.

ALVA, steamer, Mr. W. K. Vanderbilt, arrived at New York, April 15, from her Mediterranean cruise. One of her boilers was ill with varioloid and died while being transported to the hospital.

SMUGGLER.—The first of the Gardner 25-footers will be launched on April 25 at Webber's yard, New Rochelle. She is owned by Mr. L. J. Boury, Atlantic Y. C.

LLOYD'S YACHT REGISTER.—We call attention to the advertisement on another page of this valuable book. It is furnished to individual subscribers at a nominal price.

NEW YORK Y. C.—The annual dinner of the New York Y. C. will be held at Delmonico's on May 9.

LIEUT. HENN.—Lieut. and Mrs. Henn returned last week from Florida and will remain in New York until May 2, when they leave on the Umbria.

ATLANTIC, schr., Mr. E. C. Homans, is receiving a thorough overhauling below and aloft at Poillon's yard. Capt. Rose will be in command.

DAPHNE, sloop, has been sold by Com. Lowery, Larchmont Y. C., to Mr. A. W. Booth, owner of the sloop Mistral, of Bergen Point, N. J.

KNICKERBOCKER Y. C.—This club is about to make a very important change of quarters, having secured a site at College Point, so that the old anchorage at Port Morris will be abandoned.

VALKYRIE.—Lord Dunraven has decided to race Valkyrie this year, and Wm. Cranfield, her new skipper, is now fitting her out.

MONTECITO, yawl, has been sold by Manning's Agency for Mr. Ronald Thomas, the new owner not being yet announced.

YACHT ARCHITECTURE.—The second and enlarged edition of Mr. Dixon Kemp's standard work is just ready in England.

VENTURA, cutter, has been sold by C. H. W. Foster to S. J. Colford, of New York.

CARMITA, cutter, has been sold to Mr. Broughton, of Marblehead.

CORINTHIAN Y. C. OF SAN FRANCISCO.—This energetic club is doing much for the revival of yachting on the Pacific Coast, and this year expects to have a most prosperous season. A very large list of fixtures is announced, the first being the opening of the club, on Saturday next.

NEW JERSEY Y. C.—The 20th annual regatta of the New Jersey Y. C. will be sailed on June 17 over the usual course on New Jersey Bay.

UTOWANA.—The New York Times of April 19 contained a very interesting description of Mr. Durant's new steam yacht Utowana.

RAMONA, schr., formerly Resolute, has been sold by D. H. Smith to H. M. Gillig for \$24,500.

MONTAUK, schr., has been sold by J. E. Brooks to F. E. Weeks.

"Fest India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price \$1. Contains full history of the great storm of March, 1838, with practical information how to handle a vessel; n a cyclone; use of oil at sea, etc.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

M. A. V., Philadelphia, Pa.—State breed of dog.

A. O. N., Newburyport, Mass.—You do not state what breed the dogs is.

H. D., Sandusky, O.—I have the pedigree of a dog in written form, and you tell me where I can have the same in printed form and how much it will cost? Ans. Write to C. L. Schember, 90 Nassau street, New York city.

STEADY READER.—Please inform me where I can procure the history and picture of the South American bloodhound, either by letter or through your valuable paper. Ans. We do not know of such a book or dog. By writing to Mr. Winchell, Fair Haven, Vt., you can procure photos of his celebrated bloodhounds.

T. S., Brooklyn, N. Y.—1. Please inform me how to train and keep a dog's hair in proper condition. 2. Also, what color is a Yorkshire terrier? Ans. 1. Plenty of exercise, judicious feeding and a good grooming every day with brushes suitable to the texture of the dog's coat, always brushing from head to tail of course. 2. Golden tan on the head and legs and silver blue from neck to tip of tail.

E. J. M., New York City.—I have a puppy of the Rockingham-Donna strain, which I desire to have trained and handled for the field trials of '91. Could you kindly furnish me with the name and address of some trainer to whom I could send the puppy for careful treatment? The puppy, Prima Donna, took the two first prizes at the recent Westminster Kennel Club show in this city, and I am very desirous of developing every good quality she may possess. Ans. You will find several kennels advertised in this week's issue, any one of which we can recommend.

G. F. S., Haverhill, Mass.—Will you kindly state the weight of the largest striped bass on record, caught with hook and line? How large a bass has been caught, to your knowledge? Do the largest striped bass enter the rivers at all, as far as is known of them? Ans. 1. Between 50 and 60 lbs., at Catyunk. 2. A specimen of 12 lbs. was taken in the Town Cove, Orleans, Mass. 3. Occasionally. An example said to weigh 80 lbs., was taken in the Potomac and sent to Washington, D. C., recently. In some North Carolina sounds individuals of 100 lbs. are reported common by good authority.

C. B., Akron, O.—I am thinking of going into the kennel business, and would like to ask a few questions. 1. Do you know of a man that lives in Ireland that will buy dogs for an importer? 2. Is there any money made at the bench shows? The prizes are so small, I should think the expenses would be more than the prizes. 3. Which is the most profit in, setters or English mastiffs? Ans. 1. Wm. Graham, Belfast, Ireland. 2. All depends on the shows, distance from home, and the kind of dogs you exhibit. It is an advertisement for your kennel more than anything else. 3. Setters at present.

M. T., Chicago.—Will you be kind enough to tell me what kind of flies to use for trout and bass in Montana, North Dakota and Washington? Ans. The best patterns for the black-spotted trout are coachman, royal-coachman, dark-coachman, professor, brown-Palmer, Abbey, Montreal, alder, Lotie, Imbrie and brown-ben. The Alexander and black-prince are good flies for swift streams. The brown-hackle is a general favorite for the region. For black bass the grizzly-king, coachman, professor, red-bith, polka, oriole, Oconomowoc, Henshall, Epting, gray-drake, Seth Green, white-miller, fluttering-fly and various hackles. The success of any particular fly is limited by many conditions, which can be learned only by local experience.

AZTEC.—A Mexican gentleman, who is a friend of mine, has recently received as presents a couple of fine dogs. One of them is a setter bitch whose parents were imported direct from England and presented to President Diaz, who is a great hunter. I do not know what stock she is from, but she has the appearance, so far as I can judge, of being a good dog. The other is a pedigreed pointer, given him by General Stanley, of San Antonio, Texas. He has not received the pedigree yet, but the dog is doubtless a good one. Now, what he wants me to find out of the "only" FOREST AND STREAM is, what will be the probable result of breeding the two, pointer and setter, together? Do such crosses usually result well? An answer through the paper or otherwise will greatly oblige. Ans. Such an alliance would result in a "drop-per," which is known, as a rule, to be an excellent field dog. We do not advocate this breeding, though in your case it may be unavoidable.

E. H. P., East Trumbull, O.—Will you give the distinguishing features between a mascalonge and a pickerel? In Grand River, a tributary of Lake Erie, there are fish that local anglers call mascalonge, but some persons call them pickerel. The fish are taken with minnow or spoon and weigh as high as 20 lbs. Ans. In our columns of April 2 and 9 we published accounts of the pike and pickerel, and we will soon have a paper on the mascalonge, containing a figure of the species and some illustrations, showing the differences between the three principal members of the pike family. The pickerel of Grand River is probably the pike, which is best distinguished from the mascalonge by its pale spots on a dark ground, the mascalonge having dark spots on a pale ground. The pike has the cheek scaly and the lower half of the gill cover naked, the mascalonge has the lower half of both the cheeks and the gill covers naked. In all the true pickerels the cheeks and the gill covers are completely scaled.

The Expert's High Grade Trap Cartridge

Owing to the demand for a thoroughly reliable and strictly first class "Trap Cartridge," we have decided to put on the market a cartridge to be known as "The Expert's High Grade Trap Cartridge." These cartridges will be loaded with The Chamberlin Cartridge Co.'s "High Grade Trap Powder," which is made "exclusively and expressly" for these cartridges, and which we know to be the best trap powder made. The specifications and lists of these cartridges are as follows:

Load No. 30. 10-gauge Climax Shells, $\frac{3}{4}$ drs. High Grade Trap Powder, $\frac{1}{4}$ oz. No. 8 shot. List \$30.00 per M.

Wadded two 9 and one 10-gauge Black Edge Wads on powder and card on shot.

Load No. 32. 12-Gauge Climax Shells, 3 drs. High Grade Trap Powder, $\frac{1}{4}$ oz. No. 8 shot. List \$27.50 per M.

Wadded two 11 and one 12-gauge Black Edge Wads on powder and card on shot.

Chilled shot \$1.00 per M. net extra.

We solicit a trial of these cartridges and know that they will not fail to give the very best of satisfaction. We are also prepared to load these or any of our regular trap or nitro-powder cartridges in the new U. M. C. Co.'s "Trap" shell for which an extra charge of \$10.00 per M. net will be made.

Send stamp for our list and discount.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, with-
out increasing his labor, he wants all his brother hunters
and anglers to know of it and share with him
the newly discovered "helper."

WHAT WE CLAIM FOR
The Automatic Reel.

FIRST—It will wind up the line a hundred
times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if
the angler chooses.
THIRD—No fish can ever get slack line with it.
FOURTH—It will save more fish than any
other reel.
FIFTH—It will prevent tips, lines and snells
from being broken by large fish.
SIXTH—It enables the angler, and makes it
desirable, to use lighter tackle.
These claims have been substantiated by
the most skillful fishermen in America and
Europe.

Improved

Angell's Pat. Metal Revolving Flies,

FOR TROUT AND BASS.

Revolving Wings and Body.
These flies are of light metal, of attractive col-
ors, in nickel and bronze. When trolled in the
water the body and wings revolve, giving them
the appearance of live flies in the water. The
difference between these flies and the artificial
feather fly is this: One is a dead fly in the water
and the other is a live fly. These flies have been
well tried. The Angler has only to put one on
the end of his leader to find out that it is the best
trout fly in the world.
You can fly-fish at the bottom of deep water by
letting the metal fly sink and drawing it up
rapidly catch large trout that won't rise to the
surface.
The metal wings shown in the lower cut are
made to fit all sizes of artificial feather flies for
trout and bass. The angler can vary his flies by
slipping on various colored wings over a single
feather fly, as shown in the center cut. A pair of
nickel wings with bronze body, fitted to a "Pro-
fessor," will be found a killing fly under all con-
ditions.
Price of Wings or Flies, \$1.00 per dozen.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in
language understood of the people.
BY G. TRUMBULL.
Contains the local names in popular use, and
eighty-nine illustrations, which, with the clear
descriptions in the text, will enable any man who
can read to identify the contents of his game
bag.
OPINIONS OF THE PRESS:
It is the first, so far as we know, of a class of
books of which the need is felt in every depart-
ment of natural history.—Troy Press.
To all dwellers by the water and in the country
and especially all who shoot, the book will supply
a great need, and every one who is interested in
birds will be interested in it.—Boston Evening
Traveler.
The book should find its way to a choice place
in every sportsman's library.—Chicago Inter-
Ocean.

There is a delightful dearth of dead languages
in this book. The sportsman who looks between
the covers for a description of some game bird—
a description which will enable him to identify
the creature should he meet it in the woods or on
the water—is not compelled to shut the book,
drop a bad word or two upon it and go in search
of some Greek and Latin dictionaries to find out
what the description means.—New York Herald.

THE AMERICAN KENNEL CLUB ACCOUNTS.

THE trial of the case of Mr. Chas. J. Peshall, who was indicted for criminal libel of Alfred P. Vredenburg, has resulted in a verdict of acquittal. In other words, a jury of business men have determined that it was not libel for Mr. Peshall to state in the FOREST AND STREAM of June 19, 1890, that the accounts of the American Kennel Club were "juggled." As a matter of fact, it happened that the verdict turned directly upon the actual condition of the books as shown by an inspection in the jury room. After discussion of the evidence, on the third ballot the jury stood nine for acquittal and three for conviction; and so firm were both sides after a further consideration of the evidence that no other result than a disagreement was thought possible. At this juncture the A. K. C. Treasurer's book was sent for, and when the three jurors who had stood out for conviction looked at them there was no further argument; they concurred with the rest that Mr. Peshall had not been guilty of libel.

The result of the famous Peshall case is far from pleasing. Mr. Peshall, it is true, has every reason to feel elated and to look for the congratulations of his friends, and of others, who, knowing him (as we have known him), have believed (as we have believed) in the perfect sincerity of his contention. To know the man at all was to be convinced that he had made no charges, the full truth of which he did not believe; and the verdict will of course be accepted as a substantial indorsement of his charges. With this personal vindication he and his friends may well be satisfied.

When it is considered, however, what Mr. Peshall's personal vindication means, at what a cost it has been won, there is outside of his own sympathizers little reason for rejoicing. Here was a man on trial for having questioned the accounts of a public club. He was not alone on trial. The accounts were being tried. The verdict turned on the actual condition of the accounts. The man

was acquitted. The acquittal is bound to carry with it in the mind of the public, rightly or wrongly, discredit of the accounts; and we submit that this is an ending of the case much more deplorable than the conviction of any one man possibly could have been. Had the jury found Mr. Peshall guilty, his friends might possibly have claimed for him that such a verdict proved only that he had been intemperate and criminally rash in his public charges; they might still have contended for his honest intention and his justifiable motives. At the most, looking at it abstractly, such a result would have convicted an individual only, and any personal hardship would—in public estimation—have borne with it more than ample compensation in the vindication of the accounts—accounts with which the kennel world is so nearly concerned. The members of the local clubs constituting the American Kennel Club surely have little reason to be satisfied that Mr. Peshall has been vindicated at the expense of their executive officers.

There was no charge of stealing; nowhere in all the discussion of the case has there ever been any imputation that one single cent had been dishonestly appropriated. The charge was that certain transactions had not been recorded as they should have been recorded; in short, that the accounts had been "juggled."

What are the facts about the financial management of the American Kennel Club for the years 1888 and 1889? Do the Treasurer's books contain a correct record of the transactions of that period? Was the January 11th, 1889, balance of \$1,228.28 made up of money actually earned by the club and properly belonging to it at that time? These would appear to be questions easily answered by the club's officers having the books in their possession. They are questions, one would suppose, which would have been answered at the trial, and answered conclusively—beyond the shadow of a dispute—by the men who caused the prosecution of Mr. Peshall. On the demonstration of the absolute integrity of these accounts, or at least of the correctness of the manner of keeping those accounts, depended the verdict last Friday. The demonstration was not afforded. The verdict was against them.

DESTRUCTION OF SEAL LIFE.

AS was to be expected, the announcement made last week by the FOREST AND STREAM of the project to establish marine reservations in the Pacific Ocean, which should be refuges for certain species of the larger aquatic mammals which resort to the land for rest and breeding, has attracted wide attention and met with general approval. Every day thinking men are coming to realize more and more that it is worth while, now, before it is too late, to try to save from utter extinction the wild creatures native to our continent. These wild animals are a part of nature; and nature, uninterfered with, cannot exist among our people—has no place in our scheme of civilization. To-day even the most sternly practical men regret the extermination of the buffalo, and we have heard those who were among the most successful of the old-time buffalo skinners express profound sorrow at the part they took in that miserable butchery.

The slaughter of seals, sea lions, sea elephants and walrus has been going on for more than a hundred years, and these animals have been destroyed in numbers which really cannot be computed. No one who is not familiar with the literature of the subject, can have any conception of the vast numbers of these creatures which have been slain since the trade in their skins and oil first began. It has been a war of extermination, and one species—the northern sea elephant—has already succumbed to this continual pursuit, and has no doubt passed out of existence.

The history of sealing tells the story of the rapid diminution of other species. The fur seal, for example, used to be taken in paying numbers on both coasts of South America, and on many outlying islands in the Atlantic, the Pacific and the Antarctic oceans, as well as on the coasts of Australia and New Zealand; but to-day those shores no longer resound with the hoarse barking of their crowding multitudes, and the only profitable fur seal fisheries are on those islands of the North Pacific where the seals have been protected for many years, and where they are now, we are told, rapidly diminishing in numbers.

The walrus, while it inhabited an area much more lim-

ited, and was probably never anything like so numerous as the fur seal, has yet been slaughtered in appalling numbers, for we have records of cases where one ship's company destroyed eight or nine hundred of these great beasts at a single killing. Mr. Lamont mentions such occurrences, and adds that in one case, when he visited the spot six years afterward, "the smell of the island was perceptible at several miles' distance."

The destruction of the *Phocidæ* in the North Atlantic is scarcely less than of the species already mentioned, and each year very many thousands of them are slaughtered, as many as 25,000 having been taken in one spring by a single vessel. The season for this hunting lasts, however, only about two months.

It is evident that these marine carnivora are peculiarly subject to destruction by man, and that if they are to be preserved it must be done at once, and by the establishment of just such places of refuge as outlined in FOREST AND STREAM last week. That the Secretary of the Interior should act in this matter will be acknowledged by all, and we have good reasons for believing that the time is not far off when these marine reservations will be duly established by law.

Elsewhere we print letters from eminent naturalists, whose intimate knowledge of one phase or other of the subject in hand, entitles their opinions to the greatest weight. Their letters are prompted by their interest on the subject—an interest which is shared by all who have given the subject any thought—and solely by a desire for the public good.

THE CODIFICATION BILL.

A POLITICAL wrangle between the Senate and the Governor of the State of New York has resulted in a deadlock, which blocks the wheels of legislation and will apparently prevent the passage of any more bills during this session of the Legislature, which is now almost at an end. Among the bills which will fail to be acted upon is that for codifying the New York game and fish laws—a measure which all sportsmen in this State hoped might pass. The failure of this bill is deplorable, but it is not difficult to discover the reasons which postponed action on it until it is now too late to hope for its passage.

The commission appointed by the Governor to codify the game laws did not confine itself closely to the work for which it was established, which was "to revise and codify the laws of this State for the protection and preservation of fish and shellfish and of birds and quadrupeds." It went outside of this defined and limited work, and attempted to legislate out of office the present Fish Commission. By this action it drew upon the bill as originally submitted the hostility of all the Fish Commissioners, who naturally objected to the star which was thus cast upon them and upon their work. The time taken up in hearings before the game law committee, which should result in eliminating this provision of the bill, caused the delay which has led to the failure of the measure.

If the codification commission had confined their labors to the game and fish laws and to nothing else, their bill, with some minor modifications, would no doubt be to-day the law of the State.

The laws on our statute books with regard to fish and game are a disgrace to the State and it is high time that they should be changed for the better. Next year an organized effort should be made to put through the Legislature a bill, which shall simplify and improve them.

SNAP SHOTS.

A CORRESPONDENT writes: "I leave home to-day for my thirty-ninth annual spring trip to the dear old Adirondack woods and waters." Our correspondent "Are-far" asked, the other day, what old men who had never gone fishing had in memory to amuse themselves with. Surely our friend of the thirty-nine annual fishing trips to the Adirondacks—if he shall ever confess to old age—will have a rich store of delightful reminiscences.

THE FOREST AND STREAM notes with pleasure that it is to have for neighbors Messrs. Hartley & Graham, who are about to remove from their old stand in Maiden Lane to Nos. 313-315 Broadway, just across the street. The vicinity of this office is every year coming to be more and more a center for the sportsmen's goods trade; ever since we came here, of course, it has been the center from which has gone out the best of sportsman's literature.

The Sportsman Tourist.

DUCKING IN THE MOUNTAINS.

SOUTHWARD, ever southward, to the summit of the great divide, where the snows lie deep, where the rivers run, some to the north to lose themselves in inland lake, some to the east or south to mingle their foaming waters with the muddy Colorado. Here and there amid the great snowy billows rise white sentinels that, far above the timber line, collect the fleecy clouds above their majestic heads. And the rivers that cut their way out of this great wilderness make the grandest cañons to be found on the continent. Yonder the Kanab hews mighty parapets from the barrier walls of trachyte; there the Virgin boils and tosses over granite boulders; there the receding banks make parks along the picturesque Wa weap, and, far to the south, far as the glass can spy, beyond the Buckskin plateau, the Grand Cañon of the monarch stream stands—the crowning wonder of this mountain land.

Not on the old Thessalian hills, but here did Titans fight and Ossa pile on Pelion. Aye, and before the rule of Kronos, here dread Chaos, Nox and Terror had their thrones. Shapeless, sombre, sublime was the waste they left—awful in its solitude, peerless in its planless grandeur. Age followed age; rocks crumbled and the warm wind from the southern seas breathed the breath of life upon the cheerless scene, until the hills were covered with a mantle of pine and carpeted with mosses and ferns and the great timber district of the middle Colorado assumed its present shape. But why should I attempt to describe this region that the Powell expedition opened to the view of the world—this region where winter and summer are at endless warfare, where the perfume-laden breezes from the Mexican coast beat forever on the banks of eternal snow and where frosty gales are lost on the cactus and yucca-strewn desert?

This great, timbered angle of the Rockies occupies an area 100 miles in length by 60 in width. It is unsettled and the few saw mills that have been built along its borders have scarcely made one respectable clearing. Game? Well, some. You can find deer, bighorns, bears, lions, wildcats, Mexican lynxes, beavers, wolverines, dusky grouse, western ruffed grouse, sage hens, quail, ducks, geese, wild turkeys (these from Buckskin plateau southward) and trout. You can find Utes and Pah-vants slaughtering game by wholesale, and zealously guarding their "rights" against all intruders. To one who can speak their language they are inclined to give every privilege, and to a "Mormon" they are invariably friendly, but a stranger gets run out of the country with little notice and less ceremony. It seems almost time for these Indians to be converted (*volentes, volentes*) into law-abiding citizens. Only last week I knew of a man going a few miles into the foothills and bringing back fifteen deer that he had found in the deep snow. Of course it was wrong and he knew it, but if he had not slaughtered them the Indians would have done so for their hides and the meat would have been wasted. There is a trout law, but the Utes dam the streams, divert the brooks from their natural channels and shovel out the spawning fish. What better can you expect of their white brethren? I have ceased to be angry and expostulate. I am "clean" disheartened at the outlook.

Day after day there have been hours of snow and hours of sunshine. The heat has grown stronger, the mercury has climbed higher, the ice has broken on the rising brooks, and the snow in the valleys has given place to mud. It is spring. You can fool the geese, you can fool the robins, you can fool the ground hog and you can fool the freshly budded trees, but you cannot fool a beaver nor can you deceive a sprigtail. Last Friday, Feb. 27, a flock of sprigtails sailed northward over the mountains into the upper Sevier valley.

I did not imagine that there could be much sport in duck hunting on a swift, tortuous mountain stream. I was certain that there could be no such fun as is to be found along the Platte or upon the Missouri or Sacramento bottoms; but ducks are ducks the world over. Early Tuesday morning John T. brought his cart to the door and we started down the valley. I had a lot of shells in the pocket of my hunting coat. My gun and outfit were on a freighter's wagon somewhere down the Sevier, but coming southward at the rate of fifteen miles a day. However, John borrowed the only breechloaders in the settlement. As luck would have it they were both 12-gauge, so we were fixed. His was a "pump," while mine was one of those rusty single-barreled nondescripts that sometimes goes off at half cock, and sometimes refuses to go off at full cock; that sometimes is provocative of profanity and that does best execution when used as a club. After riding five miles we turned down to the river, tied the horse in a fence corner, left our lunch in a flour sack on the seat and made our way through mud and snowdrifts to the water's edge. As a fortunate omen, above us northward sailed a flock of geese; eleven answered to the name *Branta canadensis* and one, the second in line, was a white-fronted goose.

The Sevier at this point was open, with steep banks from 3 to 8 ft. high. It was turbid, swift and filled with floating ice. It made more bowknots in a given distance than any stream of its size in America. In the great bends, where the flow was more gentle, beneath the shelter of the wind-breaking banks, the ducks were sporting. Here and there were little clumps of willow, but the principal protection was from knee-high sage brush. For half a mile we walked without seeing a feather. Then on a bend below us we saw some bright objects bobbing up and down. We stole up as cautiously as possible, but before we were within gunshot four or five of them flew up. Supposing that no more were there we walked boldly to the brink and from the base of the bluff at our very feet a large flock raised. John was so taken by surprise that he forgot to raise his gun and mine came up only through force of habit. There was a snap, but no report, and I was so mad that when I did succeed in getting the gun off I scored a clean miss. As we went along the ducks kept rising before us, but always just out of range. At length John bent over and commenced to run. An instant later he shot and a pair of blue-winged teal fell as the first trophies. Then five mallards flew overhead. John banged away and a fat female fell in the meadow 100 yds. away. He had now three to my none, and I was getting my Irish up, but it did no good, for we walked nearly two miles without seeing another bird.

At length John pointed out a line of willows far to the left.

"There," said he, "is a warm creek, where there are always lots of ducks. We will go down to its mouth and then follow it up to the spring."

Down the warm creek rode a horseman on a white horse. We have a special reason for remembering him. In all probability he would scare up whatever ducks were over there. That is just what he did. John and I were sitting on the bank, when there was a rustling of wings and, within 20 yds. of us, a tremendous flock of teal fluttered to the water, balanced themselves and prepared to settle. Bang! bang! whoop-la! John made a miss, but I dropped one in the water and one in the sage brush on the further bank. The current carried the first out of reach, but I was determined to secure the second. The river was about 40 ft. wide, and only two weeks before I had waded it 50 miles below this point and the water had not reached the top of my hip-boots. It would be only knee-deep here. One step, two steps, three steps. Oh! I catch my breath, gasp, and just manage to keep my head above the water and the floating ice. Evidently the melting snow had exerted a decided effect upon the treacherous stream. Well, I got over and came back with that doggoned little teal. After getting wet I'd have crossed if it had been for only a sparrow. Then, as there was no bridge within 10 miles, I plunged in and rejoined the smiling John. Revenge is sweet, and to pay for his levity John scored three consecutive blanks. Oh the perverseness of inanimate things! Up to this time the sun had shone brightly, but now he hid himself, and one squall followed another in rapid succession. To dry was an impossibility, and I became terribly chilled. My fingers were so numb that I could scarcely cock my gun or pull the trigger. But I kept constantly in motion, and John T. did most of the shooting, which grew better as the snow and wind increased. We were enabled to get closer to the ducks, and they arose in confusion and made short flights. At one bend we found the river perfectly black with teal. As there was no way of stealing upon them we ran along the chord, a distance of some 60 yds., intending to intercept the flock as it came floating by. When we reached our vantage point a flock arose. As we blazed away John remarked that he had never before known ducks to swim so fast. We each dropped one into the river, and, as I could not get any wetter or any colder, I played retriever, and made a most excellent water spaniel.

The warm creek yielded its quota, and when we started on the four-mile walk back to the cart the game bag was more than heavy. The last shot of the day was a wonder. The snow stopped falling for a few minutes, and on a little pond a quarter of a mile away John espied a flock of big ducks. I was too stiff to crawl or even to lift my gun, so John played a lone hand. He did it in elegant shape. There was only a solitary sage brush to hide him, but he flattened and crawled like an adder. At length he stopped and raised his head. I thought that he was out of range, but at the report two ducks dropped dead in the mud on the further side of the water. One was the finest greenhead I have ever seen, and his mate lay beside him. The distance from the sage brush, where John stopped, was 93 good paces, and the shells were loaded with 3 drs. of powder and 1 1/2 oz. No. 4 shot. The shades of night were falling fast when we reached the cart, to find that our lunch had been stolen by the man on the white horse. I still have a warm place in my heart for him. John helped me to my seat and held me in place, for I was too nearly frozen to look out for myself. All I could do was to shiver and with chattering teeth pray that I might land somewhere where a simple prescription could be compounded; but no such luck was mine. At 7 o'clock we drove up to the door, and in a few moments John's kind mother was dosing me with ginger tea and cayenne pepper. A change of clothes and an hour before the glowing fire-place restored the circulation, and the next day I was in excellent condition to enjoy the duck dinner.

All the readers of FOREST AND STREAM are duck shooters, but I imagine that few of my confreres have enjoyed ducking at an altitude of 6,500 ft. above the sea level. I did not know that the Anatidae were so abundant in this region, but they winter only 60 miles away in the streams east and south of the divide, where the climate is as warm as that of Louisiana. The Escalante, Paria, Kanab and Virgin rivers are covered with ducks during December, January and February. But the habits of these western ducks differ from those of the aristocratic dweller upon the Calumet marshes or upon the shallows of the Chesapeake. Here there is no feed in the streams and ducks follow the example of geese and take their meals in the stubble fields. The mountain lakes are full of lemna and algæ, and with the addition of an occasional trout, an ordinary duck can make asquare meal. On the lakes, however, ducks and geese are migrants. They do not enjoy the gloomy environment of somber pines. Along the upper Sevier mallards and teal are found during the entire year. If a cold snap freezes the river, an hour's flight over the divide brings them to Dixie, and just as soon as the ice breaks they return. Sprigtails are migratory, making a very brief visit and I am told that, in a week or two, there will be a few canvasbacks on the stream.

There are very few shotguns in this country, so the ducks are comparatively unmolested and they are too small game to attract the noble redman, so those of us that do enjoy ducking can have a genuine feast. I have selected half a dozen lakes and streams where deer, trout and ducks are abundant and where there is plenty of big game. These pools and preserves I intend to put on the market when I return to civilization, and I think the scheme ought to be as profitable as the ordinary mining sale, especially if the mine is salted. However, I do not believe in a blind sale, and I wish it were possible for the editorial staff of FOREST AND STREAM and as many of their friends as they could induce to make the trip, to come up here to this out-of-the-way land of wonders to enjoy rod, rifle and gun, to drink in the glorious scenery and to find in every breath a new life. Friends, the latch string hangs out. SHOSHONE.

PANGUITCH, Utah, March 5.

Since writing the above I have learned that one Mike Lloyd has been appointed game commissioner for this county of Garfield. He has not yet qualified but I understand that it is his intention to do so. I have not the

honor of a personal acquaintance with Mr. Lloyd but I wish to give him a little friendly advice.

Don't qualify, Michael, unless you intend to see that the law is obeyed. If you enforce the game laws you will incur the ill-will and the anger of your neighbors; if you close your eyes to the wanton destruction of deer and trout you will only excite the scorn and derision of the very men that it is your duty to watch. There is excellent fishing in your meadow on Panguitich Creek and I suppose that you will never refuse any one permission to catch enough trout for one meal, but what are you going to do about the carloads of trout that you know are caught with seines and giant powder and, regardless of the season, are shipped to Salt Lake? What are you going to do with your friends that pitchfork trout out of the brooks when they go up to spawn and then salt them down by the barrelful? You would not begrudge a deer to a family that you know is out of meat, but what will you do about the wagon loads that you know are slaughtered for market every month in the year?

Speak up, Michael. Be a man. Enforce the law, whether you cinche friend or foe. The country at large and Utah in particular needs the example of a few fearless, honest game wardens. If you are such a one your praises will be sung by every true sportsman from ocean to ocean. You may have the old laurel wreath of Cincinnati for your brow and may wear the little tomahawk of George Washington in your cartridge belt. But if not, bah! The sooner you get a corner in that lot that was originally homesteaded by Ananias, why the better you will suit SHOSHONE.

A STORY OF THE FIRST RAILWAY.

I PASSED the winter of 1832 in Augusta, Georgia. It was the year when South Carolina proposed to nullify the revenue laws of the United States, "peaceably if she could, forcibly if she must," always provided that Georgia would join in the act. In February the annual race meeting was to be held in Charleston, and this usually brought the leading men of the other slave States to that city, where the scheme was to be laid before them. A party of Augusta gentlemen were going down to these races on horseback and I was invited to join them.

At that time there was an excellent breed of saddle horses in Georgia, called the "Cherokee pony," being raised in the upper country, then occupied by the Cherokee Indians. It is now a thickly settled region, with Atlanta for its chief city, but the Indians have long since disappeared, along with their ponies. I owned one of these ponies, a very handsome animal, about twelve hands high, a compactly built bay, with long tail, mane and foretop, very easy in all gaits, gentle and spirited. I had ridden him in fox chases, and he could generally keep up with a field of big horses, and would jump any common fence. I have ridden many horses in many lands, but I think "Little John" was the best saddle horse I ever rode.

The distance from Augusta to Charleston is 140 miles; there were no railroads then, although one had been begun from Charleston toward Augusta, and it was the first railroad in the United States which was operated by steam power. On a fine morning in the latter part of February we started, six in number, with a change of clothing in our saddlebags, down south through the great tract of pine forest which lies between Augusta and the coast, thinly settled, with roads only suitable for horsemen. We made about thirty miles a day, and ate and slept usually in some log cabin by the roadside. There were few villages or taverns, but almost any planter or farmer would take us in for the night.

One day as we approached Charleston suddenly there appeared on the road an elephant, coming slowly toward us flapping his great ears. This apparition was more than our horses could stand, and they all bolted into the woods with their riders, and refused to be comforted until the monster had passed. A few hundred yards further we met the caravan of wild beasts to which the elephant belonged—as the wagons were drawn by the familiar mule our horses passed quietly, but as we got abreast of them from one of the wagons came the roar of a lion, with the growls of other beasts. The bolting process was renewed, and off went our horses in a panic.

Hardly had their nerves become quieted again, when we saw in the distance the new railroad, finished some ten or twelve miles out of Charleston; it was built upon piles, longer or shorter, according to the nature of the ground; sometimes in crossing a ravine the rails were 20 ft. from the surface. Our track ran near this L road, and soon a horrid shriek as from twenty panthers was heard in the woods. By this time we were nervous. Elephants and lions we had heard of, and some of us had seen them, but what monster was this whose screams we heard? Presently it came in sight, flying aloft through the air, and breathing fire and smoke, and again our frightened steeds became unmanageable. And in fact I think that some of our party were as badly frightened as their horses. If any of my readers are old enough to remember the introduction of locomotives, and how they felt at first sight of them, they will perhaps understand our sensations that day in the pine woods.

A mile or two further on we came to a broken wagon by the side of the road, and near it sat a Georgia cracker smoking his pipe. On being asked what was his trouble, "Well, stranger," was the reply, "I've often heard tell of nullification, and now I reckon I've saw it for true."

We found Charleston full of the notable men of the South, bent upon politics and the sports of the turf. I attended the races every day and saw the finest horses of that region. The methods were different from those of the present day. Instead of running two and three-year-old horses in short races of a few furlongs, as now, these old-timed turfmen seldom trained a horse till he was four years old, and then run him in heats of 1, 2, 3 or 4 miles—best two out of three, or three out of five—so that a horse had to run from 3 to 20 miles before the contest was decided. The great event of the week was a match race, four mile heats, between the gray mare Bonnets of Blue, belonging to Wm. R. Johnson, of Virginia, called the "Napoleon of the Turf," and the chestnut mare Clara Fisher, belonging to Col. Singleton, of South Carolina; this for \$5,000 a side. The Virginia mare won in two straight heats, the quickest being 7:45. I also saw a little chestnut mare (name forgotten) belonging to Wm. R. Johnson win the regular four mile race in three heats, equal to 12 miles, and she was ready to run

again two days after. How many of the fast youngsters of the present day could do this? The professed object of horse racing is to improve the breed of horses, and it would seem that the progeny of a four-miler, who was not put on the turf till he came to maturity, would be a stouter and better animal than one whose sire began to run at two years and never ran over a mile. But a race horse nowadays appears to be merely a betting machine.

The politicians of South Carolina, as well as her horses, were unsuccessful on this occasion, for the Georgians would not join in nullification and President Jackson put a stop to it for the time. S. C. CLARKE.

OLLA PODRIDA.

I WANT to join those who have been of late expressing their satisfaction with *FOREST AND STREAM* as a substitute for the pleasures of the field when you can't go hunting or fishing. I too feel as if I ought to say something grateful, graceful, if I could, to the writer of Antoine Bissette's letters. I never heard the lingo, myself, but the beautiful consistency with which "Antwine" murders good "United States" is evidence that the work is well done. And we can all enjoy the pleasant satire, that "long American fellow" being simply delicious.

But the thing that sets me going just now is a wish to say something on a subject mentioned several times of late and discussed rather more at length by your correspondent "Dudley" in the last number. This is the value of hunting and fishing as a relaxation for professional men. But it has just occurred to me that after all it is idle to discuss this matter in these columns. Those who need to be convinced are the ones who have no time to read such literature as *FOREST AND STREAM*. Still a few words may not be amiss, as they might be seen by some one not yet entirely persuaded. It seems to me that the convincing answer to all objections is that more actual work can be done in the course of the year, not to speak of a whole lifetime, by thus keeping up the balance between mental and physical forces than by constantly digging. This I believe capable of full proof. I have seen it tried more than once. But if there is any question as to the quantity of the work there can be none as to its quality. In those professions whose demands are purely upon the mind the importance of a sound condition of the nerves cannot be over-estimated. But the constant destruction of nerve tissue calls for a variety of rich and nourishing food, and the strain upon the digestive organs being so one-sided they get avary and the brain begins to work at a disadvantage.

But there are other considerations. No man is fairly himself or getting his just proportion of satisfaction out of life, when he is suffering from even incipient dyspepsia. The false coloring which a morbid condition of the physical man throws upon men and motives hinders much the prompt and efficient discharge of professional duties. A Methodist Bishop who is well-known all over the United States is an enthusiastic fisherman. He says he would have been a hunter too but for being near-sighted in his youth. When his over-conscientious friends ask him how he can afford to spend so much time on the river bank he replies: "As a means of grace, sir." Lawyers, physicians and preachers; all whose success depends upon their dealing with men, especially need to have themselves thoroughly in hand, so that no personal element may mix with their judgment of motives and character.

Nothing can be compared to field sports in the way of recreation. Of course the same amount of mere physical exertion can be easily had by artificial means, but this is only half, perhaps less. No mind that is trained to close and intense application can suddenly leave off and do nothing. While one swings the dumb bell or takes a constitutional, the tough question, be it a sermon, a brief, or a battle with pneumonia, riots in the brain and will not down. The only show is to give the mind something else upon which to work. This is most successfully done in the effort to circumvent a wily trout or make the most of a day's shooting. The intensity with which a genuine sportsman will focus his trained faculties on such problems is refreshing to a degree, and sometimes supremely funny.

These are some of the things I say to my friends who seem surprised to see a preacher and a missionary put on a ducking coat and a slouch hat and "take to the woods." And to myself I say that if ever there was a position in the world which demanded a little communing with nature from time to time it is the one I am trying to fill. Even if I thought it interfered a little with my present success in my work, which I do not, I should still not deny myself that which I know to be essential to my properly living the long and laborious life that I believe I am entitled to look forward to.

It is close season with us now, not that we have any laws, but on account of the heat and because no true hunter will shoot birds in breeding time. A few weeks ago two of us in a sort of farewell shoot got about six dozen doves and quail in a day's shooting. The ducks are gone to Canada, I suppose. May they have a safe return. If I don't get some panther and leopard shooting next fall I shall be disappointed. I know where they are and how to get there. It is only a question of opportunity. Mine host of Angostura has given me a standing invitation to come and shoot deer, of which he has plenty. AZTEC.

SAN LUIS POTOSI, Mexico.

A LABRADOR EXPEDITION.—Prof. Leslie A. Lee, of Bowdoin College, who was chief naturalist on the U. S. Fish Commission steamer *Albatross* during her cruise from Norfolk to San Francisco in 1887-1888, is to lead a scientific expedition to Labrador during the coming summer. The expenses of the excursion will be met with funds raised chiefly by the alumni of the college, but the personal expenses of the members will be paid by themselves. The expedition will study the Esquimaux between Hamilton Inlet and Cape Chudleigh and make general collections, which will be studied after the return of the party. It is hoped that the expedition will be able to cover a distance of 500 miles among the comparatively neglected Esquimaux of the region. The collections of ethnological and other natural history objects, besides the determination of some doubtful geographical questions, will undoubtedly prove interesting to the public.

A BOOK ABOUT INDIANS.—The *FOREST AND STREAM* will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

Natural History.

MARINE RESERVATIONS.

THE project for the establishment of marine reservations in the Pacific ocean, which was outlined in last week's issue of *FOREST AND STREAM*, has been received with the greatest interest by naturalists, and so far as we have been able to learn, there is but one opinion as to its desirability. We print this week comments on the subject from several gentlemen who are peculiarly fitted to speak intelligently about it. No one knows more about the rapidly with which our marine carnivora are disappearing than Dr. J. A. Allen, whose important volume on the Pinnipedia (seals and walruses) must long remain the standard work on this group. Dr. Dall is well known as one of the earlier explorers of Alaska, and no doubt to-day knows more about that Territory at large than any other single man in the country. Mr. Elliott, whose important monograph on the Seal Islands of Behring Sea, really contains all that is known about these islands and their fauna, has resided long in these and other islands in this sea, and has an exhaustive knowledge of all the larger mammals which are found on them.

We are glad to be able to present to our readers the opinions of these experts.

It would seem that the only possible objection to the plan, which we outlined last week, will come from the walrus hunters, who, like the buffalo skinners of a dozen years ago, want to secure the last one of the great beasts left alive; and from those ignorant fishermen who desire the extermination of all seal life, because seals destroy fish. These men do not know that the seals—as shown by Mr. Elliott in *FOREST AND STREAM* some weeks ago—do a great deal toward preserving the valuable food fishes of Alaskan and other waters by killing enormous numbers of the dogfish, the most destructive enemy that the cod, hake, pollock, herring and young salmon have to meet. There is every probability that the amount of useful food fish which the seals destroy is insignificant in comparison with what they preserve.

Below we print the letters already referred to:

Editor Forest and Stream:

I am delighted to see your hearty editorial indorsement of the suggestions of Prof. S. P. Langley, secretary of the Smithsonian Institution, favoring the setting apart by the United States Government of certain islands on our Pacific Coast as Government reservations for the preservation of some of our larger marine mammals, for such action can be taken none too soon.

The suggestion of making Amak Island, on the Alaskan coast, a reservation or place of refuge for the Pacific walrus (*Odobenus obesus*) is an exceedingly proper one, this island being one of their favorite places of resort, and so situated as to be readily protected apparently from invasion by the walrus hunters. The sluggish nature of this animal and its unwieldy form render it an easy prey to human enemies, and its wholesale slaughter for commercial purposes threatens its early extermination.

During the last half century they have decreased from herds of thousands to a comparatively small number, distributed in little groups lingering precariously in out of the way places, to which they are pursued and relentlessly slaughtered. Amak Island also seems favorably situated for the sea otter (*Enhydra marina*), which is also evidently approaching extinction.

The Farallones, off the California coast, opposite San Francisco, have long been noted resorts of the northern sea lion (*Eumetopias stelleri*) and the California sea lion (*Zalophus californianus*). These islands belong to the Government, and can be easily patrolled for the protection of the animals resorting to it. While these two species are of comparatively small commercial importance, they are more or less hunted for their oil, and doubtless many are killed wantonly. Their numbers, however, are annually decreasing, and it is only a question of time, in the natural order of things, when these most interesting forms of seal life will go the way of our larger mammals generally, unless the Government intervenes for their protection—a sacrifice to man's avarice or to his insatiable desire to "kill something" for the mere sake of killing.

It is to be hoped that Professor Langley's letter and recommendations to the Secretary of the Interior, published in your issue of April 23, will promptly meet with the favorable consideration their importance so evidently merits, and that our Government will provide suitable marine reservations to serve as places of refuge for, and thus prevent the extinction of, some of the most notable and interesting of our aquatic mammals, which otherwise will soon swell the list of species needlessly exterminated by man.

J. A. ALLEN.

AM. MUS. NAT. HIST., New York, April 25.

Editor Forest and Stream:

The preservation of any well known form of animal life from extinction is a popular idea among all civilized people, especially among Anglo-Saxons. Your recent editorial on the proposed Marine Reservation in the waters of Behring Sea and off the entrance to San Francisco Bay is one that has doubtless aroused the interest and approbation of all readers.

The case of the Alaskan walrus, which is now threatened with extermination, is one that is decidedly pressing, since the combined hunting of this animal by our own people and the Alaskan natives has during the last twenty years reduced the herds so much that unless some refuge is left for the remnant the end is at hand, and the skin or two more in the National Museum will be the last evidence of the existence of *Odobenus* which we will have.

Although only a few hundred walrus haul out annually on Amak Island, yet it is due to the fact that they are regularly hunted there as elsewhere in Alaska; if not disturbed on Amak, then the herd would be recruited by large numbers, which, having been driven from Port Moller, Oogashik and the Togiak region, would speedily recognize and visit Amak Island as a quiet and safe resting place.

While it is true that the walrus does not breed except on the ice floes of Behring Straits and the Arctic Sea, and where it is practically impossible to prevent whalers from getting them, except as the fog and weather from year to year shall interpose to save them, yet I believe that this reservation of adult and young walrus life at

Amak would be sufficient to tide the species from year to year over the danger of extinction.

The walrus is evidently long-lived, and although sluggish, is still a watchful and cautious traveler when in the sea; it is only when hauled out on the rocks or sand beach that he becomes an easy prey to man or any other adequate foe, like the polar bear for instance. Let him rest in security at Amak and I believe his race will be preserved from extinction.

But the fact that Amak Island was reserved for this purpose would be duly advertised, and unless an American keeper, well equipped with the simple belongings of civilized life, was placed on the island, it would be raided worse, far worse, and oftener than it has ever been thus far.

The memoranda of Prof. Langley seems to cover the ground very well in my opinion, and nothing better can be said as far as I understand the subject.

HENRY W. ELLIOTT.

SMITHSONIAN INSTITUTION, April 27.

Editor Forest and Stream:

It may not be amiss for me to say in regard to the proposition to reserve Amak Island from the pot-boilers who are destroying all our larger and more interesting mammals and birds, that I am heartily in favor of it. When I visited the island in 1868 I found it a dead volcanic cone without a harbor, covered with luxuriant herbage near the shore, and with a herd of about 300 walrus hauled up on a sand and shingle beach near the sea. The only other animals were sea birds and a few blue foxes. It is the only place in Alaska where I have seen what appeared to be young and female walrus associated with old males. Walrus Island, of the Pribiloff group, is a sort of walrus club house, where old bald males associate with each other exclusively. On the sand islands at the mouth of Port Moller I am told by the head of a walrus party who spent a year there, killing them, that only males were found. At Amak Island the dangerous character of the navigation, from myriad rocks and reefs, had preserved the little band almost free from fear of man. At a distance we saw the steam rising from their hot bodies in the frosty September air. Coming nearer they gradually slipped into the water and played around our boat, rising on each side of us upright in the water with their strange crimson eyes and funnel-like nostrils fringed with stubby bristles; then diving under the boat to rise on the opposite side and stare at us again. I do not know how many survive from that time, but if any there are by all means let them be preserved!

WRENS VS. SPARROWS AND BOYS.

ON May 3, 1890, our little friends the house wrens (*Troglodytes aedon*) returned and undoubtedly intended to occupy again the little white cottage situated in the apple tree that they had occupied for the past two or three seasons. But, alas! the apple tree had been blown down during a severe wind storm, and when we cut it up into firewood we neglected to place the little white cottage in another tree. But our little friends had come to spend the summer months and they took possession of a much larger domicile that had been erected for our more sedate friends, the bluebirds, who had been evicted by the English sparrows, who, however, did not occupy it. But the wrens had not known of this and they commenced moving in their household goods, when they also received notice from the sparrows to vacate, which they did, and took possession of an old sparrow house on the grape trellis of our next door neighbor. Matters now seemed to be moving on smoothly until one morning about two weeks after they had taken possession, we saw an English sparrow entering their abode with a straw about 2 ft. long.

In the meantime we had found the little white cottage and placed it in another apple tree, to be in readiness for our friends another season, little expecting that they would require it for the present. But the next morning after seeing the English sparrow moving in their old domicile we saw Mrs. Wren enter the little white cottage and Mr. Wren perch himself on the top of it and pour forth his song of exultation over the victory over their garrulous and pugnacious enemies, knowing by past experience that no *Passer domesticus* could pass the threshold of the little white cottage, the entrance of which was a tin round hole.

But now our little friends seemed to have difficulty in finding material enough to furnish even the small back room of the old house, as it was nearly two weeks before they were satisfied with their efforts. We had called on them whenever they were not at home. But one morning we saw Mr. Wren on top of the cottage with his wings drooping, bill pointing upward and wide open, his throat throbbing and tongue vibrating, and we knew that he was again exulting over some event (the writer does not hear the songs of birds any more.) Shortly after, when we thought that they were not at home, we called at "the little white cottage," and looking in we saw in the nest a little whitish-brown egg. The next day there was another. The third day three, and at the end of the week there was the usual complement of six. A few days passed and we did not see our little friends. But supposing they were so busy with their household affairs that we thought little of it; but after another day or two had passed without seeing them, we thought we would call and see if there was anything wrong, and found that the nest was empty with no signs of its contents in "the little white cottage." It had been ruthlessly robbed.

We surmised that our next door neighbor's boys might know something about the robbery and offered them \$5 if they would give information as to who had taken the eggs, but they did not seem very anxious to earn the money, which I suspect they might easily have done. It is again about time for our little friends to return from the South. But we can hardly expect them to occupy "the little white cottage." As an incentive for them to do so, we will put a good strong lock on it and warn our neighbors' boys not to meddle with it in future.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 280 pages, price \$2.50. For sale by *FOREST AND STREAM*.

HOW GREEN MOUNTAIN FORESTS GO.

CHARLESTOWN, N. H., Feb. 21.—*Editor Forest and Stream:* I much fear the Green Mountains are to lose their title to their name, if an opinion may be formed on the observations made in a recent trip among them. To be sure, the trip led me right into scenes tending to create such a conclusion, for I went on a business errand to examine the working of sundry engines and boilers in the sawmills on the higher slopes of the main range, above the reach of the available water power, which has long since made into boards and scantling the available timber on the lower hills and is now superseded by steam engines, the fuel for which is supplied by the slabs and sawdust, which were formerly thrown into the trout streams.

Leaving Brattleboro at 6:30 P. M. with a companion, who had furnished the engines and machinery for a number of these mills, we reached the little village of Londonderry at 10, and were soon asleep, getting rested for the morrow. The next day was spent in the examination of a large mill in L., about four miles from the village, in a steady drizzling rain, which we did not mind while under cover, but which destroyed all the enjoyment of the beautiful mountain scenery through which we drove in getting up to it. This mill was busy working up beech, birch and maple logs into furniture stock.

It cleared in the evening, and we anticipated a pleasant drive across the mountains the next day to Dorset on the west side, but were disappointed. When we started early in the morning, it was gray and dark again, and began to snow before we had gone a mile, and soon developed into a "howling blizzard." We kept on up into Peru, where we came to a mill which we intended to look at on our way, when with frost bitten cars and faces we drove into an open barn door, blanketed the horses as quickly as possible, and made a beeline for the nearest house, which proved to be that of the owner of the mill. After thawing out over the kitchen stove for half an hour, we went to the mill and found it idle. The owner said he did not make slabs and sawdust enough to run his boiler, and he was not going to buy hard wood for fuel. He was saving spruce lumber. He dissuaded us from the attempt to cross the mountains in the storm, and tying our hats down over our ears with our mufflers we turned our horses' heads and were back in Londonderry to dinner.

In the afternoon we took a passenger car attached to a freight train and started for Brattleboro, stopping at every station for a load or two of lumber, among which we took on two car loads of huge rock-maple logs, 18in. to 2ft. in diameter, destined for wash rolls in the bleacheries at Lowell. We got on such a load that the engine could not pull it all over a rise, where the West River makes a long turn through a rocky gorge, and our engineer "broke the train" and went off with half of it over the hill, leaving us waiting until he came back, which he did in half an hour, and got us down to B. in time to take the up train for Rutland which we reached at 10 P. M.

At 6 the next morning we were on the cars again, on the Rutland and Bennington Road. When we reached Danby, our destination, it was just coming daylight.

We soon secured a pair of horses and driver, with a "box-sled" from the office of the sawmills, which is here in Danby, and started for the deep gorge of one of the branches of Otter Creek, for Mt. Tabor. It was clear and still, but the mercury was down to 10° below zero, and we tied our hats down over our ears again, drew the robes well up round us, and enjoyed the climb.

There was just room up the ravine for the brook and the road, and the latter wound its way up among the rocks and trees, in a manner which was picturesque enough, and it must be a lovely drive in June. We met occasional sled loads of lumber and charcoal coming down, and at one rocky corner had to wait some time while the drivers of the charcoal sleds chopped tracks through the ice to keep them from "slewing" over into the stream. At another point we found another lumber sled hanging on the edge of the road, the horses having gone over into the water the day before. Luckily no bones were broken, and they were taken out safely, and when we came down at night the sled had been carried away.

However, in spite of delays, we reached the first set of mills, in an elevated plateau at the base of Mt. Tabor, in good order, and after thawing out at the "store," which the Lumber Co. keeps there to supply their workmen, and examining the huge piles of spruce logs, we went on three miles further to the upper mills, getting there in time to enjoy a lumberman's dinner in the logging camp, of fried salt pork and potatoes, brown bread, "biled" tea, with a raw onion to give it a relish. "You know how it is yourself," and you can believe in that cold mountain air that simple dinner tasted better than "all the flesh-pots of Egypt!" The afternoon gave us time for our examinations, and slowly and carefully we picked our way down the steep mountain road to Danby, my companion pointing out to me on the way the big trees by the roadside, to which he had attached "blocks and tackle," and applied "man power" to help the ten pair of horses which were attached to the wagon, last October, to pull that big boiler up the mountain.

We reached Rutland again at night, and the next day drove north four miles to Mendon over a level road on wheels. Then we turned sharp up another gorge, not so long or so steep as the one we ascended the previous day, and at the end of three miles more found ourselves in an amphitheater, surrounded by "Pico," Killington Peak and Shrewsbury mountains. Half a mile more up the base of one of the opposite hills brought us to another mill belonging to the same parties as the one we had visited the day before, and just erected, right in the edge of an unbroken forest of old heavy timber.

These parties have bought all the timber, as I was told, on 30,000 acres of mountain, and are preparing to convert it into dollars as rapidly as possible.

I fear the dwellers on Otter Creek will suffer from summer droughts for many years to come until these forests are grown up again, for it is probable that they will do so in the course of another century, for the land is too steep and rocky even for pastureage.

This last mill was working hard wood the day we were there for furniture stock, wainscoting and boards for the Brandon Scale Works. Everything was going on satisfactorily, and while my companion took the measures for a new set of grate bars I went out in front of the mill, sat down on a big beech log and enjoyed the prospect.

Right in front of me rose the sharp, clear peak of Killington, white against the blue sky, a little to the left was the rounded dome of Pico, and the longer and lower slopes of Shrewsbury Mountain laid to the right, dark with their heavy spruces, while Pico and the Peak had been caught in the rain and blizzard of the previous days and rocks and trees were covered alike with a snowy coating and only distinguishable by these outlines.

I sat there some time enjoying it all, for the weather had moderated sufficiently to make it very pleasant, until my companion joined me, with the wagon, and we made our way back to Rutland, where there was no snow, though we found four feet of it on the mountain. Had there been eight days in the week instead of seven I would have run up to Danvis and inquired for those thirty-seven coons of Antoine's, but it was Friday night and I had to be home the next day, so I could not spare time. I had been up in Peru and that region thirty years ago trout fishing, but never got up there in mid-winter before, and now hope that you and some of your readers may enjoy my trip half as much as I did.

VON W.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

Then stood we shivering in the night air cold,
And heard a sound as if a chariot rolled
Groaning adown the heavens; and lo! o'erhead,
Twice, thrice the wild geese cried, then on they sped,
O'er field and wood and bay, toward Southern seas;
So low they flew that on the forest trees
Their strong wind splashed a spray of moonlight white;
So straight they flew, so fast their steady flight.
True as an arrow they sailed down the night;
Like lights blown off they vanished from the sight.
—From I. R. Pennypacker's "Gettysburg and Other Poems."

BORES AND SHOOTING QUALITIES.

Editor Forest and Stream:

Not long before the FOREST AND STREAM shotgun trials commenced I wrote you a letter upon several points connected with the subject, and mentioned, among other things, that my own experiments did not confirm the general opinion that, with equal charges of powder and shot, small bores give greater penetration than large.

In stating this, I referred to some experiments made three years ago with two Maynard shot barrels of 28 and 18 bore, a double English shotgun of 16-bore and a double muzzleloader of 14-bore. The Maynard barrels are of steel and each 26in. long, the 28-bore being muzzle-choked and the 18 recess-choked. The 16-bore barrels are of Damascus twist, 28in. long and both are recess choked so as to make a pattern of about 175 on a 30in. circle at 40yds. when loaded with 1oz. of No. 6 shot (270 pellets to the ounce). The muzzleloader has 30in. Damascus barrels of cylinder bore, making very close and regular patterns of their kind. For testing penetration I used straw boards placed 1in. apart in a rack. The trials showed:

1. That with very minute charges, such as are used by naturalists for collecting small birds, viz.: 20 to 25grs. of powder and 90grs. weight of No. 12 shot (1,272 pellets to the ounce), the 28-bore was greatly superior to the 18 in pattern and penetrated about double the number of boards. When No. 7 shot (370 to the ounce) was substituted the 28-bore was still superior, but not nearly to the same degree as with No. 12 shot.

2. When the charges were increased to only 1½drs. of powder and 4oz. of shot, the 18-bore made a closer pattern than the 28, and was equal and sometimes slightly superior in penetration with No. 12 shot. When No. 7 shot was substituted the pattern and penetration of the 18-bore were considerably superior. This was the case with both fine and coarse-grain powders.

3. When both barrels were tried with the largest charges that the 28 bore shells will hold, viz., 2drs. of powder and 4oz. of shot, the 18-bore was slightly superior in pattern and very decidedly superior in penetration.

4. The 16-bore with 2drs. and 4oz. gave the same penetration as the 18-bore and a better pattern.

5. When the 16 and 18-bores were each loaded with 1½drs. of powder and 1oz. of shots their penetration was almost exactly the same and the pattern of the 16 superior.

When the 14-bore muzzleloader was fired with the same charge the patterns were of course superior to those of the 16 chokebore, but the penetration was exactly the same with No. 4 grain powder and superior when both were tried with No. 2 (a finer grain).

The above detailed results were quite different from what I had expected. I was aware that a large bore with its own loads of powder and lead must be superior to a small bore, for the same reasons that a punt gun must be superior to any shoulder gun; but I had always heard and believed that a large bore with the loads of a small bore had less penetration than the latter, because the powder was not confined sufficiently to develop its force.

One conclusion arrived at was that naturalists' collecting guns need not be of the very small bores made in England. These are (in rifle gauges) .36, or about 90-bore, for 14 grains of powder, and .41 for 20 grains.

The 28-bore Maynard barrel, with 20 grains of powder and 90 of No. 12 shot, carried so closely up to 16 or 20yds. that hummingbirds could not have escaped, and at the former distance gave an average penetration of 9 strawboards. When tried at sparrows it killed them in a most satisfactory way. A naturalist when searching for small birds often has opportunities of shooting at hawks and other kinds that require heavier charges. It would then be advantageous to be able to use the shells of a 28-bore fully loaded.

During the past month I have been making a few experiments in order to find out the difference in penetrating power between a 16 and 12-bore. The 16, which weighs slightly over 7lbs., was the gun used in the first mentioned trials.

The 12-bore weighs 6lbs. 9oz. and has Damascus barrels 30in. long. The right is very slightly recess-choked so as

to make patterns of about 140 on a 30in. circle at 40yds., when loaded with 3drs. of powder and 1½oz. of shot containing 270 pellets to the ounce.

The left is muzzle-choked and makes patterns of more than 200 with the same charge. The penetration was taken with cardboards 1in. apart in a rack, the ends of which were guarded from injury by pieces of hoop-iron nailed on, leaving the exposed part of the first card 6¼in. square. (I believe this to be the most reliable of all tests when the cards are not so thick as to flatten the shot, otherwise, as sometimes with paper pads, the pellets driven with the greatest velocity would show the least penetration, although their effect upon live game would be the greatest.)

The powder used was Curtis & Harvey's No. 4 grain, the favorite size for shotguns in this country. The charges were measured from a powder flask, tapping it always the same number of times against the hip, which I have found to give accurate weights within a grain. Each charge of shot was carefully weighed. The size used was No. 7 (330 to the ounce when counted). It does not suit either gun (both being regulated for No. 6), but I loaded with the smaller size in order to economize the cardboards, which were difficult to obtain in sufficient quantity.

The distance was 40yds., and only those cards were counted which were pierced by three or more pellets in order that errors might not arise from an occasional large pellet.

The guns were first fired with 20-bore loads, viz., 2½drs. of powder and 4oz. of shot, and the results were:

* 16-BORE.			
Right Barrel.	Left Barrel.	Right Barrel.	Left Barrel.
No. of pellets through first card.	No. of cards pierced by 3 or more pellets.	No. of pellets through first card.	No. of cards pierced by 3 or more pellets.
33	13	25	14
9	12	15	12
28	13	13	12
Av. .24½	13½	Av. .17½	12½
12-BORE.			
7	12	21	13
3	11	20	13
7	13	5	11
Av. .5½	12	Av. .15½	12½

The ordinary 16-bore loads, 2½drs. and 1oz., were next tried and gave:

16-BORE.			
Right Barrel.	Left Barrel.	Right Barrel.	Left Barrel.
No. of pellets through first card.	No. of cards pierced by 3 or more pellets.	No. of pellets through first card.	No. of cards pierced by 3 or more pellets.
21	14	9	12
18	13	19	13
28	13	30	14
Av. .23½	13½	Av. .10½	13
12-BORE.			
11	12	13	14
15	15	42	16
7	12	19	18
Av. .11	12½	Av. .24½	14½

With 3drs. and 1oz. the results were:

16-BORE.			
Right Barrel.	Left Barrel.	Right Barrel.	Left Barrel.
No. of pellets through first card.	No. of cards pierced by 3 or more pellets.	No. of pellets through first card.	No. of cards pierced by 3 or more pellets.
5	12	16	13
12	13	11	13
18	13	13	14
Av. .12	12½	Av. .13½	13½
12-BORE.			
17	14	7	14
10	13	4	12
13	14	9	13
Av. .13½	13½	Av. .6½	13

It will be noticed that, as a rule, the penetration was greater when the first card was hit by the greatest number of pellets. This was probably due to my having fired off-hand, and so failed to hit regularly with the center of the charge, which would usually give the closest pattern and best penetration. I did not try the patterns of either gun on a 30in. circle. They are of slight consequence since the invention of chokeboring, because guns of any gauge can now be made to throw too closely for 49 sportsmen out of 50.

The trials show that the 12-bore gave practically as good penetration as the 16, whether fired with 20-bore or 16-bore loads.

The first mentioned trials proved that the 16-bore was equal to the 18 and superior to the 28 with the loads proper to either of the two latter gauges. It seems, therefore, that nothing is gained in penetration by using small-bore guns for small loads. Is there anything gained in pattern? It is generally admitted that the killing circle is less in small bores than in large, and this is usually attributed to their making closer patterns. The statistics quoted in my former letter to FOREST AND STREAM, of the extensive trials made by the London *Field*, prove clearly that small bores do not throw shot more closely than large, even when loaded with the same charges of shot. To what then are their smaller killing circles attributable? I believe those sportsmen to be right who say that they have a larger proportion of outside pellets deficient in penetration. They therefore do not kill so well as large bores unless held straight enough to hit with the central mass of the charge. Whether this opinion be correct or not could be proved by trying several 20 or 16-bores against 12 or 10-bores, with cardboards (in a rack) of sufficient diameter to show the whole killing circles.

Although the 16-bore I used makes remarkably regular patterns with the shot which suits it, the general rule is that small bores make less regular patterns than large. The question then which would be well worth settling is whether it is advisable to have a small-bore when in want of a light gun. Suppose, for instance, that a sportsman did not care to carry more than the weight of a 20 or 16-gauge, would it not be better to have a 12-bore of the same weight loaded with the 20 or 16-bore charges? The 12-bore barrels would be quite safe, even if the same length as the smaller bore and consequently thinner, because the pressure of the powder gas rapidly decreases in proportion as the bore is enlarged. These could be used for ordinary shooting, and there would be the advantage of being able to load with heavier charges for occasional shots at ducks or other game that required extra hard hitting. As guns vary so much individually, several of each gauge would have to be tried together in order to settle the question conclusively. To make the trial quite fair the barrels should be of the same length. I never can understand why small bores are usually made with shorter barrels than large. It is said that 28in. or even 26in. are quite long enough to burn the small charge

of a 20-bore, and at the same time that 30in. are best for a 12-bore. The latter is usually loaded with only $\frac{1}{4}$ of a dram more powder than the former. The interior capacity of a 30in. 12-bore barrel is nearly $12\frac{1}{2}$ cubic inches, and that of a 28in. 20 bore is very slightly more than 8 cubic inches. If 8 be sufficient for burning $2\frac{1}{2}$ or $2\frac{3}{4}$ drams of powder, surely 12 are not required for burning $\frac{1}{4}$ of a dram more.

Some of our best gun makers and practical sportsmen assert that they get as hard hitting with barrels of 30in. or shorter as with those of 30in. Other makers and sportsmen, probably quite as reliable, state that even 30in. barrels do not give so much penetration as larger ones. Dougall, the London maker, says in his book "Shooting Simplified," that he once made some guns of 36-bore with barrels 36 to 40in. long for an Arctic traveler to take as presents to the Esquimaux, and that these were afterward found to kill wild geese at ranges far beyond the reach of ordinary sized guns.

One of your correspondents who signed his name "Cyrtionix," wrote three letters to FOREST AND STREAM about small-bore guns, and said that he found a 16-bore with 23drs. of powder gave more penetration than a 10-bore with 5drs. If he used a reliable test for the penetration, the extra power of the 16 must have been due to the length of barrels—34in.

Mr. G. T. Farmer, who wrote two extremely interesting articles in FOREST AND STREAM last July, about the Hudson's Bay territory, might be able to enlighten us as to the killing powers of the guns supplied by the company for their Indian trappers. These were when I lived in Canada in 1864, of 26-gauge, and had barrels from 36 to 40in. long.

One point, which certainly ought to be settled, is whether the recess choke or the muzzle choke is to be preferred. I have several times been surprised at writers in FOREST AND STREAM complaining that chokebores do not carry large shot, and especially buckshot, as well as cylinders. Three of my own guns, two 16 and one 12-bore, choked on the recess system, have been remarkably good with large shot, but the behavior of the Maynard 28-bore, and the left barrel of the 12 bore used in my last experiments, make me think that perhaps the complaints are not unfounded as applied to muzzle chokes. The 28 scatters all large shot badly. The left barrel of the 12-bore makes very close and regular patterns with Nos. 8, 6 and 4 shot. It throws No. 8 in patches, and with such sizes as BB or A shot it is absolutely useless. With a moderate cylinder, on the other hand, both the 16-bore are splendid performers with buckshot, whether due to their being recess-choked, or to some peculiarity of their boring, I am unable to say.

The weight of the 12-bore, 6lb. 9oz., will be thought ridiculous in America, but with the ordinary charge of 3drs. of powder and $1\frac{1}{2}$ oz. shot it is not unpleasant at a target, and when firing at any game the recoil is absolutely unfelt. Perhaps this is due to there being plenty of metal in the breech and to the barrels' being about the weight of those in 7lb. guns, viz., 3lbs. 5oz.

Here in England we think that our brother sportsmen in America sadly overload themselves with iron. When a man shoots only for health and recreation he surely ought not to have a heavier weapon than he can carry and handle with pleasure at the end of a fatiguing day's tramp. Of twelve shotguns which I have owned during the last 30 years none ever gave me greater enjoyment than a cylinder 16 bore of only 6lbs. weight. I used it for years at everything, including ducks, and only gave it up when taking to breechloaders. For all-round purposes, including duck shooting, I prefer a 12-bore of 7lbs., and would not buy one exceeding 7lbs. at any price, for a gun of that weight will carry the largest charges that the shells will hold without uncomfortable recoil.

SIX YEARS UNDER MAINE GAME LAWS.

V.—VARIOUS MINOR MATTERS.

THE last paper was on an unpleasant topic and needs the relief of the brighter side to prevent misunderstanding, for some will say: Are there no good sportsmen then? And those who have come here and left a record of honorable acts will ask in discouragement, Has all that we have done counted for nothing?

Far from it! to both. There are such honorable sportsmen—to them these papers are addressed. They have done well and it is remembered for them. We look for some of them every year, and are glad to see that they have returned; when finally they shall cease to come, among those who regret their loss most deeply will be some at this end of their accustomed haunts. A man is prized here for what he is, and is judged by what he does; nor need the one who has lived honorably and spoken truly ever fear the judgments of Maine backwoodsmen, or an uncordial welcome to Maine.

I have a curious matter to present, which I can in no way explain without taking into account the influence of such men as these. In the four counties of which I speak there is one that in some ways is so different from the others that at first it would seem it ought not to be counted with them. In area it is one of the largest in the State; in population the smallest of all. More sportsmen go there than to all the other three; and in proportion to its area more such enormities as were described in the last article are committed than in any of the other counties. And yet the residents of Piscataquis county do not, so far as I have been able to learn, either feel or speak upon game matters in the same way as those of the other eastern counties. I have not so far found that they were greatly disturbed by the present unhappy state of affairs. At first it would seem that this county ought to be classed with the western part of the State; but in all its interests it belongs to Penobscot waters, and so a different explanation must be sought. What? In the first place some of the grievances of the eastern part of the State have scarcely touched this county; but even so, why should it not sympathize? In the supposition by which I have been able to explain the matter I may be wholly or partly wrong, but it is the only one by which I can account for a noticeable difference. I think that the character of the summer visitors who go there largely explains it. That county includes Moosehead Lake, Katahdin Iron Works and many other resorts more or less known. It is visited by people who go for recreation, for fishing and for hunt-

ing. Now, of those who go for the two former purposes, a very large part stay at hotels or near enough the settlements for the residents to know them personally or to know of them, and a better class of visitors than most of these could not be desired. The people there form their opinion from these. Of those who go to hunt most pass beyond the settlements into the deep woods, and they are the ones whose misdeeds are so widely reported. The eastern counties hear of these principally—much less of those who stay on the borders of civilization. But Piscataquis people know the latter also, and while no less severe in condemnation of such waste and slaughter as I have reported, do not blame the whole class of summer visitors, but the individuals who are responsible. In this way the presence of these well-disposed, honorable men coming to stay for a time and not merely to pass through the country, seems to me to account in part at least for this manifest difference in feeling, and so to be its own reward. Lest a mistake should occur, I will say that by "sportsman" as I have used it, and as it is used in this locality, I mean those with whom hunting is the principal object—not fishermen nor tourists, but those who wish to kill large game. In using it I do not intend to include any other class of summer visitors. Of those who come for this purpose, observation and consultation convince me that the majority come and go in close time and kill what they get illegally; but there are certain honorable exceptions of whom it would be a pleasure to speak if space permitted, but who surely are no more condemned with the majority than are these others of whom we have spoken above by the people of Piscataquis county.

Lest there should be a misunderstanding on another point, I wish to state again that in what I have said so far I have tried to represent other people's views rather than my own, and to give their reasons for these opinions instead of those which I might hold personally. For my own opinions on most of these matters I conceive to be of little value. That I sympathize fully with the people who say these things is most true, but does not make it necessary for me to believe all these charges correct, even though they may not be baseless. I do not believe that our Legislature is wholly corrupt, nor that the game laws have been unfair, nor that all visitors are lawless and all residents are saints—nor, it may be added, that the people here all think so. What we all hold is that grave wrongs have been done—and I will show some of them in the forthcoming papers—which have greatly disturbed a very large number of people, which have caused loss of property and loss of life, which still endanger both and are fully sufficient to account for all the complaints that have been made and for others yet more radical. I might claim even more and be fully able to sustain it, but this is enough. In the papers which have preceded I have tried to represent the state of public feeling at present, thus preparing by anticipation for those which follow which will tell the causes and deal with facts instead of with theories.

If it should be asked after this part, Where is the good sportsman? it will certainly be asked after the second, Where is the good warden? He is not very abundant here, but in this immediate vicinity we have one man who deserves special mention. Mr. Eben G. Morse, of Eddington, is a warden whose justice, faithfulness and honesty are believed in by the people here. I have never but once heard him accused of doing anything which was not honorable, and that he did not do, although there was reason for the suspicion. I may make this personal mention here, for it is he who has suggested that I should explain more fully some points regarding my article published on April 2, mainly those relating to the holding of game animals alive. This I am the more happy to do, as it may not only bring out some facts clearly, but will illustrate an interpretation of the game law which caused trouble three years since.

Mr. Morse writes: "The law making it subject to fine for hunting and keeping alive is of recent date, and was not in effect nor passed at the time that the deer kept at the Bangor House were caught; and Mr. Beal or any other person, rich or poor, had a lawful right to catch and keep such animals. But later on, and before Davis caught the caribou, the law was amended so as to prohibit the hunting in close time." Mr. Morse thinks that insufficient information was given on these cases, which was indeed necessary at that time on account of lack of space.

Regarding the Bangor House deer, I may quote the following letter from their owner:

"To the best of my memory I bought my first deer in the spring of '84, buying two at that time. The next winter I bought another, and then raised several. In the spring of '84 I bought an albino buck, the other buck having escaped. I had them every year until I sold them in the fall of '88. My impression is that those which I bought were in captivity but a short time. Trusting that this is the information which you desire, I remain, very respectfully, F. O. BEAL."

The point of my reference to these deer was that they were allowed to be kept in Bangor at a time when other people were required to release deer and other animals which they had captured, and that this gave rise to the complaint that one man was favored more than another. The complaint was made. I did not seek to discuss its justice though I tacitly admitted it; nor did I try to give the whole facts. These, as the letter shows, were that one deer was undoubtedly legally held, having been taken before 1883; and that the white one was not legally held as the law was afterward interpreted, though supposed by the owner to be so; that neither was disposed of until after other people had been forced to liberate animals, and that then they were not set free but sold. The facts have borne out the statement which I made. It would be interesting to trace their history from this date.

But respecting the change in the law to which Mr. Morse refers. There was no change in the law from 1883 to 1891, but there was a change in the interpretation which is what Mr. Morse means. This occurred in 1888 or a little earlier, but was not legally established until 1889. Until last month there was no explicit law against holding live game taken in close season, and it very rarely can be taken when there is no snow on the ground. Since our game laws were first originated in 1830 there have been but two passages which could apply to such a case.

Sec. 11, passed in 1878, reads: "Whoever has in his possession the carcass or hide of any such animal, or any part thereof, between the first days of January and October, shall be deemed to have hunted and destroyed

the same contrary to law," etc. Sec. 9 on moose and 10 on deer and caribou (both passed in 1883) say: "And no person shall, between the first days of January and October, in any manner hunt, kill or destroy," etc. The two are not mutually inclusive. On the one hand it is forbidden to kill large game at a certain season, and also to hunt it. On the other it is forbidden to have in possession dead game taken at that time, but nothing is said about live game captured then. If it is legal to have the game alive in close time, why is it illegal to hunt it then for the purpose of keeping it alive? If it is illegal to hunt it for this purpose, why is it legal to have the game so taken? It is evident that all depends on the definition of hunting if we are to construe the law in the strictest way.

But at first it was not so interpreted. For nearly five years it was admitted that any one could capture and keep live animals taken in close season. Hence the keeping of the albino deer at the Bangor House. In 1888, or a little earlier, the opposite interpretation was unexpectedly put upon the law, and it was declared illegal to keep any game animal taken in close time. Did this refer merely to those taken after this decree, or after 1883, or after the decision of the court in 1889? It would be hard to say; but there are a number of instances of animals being let loose before the law court gave its decision on the James vs. Wood case.

The grounds of this change in interpretation are interesting. There was no possible reason except what could be deduced from the one word "hunting." The one who held a game animal taken in close season could be prosecuted for hunting it, but not for having it. As Mr. Morse says: "The having it in possession was not taken into account, only to prove the hunting. I admit that the law did not prohibit having live deer, moose or caribou, if taken in open time or if obtained in any way without hunting it in close time." This sudden change in the meaning of the law caused some trouble. The Davis case occurred about this time, and in the western part of the State there was a famous one which was carried up to the law court—Isaac H. James vs. Thomas P. Wood, a game warden, who, without process, released or caused the plaintiff to release from his own inclosure, a moose and a deer. The moose was captured by Mr. James in March, 1888; the deer bought by him the same month. In the lower court Mr. James was awarded \$125 damages. The case was then carried to a higher court, and the opinion of the law court given Dec. 11, 1889, was in favor of the defendant warden.

Mr. James's moose and deer were set at liberty June 6, 1888. As evidence that the interpretation of the law which allowed this to be done was considered very doubtful, I may say that on Sept. 14 of the same year (1888) I saw a full-grown caribou, with fair-sized horns, confined in a pen near the railroad station at Winn in this county. I was told that it was taken in close season. I was also told that a warden had been sent to release it; that the possessor had refused to allow him to do it; and that the warden had yielded. What became of the animal afterward I do not know. The Bangor House deer were kept somewhat later than this, I am very sure. Mr. Morse tells me that he has known several to pay fines for keeping live game "after it became unlawful," which I understand to be previous to Dec. 11, 1889, as I have heard of none since then, though some who had captured deer have let them go.

In support of my definition of hunting, and to show that Mr. Morse did not proceed as too many wardens have done here in pursuance of plans that no court would uphold, even when he released the caribou on the ground that to put on snowshoes to follow it constitutes hunting, I will quote from the James vs. Wood case, Law Reports 82, Maine 179: "The plaintiff followed the moose in the forest until it became snow-bound, and then, by the use of a rope, tied it to a tree, and finally bound it upon a sled and hauled it some fifteen miles to his home, where he confined it until it was released by defendant. Without doubt this conduct resulting in capture was in violation of the statute. The plaintiff did not destroy or kill the animal, but he did hunt and thereby capture it."

This matter which from one side is unimportant, from another has weight. It shows a law changed from a looser to a stricter interpretation. In my next article I will show another which has had just the opposite history during the eight years past.

Mr. Morse calls my attention to an error in one of the cases mentioned. I wrote partridges "legally killed in December" when I should have said November. I am likely to make other similar mistakes, and will correct them when brought to my notice, if not too trivial or having no real bearing upon the point in question.

Since writing the above I notice the following in the Bangor Daily Whig and Courier, April 25:

"A buck caught at Moose River has been brought to Portland and placed in Deering Park as a companion to the fawn presented to the city by Captain Winslow last spring. A yard will soon be built for them."

If true, this is an ample commentary on what has been said. Are there any deer in Deering Park? If so, by what right? FANNIE PEARSON HARDY.

KANSAS GAME.—Hutchinson, Kan., April 19.—*Editor Forest and Stream:* We have had splendid goose and duck shooting this spring. Trap shooting is getting to be a very popular sport in the West; our State meeting, to be held at Salina, May 19 to 21, promises to be a large one. We have had an extremely mild winter; the quail have fared well; chickens are scarce, but we will have fine quail shooting this fall.—SHADY.

HALIFAX, N. S., April 21.—I was out this afternoon trying my new setter dog. I put up a woodcock, and if you could have heard them "whistling" you would have thought their "outer primaries" pretty well developed for April birds. Killed five sea trout afternoon of 18th; they were a small run, from 1 to $1\frac{1}{2}$ lbs.—H. AUSTEN.

FOREST AND STREAM, Box 2,332, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanik," "Glean," "Dick Swiveller," "Sylvillene" and other competent authorities to be the best treatise on the subject extant.

THE BOB WHITES.

THE day before Christmas I was all anxiety to have some sport with the Bob Whites. Five miles above where I was visiting was a plantation noted for more quail than any other on Red River, in Bossier Parish. Just before the close season for birds was to begin I had been to this plantation and had a most successful hunt. There were not less than two or three hundred quail left over for the summer rearing. As the front lands on this plantation were not overflowed in the great overflow of last summer I concluded that the birds had escaped destruction and that I would most assuredly find them quite numerous at this time. Alas! for such thoughts!

With Dan's Trump and his year-old son, out of Maud, I rode to this plantation with "expectation big," that I should have a grand time. Nothing short of a bag of a hundred Bob Whites would satisfy me.

As I entered the fields a negro assured me there were a number of coveys in the coco pasture, opposite Captain Billy Robson's store. This was the place where I left so many birds the close of the last winter. The pasture embraced some 40 acres of land, thrown out of cultivation by coco, on which dewberry vines thickly grew, thereby protecting the birds from the rapacity of hawks. Bordering on three sides of this pasture grew great quantities of the cow pea (that the frosts of a year or two cannot rot), affording ample food for the birds the year round. The pasture was above all high waters. Thence my conclusion was a reasonable one, that the Bob Whites had escaped destruction from the great overflow of 1890 and I would have a most interesting time with them.

Dan's Trump and Jeff Davis ranged the fields as finely as I ever saw pointers do, until I drew near the coco pasture. Not a point had been made; not once did I notice that they winded the scent of a game bird. Surely, I thought, all the Bob Whites have congregated in the pasture, and soon there will be a massacre. Over the barbed wire fence leaped both dogs. I remained on my pony, momentarily expecting to see them grow rigid to a point. Over the forty acres both ranged, crossing and recrossing. Not a halt was made, no points. Dan's Trump came back to the fence, crestfallen and with a downcast look of disappointment. He peered into my face, as much as to inquire, "Where are they?" and "What must I do?"

"Ah! Dan's, the butchers have murdered them, leaving not a bird for seed. Over the fence, sir, and we will go home. Day after to-morrow we will go to the Bossier hills, and I trust we will have better luck."

As Jeff had never been there before, he was not disappointed. Both dogs leaped the fence. Jeff proceeded to range far out, while Dan's showed his disgust and chagrin by merely keeping ahead, so the pony should not step on him.

"Cheer up, old dog!" I said to him; "we will go to Mrs. Weather's new ground field. Perhaps we may find a covey there. If so, you shall have the pleasure of retrieving a bird, provided my old eyes do not deceive me." Dan's seemed to understand what I said. He brightened up, increased his gait, and made a bee line for Mrs. Weather's plantation. Jeff was in advance, and when he got to the fence, sprang over, and flushed a covey of only five birds. Dan's looked as if he could have bit his head off; but it was not Jeff's fault. The birds were running and flushed some distance from the fence. Besides, the wind was blowing from the dog to the birds. I marked the places to which the birds had flown and said to Dan's, "Now we will have some fun." On entering the field both dogs drew to a point at once, rigid as logs. Dismounting I gave Black Pat the bridle to feed as he pleased, and approached the dogs. It was the first time Jeff had ever smelt a quail. Foam fell from his mouth, his beautiful eyes flashed with excitement, his tail stood horizontal, body toward head slightly crouched, and left hindfoot raised from the ground. I was anxious to have the dogs flush. To my order to "Hie on!" neither moved, each afraid of the other, and I had to flush the bird myself. It rose with an ascending flight, and at the distance of some 50 yds. fell to the crack of the gun.

Both dogs stood steady, not moving to the report of the gun, but at the command, "Dead bird, go seek," each dashed out. Dan's got to it first and came running back to me followed by Jeff, who did not like his taking away the bird.

On going near the place where I saw two birds drop, Jeff got in ahead of Dan's, and made a splendid point. At the command he flushed, I dropped both birds, which he retrieved in handstyle, not crushing nor rumpling a feather, a quality he inherits from his sire, who never hurts a bird, and no matter how far off he retrieves a bird it is brought to me uninjured. I have no use for a dog that mashes a bird, and will not keep one that does.

Both dogs scented at once the other birds that I had marked, Dan's making the point, and Jeff backed. I flushed one bird, the gun failed to fire—examination proved I had not reloaded, no wonder at its failure when the chambers contained no shells. I reloaded in time to get in a snap shot as the second bird got up behind me, and the bird was retrieved by Dan's, who beat his son to the fallen bird. Thus I got four out of the five.

The dogs ranged the entire field without finding any more birds. As I went out of the field to take the public road home I met an intelligent negro, who, in answer to my question, "What had become of the quail on the Clyde Pickett coco pasture?" replied, "Oh! sir, last spring in the high water they were all killed." Both whites and colored people united in killing them. They were confined to the front banks of the river, and could not escape. It was death by drowning should they attempt to fly to the overflow, and death to remain on the pasture. None escaped. Had the owner only urged the protection of his game, there would have been birds in quantities to have given both himself and friends good shooting all the hunting season. How long will this be the case, that our planters, in the eagerness to grow cotton, are regardless of the protection of their game?

While I was talking to the negro I missed Jeff. A search found him pointing near the banks of a beautiful lake, known as Wasson's Lake. Supposing it was a hare he had pointed, as it was in the woods, I rode in and flushed a very large covey of birds. Shot once and killed a bird from the saddle. All the birds flew across the lake but one, that perched in a tree. It was too late to go after the birds, and I wanted that one in the tree. I knew I could not kill it if I shot flying, and pardon me, reader, I rode up and pulled down on it, sitting. Under

ordinary circumstances I do not shoot at a bird sitting. But in this case there were five mouths at home waiting to enjoy a bird pie for Christmas dinner. Mine would make the sixth, that would be as eager for that bird pie, and only five birds were in the pockets of my hunting coat. What would you have done, kind lover of the gun and rod?

Dan's recovered the bird, giving it to my outstretched arm—the only one I have. Putting it in the capacious pockets, I rode back to the residence of my son-in-law, Lawser K. Hodges, with no twinges of conscience that I had committed murder in shooting a "sitting" bird.

The next day was Christmas. I enjoyed the fine dinner, especially the bird pie. In the afternoon, by appointment, I rode to Elm Grove, the mansion of my friends, W. H. and C. B. Hodges, to spend the night and accompany Mr. Caw Hodges the next day to the Bossier hills for a two days' sport with the Bob White. Thereby hangs a tale, which I may, in another number, give to the columns of the FOREST AND STREAM.

GEO. D. ALEXANDER.

HUNTER'S RANCH, Cross Bayou, La.

WAYS OF THE RUFFED GROUSE.

THE ruffed grouse behaves far differently before a dog from what he does in the presence of a man. He does not resort to those devices and maneuvers which he is wont to practice with the latter, knowing well that they would be useless and vain. When pursued by a dog he relies mainly for safety upon flight and keeping himself off the ground; hence he betakes himself to a tree, and standing on a limb on the leeward side looks down in security upon his four-footed enemy. He selects the side opposite to the wind so that the scent will not be carried in the air, and he be thus located. When he flies into a tree to escape from man he gets on the side opposite to that in which the person is approaching. A grouse in a tree always remains motionless, whatever the position may be he assumes.

A favorite one is with his back to the body of the tree, standing upright. In this case he selects one of which the bark corresponds as nearly as possible in color with that of his breast and under feathers. When he stands on a limb on the side opposite to the person approaching, his head alone is visible, and this is the "crook" or "knot on the tree," that country hunters talk so much about.

Sometimes the grouse stands out on a limb plainly in view, and does not seek concealment in the least. Then he is indeed a beautiful sight, and one which I would go quite a distance to see. The grouse (except in rare instances) is a difficult bird to shoot either on the ground or in a tree.

To do so successfully requires an intimate knowledge of the habits and ways of the bird and a keen vision. Indeed, a more perfect knowledge than most sportsmen attain to. It also requires great caution and carefulness in approaching the bird at times, while at other times a careless and indifferent demeanor with the eyes wide open answers the purpose. The difficulty of shooting the grouse while at rest has been generally, I think, overlooked by sportsmen, as well as the great knowledge required to do so successfully.

I am sure I could more easily kill ten grouse flying, in a given time, than ten sitting, and yet one shot flying would give me more cause for rejoicing and inward satisfaction than ten shot at rest. This is the true test of superior sportsmanship.

The grouse is still more difficult to shoot while flying. To accomplish this feat requires the exercise of quickness of motion with precision of aim.

I have heard stories told of men who were wonderful shots at the ruffed grouse, of one who took off a pair of gloves, cocked his gun and then killed his bird, all done after he had started from the ground; of another who killed one bird going from his left and turning killed another going directly from his right, both birds sprung at the same time. I leave my reader to judge of the truthfulness of such fiction.

Akin to this is the ancient myth about the "flock of partridges" in the grapevine, and how if you are very careful and particular to aim at and shoot first the bird that sits lowest, the rest will not take wing; but on the contrary if you happen to be a little too hasty and should happen by mistake to shoot the one that sits highest his falling down will so frighten the rest that sit lowest that they will take wing.

Although the grouse is so difficult to shoot on the wing, yet a very small wound on one of his wings will bring him to the ground. On one occasion while hunting in Clifton Park I fired at a grouse as he went over the tops of the trees along the edge of the timber. I had but a small hope of hitting him, as I got but a glimpse and he was quite a distance away. It was a golden October day, not a breath of air stirring. After the report of the gun had died away I heard a slight rustling in the leaves in the direction in which I had shot. I ran out and saw the bird on the ground. Instead of going into the woods he ran out on an old sheep pasture. Then began a foot race (for I had no dog with me on this occasion). After going about 150 yds. I came up to about 20 ft. of the bird when he lay down and I walked up and examined him. One shot only had struck this bird, and that had gone through the tip of the wing a quarter of an inch from the end.

The grouse when mortally wounded sometimes flies quite a long distance and falls dead. One day I fired at a grouse that rose quite close to me but he still kept on, and after going 75 yds. passed near my brother, who noticed a wavering motion in his flight, and keeping his eyes on the bird heard him strike far in the woods. Going to the place, about 80 yds. from where he had stood, he found the bird dead at the foot of a large hemlock tree. He had struck the tree about 40 ft. from its base and fallen dead.

On one occasion I saw a grouse shot that fell in a small stream of water about 8 ft. across; he fell directly in the middle of it. This bird could not have been hurt very badly, I think, for he rose again. As he struggled to rise he threw the water into the air in a spray and it was about 10 seconds before he succeeded in getting up and under way, when he flew up the vale and lit among the tall pines. We were unable to get this bird and saw nothing more of him.

The grouse when wounded will run as long as able, but he soon tires, and when come up to will lie down and seem resigned to his fate, and be passive and rarely, if ever, make any struggle while in the hand.

SCHENECTADY.

GAME THAT IS ALWAYS ON TAP.

EDDY, New Mexico, April 22.—*Editor Forest and Stream:* Our local sportsmen are having great sport shooting jack rabbits. There are thousands of them in this country and they can be found anywhere within half a mile of town. They do a good deal of damage to the young fruit trees, and farmers are anxious to have them thinned out. Several parties have been out lately and made large bags. So far the only weapon used has been the rifle, but some of our wing shots are getting interested, and a large circle hunt is talked of for the near future, in which everything that will burn powder and throw lead will be allowed to enter.

We could have great sport with a pack of greyhounds, but none have yet been brought into this valley.

The blue quail are nesting, and the indications are that there will be an abundance of them next fall.

Antelope have bred liberally. Cowboys and others who have ridden over the staked plains, to the east of this valley, report a large number of kids. Band of them are found within five miles of this town, but so far as I have been able to learn no one has molested them since the season closed.

The season is well advanced here. Alfalfa is 12 to 18 in. high and is in bloom. The first crop will be cut in a few days. Fruit trees are in bloom and promise an abundant yield. We raise all the fruits here that are grown in southern California, except oranges and lemons, and being 1,000 miles nearer the Eastern markets this valley is destined to become in the near future as rich a fruit country as any portion of that State.

There are over 100,000 acres of Government lands in this valley, subject to entry under the Homestead laws, that are well adapted to the cultivation of fruits and cereals of all kinds, and if any brother sportsman, who may be in search of a new home, will write me, I shall be glad to give him any further information desired.

H. A. LADD.

STRANGE ANTICS OF A JACK RABBIT.—Pecos City, Tex., April 22.—*Editor Forest and Stream:* I walked out a mile from town yesterday to shoot jack rabbits, and on my way in shot at one that immediately gave an interesting exhibition of his agility. When the rifle cracked he jumped straight up, some two feet high, and then ran in a small circle, at the best speed he was capable of, for two or three minutes. During this performance I shot again and missed. When he stopped I threw down the lever to fire again, but my magazine was empty and so were my pockets. The jack now settled down and appeared to be getting sick. I laid down the rifle, picked up a couple of rocks and started toward him. When within 20 ft. of him he got up and ran several times around me, keeping about the same distance away. I threw several rocks at him, all of which missed. Finally one hit him on the point of the shoulder and knocked off a bunch of fur. Then he turned and ran straight toward me. I threw again, missed, and, as true as gospel, the long-eared *Lepus* ran between my legs. I grabbed at him as he went through, but had both hands full of rocks, and the action was so quick that I did not think of dropping them until too late. I caught him on both sides with my clenched fists, but he shot through my hands like a greased pig, leaving another good crop of fur on the ground. He lost no time then in getting out of the country, and to this moment I am unable to say where the first bullet hit him. I presume it was on the lower edge of the stomach, although I could not see a drop of blood on him or on his trail. If I had had sense enough to drop the rocks when I saw him coming I could easily have held him, but a fellow always knows more to-day than he did yesterday. I presume some smart Aleck will get himself in print to say that this whole business is a lie; but as I get no pay for writing this article, and have no axe to grind, I am telling the truth this time just for a change.—E. H. G.

Camp-Fire Flickerings.

"That reminds me."

A SHORT time after the winding up of the "late fraternal unpleasantness" found me stranded out on the prairies in Illinois, about midway between the Des Plaines and the Du Page rivers, a few miles from a place called Napierville. There I unexpectedly ran across a former friend from the East, named Joe Elliott, who just then happened to strike the same place. We had not heard from each other for a number of years, so we were both surprised and glad to meet again, and, of course, undertook to enjoy ourselves. Among other pleasures we proposed to go shooting. As for guns he had none, but I had a rifle; so we decided that when any suitable game was found we would shoot alternately with the rifle, to equalize the sport. After tramping quite a while we came to a big slough (pronounced "sloo"), and in the grass and water off near the middle of it I espied a large sandhill crane, or "stake-driver," as the Western folks call it, standing as immovable as a stick in the mud and looking like one too. Now Joe had never seen a bird of that kind before, and when I told him "to take a shot at that stick out in the slough to see if he could knock it over" he, thinking it was a stick and in order to get a better shot, lay down on the prairie with head to the target and blazed away. By dumb luck (for he was never even a decently good shot with a rifle) he hit the bird and wounded it in such a manner that it made an awkward flapping and jumping, as that species invariably will when wounded. In great surprise, and as quick as a flash, Joe bounded clear of the ground and shouted in his excitement at the top of his voice, "I'll be darned, Andrew, if I ain't shot the devil himself this lick." Although poor Joe, many years since, joined the great majority on the happy hunting grounds, his remark in connection with that shot is still vivid in my memory.

A. L. L.

A fishhawk pulled a large salmon out of Elk River one day last week. The fish was too large for the bird to carry off, so leaving it on the sand the bird flew off to a pile of drift-wood, and picking up a stick with a sharp and jagged edge, returned to where the fish lay and saved it in two, when it flew away with half of the salmon. The other half was served for our dinner.—Crescent City (Cal.) Record.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

ON THE NORTH SHORE.—I.

"No pastimes and pleasures,
No wealth nor no treasures,
Can yield us so much delight,
As to throw the light fly,
And with quick skillful eye,
Hook the trout—sportive and bright"

ONE of the most delightful trouting trips I ever made was that to the North Shore of Lake Superior, in the summer of '89, an account of which was published in this paper, the first part appearing Jan. 30, 1890. It was so pleasantly associated in my mind with the sports of the angle that when the next season came around and the radiant beauties were rising to the alluring fly I was exceedingly eager for a second trip to that rock-bound coast, which evidently presents the best trouting waters on this continent, and at the same time the most grand and imposing scenery, with an atmosphere of ozone as exhilarating as the purest champagne. A mention of my desire to again renew my pleasures to my respected friend Ned, who accompanied me on that famous trip, met with a response that pleased me beyond measure. He manifested an eager desire to again do battle royal with the dandies of the crimson stars, and so we agreed to meet at the "Soo" about the middle of July and prepare for the voyage.

I was passing some idle days at Petoskey after having had a week's sport with the small trout in Deer Creek, at Boque Falls, Mich., when a telegram reached me, bringing the glad tidings that Ned would be at the Soo on July 18. I at once arranged to meet him as specified, and at an early hour in the morning of that day I was aboard the train booked for the Soo by way of Mackinac city and the lake. I expected a very pleasant trip when I reached the lake, but not till then, for along the rail route of about thirty-five miles there is little to interest and no scenic beauty to delight. A few struggling villages, a brook or two running into the dense foliage, an occasional clearing and the inevitable saw mill about complete the prosaic picture.

What a sudden change transpires when you reach the little lake town. After the trip through a loveless forest it is like emerging from darkness into light. Here I was greeted on every side with scenes of beauty and interest. There was the indescribable richness in the dome above, which was charming in lovely shreds of silvery clouds; the unstained, far-reaching sapphire margin of the lake that lost itself in glittering sunlight; the graceful movements of vessels far and near, with their white wings spread to the gentle south wind; the rhythmic beat of curling waves along the sandy beach, all harmonizing in lovely views ever a delight to eye and fancy.

"Here hills and vales, the woodland and the plain,
Here earth and water seem to strive again."

The steamer on which I took passage was stanch and decidedly comfortable, and as it progressed through the sparkling waters the landscapes grow in beauty, and when you strike the St. Mary, at Detour, you have sixty-two miles through a tortuous channel, which completes one of the most lovely panoramas imaginable. It is really one succession of beautiful straits and broad lakes, with long islands mirrored in the clear, rapid river. This sinuous stream has been compared to the Hudson and other noted rivers of romantic grandeur, and one writer declared that the Canada side, with its bold and precipitous cliffs, only lacked the ruined villas and castles of the Fatherland to make it a veritable Rhine. At intervals along the route you are greeted with decaying wigwags and the ruins of old forts and posts, which, if they could only speak, would give a startling history of red-handed tragedies of the past. The ruins of old St. Joseph, on St. Joseph's Island, Canada side, can be seen quite plainly from the boat, as well as many other points of historic interest. Looking up Hay Lake from the Neebish can be seen the smoke of the dredges at work for Uncle Sam, making a new channel through Hay Lake, shortening the present channel about twelve miles. Work has been prosecuted in this canal several years, and at the present rate of appropriation several years more will transpire before the completion of this necessary and important work.

I reached the "Soo" by supper time, and ascertained that Ned and his family had arrived in the morning and were impatiently awaiting my appearance. I was given a royal reception, I assure you, and then we entered into the details for our prospective trip to the North Shore. Ned during the day had already engaged a half-breed boatman, but on being informed that he was perfectly unreliable cancelled the contract at once, and, like Micawber, folded his arms and waited for something better to turn up.

As the tents, mattresses and cooking utensils we were to use on the trip had been left last fall at Sailor's encampment, some thirty miles down the river, where Ned had been having some royal sport with the bronze-backs, we concluded to take the early boat in the morning and go for them. It was about a three hours' ride, and as we started at 6 o'clock sharp, we were there in ample time to do all the packing and the hauling of the goods to the landing. The work being soon over, we crossed the river and there took dinner at the tavern, and then after a cigar or two, we recrossed the river and awaited the arrival of the steamer, which soon came. Our bill of lading being duly signed, we felt that the cares of the day were over. Ascending to the deck of the steamer, we took position on the guards, and as the wreaths of nicotine incense floated gracefully o'er our heads, we watched the wrinkles in the water as they rolled in flashing silver from the bow, then the low and craggy cliffs of the shore as the sunlight brightened them and the airy beauty of the snowy clouds, as they were tinged with the ruby splendor of a sinking sun.

Again we are at the "Soo," and here we were greeted by Joe Peters, our half-breed hostman of last year, who expressed an anxious desire to make another trip with us. He had a larger and better boat than the one we went in last year, and a number one assistant, so he stated. Ned

and I had positively declared against Joe on account of his churlish disposition, but as he made such fair promises to us, we concluded to try him once more, and so made the contract with him without further delay. We might regret the compact in the future, but as boatmen just then were scarce and we were soon to leave, it was as much a matter of necessity as aught else. We might have waited longer and fared worse, but believing in the old adage now modernized as a "bird in hand is worth two pair," we instructed Joe to have his boat and helper at the mouth of the canal at 7 A. M. on the Monday following. This gave us three days in which to complete our preparations.

The next thing was the *cuisine*, and as neither of us were much in arrears of being true disciples of Lucullus, we concluded we could fill the larder without having to seek outside advice. We were old campers, believing that the three necessities—food, raiment and shelter—should be liberally provided.

Ned had brought three extra brands of hams with him from home, and while at Detroit had laid in other choice provisions, which were shipped on the steamer Winslow. This shipment was really unfortunate for us, as the boat, during the night, ran on a reef in Lake Huron, and in order to lighten her a hundred tons or more of freight were consigned to the waters, among which was our choice stock. We lamented the loss, not pecuniarily, but from the fact that we could not replace it with the same quality at the "Soo," and consequently our *entremets* would be somewhat reduced both in flavor and stock. The loss of these provisions necessitated another selection, and before that was done we must determine the time desired to remain on the trip. Ned said two months, I said six weeks, being fully satisfied that the romance of the trip would pan out in about four weeks. We finally settled on a six weeks' stay, and then at once selected and purchased the following bill:

42lbs. pork @ 9c.....	\$3 78
50lbs. ham @ 12c.....	6 00
20lbs. lard @ 10c.....	2 00
18lbs. butter @ 25c.....	4 50
50lbs. flour @ 8c.....	1 50
5lbs. royal baking powder @ 50c.....	2 50
30lbs. granulated sugar @ 85c.....	2 55
6lbs. beans.....	25
1lb. pepper.....	30
52lbs. hard bread @ 85c.....	4 42
10lbs. corn meal.....	45
3lbs. evaporated apples.....	40
8lbs. Oolong tea @ 75c.....	6 00
10lbs. cut-loaf sugar @ 10c.....	1 00
1 dozen boxes matches.....	25
2 bottles catsup @ 35c.....	70
15 dozen eggs @ 24c.....	3 60
8 cans California peaches @ 25c.....	2 00
8 cans California pears @ 50c.....	2 40
3 bags salt.....	25
9 bars Ivory soap.....	45
Red pepper.....	10
1 dozen wax candles.....	30
1 bushel onions.....	2 00
6 cans condensed milk.....	1 08
12 boxes sardines @ 16c.....	1 92
10yds. crash @ 5c.....	50
Toilet paper.....	35
Clothes line.....	25
Paul.....	10
Nails.....	10
8 loaves rye bread.....	80
1 1/4 barrels potatoes.....	5 50
2 cans pineapples.....	50
Total.....	\$58.85
Less one-third returned.....	\$19.28
	\$42.57

This may strike some campers as being an excessive supply, particularly when trout would be served at each meal, and in addition an occasional bird or rabbit. The Indian, it is well known, is simply a glutton when the chance offers. Not satisfied with two or three meals per day he will, when occasion offers, arise in the middle of the night and partake of a bounteous lunch. Our men frequently complained of headaches, the result undoubtedly of over-eating. So you see it is well to have a liberal supply or else your rations will run short and necessitate either a replenishing or a return. We are evidently correct as to the supply of food.

The time to leave soon came, and when we arose on the appointed morning we were fairly bubbling over with enthusiasm, so eager were we to lure and play a trout. After our early breakfast we waited some time for our boatmen, and began to think they would not put in an appearance at all. They came, however, but it was fully an hour after the appointed time, their excuse being the rowing of their boat that morning all the way from Point aux Pins, where they were then located with their families engaged in gathering huckleberries. Another hour was now consumed in getting all our things hauled to the head of the canal, where the boat was at anchor. Here we sat for fully another hour before they came, they having remained at the Soo to make some purchases for their families, which they desired to leave with them en route. We had come to the conclusion during the anxious wait that they had been toying with fire water, as I had that morning advanced John, Joe's assistant, five dollars for his family. In addition to this I had the day before allowed Joe to draw seventeen dollars. This is generally customary, as their families must have support while their husbands are away. I had every confidence in Joe's appearing, knowing full well that he would not prove unreliable, though there was slight danger that the tempting fluid might have proved too strong a temptation while he had the wherewith.

FOR "FOREST AND STREAM" READERS.

WE have secured, for the private information of the readers of FOREST AND STREAM, knowledge of a number of streams and lakes easily accessible from this city, where we believe that good fishing for trout and black bass may be had. This information, much of which comes from private sources, we are not at liberty to print, but we shall be glad to furnish it without charge to any reader of FOREST AND STREAM who will apply for it, either personally or by letter.

STRIPED BASS IN THE HUDSON.—On Monday last there was exhibited at Abbey & Imbrie's a 20lbs. striped bass taken with hook and line near Tarrytown, N. Y. While fish of this size and even larger are often taken up the river in nets, it is very unusual to learn of the capture of a "big fellow" in the Hudson by means of hook and line.

ANGLING NOTES.

POSSIBLY some of the readers of FOREST AND STREAM may remember a little book published years ago called the "Blackwater Chronicle, which gave a very interesting description of the adventures of a party of gentlemen in search of trout among the mountains of western Virginia, in Randolph county. It was illustrated by Porte Crayon (Gen. Strouthers) who afterward made up another party and penetrated into the wilderness as far as the headwaters of the Cheat and Blackwater rivers, where they camped for a week and had a royal good time with the trout. Porte Crayon wrote this trip up and it was published in *Harper's Magazine*. From all accounts there is considerable wilderness left there yet, and it is still an angler's paradise and well worthy of a visit. The Cheat River and the Blackwater abound with good-sized trout and the upper Potomac furnishes excellent black bass fishing. The nearest railroad station is Elkins, from which point the angler had better drive to Mingo Flats; the ride alone is said to be well worth the trip. The best flies for this region are the professor, crowding, coachman, brown-palmer, Abbey and march-brown; these should be tied on an No. 8 splot. The wading is rough and hob-nailed shoes are not only a comfort, but a necessity.

No doubt many anglers have noticed how often trout change their location, particularly in lakes and ponds. A curious instance of this was related to me by Mr. A. B. Knapp, of this city, who spent a couple of weeks in the Rangeley Lake region last September. He was passing through Kennebec Lake, when his guide stopped the canoe at the mouth of a stream and told him to try a cast there, as once in a while it was a great place for trout. At the first cast the water fairly boiled with eager fish, and at once two were hooked and soon landed. As there seemed to be so many Mr. Knapp timed himself and tried to see how many he could catch in an hour. The guide unhooked them and threw them back as fast as they were caught, and when the hour was up told him he had returned just 103 to the water. Mr. Knapp reported the wonderful catch to the rest of the party that evening, and the next day they all visited the same spot expecting great sport, but no fish were there; they had left for parts unknown and probably the party had their opinion of Mr. Knapp's fish story. But it was true nevertheless.

The old saying, "When the horse-chestnut leaves are as big as your nail, then the blackfish bite without fail," came true this year to the dot. And the thousands of New York fishermen who visit the bays and harbors around this city are happy, for, next to the universal flounder, no fish is caught in greater numbers or is more reliable than the blackfish. Many use the humble hand line for these fish, but they afford greater sport on a stiff rod. Use a small Virginia or Chestertown hook snelled on twisted linen in pairs—bait with the tough part of a soft clam or a fidler crab. When the tide runs swift a rather heavy sinker is necessary, as the fish is a bottom feeder. The favorite resort for blackfish is around rocky ledges or old wrecks. The wreck of the Black Warrior is a famous ground, but rather difficult to find; there is also a wreck of an Italian ship opposite Manhattan Beach which is favorite ground for big blackfish. The shores of Long Island Sound from New Rochelle to New London afford excellent blackfishing, and at the latter locality they are caught as large and as plentiful as at any place along the coast. SCARLET-IBIS.

NATURAL BRIDGE TROUT.—New York, April 25.—Your old correspondent "Flin" writes me from Natural Bridge, Va., the letter given herewith, and it seems to me of so much interest to anglers that I give it to you verbatim. The "sheet of paper" measures 10 1/2 in.—H. S. CHANDLER. The letter reads: "Natural Bridge, Va., April 23.—Yesterday, with a small 'coon' as guide, I drove down to the James and was shoved across in a flat boat, when after a few rods the creek came tumbling down; an ideal trout stream, about 30ft. wide, swift in places and filled with likely holes. I put on some flies, and in a moment a trout started for it, but he decided not to bite after he had gotten within about an inch of the tail fly, nor would he rise again. I tried flies for a half-hour without catching a fish, and then descended to the 'barnyard-hackle.' Standing on a tree trunk, which had been thrown across the stream as a bridge, I let my bait go down on the current about 50ft., when I felt a yank, and in a second I found I had hooked a fine fish. He fought savagely and it was some little while before I could land him, as I had no net and the boy was with the horse on the road. The fish finally swallowed enough water to drown him and I pulled him ashore. He was fully 2in. longer than this sheet of paper and weighed over a pound. I got another from the same place within five minutes, but a trifle smaller. The day was very hot and with a bright unclouded sun, and I fished only in the middle of the day, 10 to 4, and had no wading boots, but I caught 9 as handsome fish as I ever saw, and was satisfied. I shared them with the people here for breakfast. I took a walk this morning and got within 50ft. of a fox. There is a den of four bears within three miles of here, and wild turkeys are shot across the river five miles away in the fall, and there are a few deer within 15 miles, to say nothing of countless partridges, etc.—Flin."

WESTFIELD, Mass.—The trout season opened here with a rush on the first. Most of the members of the gentle craft who could wield a pole or chuck a bug were out after trout. In many cases from fifteen to twenty persons would be found upon the new stream, so anxious were all to avail themselves of the open season. Various catches were to be seen running in quantity from a few fingerlings to a respectable creel of from 5 to 8lbs. The most successful catch so far as individual size is concerned was that of the veteran fisherman James Liswell, who caught a magnificent specimen of *Salmo fontinalis* in the Still Pond, so called, (which is about half a mile from the station of the B. & A. R. R.), which weighed 2lbs. 6 1/2 oz. It was placed in the show window of tackle dealer Lewis shortly after its capture, attracting crowds the rest of the day. The weather thus far is too cold for fishing, and the snow in the woods in this neighborhood is too deep to admit of fishing for some days to come. Fishermen generally predict a larger catch of trout this summer than last, as the result of stocking the streams the past two seasons, which will result in larger fish and more of them. —WOBOSCO.

CHICAGO AND THE WEST.

CHICAGO, Ill., April 22.—It would seem that we are to be snipeless this spring. There is so much water everywhere that the birds are scattered. George Airey got 61 snipe on the "Sag," south of town, last Thursday, but that is the only shooting I hear of. Tom Marshall writes Charlie Willard from Keithsburg, on the Mississippi River, that the snipe are not there in any quantity. Clark Nelson said yesterday from Fox Lake that a few snipe were in there and that the bass were biting well. Snipe have made their appearance around Ft. Dodge, Iowa, and indeed they are probably away north of here. They can be heard in the air at night all around Calumet Lake, but none seem to be stopping. Al Sharp and Dick Turtle only got 21 at Water Valley in two days. Billy Mussey had a big hunt and got one snipe this week, and one is a good many this week. I have not fired a gun this spring, and since reading the recent editorial in *FOREST AND STREAM* have about concluded I won't go out at all.

Mr. Lew Harrison, of Minneapolis, is again in town. I don't know what makes him, but believe he is buying his spring tackle.

Spring tackle is getting to be of great importance just now, for the bass season will soon be upon us. I should not counsel bass fishing in serious earnest until nearly the first of June, for the run and the spawning season should first be over. I do not know of any bass having been caught yet, except a half-dozen taken by our party at Momence, 50 miles below here, on the Kankakee River. Mr. Harryman, Mr. Hirth and myself went down there more to wet our lines than anything else, and to spy out a new land for the people. We found a great many fish-ink, and learned that a number of bass had been caught under the dams. We caught two or three bass apiece, but I can't say that we should be very proud of that, though we found no spawn, except in one Oswego bass.

We were simply delighted with the Kankakee River at Momence. It runs through a rock bed there, and for miles is a swift, dashing, sparkling stream, clear when we saw it, in spite of the high water. Momence is a pretty little country town, and the country thereabout is lively, the shores of the river being high and covered with blue grass all along that part of the stream. The stream itself is simply lovely. I cannot get any word that it has ever been fished with the fly, but it is elegantly adapted to that in season. I caught one good bass on the fly while there. I shall certainly try for bass down that way later on, for I have found no water around the city that I like so well as this at first sight. I presume we may add the Momence trip to the cheap and desirable fishing trips out of Chicago. Round trip tickets \$2.70. Minnows 10 cents a dozen and plenty, such as they are. Hotel good at \$1.50 to \$2 a day. The fishing is within 250 yds. of the hotel, or begins there. The train leaves Chicago 4 P. M. or 5:05 P. M., and leaves Momence for Chicago in the morning at 4:40 or 7:32. No wagon needed. I don't know how a much nicer trip could be planned. It was a new one to me, but I presume there are plenty of other new ones waiting to be found out, and of these we shall hear later I hope.

It is high time the lower Kankakee were visited and investigated and shown up, for certainly a more lamentable state of absolute lawlessness never existed than is now displayed there. No feature of the law is observed. We saw a dozen spearing lights the night we were there, right in the city limits. We purchased one bass, speared, that weighed 4 lbs. The bass were working inshore and were suffering for it. I intended to show this fish to Dr. Bartlett, our State Commissioner. To him and Mr. Cole, president of the Fox River Association, I gave a four-hooked grab hook, or "jig," which we pulled up from below the dam. At the corner of this same dam we saw a boy who was working one of these jigs, or "grab-lines." He had six hooks tied at intervals on a leaded line, none of the hooks baited. He jerked this sharply through the water under the corner of the dam, and in an hour caught a long string of fish. I saw him catch three magnificent bass, all snagged in the side or belly. Then I couldn't stand it any more, and told him to skip or I would stay over and prosecute him. He skipped, blaspheming, but going. I could not find any fishway in the upper dam at Momence. In the lower dam there was a break or cut, apparently, but no fishway. There are eight dams in forty miles on the Kankakee, I was told by Mr. Strunk, of Momence, and not a fishway in one of them. The heights of these dams are as follows: Two Momence dams, about 6 ft. each; Altor dam, 6 ft.; Kankakee dam, 8 ft.; Wilmington dam, 12 ft.; dam right at Wilmington, 6 ft.; "Feeder" dam, 6 ft.; dam below that, height unknown. Once there was a sporting club at Momence. They tell me it broke up because it could accomplish nothing at getting the ways put in the dams.

I saw Dr. Bartlett yesterday about this matter, and he said he would go down at the end of this week and see what was wrong at Kankakee and Momence. The latter town, he said, had an ordinance requiring the opening of a section of each dam for three months in the spring. He had been making a big fight to get a way put in at the great Wilmington dam. Unless that was in the rest were useless, and that was a government affair and therefore slow. Dr. Bartlett invited me to go down with him on this trip, and I hope to be able to do so, and in any event expect to have further news about this lower country, which is altogether too good to be allowed to waste.

The Fox River and the Kankakee River are the sporting streams for Chicago, and they have actual merit besides that of accessibility. Both are good streams for game and excellent streams for fish. Both should be protected in every possible way as sporting grounds for the rapidly increasing population of this great city. The Fox River is protected. I have often called attention to the splendid work done by the Fox River Association, and even now cannot find praise enough for it, qualifying that only with the hope that its work may never begin to lag. The record of this society, which was only organized in 1888, is a grand one, and shows what a few years of serious effort can do. It is the only association in the State which has results to show, but its record is sufficient and convincing. It has won every suit, put in fishways in the dams from the Mississippi River to the head of the Fox, furnished support to the State Commissioner when needed, enlisted club after club along the Fox and Illinois in the work, and even now is morally behind the great raiding at present in progress against the netters of the Illinois, for Mr. Cole, the president, is in receipt of daily letters regarding the work of the State boat, the

Lotus, which has this spring, under Dr. Bartlett's orders, filled a big ice house full of illegal nets and is after more. The Fox River Association has filled its stream and lakes with game fish. Warden Buck reported yesterday that a big Mississippi River catfish was taken this week clear up the Fox, above the St. Charles dam. This was not a game fish, but its capture is cause for exultation, for such a fish has not been taken there for twenty years, and it shows that the water way is now open for the fish to run up even from the big river.

Now what I want to get at is this: If a protective association could be organized for the Fox, and could do so much work, and accomplish such unquestionable results, why could not an association be organized also for the Kankakee?

The Kankakee is unprotected. It is simply ravaged. That it has a fish in it or a bird along it is a miracle of nature. No butchery is spared its creatures, no illegal, wasteful or destructive method of taking the life of its fish and fowl is forgotten. Rob, kill, destroy, butcher, spare not, pity nothing—that is the rule of the dweller along the Kankakee. Yet the Kankakee is a larger and yet as good a stream as the Fox, and just as close to Chicago. The Chicago ducking clubs are located, it is true, on the Kankakee marshes, which lie in Indiana, but the best fishing part of the stream is in Illinois. Help the Illinois end of it, and you certainly help the Indiana end. Every club man of the Kankakee would be interested in a Kankakee Fish and Game Association.

Now, why not have it? No reason not, unless apathy, indifference or niggardliness. Has not the time gone by for us to have those things in sportsmanship, especially in the sportsmanship of Chicago? Has not the time arrived to continue a work which we have seen made plain as possible and effective. All the earth hates a bluffer, and loves the quiet man who gets there. The Kankakee is as pretty and good a stream as flows in the West. The men who camp along its banks are as good men as any, and they have as much money, and they can organize as well, and work as well, and accomplish as much, and can get there if anybody on earth can. Then why not?

I talked with Mr. Cole and Dr. Bartlett about this, and they thought it over seriously before answering. Then they did answer, and they said that the association for the Kankakee ought to be organized, and that they would back and aid it, counsel and advise it all they could. Mr. Cole said it would not need much money for the first year, not as much as the Fox River Association spent. He could show how to save some money in that work, and besides the work done in suits by the Fox River men would not need to be done over so extensively now on the Kankakee, but would serve as precedent. I asked Mr. Cole if he would take the presidency of such an association, and he said he would act in any advisory office, though he would not take the full executive. Then I asked him if, with an able and respected vice-president for acting executive and a working secretary and \$600 put in bank before a hand was turned, he would come in and take the headship of the association. This shook him a good deal. Mr. Cole ought not to be taken away or subtracted from the Fox River Association the least bit in the world, for that institution should be guarded jealously on the principle of letting well enough alone. That is what we have to go by, to measure from, to refer to. But Mr. Cole has showed that he could get there, and that is the quality wanted in the leader for this work. There are not many suitable for it. That is why he is wanted to lead this new movement, if it is ever made. Miscues, blunders, errors are unavoidable to novices in this work. Mr. Cole and his associates now know how to avoid much of that. They have bought their experience. To-day Dr. Bartlett said: "I use George Cole's name as a club over the law-breakers. Down along the Fox and Illinois they think George Cole has horns." Now, the Kankakee association certainly ought to be organized, and its leader ought to be a man with horns.

The success of a Kankakee association ought to be even quicker and easier than that of the Fox River Association. There are the three great clubs, English Lake, Cumberland, Mak-saw-ba. Couldn't Abner Price raise \$150 in a hurry among his English Lake people? Couldn't Geo. Farmer, Charlie Gammon, a dozen, twenty, fifty, in Cumberland Lodge raise a little \$150 in about one evening? Wouldn't Benton Leiter, Roll Organ, Joe Card, Joe Kinney, Billy Mussey, Dick Cox, or half a hundred others, acquire a hundred and a half in about a minute and a half if they started out and said, "Boys, it has to come?" Couldn't Henry Ehlers go among his German friends at the Diana Club and make 'em liquidate \$100 before breakfast? Couldn't Dick Turtle and his friends hustle out \$50 from the Water Valley Club? Wouldn't Momence men put up \$50? Wouldn't Kankakee town jump at a chance to drop in \$100?

The difficulty in interesting these clubs is that most of the men are shooters and fishers. That ought to cut no figure. The fish wardens could also stop the illegal shooting of the woodducks, woodcock, teal and mallards. It would be a good thing all around. Besides, it is the right thing, and I'll tell why. Some day there is going to be a State league of all these protective societies, with an annual meeting at Springfield, and delegates enough to scare certain legislators who need it. Dr. Bartlett, Mr. Cole and others are already talking this over. It is Mr. Cole's idea. The time will come for it. The organization of the Kankakee association would hasten that day. Word is coming up from the Beardstown Rod and Gun Club every day now, and Mr. A. A. Greene, their president, is jubilant. The Fish Commission is doing great work in this State, and it ought to be known, and so should the fact of the assistance of these local clubs. They are yanking them. They are snaking them this year, sure, and now finally we have got to a place where we can say that the fish protective work for Illinois is past the day of promise, and into the day of performance. It's getting there. Now, what greater step forward in all this work could be taken than the formation of a little league along the Kankakee? It should be organized, and that for success, and not for failure.

We make a mistake when we go away up into Wisconsin, or out into Minnesota, or somewhere else, for fine fishing, be that with bait or fly. We don't know our own country. The Kankakee is a lovely stream. Go see it and then match it for excellence by any other river within 300 miles. It's too good a stream to be robbed, abused and ruined by the mob, as now is being done. It ought to be protected. It stands to reason that some day

it will be. The organization of the Kankakee association is a proper and natural thing. Time will bring it. Why not now? It may not be this year, but I will bet my rifle, blankets and ponies that it will be some day.

April 24.—Mr. Greene writes from Beardstown that the Lotus, the State Commission's steamer, aided by two men, sent out by the club, captured on the 17th two big focus nets (fykes) and a boat load of other nets, and intended to take a flat boat and go for another load. He says the market men are getting scared now. He reports \$75 in the treasury of the Rod and Gun Club and offers aid in men or money. Dr. Bartlett yesterday received a telegram from one of his men that the Lotus had seized another big focus net in an adjacent creek. I met Mr. Cole on the street and he told me he had yet another letter from that locality and that a lot more nets had been seized, but I have not yet had time to go over and see this last letter. It looks as though they were shaking things up down Beardstown way. E. HOUGH.

THE MONARCH OF THE POOL.

THE morning of Sept. 13, 1890, broke in gloom over the State of Maine and the rain beat a restful tattoo upon our camp on the Little Jo Mary, and contributed to a lengthy morning snooze on our fragrant beds of spruce and hemlock. The camp-fire sizzled and spit—the circling smoke now forced to earth by fitful gusts of wind and again circling up and losing itself in the branches. The weird notes of the loon made mournful threnody with the sighing of the wind in the treetops and the swish of the waves as they broke upon the shore. During the forenoon we snoozed, played whist (our wives being members of the party), oiled boots, made needed repairs to tackle, mounted some new casts of flies—when came the summons to report at the dinner table. Our stomachs always accompany us on our outings and we strive to treat them as we would our best friends, and years of experience have made us somewhat fastidious in the selection of a chef. The savory odors that had reached our camp for some time previous attested his skill, and these joined to our sojourn in nature's haunts high up in the mountains had so sharpened our appetites that we stood not upon ceremony in obeying the call. That we did ample justice to the inner man and to the skill of our chef, may be inferred when it is known that the one rule that he thought he would have to make and enforce was one limiting our time at table to an hour and a half!

The rain having ceased, our friend of former camps, H. S. Seeley, jumps up from the table and sings out:

"Here's a go for a paddle to the upper end of the lake."
No sooner said than he and the writer with Frank Jones as factotum are off.

The clouds rolled low and Katahdin's nightcap was still upon its head. Spiteful whitecaps broke against and over the bows of our canoe, but being well laden we rode along quite smoothly. Not expecting to do much if any fishing we left all of our tackle behind save a cheap rod that had been left on the beach under the overturned canoe, and a few casts of flies which we carried in our hats.

A beautiful sand bar and shoal has been formed by the action of the water where a brook enters the lake, passing which we find deep water extending back from the mouth about a fourth of a mile, now broken only by gentle ripples. The width varies from twenty to fifty yards with a forest growth on either side and an occasional boulder as large as a small house jutting out from either shore or nearly submerged in the water.

Who could resist the temptation to cast? The rod was soon jointed and a cast made by Harry, a second, a third, and a rise and a strike. Ah! and a game boy is he. I grasp my watch to take the time as he flashes his beautiful sides out of water. Down he goes, out again! down and off as the plant rod yields and the reel sings a tune to which Paganini never played an adequate accompaniment.

It is give and take, and take and give for twenty minutes, when our disciple of Uncle Izaak begins to think it more labor than fun, puts severe strain upon the rod and forces the fight. By dint of great effort and considerable skill he leads the victim around to the stern, where I sit, and as I reach out my hand to grasp the line to lift him in, the fish makes a plunge for liberty, breaking the rod at the second tying from the tip, but I grasp the line on the instant and he is in the canoe and the struggle is ended; and we have an addition of two and a half pounds of beautiful freight to our cargo.

"Well, yes! he made a splendid fight and I am tired. You take the rod, Doctor, and give them a try."

Examining the rod we find it like all cheap goods, only "a delusion and a snare." The strips had never been cemented, but glued, and the glue yielding to the moisture, had allowed the strips to separate and bend over nearly to a right angle. Had we another rod along this one doubtless would have gone where it deserved—to the bottom. But we straightened it out, split a quill tooth pick and bound it firmly about the rod with a bit of line and started down stream toward the lake.

We had gone some distance without a rise and I began to distrust my store flies. A huge sunken tree, which had fallen athwart the stream at an angle and right in line with an immense boulder, which extended into the water, turned the current and made a whirlpool that looked to be a most promising spot, and we did our best for "distance, delicacy and accuracy." And, lo! a rise! a swirl of the water and all is quiet. I note that he is a large one, and distrusting my flies tell the paddlers to send the craft right along to the shoal. Here I mount a cast of flies tied by Geo. H. Burtis, of this city, composed of Parmachenee bellies for hand and tail fly with a Jenny Lind for dropper, and back we turn to try conclusions with his lordship. We near the spot and redouble our efforts. A rise, a strike, and right about face went our canoe down stream for the lake as if drawn by a span of ponies. And here we are anchored to a giant with a disabled rod and no gaff or landing net. Let him go, says I, keeping the canoe in mid-stream, and if he reaches the clear water of the lake I will make a landing at the sand bar and reel him out on the beach. We fight minute by minute and contest inch by inch. We near the mouth and I prepare to step out, but no, says he, as he makes a grand break and darts up stream as if he divined my purpose. He sulks, and we think it safe to reel in—a dart to the surface, a break, a dive, a break and dive again. Break, dive, dart, sulk succeed break, dive, dart and sulk! Minutes have sped along into an hour and yet

he is not subdued. As we start from the rapids on the fourth trip I avow that it will be trout or no trout this time when we reach the sand bar, as the fatigue that has supervened has long since eliminated the element of sport and excitement from the unequal contest. I give him the butt of the rod and succeed in getting his nose out of the water. He throws all his weight on the rod and the pliant thing permits him to dive well below the surface.

Again I get his head out of water and again he dives, but with less strength and determination: and he sooner yields to the pressure on the rod. His strength fails and yet he is game and a very unwilling captive. We reach the bar and I step out, followed by the crew. The canoe is beached and I reel in. The boatmen, armed with a paddle, surround his kingship and follow him in until I land upon the sand this foeman worthy of his steel. He tipped the scales at 4½ lbs., and while many a larger one has fallen victim to the tempting lure and human skill, I cannot conceive of and never expect to have, a greater battle than I had, with this monarch of the pool.

If any reader of *FOREST AND STREAM* would like to try his luck and test his skill in this attractive and romantic region, which is outside the beaten path and yet easy of access, a line of inquiry addressed to L. M. Gerrish, Burdenville, Me., will secure all needed information. Mr. Gerrish was our guide and chef, and we cannot say too much in his praise. GEO. MCALFEER.

WORCESTER, Mass.

APRIL TROUT.

THE April fishing for trout in Connecticut, New Jersey and Pennsylvania has not come up to the expectations of the anglers. The fish have not reached their prime condition and show very little interest in anything except the worm. In Connecticut a sentiment in favor of changing the date of the open season from April 1 to May 1 appears to be growing. A great many small trout have been caught and few large ones; the largest recorded is one of 23oz., taken by Mr. Potter, of Forestville. Connecticut streams have been depleted by over-fishing and the use of explosives.

In Pennsylvania large trout have formed a greater ratio of the catch; the good work of the Fish Commission in restocking natural trout streams which had been fished out is attracting universal attention and the anglers are reaping the benefit of the State's liberality. The Schuylkill valley has yielded a goodly number of fine trout, among them numerous specimens of about ½ lb. in weight.

When the balmy air of May is fragrant with the perfume of apple blossoms, and the meadows are bright with the golden buttercup; when the pale anemone lifts its modest head in shady woods and the busy hum of insect life mingles with the plaintive notes of nesting birds, the angler may seek his favorite streams and match his choicest flies and consummate skill against the cunning of the vigorous and wary trout with reasonable assurance of rare enjoyment and ample reward.

MISSOURI VALLEY ASSOCIATION.—Kansas City, Mo., April 21.—*Editor Forest and Stream:* It is important that the sportsmen generally should know that we (Kansas City sportsmen) are working just as hard as our friends and neighbors are. We have used our best efforts, and by the aid of our worthy representative, Mr. Coats, for which we thank him very much, will have a law in about sixty days which we intend shall protect the fish and game of our section, at least. We want the public to know that in the last three months we have perfected an organization known as the Missouri Valley Fish and Game Protective Association, and at our last meeting it was shown to have 207 members in good standing. Uncle Joe Erwin, one of the oldest veterans as an angler, is our permanent president, and we are fully satisfied that there is no one in our State that is more earnest in the matter than Uncle Joe. Some time in the future we shall give you the joke he played on some of the Down East anglers before he emigrated to this country. He being in such a position as to prosecute the law breakers, and having the money to back him, we feel sure that we shall soon have better fishing than we have had in the past. James Whitfield, who is connected with our leading daily paper and is a great rustler, is the secretary of our organization, and is very active and a well-informed man. The season for angling here has been very backward, and so far we have not heard of any great catches having been made; but if this season is as favorable as the last, no doubt we shall be able to give you an account of some of the great game fish procured in the West before the season is over. —SCOTT.

SULLIVAN COUNTY TROUT.—Woodbourne, N. Y., April 21.—Never in the history of trout fishing have the indications been so favorable for a great season, as every circumstance promises for the coming summer an abundance of sport for the worthy angler. The winter has been favorable, as there were no ice jams in the streams to do destructive work, as is too often the result in the breaking up of winter in these mountain streams. And the beneficial evidences of a continual stocking have encouraged the residents to greater energy. This season, as heretofore, over 1,000,000 trout fry were distributed throughout the county at the heads of the many streams. This good work has been carried on for the past ten years. It takes about four years for the young trout to reach the desired size, when they can make it interesting for a 7oz. rod in the hands of an amateur angler. There are about 500 miles of trout streams throughout the county, convenient to the line of the New York, Ontario and Western R. R., and some of these streams are the most popular in the State. Among them are the Neversink, Willowemoc, Beaverkill and Mongaup. The Neversink has its source in the Big Indian Mountain and flows through a wild and romantic part of the county, it is one succession of pools, eddies and rapids, in which sport the spotted beauties varying in size, and frequently reach up into the pounds. The largest catch for last year was made by a guide living at the village of Woodbourne, who thought it no trick to fill a 12 or 14lb. basket during the day, with as fine specimens of brook and California trout as one could hope to hook. The California trout were first placed in the Neversink River by Seth Green as an experiment, to learn if they would propagate, and since the stocking by Seth Green a number of shipments of the same species have been successfully placed in the small brooks leading into the main streams; they grow

almost twice as large as the native brook trout in the same length of time. Experienced fishermen hereabouts look for the best sport during the months of May and June, when fly-fishing will begin in earnest, and they safely predict for this season a greater catch than has ever before been known.—OBSERVER.

KEUKA LAKE.—Dundee, N. Y., April 27.—Trout fishing in Lake Keuka has opened very satisfactorily this year. Several fine catches have already been made. Eighty pounds of trout were recently brought in in one afternoon by the guests of the Lake Keuka House. The fish are running larger than for several seasons past at this time of year. Dr. Phillips, of Penn Yan, captured one last week weighing 14½ lbs. and measuring 37in. in length. Several weighing 10lbs. have also been caught. —GUY GRUNDY.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

April 28 to May 2.—Dog Show of the California Kennel Club, at San Francisco, Cal. H. L. Miller, Sec'y.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.

Sept. 9 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.

Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.

FIELD TRIALS.

Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall street, New York city.

COCKER SPANIELS AT CHICAGO.

Editor Forest and Stream:

As an owner and exhibitor of dogs, I desire to protest in the most emphatic way against *FOREST AND STREAM*, a journal which the dog-loving public look to for accurate and unbiased reports of the different dog shows that are held, being made the medium for abusing and maligning my spaniels by a disappointed exhibitor. My special cause of complaint is your report of cocker spaniels at the Chicago show. It is not my intention to enter into a newspaper discussion as to the cocker spaniels shown at Chicago further than to say that the dog which Mr. Bell appears desirous of setting back has won at five shows this spring, under four different judges, six first prizes, two second prizes, one third prize and five special prizes. Further, that he can beat, under the official judges of the American Spaniel Club, any cocker dog (or bitch either) that Mr. Bell owns; for fun, money or marbles.

You say, in regard to the cocker spaniel classes: "George Bell writes us the notes on them." I am quite ready to admit the statement as correct, and believe any one with ordinary perception would not require to be informed of the fact, but would see that there was a "nigger in the fence" after reading the report. It is quite evident that Mr. Bell did not expect that his name would appear in connection with the report.

[Here follows Mr. Bell's report in parallel columns accompanying his criticisms on his own dogs and those of his competitors. Space will not permit our publishing it, especially as it is only a repetition of a report already printed. In justice to Mr. Bell we may say that he signed his name in full to the report in question.]

Any one who will say that this report was a strictly fair and impartial report is stating what is untrue. A glance shows that all the dogs owned by the writer of the report have all the essential points of the breed, leaving almost nothing to be desired. All Mr. Bell's dogs (if you take his word for it) are "world-beaters," grand movers, etc. None of the other dogs appear to have been "in it." Still, Mr. Nelles, who is one of the official judges of the Spaniel Club, thought differently; and when Mr. Bell found that he could not work successfully the big game of bluff on the judge that he intended, he became abusive and so impertinent in the ring that Mr. Nelles finally asked him who was judging the dogs. The spaniels at Chicago were placed as a majority of the Spaniel Club judges would have placed them, and I think that this report, belittling every dog not owned by himself comes with very poor grace.

This same George Bell wrote me, under date of March 13, 1891 (less than a month before the Chicago show), in reply to a letter of mine, stating that I desired to dispose of all my spaniels, the following peculiar letter:

TORONTO, March 13.—Mr. A. Laidlaw.—Dear Laidlaw: Your letter to hand. I am showing at Chicago and Denver only. I have got a strong kennel of blacks, do. reds, do. livers. Would not care to buy any at present, but would show about three of yours for you in my name and do my best to sell them for you. Let me know what you think of this.—G. BELL.

Mr. Bell has for several years never lost an opportunity of abusing my dogs and myself personally. He has followed the same tactics with regard to other spaniel men, until forbearance has ceased to be a virtue. I have hopes, however, that he will in future devote his attention more strictly to his own business, and if by doing so he can produce the "world-beaters" he claims to have (but which he has not) I will acknowledge the fact as quickly as any one. My own opinion is that your reporter was much more competent to criticize the cocker spaniels at Chicago than the man who supplied the notes for the report.

ANDREW LAIDLAW.

WOODSTOCK, Ont., April 21.

MASTIFFS.

Editor Forest and Stream:

Notwithstanding the opinion of the judge at the last New York bench show that champion Beaufort was a used up specimen, authority of greater weight says Beaufort never looked or appeared better or was in better show condition and health, "and that no one could say that he showed the first symptoms of weakness in any part of his grand frame." He was there as he always has proved himself in the strongest company and before all judges, king of the stud and of the show bench.

Why has the mastiff fallen in popularity? Not from any fault of the dog, for he is still the most trusty and noble of all. Is it not more on account of the poor specimens that have appeared with few exceptions at our principal shows for the last two years? Why have not the old breeders brought out anything new? Is it to be supposed that with the best bitches that can be obtained from England in their kennels and with such a sire as champion Beaufort has proved himself, that within the past two years they have bred nothing worth showing. If you think so visit their kennels and judge for yourself. Should there be a judge at New York next spring who is a recognized authority, a breeder who has owned and bred good ones, then you will

see a class of mastiffs that America can be proud of. It will have the same effect on quality and the increase of the mastiff classes that it did in 1888, when Mr. W. K. Taunton was the judge there. Then the value of Beaufort as a stud mastiff would be more plainly seen.

Besides the quality of Beaufort's get, he has sired the largest and strongest litters; besides, bitches that I have been unable to get in whelp by other dogs after repeated trials for the last three years, have had fine litters by him. At first I regretted that there were no entries made of Beaufort pups that he had sired since he came over, but afterward I saw it was best that they were away. I was anxious to show the great value of Beaufort to American breeders when properly mated. Mastiff breeders will remember the exhibition of mastiffs given at the Crystal Palace in honor of the visit of the president of the American Mastiff Club, and of the presentation of the mastiff bitch Albion (champion Hotspur—Nita) by Dr. Sidney Turner to Dr. Derby, and his remark that by the unity of Beaufort and the Albion blood the finest pups should be obtained. Shortly after Albion's arrival she was sent to my kennels and was bred to Beaufort, when she whelped one of the most remarkable litters in every respect, so far as quality and quantity goes. She gave birth to 10 dogs and 5 bitches. I call this Beaufort's great, prize litter. Well may Dr. Derby be proud of it. He will stand many points ahead whenever any appear on the show bench should it be before a judge who knows a mastiff. J. L. WISCHELL.

FAIR HAVEN, Vt., April 18.

THE AMERICAN SPANIEL CLUB JUDGES.

Editor Forest and Stream:

I notice, in April 16 issue, that a member of the above club wishes to tell some of us how to cast our vote for the two vacancies that remain on the list of judges. Mr. Hemingway and Mr. West, as explained, will not be on the list and two others will take their places. Who shall those two be? I think another might be substituted for Mr. Nelles, thereby making three. Mr. Kirk, of Toronto, is mentioned as one and will probably give great satisfaction. Mr. Winslow is the other. I do not hold with his nomination. Should not call him a spaniel man; he is a first-rate gentleman socially—none other like him, and a great favorite and as good a pointer judge as we have in America, but I am sure the last few years he has not dabbled in spaniels. Count him out and put in "long and low" Otis Fellows. Now last, but not least, comes the best of the trio, one who has proved himself time and again the shrewdest buyer and breeder of any one in the country—that is Geo. Bell. A man who buys Obos and such like for \$4 and makes champions of them is quite qualified as a judge. So cast your vote as follows and be guided by your father and you won't go wrong—Mason, Wilmerding, Willey, Oldham, Otis Fellows, Kirk, Geo. Bell and Laidlaw. PATER.

Editor Forest and Stream:

It was with much reluctance that, during the past circuit, I had to so often disagree with the awards and criticisms of the spaniel classes, and particularly where the Spaniel Club's cups were competed for. I always avoided saying anything where I was interested in any degree, and wish to make it clear with regard to Baron's competition for the cup, that I carefully prevented any arrangements whereby I became interested in his defeat or success. This is a point I wish my fellow members to know. In a recent issue you had a communication recommending certain men for the new list of judges for the Spaniel Club, which did not seem to be exactly to the taste of many exhibitors, and it seems to me that the members of the club do not require to be so instructed. I wish to say in reply that, with many others, I think that some provision should be made for some one competent to handle the large Irish water spaniel classes at the Western shows, and that others thoroughly acquainted with the Clumber, the field, as well as cocker spaniels, should be on the new list. In thus insuring a good and equal representation for each variety, a fair proportion of Canadians should be on the list, not only because it is their right and equally proper as a matter of courtesy, but also because of the desirability of having the judges so located that their expenses will not be too heavy for show committees. EDWIN H. MORRIS.

NEW YORK, April 24.

NATIONAL BEAGLE CLUB MEETING.

Editor Forest and Stream:

An executive meeting of the National Beagle Club was held at 266 Washington street, Boston, Mass., April 25. President O. W. Brookings called the meeting to order at 8 o'clock, the roll call showing two absentees. Minutes of last meeting read and approved. Committees on banquet and decoration gave their reports and were discharged.

Several communications were read and accepted. Mr. Schellhass was further instructed to fulfill duties imposed upon him at the amalgamation meeting held at New York and was elected delegate to represent the National Beagle Club at meetings of the American Kennel Club. Mr. W. S. Gates, Chagrin Falls, Ohio, was elected a member.

Dr. W. A. Power, chairman, Messrs. Rutler, Jamieson, Clark and Turpin were appointed a committee by the president to carry out the vote of the club in regard to incorporation under the laws of Massachusetts.

Much discussion in regard to the National Beagle Club field trials followed and the executive committee was instructed to look up and report at the next meeting any grounds they may see before that time. It is expected at the next meeting the time and place may be selected so that those who desire to train their dogs may be assured that the field trials will be held. The prizes will be liberal and a large entry is expected. Meeting then adjourned until Saturday, May 2. HUBITE.

THE LATE MR. PORTER.

Editor Forest and Stream:

By a vote of the Executive Committee of the Bulldog Club of America, the following was adopted:

Whereas, The All-Wise Disposer of human events has taken from us by the hand of death, suddenly on the 16th inst., our highly respected friend, colleague and vice-president, Edgar Sheffield Porter, who was one of the prime movers in the formation of our club and has been our valued associate, be it

Resolved, That acquiescing as we must in this dispensation of Divine Providence, we cannot but lament the loss we have sustained, as individuals, and as members of this club.

Resolved, That we express in this manner our high appreciation of his many excellent qualities which endeared him to each one of us, and of his valuable services so cheerfully rendered to the club, and of which we regret that we must henceforth be deprived.

Resolved, That these proceedings be published, as our testimony of the worth of one who has been called from us, in the summer of his years and usefulness, and that they be communicated to his family as expressive of our cordial sympathy in their great bereavement.

CHAS. D. CUGLE, Sec'y.

HAMILTON DOG SHOW.—Hamilton, Canada.—*Editor Forest and Stream:* I have the pleasure to inform you hereby that the bench show of the Hamilton Kennel Club will be held in this city on 9th, 10th and 11th Sept., 1891, and the club now claims these dates.—A. D. STEWART, Pres. H. K. C.

THE VREDENBURGH-PESHALL CASE.

THE trial of Mr. Chas. J. Peshall, charged with libel, for having said that the accounts of the American Kennel Club were juggled, was concluded last Friday, when the jury, having weighed the evidence in the case, brought in their finding that there was no libel in what Mr. Peshall had written.

The evidence was summed up on Thursday afternoon. Judge Martine concluded his charge shortly after 1 o'clock on Friday, and the jury retired. They were an intelligent set of men, "a jury of business men," as the Court had characterized them; and among the twelve were three practical book-keepers. Their first ballot showed 7 for acquittal and 5 for conviction; the second 8 for acquittal; the third 9. There it stood; and so determined were the 3 for conviction that in the jury room a disagreement was thought inevitable. Then they sent for Mr. Vredenburg's books. It was discovered that although these were a part of the evidence in the case, they had already been taken back to the A. K. C. office; but after an hour's delay they were brought into court and by consent of counsel on both sides were delivered to the jury. The three jurors who had all this time been standing out for conviction took a look at the books. There was no further argument nor delay. The jury returned to the court room, and Foreman Samuel Levon announced the verdict, "Not guilty."

The case grew out of Mr. Peshall's criticism of the management of the A. K. C. This began in the winter of 1888-9, and was continued, until on June 19, 1890, in an article published in *FOREST AND STREAM*. Mr. Peshall charged that the financial management of the club, as evinced by the treasurer's reports, was false and fraudulent. As a reply to this article Sec. Treas. Vredenburg preferred counter charges against Mr. Peshall and summoned him to appear to answer them at a special meeting of the advisory committee in July, 1890. Mr. Peshall denying the jurisdiction and even the legal existence of the committee, refused to appear. The committee referred the charges to the club. The controversy over the accounts was continued in *FOREST AND STREAM*. On Sept. 18 Mr. Vredenburg made a complaining affidavit before the Grand Jury charging Mr. Peshall with libel. The charge was based on the article of June 19, and specified in particular the following paragraphs which we copy as they appear in the indictment:

I have also opposed the financial management of this Club [meaning the said American Kennel Club] and for fear that I may have been misunderstood, permit me now to say that the financial management as evinced by the reports made, are not only false and fraudulent, false, because they are not true, and fraudulent because they have been made with the intention to deceive.

A few days after this meeting, while the writer of this was in the American Kennel Club [meaning the said American Kennel Club] office, Mr. Vredenburg [meaning the said A. P. Vredenburg] stated to me out of his own mouth, substantially that I had made no mistake in nominating Mr. Belmont, as he had come into the office morning over the snags of the bank account and replenished it with a large sum of money. At the annual meeting of the American Kennel Club [meaning the said American Kennel Club], which was held Feb. 21, 1889, Mr. Vredenburg [meaning the said A. P. Vredenburg] as treasurer made two reports, commencing from Dec. 5, 1888, and showing the balance as reported at the previous meeting \$5.39, and on Jan. 11, \$1,228.28. If any book-keeper will now take these two amounts and examine them, there is only one conclusion that he can come to, and that is this, that they are false. The item of \$1,228.28 was not earned by the Club [meaning the said American Kennel Club], there was no possible resource from which the club could earn this item, and the club [meaning the said American Kennel Club] did not earn it; it was either borrowed, book-keeper or juggled into the accounts.

May 8, 1888, the American Kennel Club treasurer's [meaning the said A. P. Vredenburg's] report shows \$128.00 on hand. Secretary goes to Europe, returns Dec. 3, 1888. Dec. 6, 1888, makes a report dated Dec. 5, balance on hand \$5.39. At the same meeting asked to have registration fee increased 100 per cent., because stud book was always published at a loss. On same month states to the writer, received a large amount of money, from the president, Feb. 21, 1889, makes two reports of the day, which show upon their face fully as much jugglery as could have been gotten into one report in two days.

January, 1890, secretary and treasurer [meaning the said A. P. Vredenburg] published an annual statement showing that from and during the year 1889 he [meaning the said A. P. Vredenburg] had received from the dog men and breeders of this country \$8,312.23, and that he [meaning the said A. P. Vredenburg] and a few others had expended \$7,057.09, and yet he [meaning the said A. P. Vredenburg] fails to show in any of his reports where the dog men and breeders have received any benefit from the expenditure of this money; for no stud book was published during the year and for some two months thereafter.

Mr. Vredenburg's affidavit was sustained by others sworn to by Messrs. Jas. L. Anthony and A. C. Wilmerding. Upon these an indictment was found by the Grand Jury, and on Sept. 25, at a time when the A. K. C. had convened in secret session to suspend him, Mr. Peshall was arrested on a charge of criminal libel. He pressed for an early trial, but the prosecution put the case off with one excuse and another, and it was not until after numerous postponements—nine it is said—that he finally succeeded last week in getting his case before a jury. The trial began Friday morning, April 17, was resumed on Monday, and concluded on Friday last.

Mr. Peshall, who is a lawyer, conducted his own defense and did it with great skill. The old saw is that a man who tries his own case has a fool for a client. Mr. Peshall did not illustrate the truth of the saying, though his position was recognized to be a difficult one; and it was a tremendous physical and mental strain on the man; and when, on the afternoon of the fifth day of the trial, he came to the summing up, he exhibited manifest signs of exhaustion. From the beginning he showed that the prosecution was not going to catch him napping at any stage of the game. If ever a lawyer pleaded a case with a firm conviction of the merits of his side it was Peshall defending Peshall. This unmistakable sincerity had its effect upon the jury from the first. Those who heard the man knew that, right or wrong, he believed he was right; and before he finished he had made most of them share this belief with him. His opening address was a creditable effort, with passages marked by true eloquence. The lines of defense—the points which he endeavored to prove—were that the publication of the article was justified because the charges contained in it were true, were made without malice and in the belief that they were true, that the article was in reply to the personal attack on himself in the *American Kennel Gazette*, that his prosecution for libel was only part of a scheme to "down him" in the estimation of dog men. All this he endeavored to show for the most part by the prosecution's own witnesses. The direct examinations by Assistant District Attorney McIntyre were as a rule brief, and most of the questioning was done by Mr. Peshall on his cross examinations; he kept Mr. Vredenburg on the stand about two full days.

A tremendous mass of testimony was brought out; the stenographer's transcript comprises over 500 type-written pages of letter paper. We cannot attempt to give more than a small portion of it, selecting those parts which relate to the points to which most interest appeared to be attached. The notorious balance of \$1,228.28 was, as a matter of course, the first subject of inquiry by Mr. Peshall. In fact it never disappeared for long, and was heard of all through the trial, and made a farewell appearance only in the charge to the jury. We shall give to-day only that part of the testimony (or a portion of it) which had to do with the sum of \$1,228.28 and the items composing it. To this item the cross examination always returned, even after the defendant had, as Mr. McIntyre complained, "traveled all over creation." Here is a protest by the Court, on the second day:

THE COURT: I am not going over the accounts of this club any more than is pertinent to this question. You are charged with having uttered and published a libel. Whatever re-

lates to your defense—whatever relates to the claim that is apparently made, that the statements that the accounts were incorrect are true—whatever tends to show that you were correct or incorrect, I must certainly allow; but I do not want to be drawn into any side issue that may not have that tendency and pertinency, and I am not going any further unless I am clear that that is the situation.

MR. PESHALL: Well, if your Honor please, these are accounts that I have been attacking. I have been attacking these accounts right along.

THE COURT: Well, haven't you all that you want? This witness has told you.

MR. PESHALL: I understand that, your Honor. But I propose now—this is the first opportunity that I have ever had to get these items, and I want them now.

THE COURT: I am not going into the general bookkeeping of the club. It may have been good or bad bookkeeping, and I care only for the portion that relates to the charge here.

MR. PESHALL: It all relates to the indictment. Please hand me the indictment.

THE COURT: Now, Mr. Peshall, without going over all that, if you can show here and elsewhere that the accounts are incorrect—is not that what you want to show?

MR. PESHALL: Yes, sir.

THE COURT: And without going into the entire bookkeeping of the club. Do you think it serves the interest that you represent to do that?

MR. PESHALL: It certainly does; and I will state here—

THE COURT: You will have this jury so bedeviled with figures that they will not know where they are when they get through.

MR. PESHALL: Well, if they are not more clouded about them than the dog men throughout the country, why, it will be lucky.

THE COURT: I assume that, because I confess that I am bedeviled myself as to the figures, but I depend upon the jury, who are business men and better mathematicians than I am.

The first witness called for the prosecution was Mr. Alfred P. Vredenburg, who testified that he was the secretary and treasurer of the American Kennel Club at an annual salary of \$1,800; had held the office since May, 1886. Described the composition of the American Kennel Club and its purposes. The constitution and by-laws of the club were introduced to show his duties as an officer. The witness testified that he had charge of the publications and finances of the club and made his annual reports in February. Had a conversation with the defendant in May, 1890, at which time he had assured him that the accounts were perfectly correct in every way, and the defendant's response was a simple reiteration of his accusation. The witness had brought with him, and they were subsequently put in evidence, a copy of *FOREST AND STREAM*, June 19, 1890, containing the alleged libel; also the treasurer's book of the A. K. C., including the bank pass book (Chatham National Bank), stub of check book and returned checks, minute book of the A. K. C. to January, 1890; invoice book, containing the bills paid by the A. K. C.; a ledger of the A. K. C.; daily cash book from January, 1887, to April, 1888, and another one from April, 1888, to April, 1889; also the *American Kennel Gazette* for February, 1889. Mr. Peshall subsequently called for a large red-bound ledger, in which he claimed the A. K. C. accounts were formerly kept; but Mr. Vredenburg denied its existence.

On cross-examination by Mr. Peshall, the witness testified that at the December, 1888, meeting he had read his treasurer's report, showing a balance in the treasury of \$5.39, and that his next report was that of February, 1889; that he had never made an annual report for 1889; that the February report was the Treasurer's account from Dec. 5, 1888, to the time of the meeting, February, 1889. That report was as follows:

REPORT READ AT ANNUAL MEETING, FEB. 21, 1889.

TREASURER'S REPORT, 1889.

A. K. C. Account.

Balance on hand Dec. 5, 1888.....	\$5 39
Received from clubs for annual dues.....	25 00
Received for registration of prefixes.....	15 00
	\$40 39
Expenses.....	\$390 39
Returned dues to Tenn. P. and P. S. Association, said club withdrawing its application.....	\$10 00
Stenographer, meeting Dec. 6, 1888.....	25 00
Office furniture.....	15 00
Petty expenses.....	6 94
Balance.....	\$50 94
	\$333 45

Clubs in Arrears for Dues.

American Field Trials Club.....	\$10 00
National Poultry Association, Atlanta, Ga.....	10 00
Stafford Kennel Club.....	10 00
Winsted Kennel Club.....	10 00

A. P. VREDENBURGH, Treasurer.

TREASURER'S REPORT, 1889.

of moneys received by the A. K. C. from all sources, and of expenses of every description to Feb. 18, 1889:

Receipts to Jan. 11, 1889, as per balance carried forward to new cash book.....	\$1228 28
Receipts from Jan. 11, 1889.....	
From registrations, Stud Book.....	182 00
Sales of Stud Book.....	145 50
Advertisements, Stud Book.....	50 00

Subscriptions, Gazette.....	6 00
Annual dues, active members.....	90 00
Annual dues, associates.....	507 50
Claims for prefixes.....	15 00
	\$2375 53

Expenses from Jan. 11, 1889.

For Stud Book, including editor's salary on account of last year.....	\$191 20
For Gazette.....	365 64
For club.....	194 51
	\$751 44

Balance on hand..... \$1624 09

A. P. VREDENBURGH, Treasurer.

Asked to explain the item of \$370 in this statement, the witness, consulting his ledger, testified that it was made up of club dues paid as follows:

July 24, Dues, Southern Field Trial Club.....	\$10 00
24, Albany Kennel Club.....	10 00
24, Washington City Kennel Club.....	10 00
24, Virginia Field Sports Association.....	10 00
14, The Tennessee Poultry and Pet Stock Association.....	10 00
Aug. 6, The Chattahoochee Valley Exposition Company.....	10 00
21, The Gordon Setter Club.....	10 00
Oct. 23, The Maryland Kennel Club.....	10 00
Dec. 5, The Rochester Kennel Club.....	10 00
5, The Columbia Financiers' Club.....	10 00
8, Pacific Kennel Club.....	10 00
8, Michigan Kennel Club.....	10 00
10, The Beagle Club.....	10 00
10, The Westminster Kennel Club.....	10 00
12, The Fox-Terrier Club.....	10 00
12, The Collie Club.....	10 00
14, The Bernese Mountain Dog Club.....	10 00
15, The New England Kennel Club.....	10 00
17, The Pittsburg Kennel Club.....	10 00
19, The New Jersey Kennel Club.....	10 00
20, The Mascoutah Kennel Club.....	10 00
21, The Philadelphia Kennel Club.....	10 00
31, The Georgia Poultry and Pet Stock Association.....	10 00
31, The Cincinnati Sportsman's Association.....	10 00
31, The Rhode Island Kennel Club.....	10 00

1889, The Massachusetts Kennel Club.....	10 00
Jan. 2, The Worcester Kennel Club.....	10 00
4, The Hartford Kennel Club.....	10 00
11, The Wisconsin Kennel Club.....	10 00
12, The Cleveland Kennel Club.....	10 00
21, The American Mastiff Club.....	10 00
21, The Rensselaer Kennel Club.....	10 00
23, The Syracuse Kennel Club.....	10 00
25, The Fort Schuyler Kennel Club.....	10 00
23, The Gordon Setter Club.....	10 00
Feb. 4, The St. Paul Kennel Club.....	10 00
6, The Toledo Kennel Club.....	10 00

Mr. Peshall then asked for the receipts of this nature subsequent to Dec. 5, 1888 (the date of the \$5.39 balance), and the testimony ran as follows:

Q. Now, will you tell the Court and jury how many dollars you got in after that; that is, commencing on Dec. 8, how many clubs paid \$10 each? A. Twenty-six.

Q. Twenty-six? A. Yes, sir.

Q. Now, will you look at that account and see how you can get 26 clubs to pay in \$370 there, and \$90 in the other account? A. Yes, sir.

Q. Well, tell us how it is. A. The statement of the treasurer was brought up to the annual meeting of Feb. 6, '89, which made \$370, received from dues from 37 clubs. The statement that I made, running back from Jan. 11, includes in that, as you will see, only dues from active members—\$90—which were paid in between the 11th day of January and the date of the 16th of February.

Q. Now, will you take your pencil and figure out and show us how you make that? You may be a better figurer than I am. I don't pretend to be a bookkeeper. A. Well, I can do it very well. On the 12th of January I received \$10.

Q. Well, who did you receive that from? A. From the Wisconsin Kennel Club. That is one. On the 21st I received from the Cleveland Kennel Club \$10. On the 22nd of January, from the American Mastiff Club, \$10. On the 23d of January, from the Rensselaer Kennel Club, \$10. On the 25d of January I received from the Syracuse Kennel Club \$10. On the 25th of January I received \$10 from the Fort Schuyler Club. On the 26th of January I received \$10 from the Gordon Setter Club. That makes seven. On the 4th of February I received \$10 from the St. Paul Kennel Club. On the 6th of February I received \$10 from the Toledo Kennel Club. That is 9.

Q. Now, that is the ninth. Now, will you account to us and tell us in regard to the other. That makes 9 clubs that paid after Jan. 11, does it? A. After Jan. 11.

Q. And there were how many clubs that paid between Dec. 5, 1888, and Jan. 11?

THE COURT: That would be Jan. 11, '89?

MR. PESHALL: Yes, sir. During the latter part of December and commencing the 8th of December. A. 20.

Q. How many are ten 20's? A. 200.

Q. How do you account for \$370, then? A. Well, simply between Jan. 24 and Dec. 5, there were eight clubs that paid applied on the new payment of dues.

Q. Now, let me ask you this question: You made a report on the 5th of December and read that report at the meeting of December? A. Yes.

Q. And you said you had \$5.39 on hand? A. Yes.

Q. Where was this money? A. It was waiting to go on the new account; it belonged to the account.

Q. You did not report it? A. No.

Q. You had it? A. Yes, sir, I had it.

Q. Then you had—then your account on the 5th of December was not correct, and you had \$80 more in your possession than you stated? A. My account is correct, because—

Q. Now, answer my question. You are under cross-examination.

MR. MCINTYRE: If your Honor please—

MR. PESHALL: I protest. This is cross-examination and it certainly is no time to come to his rescue.

THE COURT: Mr. Peshall, you must not talk quite so much. Everybody is with you but the District Attorney. If you talk so much the Court cannot hear you.

MR. MCINTYRE: And I am certainly against him on this line of examination.

THE COURT: Now, put a new question. Let us have it again.

MR. PESHALL: Q. You say that you had \$80 in your possession that you did not report as treasurer? A. I did.

Q. Then your account that you made then—the report that you made at that time—was not true? A. It was true.

Q. It was true? A. Yes. The \$80 applied to a subsequent time. It was paid in advance—there is the difference—before it was due.

Q. You had the money in your possession as treasurer? A. And it is here credited.

Q. Was it credited in December? A. No, sir. It was credited already, but it was paid.

Q. You say it was paid in July or August—along there? A. Yes, sir.

Q. And you had it in your possession as treasurer of the American Kennel Club? A. Yes.

Q. And you did not account for it at the December meeting? A. No, sir.

Q. Then, if it was your duty to account for the money at the December meeting—for the \$80—then your account was not true? A. I held that money in trust for these clubs.

Q. You were treasurer of the club? A. I was.

Q. And you had the money? A. Yes, sir.

Q. And those clubs looked to the American Kennel Club for that? A. Yes.

Q. And you were secretary and treasurer? A. Yes.

Q. And you had the money and did not report it? A. That is true. But that money was not due until the following December.

The witness then testified that he had never as treasurer at any meeting of the club given the items making up the sum of \$1,228.28, but he had given them to a number of the members of the club. Had never published them in the sporting papers nor in the *Kennel Gazette*. Had been requested by defendant to do so. Had made in 1890 a detailed report for 1889, so that the dog men throughout the country knew where the money he spent had come from and where it went to. Had in January, 1888, published a report for the year ending 1887, because the *FOREST AND STREAM* had questioned the defendant's statements respecting the financial condition of the A. K. C.

Returning to the item of \$1,228.28, the defendant resumed:

Q. Will you give us the items now, Mr. Vredenburg, going to make up that item of \$1,228.28? A. I will. I commenced on Jan. 10, 1888, with \$650.04. I received from members' dues \$310. I received for registration of prefixes \$42. I received for traveling fund \$100. Received for sundries, incidentals, \$7.90. Received for the registering of dogs \$2,128. Received for sales of stud book \$997. Received for tabulated pedigrees \$54.50. Received for advertising \$425.25. The total receipts were \$4,714.69. The disbursements for salaries, rent, printing, postage, expressage and incidental expenses during the period amounted to \$3,486.41, which disbursements deducted from the receipts of \$4,714.69 leave a balance of \$1,228.28.

Q. Now, Mr. Vredenburg, will you allow me to recall your attention again to this account, which was filed in 1890—January, 1890. Now, will you look at that stud book for 1888 and tell me how much money was in the stud book account, at that time, of this sum of \$1,228.28 that you claim? A. It must have been the difference between \$1,228.28 and \$833.45—about \$900. This is in my following ledger.

THE COURT: Q. The difference between what? A. \$333.45.

MR. PESHALL: Q. Now, what was the balance on hand,

You are a bookkeeper? A. Not an educated bookkeeper, but I keep the accounts of the club.

Q. What do you mean by an annual statement? What is meant by it—as secretary and treasurer of the corporation? A. Well, I mean by the annual statement that I show the sources of income and the disbursements for the year, leading up to that item, and the difference, the balance, is to my credit. That is, if we have a balance, but showing everything in detail.

Q. That is it. Everything in detail? A. Yes.

Q. Now, Mr. Vredenburg, an annual statement made by a firm or corporation or bank—when this statement is made it shows the condition of the corporation, or the club, or the firm, or whatever it may be, when the annual statement is made, does it not? (Objected to. Objection sustained.)

Q. I will ask you if this is a part of your report made for the year—if you made this report to the club, to the members of the American Kennel Club at the annual meeting and published in your official paper, of which I will show you an extract.

THE COURT: Let him identify it first.

MR. PESHALL: Q. Yes, I will ask you to identify it first. A. I wrote that report.

THE COURT: Was it published by your authority? A. It was published by me. I never reported it at a meeting, though. Q. You wrote and published it? A. Yes, sir.

MR. PESHALL: Q. I would ask you to read what is said in that report about your stud book? A. "The 'Stud Book Account' carried over from 1888 a credit balance of \$943.89, but from this we had to pay for the printing of Volume V., Part IV. (that is the book containing the registrations received during October, November and December, 1888.) [Q. Now, I want to ask you—THE COURT: He may finish the answer.] A. There are only three more lines—amounting to \$498.12; also the editor's arrears of salary, \$287.50, which left an actual balance of \$157.27."

MR. PESHALL: Q. Now, Mr. Vredenburg, if you will hand that back to me I will ask you this question. In truth and in fact, now the only balance that is, if you have been making an annual statement; but, if it was an annual statement that you were making for 1888, the true balance, as you state there, would be \$157 and some cents. A. Let me have the book and I will tell you.

Q. You just read it. A. That's all right, but I would prefer having it in my hand before I answer the question. We carried over a balance of \$942.89, and then from this we had to pay for the printing of books, which is \$498.12; also the editor's arrears of salary, \$287.50, which left an actual balance at that time—

Q. At what time? A. After these were paid—of \$157.27.

Q. Now, then, at the time that you made that statement at that meeting—at that meeting those bills were all due? A. Yes, they were due.

Q. And at the time you made that statement you knew those bills were due? A. Yes.

Q. That is what I am getting at. That is what I am getting at. Then, as you have said there truly, the true amount or balance of the American Kennel Club, if you were making a financial statement, on the 31st of December, for the year 1888, would be 150 odd dollars? A. No; I don't say that. I say the stud book accounts, after paying everything, the actual balance is \$157.27.

Q. On the 31st of December, 1888? A. No, sir.

Q. There would be \$123, and some cents left? A. No, sir, I don't understand what you are getting at.

Q. Did you or did you not take in, between Dec. 31 and Jan. 11, \$123.75? A. I had, on Jan. 11, 1889, \$1,228.28.

Q. Wait a minute. I am not asking you that question. I am asking you if you took in, between Jan. 11—or how much you took in between Dec. 31 and Jan. 11? A. Well, I can tell you. I took in, between Dec. 31 and Jan. 11, \$123.75.

Q. How much? A. \$123.75.

Q. Well, then, really the American Kennel Club's balance sheet should have shown, on Dec. 31, 1888, according to this—your stud book account—taking the \$123 from it, would leave how much? A. I don't know anything about it.

THE COURT: If it is a question of arithmetic, he need not do it. If he has got it there, he may tell you.

MR. PESHALL: Q. Then I will put it in this way. Then the true account at that time would be the 150 odd dollars, as reported by you, less the amount taken in? A. The true account would be, on Jan. 11, \$1,228.28, that I had in the bank.

Q. Wait a moment. I am asking you this question. You, in your report, the following year, said—refer back to that time. Now, is your report true here, in 1889? A. Certainly.

Q. Then, if that is true then, your statement should have been, I say, \$157 and some cents, less the amount that you took in between Jan. 11 and the 31st? A. I don't know. I don't know what you are getting at.

Q. You don't know what I am getting at? A. No, sir.

Q. Then I will put it to you a little plainer. You have made a report here one year afterward, in which you refer back to a portion of this item of \$1,228.28? A. Let me have my book and I will follow you.

Q. Let me read this: "The Stud Book Account carried over from 1888 a credit balance of \$942.89, but from this we had to pay for the printing of Volume V., Part IV. (that is, the book containing the registration received during October, November and December, 1888.)" A. What is the balance carried over from 1888 there?

Q. \$942.89 according to your statement. A. This accounts for it. I commenced the account with a balance of \$942.89.

Q. When—when did you commence? A. Jan. 11, 1889. I ended Dec. 31, 1890, with a balance of \$1,077.

Q. I am not asking you that. We are mixed up enough now. I want you to confine yourself to the item, going back—your report is made there as of 1890, and you refer back to the item of \$942.89.

MR. MCINTYRE: He has asked him to explain his account and the witness is attempting to do it.

THE COURT: If he is attempting to explain something else he is not answering the question.

MR. MCINTYRE: He is using the report that the defendant has handed to him.

MR. PESHALL: I will repeat the question: You have in [hand] your next report made in 1890—have you? A. Yes, sir.

Q. In that you refer to the report of 1888, and you say that you commenced the year—when? Dec. 31? Your account is headed that way, is it not? A. Jan. 11.

Q. Well, Jan. 11? A. 1889.

Q. Leaving a balance of how much? A. \$942.89.

Q. Now, in that report, which I have marked, you say you had to pay—you say the true balance is so much. Do you use that word? A. I do, and I was trying to explain it to you.

Q. Now, what I want to know is this: Was that report true that you then made? A. Most decidedly.

Q. Then I am back that paper. That's it exactly. That's what I want to know. Then there was—the true report should have been \$157—the balance? A. It is the difference between the credit that we started with and the credit that we ended with, that year. I explained that whole year in that statement, and there was only a difference of about \$150.

Q. That's what I say. Consequently, instead of your having that amount of money—making this statement of \$1,228, you then, at the time, had before that time actually a debt of \$157—of that money? A. No, sir, it is not true.

Q. It is not true? A. No, sir, I didn't say so.

Q. You are positive on that point? A. Why, certainly.

Q. And that is as truthful as any other of your answers that you have made to me to-day; is it? A. (No answer.) Q. Say yes or no? A. Why, certainly, it is truthful.

Witness then testified to the truth of his supplementary report made at the May meeting of 1889, which was as follows:

The Treasurer's Report was read as follows:

TREASURER'S REPORT.
Receipts from all sources from Jan. 11 to date \$4,538.43
Expenses for same period 3,578.38
Balance on hand \$960.05

Mr. Vredenburg, supplementing the above report, stated that no bills for advertising had been sent out yet, and that about \$130 was due the club. Also no indebtedness, and the rent paid up to August.

He also testified to the truth of the report made in September, 1889, in which were given the bills receivable and bills payable. It was as follows:

TREASURER'S REPORT.
New York, Sept. 13, 1889.—The treasurer begs to report as follows:
Receipts from all sources from Jan. 11 to date \$6,002.81
Expenses for same period 5,173.11
Balance on hand \$829.70

Bills Receivable.
Due for advertisements, Gazette \$637.37
Due for advertisements, Stud Book 32.00
Due for petty accounts 92.25
Accounts not good \$701.02
Total \$1,462.64

Bills Payable.
Rogers & Sherwood, printing account \$135.75
Balance due club \$554.87

HONORABLE RANDOLPH B. MARTINE.

Mr. Peshall then called attention to the Stud Book account, made at the end of this year (1889), and reported in the January, 1890, Gazette as follows:

AMERICAN KENNEL CLUB STUD BOOK ACCOUNTS.
1889.
Jan. 11. To balance on hand \$942.89
Dec. 31. entries received for registration 1,973.50
31. sales of stud books 918.50
31. advertisements 171.00
31. certified pedigrees 16.50
31. binding stud books 10.00
Total \$3,782.39
Bills receivable (uncollectable) \$83.00
1889.
Dec. 31. By postage stamps \$75.36
31. exchange charged by bank 12.32
31. trade discount 10.73
31. entries returned, not eligible 17.50
31. petty expenses (expressage, stationery, gas bills, carpenter, etc.) 16.97
31. Rogers & Sherwood, Vol. V., Part IV 112.56
31. Rogers & Sherwood, extra printing 100.00
31. office rent, paid to Feb. 1, 1890 503.00
31. purchase of American Kennel Register 167.50
31. purchase Vol. N. A. K. C. Stud Book 287.50
31. editor's salary, balance due for 1888 915.68
31. editor's salary, 1889 1,077.15
Total \$3,782.39

Referring to the item of \$171 for advertising, Mr. Peshall asked for an explanation of it. The witness testified that it was for advertisements of the stud book and was due prior to 1889, that is in 1888; that no account was made then because it was not paid then. It was paid in 1889, during which year it was accounted for in the reports. Testimony then ran as follows:

Q. I want to call your attention to another matter, Mr. Vredenburg. Now, would you kindly look at "Editor's salary, balance due for 1888," and tell me when that was paid, Mr. Vredenburg—Mr. Treasurer? A. Yes; I can tell you. That was paid between Jan. 28, 1889—

Q. Wait a moment. What was the first date? A. Jan. 28, 1889, and Nov. 30.

Q. How much? A. \$50, \$73, and \$50.

Q. Wait a moment. Give me the dates. A. Jan. 28, \$50, [THE COURT: Q. What year are you reading from? A. 1889.] Feb. 1, \$73, March 30, \$50, Aug. 23, \$65.50, Nov. 30, \$50.

MR. PESHALL: Q. How did you pay that? A. Some check and some cash.

Q. Now I call your attention backward. In May of that year you published your statement, and you supplemented it with this report that you read a while ago [Mr. Peshall reads the supplementary statement of Mr. Vredenburg, May meeting, 1889]. Now, that was not true, was it—that statement? A. Some of this money—

Q. Was it true? Answer yes or no. Was that statement true that you made, that supplementary statement that you made and published to the world? A. Yes, sir.

Q. It was true? A. Yes, sir.

Q. That is all. I am satisfied with that answer for the present. Now, I want to call your attention again to the September statement, and in this you give the bills payable—the only bills payable are to Rogers & Sherwood. Is that true or not? A. When was that—September?

Q. Yes—September, 1889—is that true? A. That is certainly true.

Q. Well, notwithstanding the fact that those statements are both true, the facts now appear that you did pay money

out that you were owing, and paid money out after making those statements—isn't that so? A. No, it is not.

Q. That's all. You need not explain to me.

THE COURT: He has not tried to explain.

MR. PESHALL: I mean I did not ask for any explanation.

If he wants to do he can do so.

MR. MCINTYRE: And then I will ask for it.

THE COURT: No; not now. The witness stood mute after he had answered, and counsel interjected something and the Court replied to it.

In his complaining affidavit Mr. Vredenburg had sworn that Mr. Peshall had had "the means of knowing all the time the sources from which the said item [\$1,228.28] was made up, as the major part thereof, to wit, the sum of \$942.89, was taken from the American Kennel Club's Stud Book account, he being the Chairman of the Stud Book Committee, which had the full business management of the Stud Book account." In reply to Mr. Peshall's cross-examination he explained: "I had that amount of money when you were Chairman of the Stud Book Committee." And after an interruption:

A. (Continued) You resigned on the 6th day of December, '88. This balance was struck on the 11th day of January, '89, which was about a month later. At the time you resigned as chairman of the Stud Book Committee the cash on hand to the credit of the Stud Book Committee was practically the same as it was on the following Jan. 11, '89.

MR. PESHALL: Q. Mr. Vredenburg, where was that money on the 6th of December, '88? A. In the bank or in the box.

Q. How much of it was in the bank? A. I can tell you exactly.

Q. That is what I am getting at now. Well, state about it. A. Excuse me, I will get at it exactly. There was about \$751 in the bank at the time.

Q. Mr. Vredenburg, how was that account kept in the bank? A. In what way do you mean—the name?

Q. In what name was it kept in the bank? A. The American Kennel Club.

Q. The American Kennel Club? A. Yes, sir—A. P. Vredenburg, Secretary.

Q. In what bank was that money in? A. In the Chatham National Bank.

Q. Was that money in that bank on the 6th day of December? A. This money was in that bank on the 6th day of December.

Q. When you made that report? A. Yes, sir.

Q. The same day when you made your report to the meeting? A. On the 6th of December?

Q. Yes. The meeting was held on the 6th of December and your report is dated the 5th. Here it is. A. Well, that day—I want to look at my books. That money was in the bank at that time, and on the 6th of December I made the report that there was \$151.48 on hand which belonged to the Treasurer's account of the American Kennel Club. The balance of it naturally belonged to the stud book account.

Q. You made what—on the 6th day of December, '88, you made a report that there was how much? A. Oh—\$5.39.

Q. Yes? A. Yes, sir.

Q. Then you say there was how much money in the bank at that time? A. About \$750.

Q. About \$750? A. Yes.

Q. Then when you stated in your report that there was \$5.39 balance, you do not account for that money that was in the bank? A. No necessity to. I was not reporting the balance in the bank at all.

THE COURT: Q. Did you, as a matter of fact, do so? A. No, sir.

MR. PESHALL: Q. Then, that is what I am coming at. Then you had over \$700 in bank and you reported that you had a balance of \$5.39? A. No, sir; I did not. You have asked me—

THE COURT: Q. No; you must answer the questions and the District Attorney will lead up to anything that he desires to correct.

MR. PESHALL: Q. You made a report to the American Kennel Club meeting that you had \$5.39 on hand? A. Yes.

Q. Now you say you had \$600 or \$700 in bank? A. Yes.

Q. You published a statement showing that you had \$5.39? A. Yes.

Q. And sent it out to all the sporting papers and published it in your Gazette? A. Yes.

Q. Now, was there anything to show the breeders and exhibitors, or the men interested in the affairs of this club, that there was any money in that bank?

MR. MCINTYRE: That is objected to. It makes no difference, if Your Honor please.

THE COURT: Was there anything in that statement do you mean, Mr. Peshall?

MR. PESHALL: Yes, sir.

THE COURT: Q. Was there anything in that statement that would show the amount of money that you had in the bank? A. It simply showed the \$5.39.

Q. Was there anything in that statement that would show anything of that amount of money that you have just spoken of as being in the bank? A. No.

MR. PESHALL: Q. Now, this money that you received is gathered from all over the country, practically—from Maine to California? A. Yes.

Q. The public are interested in this club, are they not? A. I have no means of answering that.

Q. Do you get this money from the public? A. I do.

Q. Well, if that is the case, they must be interested in the club, are they not?

THE COURT: You need not answer; that is a conclusion.

MR. PESHALL: A conclusion? Well, you receive money for the registration of dogs from California? A. Yes.

Q. From Maine? A. Yes.

Q. From Oregon? A. I suppose so.

Q. From all over the country? A. Yes.

Q. Now, the clubs are located all over the country, are they not—in different States and Territories? A. Pretty generally distributed.

Q. Yes, pretty generally distributed? A. Yes.

Q. Now then, did you make any statement during the year 1889 to show to these people who have been interested in the funds of that club, or members of the club, the items that went to make up the sum of \$1,228.28? A. No.

Q. Did you as Treasurer—I believe that you have stated that it was your duty as Treasurer to make reports—in your examination in chief, did you not—in answer to Mr. McIntyre? A. I imagine so. I don't remember what I stated about that. I believe the constitution was put in as evidence, and it was not necessary for me to answer the question.

Q. Well, is it your duty to make reports? [THE WITNESS: I have to answer the question, Your Honor, when the constitution is in evidence? THE COURT: Of course. Answer.] A. Yes, it is.

MR. PESHALL: Q. Is there any rule of the club making it your duty to make reports? A. In the order of business there is.

Q. Is there any rule of the club? [THE COURT: That requires him to do what? MR. PESHALL: To report as to the financial matters.] A. In the order of business there is.

Q. Now did you not in any annual report make a report or have you up to the present day made a report of the financial affairs '88? A. No sir.

Q. Why not? A. Because it was not necessary.

Q. Why not? A. Because, up to Feb. 21, '89, I never made a report of any moneys that came to me, other than those that belonged to me solely as the treasurer of the American Kennel Club. At each quarterly meeting I reported that the balances on hand to the credit of the treasurer's account, and at each meeting my report was accepted by the delegates.

THE COURT: Q. Did you render monthly accounts? A. No sir; quarterly. Q. To the club itself? A. Yes sir. Q. In committee assembled? A. Yes sir. Q. Then, how do you say that you rendered no account? A. A detailed statement. I simply reported the credit balances on hand. Q. Showing simply so much to the credit of the club? A. No sir—to that one account of the club. Q. Without showing what disposition was made of the different moneys. Then you say you accounted for all the money in these quarterly accounts? A. I say that I gave the balances on hand in the quarterly accounts.

MR. PESHALL: Q. How much balance was on hand at the July meeting, 1888? A. That was not a regular meeting, sir.

Q. Did you report a balance on hand on that date? A. I will tell you—July, '88?

Q. July, '88. A. No.

Q. You did not? Did you at the May meeting? A. Yes.

Q. How much was on hand? A. I answered you that question this morning. [THE COURT: Well, answer it again.] A. \$128.01.

MR. PESHALL: Q. That was all the money that you had then? A. To the treasurer's account?

Q. Was that all the money that you had in your possession? A. No, sir; it was not.

Q. Then, where is the rest of the money—that is what I am trying to find out? A. It was in the bank.

Q. Did you ever account for the money that was in the bank? A. No, nothing but the annual account until '89.

Q. You never did? A. No, sir.

Q. What did you do with the money? A. Left it in the bank.

Q. Left it in the bank? A. Yes.

Q. Where is it now? A. In the bank.

Q. In the bank yet? A. Yes.

Q. Will you explain how that money stayed—remained in that bank? A. Why it was changing continually—making deposits and drawing from it.

Q. And do you mean to tell this jury that you have never accounted for any of the money since you have been treasurer of the American Kennel Club—for the thousands and thousands of dollars that you received to date? A. No, sir; because I made a detailed statement in '90 of my '89 account.

Q. Of your '89 account? A. Yes.

Q. Have you ever made any detailed statement of the '88 account? A. No.

Mr. Peshall had evidently been doing some hard thinking about the printers' bill for payment of Vol. V., Part IV., of the Stud Book [1889 account], and he asked about it:

Q. Now, Mr. Vredenburg, I want you to look at the bill marked Feb. 11, '89, and state when that bill was paid, if you know, and how it was paid?

THE COURT: When it was made or paid?

MR. PESHALL: Q. When it was paid and how it was paid?

A. It was paid on Feb. 25, '89. It was paid by check.

Q. One moment now. When did you say it was paid? A. Feb. 25, '89.

Q. By a check on the Chatham National Bank? A. It was the only bank I had any money in.

Q. Give me the number of the check, please. A. Check No. 51.

Q. Now, Mr. Vredenburg, was that bill presented before the meeting of Feb. 21, '89? [THE COURT: Presented to him by the printer, you mean? MR. PESHALL: Yes, sir.] A. I don't remember, sir, when it was presented.

Q. Is that the original bill that you received? A. That is the original bill that I received.

Q. And that is the bill—you placed it, as soon as it was paid, in that book, did you? A. I did.

Q. Hand me the book again, will you, please? Was the bill due when you held that meeting? [THE COURT: What meeting? Specify.] Q. Feb. 18, '89. A. The work had been done. I tell you I don't remember whether I had the bill or not.

Q. It is dated Feb. 11. A. I don't remember. I did not notice.

THE COURT: Well, the bill is there.

MR. PESHALL: Q. Was the bill due when that meeting was held? A. I tell you I don't remember.

Q. You don't remember? A. No.

Q. Well, is there any document or paper that you know of that you could get that would refresh your memory upon that subject? A. No.

Q. None? A. No, sir.

THE COURT: I understood you to say that the work had been done? A. Yes; but I am not positive that the bill had been presented.

Q. Then how do I understand you when you say that you do not remember whether the bill was due or not? A. I meant the work may have been done, and if the bill had not been presented I would not know the amount that I owed.

THE COURT: Exactly.

MR. PESHALL: Q. Now, Mr. Vredenburg, I will ask you if that stud book was not out in January? A. I think it was out the latter part of January.

Q. You think it was out the latter part of January? A. Yes, I think it was.

Q. That is, it was in your office at that time? A. Yes; it may have been the 1st of February.

When Mr. Peshall at one time came around to the donation, which he says Mr. Vredenburg told him Mr. Belmont made to the club, this colloquy ensued:

MR. PESHALL: Q. Before I read this I desire to ask you, you say Mr. Belmont never put any money in the club except a hundred dollars? A. That is all.

Q. Did anybody else ever put any money in the club? A. Yes.

Q. Who did? A. I did.

Q. How much? A. \$250.

Q. Cash? A. Cash.

Q. When? A. At the time that you offered me, as chairman of the Stud Book Committee, to pay me \$750 that I was entitled to and I declined to take it all and made the club a present of \$250 and afterward gave my services for nine months for nothing.

Q. When was that? A. That was May, 1888.

Q. You say that I did it? A. You instructed me to draw from the funds of the club \$750, as the chairman of the Stud Book committee. I say I declined to take it all. I gave the club \$250 out of that \$750 and I drew \$500 in two amounts.

Q. You gave the club \$250? How did you give it to them? A. Because you gave it to me and I refused to take it.

Q. Did you have any of the money? A. You were chairman of the Stud Book committee and gave me that instruction after the meeting of the committee.

Q. I was only one member of the committee, was I? A. You stated to me that that was the result of the committee meeting.

Q. When did I state that to you? A. At the time that they had the committee meeting. It was, I think, in May, 1888, or the month before.

Q. Was there minutes kept of the meeting during that time? A. I am sure I don't know what you did in your committee.

Q. Did we have one room there? A. You met in another place that day, I distinctly remember.

Q. Who was secretary? A. I don't know. I had nothing to do with your committee at all.

Q. Did you take the money? A. I took \$500.

Q. Then you gave the club \$250 by not taking \$250 more that I said you might take, was that it? A. Yes, sir.

Q. And that is what you want the jury to believe? A. It is the truth.

Q. I say that is what the jury is to believe? A. I say it is the truth.

Q. And subsequently you made a donation of \$250 to the club? A. That is exactly it.

Q. Haven't you repeatedly stated in your reports and in your speeches that the club has never received one penny of donations? A. In reply to your accusations only, I have a statement that you will see I acknowledge a donation of \$10.

Q. I think you mentioned that. A. Yes, you read it.

Q. You were a friend of mine, were you? [Objected to; objection overruled.] A. Yes.

Q. When? A. I was.

Q. Up to when? A. Up to the publication of your letter of June 19.

Q. Of June 19? A. Yes.

The prosecution had two expert accountants to whom reference was made from time to time through the trial. It was explained that they had examined the books and were on hand to testify to their correctness. At length on Thursday the first expert was put on the stand, and read this statement (which had already been given Mr. Peshall by Mr. Vredenburg on Wednesday):

DETAILED STATEMENT OF ITEMS MAKING UP THE BALANCE OF \$1,223.23.

Statement from Jan. 10, 1888, to Jan. 11, 1889.

Receipts.	
Balance on hand Jan. 10, 1888	\$650.04
Received for members' annual dues	310.00
Registration of prefixes	42.00
Traveling expenses	100.00
Registration of dogs	2128.00
Sales of Stud Book	9.97
Tabulated pedigrees	54.50
Advertising	425.25
Incidentals	7.90
Total receipts	\$4714.69
Less total disbursements	\$3491.41
Balance on hand Jan. 11, 1889	\$1223.28

This account embraces 47 pages in cash book, January, 1887, to April, 1888, and 97 pages in cash book, April, 1888, to April, 1889.

Disbursements.

Jan. 10, 1888, to Jan. 11, 1889.

Paid Dr. N. Rowe	\$25.00
For postage stamps	118.00
Stationery	7.05
Exchange to bank	12.45
Volume I. Stud Book	20.00
Expressage	1.65
Returned registrations	20.00
Treasurer's account	69.72
Gas bill	15.97
Telegrams	75.00
Extra services	31.15
Vol. V. American Kennel Register	2.60
Trade discount	14.14
Librarian of Congress for copyright	4.00
Type writing	50.00
Returned registration of prefix	3.00
Returned copies of Stud Book	4.87
Furniture	21.00
Stenographer	25.00
Christmas gifts to elevator boys and postman	8.00
Traveling expenses	64.70
Rent of office	288.75
Salary A. P. Vredenburg	700.00
Salary A. D. Lewis	400.00
Printing to Rogers & Sherwood	1,651.01
Total disbursements	\$3,491.41

On cross-examination it was developed that the first expert had examined only the cash book. He had not looked at the ledger or other books. The second expert read a similar statement, and on cross-examination acknowledged that he too had seen only the cash book.

The prosecution called Messrs. A. C. Wilmerding, James L. Anthony, C. B. Reynolds and James Watson to attempt to prove that Mr. Peshall published the article in the FOREST AND STREAM. Mr. Wilmerding testified to a conversation he had had previous to the publication of the article, at which time Mr. Peshall had shown him the manuscript and had told him he would publish it in the FOREST AND STREAM. Mr. Wilmerding appeared to be an unwilling witness with a very weak memory, and his testimony amounted to very little.

Mr. Anthony, on his direct examination, testified that he had met Mr. Peshall in New street, after the publication of the FOREST AND STREAM article of June 19, 1890.

Q. State the substance of the conversations? A. The time of day was passed, and I said, "Well, you have done what you threatened to. I see you published what you said you would publish in the sporting papers about the finances of the A. K. C."

Q. What did he say to that? A. He replied yes, that he had published it, and that he proposed to follow this thing to the bitter end—proposed to prove the truth of his publications.

Q. Did you call his attention to the publication in the FOREST AND STREAM? A. I told him I had seen it published in the FOREST AND STREAM and Turf, Field and Farm.

Q. And in reply to that what did he say? A. He said that he had published it. He admitted the publication, and he proposed to prove its truth in the contest, the publication.

On his cross-examination he testified:

MR. PESHALL: Q. Now, Mr. Anthony, I believe you made a motion at the May [1890] meeting, you introduced a resolution to keep me out for the reason that I have made? A. Shall I answer you yes or no?

THE COURT: Q. Did you introduce a resolution? A. Yes, sir; I was the father of it, yes.

MR. PESHALL: Q. Now, since that meeting we have never spoken? A. I have never spoken to you.

Mr. Reynolds testified that he did not know whether the original manuscript of the article complained of was sent to the FOREST AND STREAM or not, but that in several conversations had with Mr. Peshall, Mr. Peshall had acknowledged the authorship of the article. On re-direct examination he testified that his best recollection was that the article had come to the FOREST AND STREAM as a printed proof from another paper. Mr. Watson testified to several conversations he had had with the defendant, and also put in evidence some letters written to him by Mr. Peshall.

The testimony of Messrs. Vredenburg, Terry, Schellhass and A. D. Lewis respecting the nature of the Lewis Stud Book contract will be given later. Also some very interesting testimony about the secret meeting of Sept. 25. The charge to the jury will be given next week.

The Hamilton Kennel Club, true to its record so far, steps in ahead and claims the dates Sept. 9 to 11, a three days' show, coming in the week before Toronto and thus starting the circuit. The judges selected are Miss A. H. Whitney and Messrs. Kirk and Lacy. The first named to take St. Bernards, great Danes, mastiffs, Newfoundlanders and pugs, Mr. Kirk spaniels and Mr. Lacy the other classes. Our correspondent Mr. Stewart, the president of the club, writes very pithily: "There will be no puppy classes, as we have decided to shut down on that nonsense; and we propose to spare no pains to make our show a good one in every branch and particular." It is not to the credit of show committees in this country that Canada should take the first credit of abolishing puppy classes and showing that progressive spirit that will at least tend to save to them the results of their trouble and expense in breeding.

NOTES AND NOTIONS.

I AM in receipt of a note from Mr. Geo. R. Krehl, advising me that Mr. E. Millais explicitly denies any connection with the publication of the libelous article in *Fanciers' Gazette*. When the armed neutrality these gentlemen maintain is taken into consideration, both are raised in estimation, and Mr. Krehl's magnanimity in hastening to correct an unjust impression against an opponent is particularly creditable to him.

Judging from the editorial course of the *Stock-Keeper*, Mr. Krehl is no carpet knight, but a most pugnacious warrior, and it is a great pity that combatants generally cannot, or will not, adopt the same course of generous justice. The hateful mischief of kennel squabbles is the blind vindictiveness usually characterizing them. As a result, while A often proves that B is a liar or knave, he also often proves that he himself is a blind, vindictive fool, caring more for injuring his antagonist than for helping himself, and seldom entirely escapes sharing the garment of Apianias with his antagonist.

I see that "Busy Bee" is still unconvinced as to the comparative merits of the collies Marcus and Metchley Wonder. As an expert discussion between two unknowns would be exceedingly ridiculous, I drop the question, with the remark that I am in hopes of FOREST AND STREAM having communications from some very distinguished English judges on the comparative merits of such dogs as Vero, Marcus, Carlyle and Cocksie, contrasted with Metchley Wonder, Christopher and Rutland, with perhaps a consideration of such intervening dogs as Eclipse and Charlemagne, and I fancy many collie men will be surprised. By the way, I think that Mr. C. H. Mason will say that he has seen no collie over here that was superior to Carlyle.

Dr. Mills is quite correct in saying that over-fat dogs are in bad condition, and when this infiction is piled on the confinement, lack of exercise, and excitement of shows, it is not surprising that many succumb to such a complication of infictions.

THE ONLOOKER.

DOG CHAT.

WE are always pleased to receive letters from our friends in dogdom, but somehow lately they have nearly always contained some news of the death of a prominent dog or other. A letter from Mr. Frank Comstock tells us that his sterling good Irish terrier Mars has joined the majority in a peculiarly distressing manner. Returning in good shape from Cleveland, where he had added to his already long list of prizes, he met with the accident which caused his death. It seems he was a great dog to climb fences and consequently was kept chained in the yard. On Friday last while so hitched, he jumped the fence during the absence of the kennel man, and the chain not being long enough to allow him to touch the ground, the dog died a lingering death. Mr. Comstock naturally feels pretty sore, not only on account of the manner of his taking off, but also because he was much sought after in the stud. This gentleman has now lost two good ones, Breda Florence and Mars. The latter was by Benedict out of Irene, and as he was only about two and a half years old, it makes his sudden death all the more unfortunate. Mr. Comstock has our sincere sympathy. The other dogs in the kennel he tells us are in good shape, his black and tan Queen IIL is heavy in whelp and as Louie has been bred too, he will soon have some puppies from his new stock, future champions of course.

The sign of the times points to black and tan terriers furnishing some of the keenest competition at future shows. Some new dogs may soon find a home in this country, and the class of terriers shown next fall may even surpass those seen here during the past circuit. We hear that Mr. Smith's General took a trip to Denver in charge of Mr. Naylor.

The National Beagle Club are now occupying themselves with the arrangements for their forthcoming trials. From the expressions of interest in the matter which we have heard from several beagle men during the show season there is sure to be a bigger entry than last year. To secure judges seems to be the hardest part of the affair, for certainly they have not a very large field to choose from, as though there are, no doubt, lots of competent men who know what a beagle should do in the field, there is a vital obstacle to them acting in a judicial capacity—wind. One needs to be in pretty good condition to follow the little hounds over the rough country in New England and especially when one has been tempted to partake of the national pie at breakfast, the cry is soon "bellows to mend." Joking apart, it is proposed to have two judges and a referee, though the use of the latter we hardly comprehend, as he cannot follow both dogs at once. We think Mr. Chapman's plan, as he writes us, is a good one, not so many classes and good prizes in each. An under 15lb. class, a 13lb., a two-year-old and under, and a champion class to come last, should about fill the bill, with \$100 in each class, divided into \$50, \$25, \$15 and \$10, and champion prize \$25. As there are sure to be several valuable specials offered these are well worth running for and many a man might do worse than don his leggings and the "toughest" clothes he possesses, to spend a week after the "bunnies," and depend upon it he will return in good condition.

Mr. C. H. Odell, the secretary of the Central Field Trial Club, writes us that the following gentlemen have been selected to act as judges at their coming trials: Messrs. J. M. Tracy, of New York city; N. Wallace, of Farmington, Conn., and James S. Churchill, of Middleborough, Ky. It will be remembered that the two first named judged last year, but Mr. Churchill takes the place of Mr. John Davidson. Mr. Tracy some time since informed us that such alteration would be made in the running rules as would admit of the trials being run off in much less time than last year, so no doubt these trials will be more popular this year than they have even been in the past two.

There seems to have been some backing and filling about the sale of Scottish Prince to Col. Ruppert. During the Cleveland show we forwarded the announcement of the sale, but luckily it did not arrive in time for insertion. Last week we gave exclusive information that the sale had not been made. We were right. On Thursday, the 23d, Mr. Smith called at our sanctum, during our absence at the memorable trial, and left the following note, which proves everything: "Dear Sir—I have just called to give you the two photos, one of Scottish Prince and the other of Aristocrat, and to tell you that Col. Ruppert has just bought Scottish Prince and Aristocrat and my young bitch ever seen. Yours very truly, SYDNEY W. SMITH." This is the quiet announcement of a sale by which Col. Ruppert transfers from his pockets the large sum of \$5,500, to those of our visitor from Leeds for Scottish Prince alone, and it is fair to suppose that, as good St. Bernards go now, it took an additional "five thou" to secure the other two, for we believe the young bitch was to Mr. Smith as the apple of his eye. These important purchases will at once place Col. Ruppert's kennel well to the front, and competition for the principal honors will not be restricted to the two Melrose Kennels in the future. Scottish Prince, whose picture we publish in this issue, is spoken of as the only likely dog left in England that could hope to successfully compete with Sir Bedivere.

Scottish Prince is a son of that grand stock getter, Prince Regent, who was in this country for some time, but was simply buried as far as St. Bernarddom was concerned. In his stud "ad" he is spoken of as the largest and most typical young St. Bernard now before the public, in color a rich orange, with perfect white markings. He has never yet been beaten on the bench.

Aristocrat is an older dog, stands 34½ in. at the shoulder, and is by champion Plinlimmon out of Lady Adelaide. As the latter is by champion Valentine, his breeding is as good as can be had. He has won this year twenty first prizes and cups in an almost unbroken record. Altogether Col. Rupert must be congratulated on his successful purchases. Mr. Samuel Mann, who will in future have charge of his kennel, will sail on Saturday next with Mr. Smith to bring his costly charges home, and we trust he may be fortunate enough to land them here in good shape. Scottish Prince has his reputation to make, in a sense, but there is little doubt but that he will have small trouble in doing this, though he will have to meet the "great and only," Plinlimmon and Sir Bedivere, in the open class.

We must thank Mr. Comstock of Providence, R. I., for one of the prettiest and quaintest pictures of puppies we ever saw. They are three little Japanese spaniels, and the clever photographer, Mr. Howe, has caught them with that wise, puzzled look which puppies assume when they cannot just make out what it's all about.

If rumor is correct that Mr. E. H. Moore, of Melrose, Mass., has purchased the great Plinlimmon, then he has indeed played a trump card. Though the dog is getting on in years, still the ownership of such a world-noted and excellent specimen of the St. Bernard is bound to add considerable prestige to any kennel. It is said \$5,000 was the price paid. Plinlimmon, of course, needs no bolstering of this sort. This grand dog has, to a certain extent, been lost to St. Bernard breeders, owing to the peculiar circumstances under

in June next. Of course we know that the latter is on a still hunt for St. Bernards and we hope he will be successful. The former will no doubt keep an eye on the fox-terriers. Mr. John A. Logan, Jr., also sails for Albion's shore, May 14, and will bring one or two good fox-terrier bitches back with him.

There is considerable excitement across the line over a Kentucky decision in regard to a dog case before Judge Jackson in Louisville. The decision was given in the case of John Doubler, who was charged with stealing a mastiff belonging to John Doewer, and valued at \$100, and selling him afterward to Theodore Schwartz, Jr., for \$10. When the case came up in the Circuit Court, Judge Jackson gave peremptory instructions for acquittal on the ground that there is no property in dogs unless they have been properly registered. Both State and city license had been paid on the animal, but Judge Jackson held that this did not constitute ownership. His judgeship is evidently an advocate of the A. K. C.

Dog shows being over it is now the time of the field trial men to busy themselves with the preparations for the fall trials. We therefore draw the attention of our readers to the closing dates for entries to the Eastern and Central Derbys. For the former, entries close May 1 with Washington A. Coster, Saratoga Springs, N. Y. The time of closing for the Central Derby is May 15, and we refer our readers to our advertising columns for the amount of prizes in each stake. Col. C. H. Odell, 44 Wall street, New York, will furnish all information, and with him all entries must be made.

The famous Peshall case is over, and no one is sorry; at the same time while it was going on it afforded the dogmen of this city ample entertainment. At one time or another during the trial nearly every prominent fancier in this city spent an hour or so listening to the multiplicity of questions with which "Jimmie's" owner bothered the officials of the

THE ROUGH-COATED ST. BERNARD SCOTTISH PRINCE. THE PROPERTY OF COL. JACOB RUPPERT, JR., NEW YORK CITY.

which he has lived the last two or three years, but now he will no doubt take the position in St. Bernarddom that his many virtues entitle him to, and breeders will have a chance to secure his services and to see him on the bench. What a sight we shall have when Plinlimmon—we name him first as the older dog—Sir Bedivere, Scottish Prince and Aristocrat troop into the ring in the open class. A win in such company will indeed be the pinnacle of canine honors. Plinlimmon was whelped June 22, 1883, and his breeder is Mr. T. Hall, of Liverpool, England. His sire was Pilgrim and dam Bessie II., by champion Bayard out of Hebe; Pilgrim by Leo out of Lottie. Plinlimmon's record is too well known to need any repetition here. Several noted St. Bernard men have rejoiced in his ownership, and until purchased by "Fritz" Emmet he was constantly seen on the bench, but since then he has appeared nowhere except on the stage, where we had the pleasure of seeing him about three months since, when he looked in excellent health and flesh. Though we hardly think it wise on Mr. Moore's part to have paid such a sum as \$5,000—if he has done so—and no self-respecting St. Bernard would think of changing his quarters for less nowadays, still such an addition to his team will make him again a formidable competitor for St. Bernard kennel prizes.

At the last moment we have received a letter from Mr. Moore confirming his purchase of Plinlimmon. He tells us that though a little thin, he yet weighs in the neighborhood of 200 lbs. He intends to breed Lady Livingstone and Suerwell to him, and of course expects something very fine as a result. Plin, it may be added, is the sire of such dogs as Alton, Prince Regent, Baron Cardiff, Baron Camrose, Aristocrat, Mayor of Leeds and Carmelite. Next season he will be shown at Boston in the open class. Mr. Moore adding, with a remembrance of his past misfortunes—if he lives.

A letter from friend Bradley, who steered Rowdy Rod to victory in the last four-hour race at the Central trials, besides making us discontented with office work, the city and everything that pertains to a humdrum existence, by holding out the prospect of some good trout fishing in his neighborhood, tells us he has opened his boarding kennels for the summer. All who know Simon C. Bradley know full well that, as a trainer and careful handler, he has no superior, and dogs sent to him are sure of good quarters and careful treatment. His address will be found in our advertising columns.

Mr. J. A. Long, of St. Louis, writes us that he has sold his noted collie, Clifton Hero, winner of 8 prizes in England and this country, to Mr. Vincent Liddicott, Saginaw, Mich., who will place him in the stud.

"Namquoit's" full report of the Los Angeles bench show arrived too late for press this week, but will appear in our next issue.

Mr. Charles Heath has sold the noted pointer Launcelot to Mr. H. F. Amsden of Boston, Mass.

Messrs. Jean Grosvenor and E. H. Moore will visit England

A. K. C. Mr. Peshall, as his own counsel, had ample opportunity to indulge in the wit and repartee for which he is noted, and at times his actions were highly dramatic, especially so while summing up in his own behalf, when he took full advantage of his power to tell the gentlemen of the jury what he thought of the gentlemen of the prosecution and of the unmeasured contempt in which he held them. The beatific smile with which Mr. Anthony received his doses was very refreshing, and Secretary Vredenburg gazed at the "counsel for the defendant" with a look as much as to say, "All right, my boy: it's your innings now, but wait till the jury brings in that verdict." Of course, as was generally supposed, the verdict was "Not guilty," and Mr. Peshall received quite an ovation at the hands of his friends, who were blessed with sufficient patience to sit out the three hours the jury took to arrive at a decision. Among those we noticed at the trial were Messrs. A. Belmont, T. H. Terry, J. D. Shotwell, Max Wenzel, A. P. Vredenburg, James Mortimer, James Watson, John Lewis, A. C. Wimmerding, J. T. Phelan, A. D. Lewis, H. B. Cromwell, O'Neil, H. F. Schellhass, L. C. Whiton, E. M. Oldham, E. H. Morris, W. Tallman, R. F. Mayhew and Drs. Glover and Foote.

The English National field trials commenced on the 21st of this month at the Aqualate estate, near Newport, Shropshire. The competition will in some degree be robbed of its interest for Americans, owing to the fact that Mr. Brailsford, having had such a hard time with his dogs since he returned from our field trials last December, will not enter any of Mr. Heywood-Lonsdale's dogs. There has been quite a stir among English field trial men over the fact that a professional handler, Mr. Bishop, had been selected as one of the judges, Mr. Brailsford writing a very sensible letter on the subject in *Land and Water*, which we may have space to publish in our next issue.

Mr. Geo. R. Krehl, in a letter to his own paper, the *Stock-Keeper*, publishes a very pretty letter which he received from Helen Keller. At the same time he invites from English readers, contributions in aid of the "Tommy" fund, which will be forwarded by him to FOREST AND STREAM, where they will be acknowledged.

Mr. Herbert G. Sweet, who was prevented through illness from officiating as St. Bernard judge at the late Kennel Club show, is on his way to this country for a visit.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.
Chesterfield and Valentine. By F. G. Taylor, Philadelphia, Pa., for black, white and tan English setter dogs, whelped Feb. 14, 1891, by Breeze Gladstone (Gladstone—Sue) out of List Noble.

Lady Zora (champion Kash—Lady Thurman), April 7, seven (three dogs), by Seminole Kennels' champion Treasure.
Alberta G. L. Shuster, Jr.'s (Philadelphia, Pa.) English setter bitch Alberta G. (Count Noble—Alphonse), April 14, six (five dogs), by F. G. Taylor's Breeze Gladstone (Gladstone—Sue).
Abbott's Joy. J. C. Schuyler's (Luray, Va.) English setter bitch Abbott's Joy (Gath's Joy—Rosa), April 6, six dogs, by F. G. Taylor's Breeze Gladstone (Gladstone—Sue).
Albert's Duchess. Dr. J. A. Hartman's (Latrobe, Pa.) English setter bitch Albert's Duchess (Warwick Albert—Princess Belton), March 30, six bitches, by F. G. Taylor's Breeze Gladstone (Gladstone—Sue).
Meg Merilles. J. F. Curly's (Fitchburg, Mass.) Gordon setter bitch Meg Merilles (Argus III.—Neil), March 29, eleven (nine dogs), by H. A. Estabrook's Whip E. (Malcolm's Whip—Countess of Devonshire, II.).
Beauty II. E. G. Street's (Lexington, O.) St. Bernard bitch Beauty II. (imported Caesar—Guenn), April 13, eight (three dogs), by Miss Whitney's Sir Herbert (Plinlimmon—champion Queen Jura).

Tillie Boru and Belle Swiveller. Red Irish setter bitches, by G. H. Covert, Chicago, Ill., to W. H. Laird, Winona, Minn.
Lone Star Queen. Red Irish setter bitch, by G. H. Covert, Chicago, Ill., to M. F. Robinson, Granite, Mont.
Royal George. Red Irish setter dog, by G. H. Covert, Chicago, Ill., to Jas. Averitt, Athens, Tex.
Kate IX. Red Irish setter bitch, by G. H. Covert, Chicago, Ill., to H. T. Harris, San Jose, Cal.
Chesterfield. Black, white and tan English setter dog, whelped Feb. 14, 1891, by Breeze Gladstone out of List Noble, by F. G. Taylor, Philadelphia, Pa., to Mrs. A. H. Moore, same place.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

READER, Clarksville, N. Y.—I lost a valuable pointer this morning (15.75). He would have been two years old in June, he was affected with red eczema. Last week I noticed it was almost all over the entire body, head and neck being affected the most. I clipped the hair off and washed him on April 4, and rubbed him with blasting powder dissolved in sweet cream, adding some sulphur and half of a dessertspoonful of carbolic acid. On the 5th I noticed he was very restless, so I washed him with castile soap and dried him. Next day he seemed well, and at night I gave him a dessertspoonful of sulphur mixed in molasses. The next morning I gave him another application of blasting powder dissolved in sweet cream, four dessertspoonfuls of sulphur and one of carbolic acid. This I applied about 7:30 A. M. I reached home again about 5 P. M.: he was weak and could not stand, and reeled as he walked. Immediately I washed him as before and placed him behind the stove; soon he was so weak he could not raise his head. I gave him warm milk with stimulants. If he was suddenly touched he would growl, but he never did before. About 4 o'clock he died. His eyes were bright and remained open most of the time, and he breathed as if he was asleep. Please tell me the effect of the application had on him, it was put on head and entire body, and what did he die with? Ans. The treatment seems to have been too severe. We had some years since a similar experience with two spaniels. You do not state the strength of the carbolic acid; if crude, no doubt it was carbolic enough that killed the dog through absorption. It is never advisable to treat a dog all over the body at one time, a few patches should be treated each day.

His earthenness was so apparent that George and I finally closed the door, threw up the hatches to keep out the rain; and then we three idiots went plashing through the river margin for a couple of hundred yards or so in each direction, and less search for a spring. Finally I started up the bank along the road, hoping to find a farmhouse, but the road appeared to lead off from the river over the bluff through a dense forest, with no signs of farmhouse, farm or, indeed, clearing of any kind. The clouds breaking away a little, however, I caught sight of the roof of a farmhouse on the other side of the river, half a mile further down, and fully that distance back across the fields from the river.

CANUCK.—Mr. Ford Jones advertises his racing canoe for sale on another page.

NAMES ON YACHTS.

THE following notice has recently been sent out by the Commissioner of Navigation:
"To Collectors of Customs and Others: Your attention is invited to the following ruling of the bureau upon the application of the act of Feb. 21, 1891, to the marking of the names and ports of yachts and steam vessels.
"The marking of the name and port of yacht is specifically provided for by the act of March 3, 1883, amendatory of sec. 4214, Revised Statutes, and the marking of the names of steam vessels is likewise specifically provided for by sec. 4495, Revised Statutes.
"These statutes were not repealed, except by implication. The supreme court has held that a specific provision for a particular class is not repealed by a general provision in a later act.
"Hence, it appears that the statute relating to the marking of yachts and steam vessels must be construed together with the marking provided for by the act of Feb. 21, 1891. This seems proper also for the reason that these several laws relate to the same subject, were enacted for the same purpose, are consistent and reconcilable, and seem to be better adapted to the particular class of vessel than the later law of February last; and it is, therefore, the ruling of the bureau that yachts must be marked in accordance with the act of March 3, 1883, and steamboats must be marked as provided for in sec. 4495, Revised Statutes.
"The law, in accordance with which vessels used exclusively for pleasure—in other words, documented yachts—shall have their names and ports marked, is found in the following section of the act passed by Congress in March, 1883:
"Such vessels shall have their name and port placed on some conspicuous part of their hulls."
"The style of marking can be found in a section of the act of Feb. 21, 1891, which says:
"The letters may be painted, gilded or carved. If carved, block or metallic letters are used, they must conform to the requirements of the statute, and be so painted or gilded as to be in a dark color on a light ground, or be in light color on a dark ground."
"Steam yachts will be obliged to have the name in distinct, plain letters of not less than six, in length on each outer side of the pilot house.
"The custom house is now prepared to document yachts as required by law, and all vessels of five tons or over, unless documented, will be subject to the penalty named in the Revised Statutes—a fine of \$50 at every port of arrival without a license.

CHANGES IN NEW YORK HARBOR.—The following very important changes will be made on May 15 in the lightships and buoys marking the approaches to New York: The Sandy Hook light vessel will be moved 2½ miles northeast by north from its present position, and moored on the prolongation of the axis of Gedney Channel, entrance buoy, bearing west northwest ¼ mile west, ¼ mile. The Scotland light vessel will be moved about ¼ mile northeast ¼ east, and moored on the prolongation of the axis of the South and Swash channels, and distant 3½ miles from the axis of the main channel. Nos. B 6, 8½ southwest spit, 10 and 15½ buoys will be discontinued; No. 6 red first-class nun buoy, will be established just south of 18 foot spot, Flynn's Knoll; No. 10, south of 14½ ft. spot, Flynn's Knoll; No. 12, south of 23 ft. spot, southwest spit; No. 14 is to be placed on the 29 foot spot; No. 7 is to be discontinued as a channel buoy and changed to a white spar buoy for demarcation of harbor limits only. West Bank Bell Buoy will be known as Fort Tompkins Bell Buoy. Junction Buoy, at junction at upper end of Swash Channel and Mainship Channel, will be a first-class nun, with black horizontal stripes and surmounted by perch and square. Romer Shoal Bell Buoy will be known as Swash Channel Bell Buoy. In the East Channel No. 2 Red Spar Buoy will be established on the north side, and No. 5 Black Spar Buoy on the southwest side of the channel.

ATLANTIC, schr., has been fitting out at Poillon's, but it has recently been discovered that some of her frames on the port quarter were badly rotted. It is stated that the injury is but local, due to leakage about the plank-sheer where it was exposed while she was laid up for a long time; but her owner has stopped all work on her, laid her up again and discharged her crew.

REVERIE, 40-RATER.—The first important addition to the yachting fleet of the approaching racing season was made on April 9 by the launch at Fay's, at Southampton, of Mr. A. D. Clarke's new 40-rater, built from designs by Mr. J. M. Soper, the architect of Castanet, built in the same yard for the same owner last year. The vessel, as she left the ways, was christened Reverie by Miss Bear, a sister of Mrs. Clarke, and was at once towed to Messrs. Day and Simmer's to have her mast stepped and was afterward towed back. She will be fitted out with all dispatch, as she is to be ready for commission by May 1. The Reverie is composite-built, her frames being of steel, and all her lead is outside. She is of about the same dimensions as Castanet, but she has rather finer lines; her fittings, too, are lighter, and she is expected all round to be an improvement on last year's boat. She has a plumb pine bottom and teak topsides, and fiddle bow. Her deck fittings are of cedar throughout, this wood being chosen for lightness, and she has a very bold deck plan. Her main saloon gives a headroom of 6½ ft., and her accommodation below is very roomy. She can make up six berths. The inside fittings are of pine, white enameled, with cedar fronts, tops, and facings, and her seats, etc., are upholstered in scarlet rep. Her mast and boom are Oregon spars. She will be canvassed by Ratsy and Liphorne, of Cowes. T. Diaper, of Hythe, who sailed Castanet for Mr. Clarke, will be skipper. Columbine, 60-rating, building for Mr. A. B. Paget, has her decks in and caulked. Capt. Garrad, late skipper of the Foxglove, will be master of the vessel.

THE CRUISE OF THE YAWL WHITE CAP.—The yawl White Cap, formerly owned by Mr. David Hall Rice, of Boston, is well known to the older readers of the FOREST AND STREAM, having received considerable notice some years since when the yawl rig was under discussion. She has recently been purchased by Prof. J. T. Rothrock, of the University of Pennsylvania, who has used her this winter on a long cruise through the West Indies, the object of the expedition, on which Prof. Rothrock was accompanied by Drs. Young and Bullock, being the collection of specimens of fishes, plants and other objects for the University. The White Cap is a keel yacht 35 ft. over all, 6 ft. 6 in. l.w.l., 20 ft. beam and 9 ft. draft, commanded by Capt. Boynton. She left Booth Bay Me. in October, the party joining her at Philadelphia on Nov. 1, and she returned to the latter port in the first week in March. During this long cruise she encountered some very bad weather, but is reported as behaving splendidly. She is enrolled in the Philadelphia Y. C. Prof. Rothrock will be remembered as the author of an interesting book entitled "Vacation Cruising."

ST. LAWRENCE Y. C.—The annual meeting of the St. Lawrence Y. C. resulted in the election of the following officers: Com., A. W. Morris; Vice-Com., C. H. Levin; Rear Com., H. J. Beaman; Sec'y, D. A. Poe; Treas., W. A. C. Hamilton; Meas., W. Kavanagh and F. P. Shearwood; Committee, Messrs. G. H. Duggan, E. Kirk Greene, J. Simmons, W. J. Wallace, A. Irving, H. M. Molson, J. H. Garth and C. A. Smart. The report of the retiring commodore, Mr. G. H. Duggan, was quite lengthy, dealing in detail with the many changes made during the past year, and showing the great advance made by the club. It is now in a very flourishing condition, and the outlook is good for the coming season.

THE NORTON SHIPBUILDING CO.—The property of the Norton Naval Construction Co., at Tottenville, has been seized to satisfy a debt for rent. It will be remembered that Francis L. Norton, who was president of this company, sailed from this country last autumn in his 50 ft. boat, which he claimed was unsinkable, for a long voyage. There were seven persons aboard the craft, and all are believed to have been lost. Capt. Norton leased the shipyard at Tottenville, and there are several boats there in process of construction.—Marine Survey.

MOHAWK-BAGRE.—The Coast Survey schooner Bagre, once the yacht Mohawk, is at Poillon's, where a new foremast, a white pine stick 26½ in. at partners, was shipped last week. In setting up the foremast, a bad creak appeared below deck, and the stick was condemned, a new one being at once begun.

THAYER 46.—This new yacht was launched at Lawley's on April 25, no name being given her.

NIMBUS, sloop, has been purchased by Com. J. S. Cushing, of the Winthrop Y. C.

MONHEGAN, schr., has been sold by Dr. M. A. Rice to Col. C. F. Ulrich, of New York, for \$4,750.

GOSsoon, Messrs. Adams's 40-footer, will have a new suit of sails.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

J. L., New York City.—Would you please let me know whether a dog must be led by a string when he has a muzzle and a license? Ans. No.

G. L. H., Englewood, N. J.—I have a greyhound puppy I want to put out to be house broken, can you tell me where I can get it done? Ans. There are several boarding kennels advertised in our columns that we can recommend.

E. S., Philadelphia, Pa.—Please give the full address of Mr. Wolf, breeder of English beagle hounds. I believe he used to live at Lewisburg, Pa., and at one time advertised in your paper. Ans. We do not know his address. Some of our readers may be able to give the desired information.

A. S. A., Wakefield, Mass.—Please give breeding of cockers champion Black Pete and Miss Ginger. Ans. Black Pete by Obo Jr., out of Phonise, by champion Obo II, out of Blackie III. Obo Jr., by champion Obo out of Nellie. Miss Ginger by champion Obo II. (A. K. R. 432) out of Blackie II. (A. K. R. 428). Whelped April, 1887.

R. H. P., New York City.—1. Would you kindly inform me what a six-months-old mastiff bitch puppy should weigh? 2. Does 50 lbs. weight at that age indicate a small dog when full grown? Ans. 1. At that age she should weigh from 80 to 100 lbs. 2. Not necessarily, depends to a great extent on her future raising, give plenty of exercise and nourishing food.

W. T. S., New Haven, Conn.—Can you give me the pedigree of Friedrich and Gypsy J., if they have any, also are they recorded? They are St. Bernards. Ans. Gypsy J. (14208), by Monk Detrick out of Nancy, by Duke of Leeds out of Fannie B., by Carlo out of Fannie; Monk Detrick, by Detrick out of Chamounix; Detrick, by Rex out of Alma. Though not spelled exactly the same, these are, no doubt, the dogs you mean.

P. D., Long Branch, N. J.—Kindly give through your columns: 1. The breeding of Pride of the Border. 2. Lark P. (8,221). 3. Gildersleeve's Nell. Ans. 1. Pride of the Border, by Dash II, out of Belle II; Dash II, by Sting out of Cora II; Belle II, by Rock II, out of Blat's Cora. 2. Lark P., by Glen out of Topaz S., by Royal Lothian out of Nancie; Glen, by Dashing Lion out of Jessie Turner; Dashing Lion, by Dash II, out of Leda. 3. Not registered.

A. W. J., New York City.—Will you kindly send me the full pedigree of the collie dog Clipper, owned by Mr. J. Watson, of Philadelphia, in 1889? Also of the collie bitch Lady Watson, owned by the same party. Ans. Clipper by champion Eclipse out of Nesta; Eclipse by Charlemagne out of Flirt, by Trefoil out of Maude, by Cockie out of Meg. Flirt was a litter-sister to Charlemagne; Nesta by Duncan out of Bess, by Carlyle out of Midge; Carlyle by Perthshire Bob out of Old Lassie. Lady Watson is not registered.

F. R. B., Greensburg, Pa.—1. Please give me, through your columns, the registry number and pedigree for three generations of the red Irish setter dog Rufus II. 2. The pedigree for three generations of Colleen (N. K. C. S. B. 690). Ans. 1. Rufus II, by Rufus out of Friend, by Leigh's Flash out of Kavanagh's Stella; Flash, by Pat out of May Martin's Flash; Stella, by Watson's Ruby out of Kavanagh's Ruby; Rufus, by C. S. Trench's Shot out of Capt. French's Linda; Linda, by Hendrick's Squib II, out of Adair's Golla. 2. Colleen, by Milner's Jack out of Green's Rose; Jack, by Dash out of H. O'Connor's Fitzsimmons' Ruby Rose, a granddaughter of Hutchinson's Bob.

The Smith & Wesson Revolvers are constructed entirely of **best wrought steel**, carefully inspected for workmanship and stock, and **GUARANTEED**. Do not be deceived by **IMITATIONS** largely manufactured of **malleable cast iron**, and often sold for the genuine Smith & Wesson. All of the Revolvers of this firm are stamped upon the barrels with their name, address and dates of patents.

If dealer cannot supply you, orders sent to address below will receive prompt and careful attention. Catalogues and prices furnished upon application.

The Celebrated Spangler Perfect Crimper

ENDORSED BY EVERYONE.

The only tool that will positively crimp every shell alike no matter what the variation of lead may be. The only tool having an automatic plunger which prevents end of shell spreading toward center of wad. The above not only insures uniformity, but entirely obviates the possibility of the lead becoming loose. Dealers and sportsmen will at once recognize this as a very important feature. All wear in points in the Crimping Die are made of steel and case hardened, thus insuring durability and perfection of work. Size and weight about same as old style. Is invaluable to users of Schulze, E. C. and wood powders. Send stamp for specimen shell. Manufactured only by

A. E. SPANGLER, Patentee, Fulton, N. Y.

The reputation we gained in the manufacture of the Fox Shot-gun is fully sustained in the New Whitmore Hammerless, of which we are the sole manufacturers. We also manufacture the American Arms Co.'s New Safety Hammerless Revolver.

AMERICAN ARMS CO., 36 New Street, East Boston, Mass.

LYMAN ACCELERATING SHOTGUN CARTRIDGE

The "EXPERT" is charged with a perforated cake of especially prepared powder, which burns progressively—the only correct method of availing of the power of powder in guns. Shot started easily, with rapidly increasing velocity and least recoil, and without stringing. Perfect combustion, little smoke, harmless dry ash residue. Cake burns in shell; no flying, heated grains to cut barrel of gun. Cakes made by machinery; greatest uniformity of pattern and penetration. No nitrates, decomposing, or changeable chemicals! Detonating impossible! Shotted cartridges, or Blanks containing powder cake only, for sale by

LYMAN CARTRIDGE CO., 9 Chambers Street, N. Y.

10, 12 and 16-Gauges.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if the angler chooses.
THIRD—No fish can ever get slack line with it.
FOURTH—It will save more fish than any other reel.
FIFTH—It will prevent tugs, lines and snells from being broken by large fish.
SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

This reel is manipulated entirely by the hand that holds the rod.

Scientific Education of Dogs FOR THE GUN.

A new work by an English writer,
"H. H."

The instructions here given are the result of the author's amateur practical experience of thirty-seven years. A review in FOREST AND STREAM says:
"This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the beginner as well as not a little that will be beneficial to even old hands to study. The chapter devoted to kennel management is a short one, but it is very nearly complete, and is alone worth many times the price of the work to any one that will heed its teachings."

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understood of the people.

BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

THE FATE OF THE FUR SEALS.

THERE appears to be no longer any doubt that the fur seals of our Alaska waters are on the point of extinction. It has been feared for some years that the destructive and wasteful methods of the pelagic sealers would bring about this result, but it appears that the threatened extermination of the seals is not in fact due to that cause, but to wasteful killing on the islands and by the lessees.

For some time it has been suspected that the fur seals were seriously decreasing in numbers, but the little islands to which they resort to breed are so far away that it is most difficult to secure exact information on this and other points connected with them. Recently, however, we have the reports of Mr. Goff and Mr. Elliott, and this week we print a memorandum from the last named gentleman, which tells its own story. His report is of especial value on account of his familiarity with the seal islands in years gone by, for this knowledge enables him to compare the present condition of seal life there with what it was soon after the Russians ceded Alaska to the United States.

Mr. Elliott's statements are so clear and so full of force that they need no explanation nor elaboration. The facts are evident to every intelligent person. While there are now on the islands large numbers of female seals—though but two-fifths as many as there were sixteen years ago—there are very few breeding males, only about ten per cent. of the number found in 1874; and there are practically no young males growing up to take the place of these breeders. In fact, there are only about 80,000 young males on the island, and these, even if allowed to live, would not reach the breeding age for three or four years. But these islands are leased to a corporation, and this corporation, if it kills any seals at all, must take them from these young males. If killing on these islands is permitted this year and next year the result cannot be doubtful. The males will all be killed off and the fur seals will disappear from our Northwest coast, just as they have disappeared from so many islands and shores in the Southern seas, just as the buffalo have vanished from our Western prairies.

For twenty years after the cession of Alaska to the United States the revenue derived from the seal islands paid more than 4 per cent. on the purchase price for the territory. Congress, realizing that this was a profitable investment, legislated for its protection, and there is no reason why its value and its returns might not have remained the same for all time. But the Government has not protected itself against its lessees, pelagic sealing has reduced the numbers of the seals, and wholesale killing on the islands has nearly destroyed one sex, so that now we have approached the end.

Congress turned over the care and protection of the seal fisheries to the Treasury Department, and if that industry is to be extinguished by our own citizens, as is now threatened, it is the Treasury Department which

must bear the responsibility of the loss to the nation. Even now it is not too late to arrest the work of slaughter.

All commercial killing of seals on the islands of St. Paul and St. George should be forbidden for five years—and not only forbidden, but actually prevented by a force of Government employees sufficient to see that this prohibition is obeyed. In this way the young seals now growing up would reach maturity and become the sires of the seals of the future.

The Department of State is also interested in this matter, since it has for several years been endeavoring by negotiation with Great Britain to put an end to pelagic sealing. Some agreement should be at once entered into with that power and with Russia, providing that there shall be no killing of seals in Bering Sea at any time. This would protect the female seals while on their breeding grounds, and at a time when the death of the mother means also the death of the pup. There should be an absolute close time for five years. In no other way can the seals be preserved.

There are those who object to such action as this, but they are only a few. The corporation which has leased the islands wants—naturally enough—to kill all the seals there, sell their skins and pocket the profits. A few narrow-minded people complain that if killing on the islands shall cease, the Government revenue will cease too. Very true, but which is better: that this revenue should cease for a few years and then begin again and continue forever, or that it should continue for a few years, constantly growing smaller and then should cease forever?

Besides the loss of revenue to the United States which will result from the extermination of the seals, there is to be considered the population of the seal islands. This population now earns a living by working at the seal fishery, and if this fishery ceases to exist, the occupation of the natives will be gone, and they must either starve or be supported by the United States.

Granting the accuracy of Mr. Elliott's observations—and this we must do, since no one knows half so much of the subject as he—the case is a most urgent one, and calls for immediate action by the authorities at Washington. The season for killing the seals at the Pribylov Islands will soon open, and if the killing shall be allowed to begin, the young male seals will soon be all destroyed.

Politics have entered so largely into this question of the Alaska seal fisheries that the important question at issue, the preservation of seal life, is almost lost sight of, and it is difficult to learn what the authorities really intend. At first we are told that killing is to be permitted this year and then that a close time is to be ordered for a term of years. It is earnestly to be hoped that the last named course may be pursued.

FISHING DAYS.

THE rivers roaring between their brimming banks; the brooks babbling over their pebbled beds, and cross-stream logs that will be bridges for the fox in mid-summer; the freed waters of lakes and ponds, dashing in slow beat of waves or quicker pulse of ripples against their shores, in voices monotonous but never tiresome, now call all who delight in the craft to go a-fishing.

With the sap in the aged tree, the blood quickens in the oldest angler's veins whether he be of the anointed who fish by the book or of the common sort who practice the methods of the forgotten inventors of the art.

The first are busy with rods and reels that are a pleasure to the eye and touch, with fly-books whose leaves are as bright with color as painted pictures, the others, rumaging corner-cupboards for mislaid lines, searching the sheds for favorite poles of ash, ironwood, tamarack or cedar, or perhaps the woods for one just budding on its sapling stump.

Each enjoys as much as the other the pleasant labor of preparation and the anticipation of sport, though perhaps that of the scientific angler is more esthetic enjoyment, as his outfitting is the daintier and more artistic. But to each comes the recollection of past happy days spent on lake, river and brook, memories touched with a sense of loss, of days that can never come again, of comrades gone forever from earthly companionship.

And who shall say that the piebegan angler does not enter upon the untangling of his cotton lines, the trimming of his new cut pole and the digging of his worms, with as much zest as his brother of the finer cast, on the testing and mending of lancewood or split bamboo rod, the overhauling of silken lines and leaders and the assorting of flies,

Considering the younger generation of anglers, one finds more enthusiasm among those who talk learnedly of all the niceties of the art. They scorn all fish not acknowledged as game. They plan more, though they may accomplish less than the common sort to whom all of fishing tackle is a pole, a line and a hook. To them fishing is but fishing, and fish are only fish, and they will go for one or the other when the signs are right and the day propitious.

Descending to the least and latest generation of anglers, we see the conditions reversed. The youth born to rod and reel and fly is not so enthusiastic in his devotion to the sport as the boy whose birth-right is only the pole that craftsman never fashioned, the kinky lines of the country store and hooks known by no maker's name. For it is not in the nature of a boy to hold to any nicety in sport of any sort, and this one, being herein unrestrained, enters upon the art called gentle with all the wild freedom of a young savage or a half-grown mink.

For him it is almost as good as going fishing, to unearth and gather in an old teapot the great worms, every one of which is to his sanguine vision the promise of a fish. What completeness of happiness for him to be allowed to go fishing with his father or grandfather or the acknowledged great fisherman of the neighborhood, a good-for-nothing ne'er-do-well, but wise in all the ways of fish and their taking, and very careful of and kind to little boys.

The high-hole never cackled so merrily, nor meadow lark sang sweeter, nor grass sprang greener, nor water shone brighter than to the boy when he goes a-fishing thus accompanied. To him is welcome everything that comes from the waters, be it trout, bass, perch, bullhead or sunfish, and he hath pride even in the abominable but toothsome eel and the uneatable bowfin.

Well, remembering that we were once boys and are yet anglers, though we seldom go a-fishing, we wish, in these days of the new springtide, to all the craft, whether they be of high or low degree, bent and cramped with the winter of age or flushed with the spring of life, pleasant and peaceful days of honest sport by all watersides, and full creels and strings and wythes.

In these soft evenings, when the air is full of the undefinable odor of the warming earth and of the incessant rejoicing of innumerable members of the many families of batrachians, one may see silently moving lights prowling along the low shores of shallow waters, now hidden by trunks of great trees that are knee-deep in the still water, now emerging illuminating bolls and branches and flashing their glimmering glades far across the ripples of wake and light breeze.

If one were near enough he could see the boat of the spearers, its bow and the intent figure of the spearman aglow in the light of the jack that flares a backward flame with its steady progress, and drops a slow shower of sparks; the stern and the paddler dimly seen in the verge of the gloom.

These may be honest men engaged in no illegal affair; they exercise skill of a certain sort; they are enthusiastic in the pursuit of their pastime, which is as fair as jacking deer, a practice upheld by many in high places; yet these who by somewhat similar methods take fish for sport and food are not accounted honest fishermen, but arrant poachers. If jacking deer is right, how can jacking fish be wrong; or if jacking fish be wrong, how can jacking deer be right? Verily, there are nice distinctions in the ethics of sport.

THE DEATH OF DR. EDWARD MAYNARD at the ripe age of 78 years has brought to its close a long career distinguished for usefulness and crowned with abundant honor. Although he was best known to the sportsmen of America as the inventor of the arm which bears his name, Dr. Maynard's work in this field formed but a portion of his mechanical and scientific achievements. We print to-day an appreciative sketch of his life from the pen of Mr. H. W. S. Cleveland. The portrait is by the loving hand of his son, Geo. W. Maynard.

We have received for the Helen Keller Fund, through Mr. W. Wade, from Mrs. Wm. Bakewell, Parnassus, Pa., \$5; and from Mrs. John Kerr, Parnassus, \$1.

ANY subscriber may supply a friend with a copy of the current issue of the FOREST AND STREAM by sending us on a postal card the name of that friend.

THE NEW YORK CODIFICATION BILL did not pass.

PROFESSORS LEIDY AND LECONTE.

THE closing days of April were marked by the death of two men eminent in the scientific world. Professor John LeConte, of Berkely, Cal., died April 29, and Dr. Joseph Leidy at Philadelphia, April 30. The following are brief memoranda of their lives:

Joseph Leidy was born in Philadelphia in 1823, and devoted himself in youth to a study of mineralogy and botany. He then studied medicine under Dr. Paul B. Goddard, and was graduated from the University of Pennsylvania in 1844. In 1848 he visited Europe, and upon his return delivered a course of lectures upon physiology. Five years later he succeeded Dr. Horner in the chair of anatomy in the University of Pennsylvania. In 1871 he was called to the chair of natural history in Swarthmore College, and in 1884 became the director of the department of biology in the University of Pennsylvania. He obtained the Walker prize of \$1,000 from the Boston Society of Natural History, and the Lyell medal from the Geological Society of London for his contributions to paleontology, and received the degree of LL. D. from Harvard. He published more than 800 papers on biological subjects, many of which were from specimens obtained on various surveys under the United States Government and submitted to him for study and report. Huxley and Marsh used his paper on the fossil horse in their illustrations of the theory of evolution. Many of his papers were issued by the Philadelphia Academy of Natural Sciences, of which he was the president, the Smithsonian Institution, and under the auspices of the National Government. Prof. Leidy was a member of many scientific societies at home and abroad. Of late years Dr. Leidy had devoted his attention more especially to invertebrates, and especially to internal parasites, but his most important labors were in the field of vertebrate paleontology.

John LeConte was the son of Lewis LeConte, the naturalist, and was born in Liberty county, Ga., in December, 1818. He was graduated at Franklin College of the University of Georgia in 1838, and at the New York College of Physicians and Surgeons in 1841. For a time he practiced his profession in Savannah, but in 1846 he was called to the chair of Natural Philosophy in Franklin College, which he occupied until 1855. The following year he lectured on chemistry at the New York College of Physicians and Surgeons, and in 1856 he was appointed Professor of Natural and Mechanical Philosophy in South Carolina College, at Columbia, S. C. In 1869 he was appointed Professor of Physics and Industrial Mechanics in the University of California, and discharged the duties of that position until 1881. From 1876 to 1881 he held the office of President of the University in connection with his professorship. At the expiration of that period he retired to the chair of physics, which he occupied until his death. The whole of his active life, more than half a century, was devoted to scientific investigations. The result of his labors was disclosed in a great variety of communications to scientific journals in this country and Europe, and in the "Proceedings of the American Association for the Advancement of Science," of which organization he was general secretary in 1857. He was a brother of Prof. Joseph LeConte, the geologist and physiologist.

JEROME C. BURNETT.

THE announcement from Washington last Monday of the death of Jerome C. Burnett brought with it genuine sorrow—a sentiment which will be shared by all readers of this intelligence who were familiar with Mr. Burnett as a contributor to the *FOREST AND STREAM*. Mr. Burnett died on Sunday, May 3, after an illness of some weeks. He was stricken with a severe attack of the grip early in the prevalence of that disease, and was thought to be improving, when he was suddenly seized with a stroke of paralysis, from which he had not the strength to recover. His age was 58 years. He leaves a widow and two children.

Mr. Burnett was well known and highly esteemed in Washington. When John C. New was Treasurer of the United States, Mr. Burnett was appointed to the position of Chief of the National Bank Division in that department, where he remained until his death. He was one of the founders and proprietors of the very successful weekly, *Public Opinion*. He was a writer of recognized ability on political and social themes, but it is not too much to say that he took more pleasure in the sketches he wrote for *FOREST AND STREAM* than in any other literary work.

An enthusiastic angler and sportsman, with a wide and interesting experience in the East and the West, he contributed to these columns many a reminiscence of days in the field, and many a bright story of scenes and incidents well worth the telling. What he wrote was marked by manliness and good cheer; the sterling character of the man was here reflected as in a mirror. Jerome Burnett was of the type which gives dignity and standing to the sports of the field.

DR. EDWARD MAYNARD.

THE announcement of the death at Washington, D. C., on Monday last, May 4, of Dr. Edward Maynard, at the ripe age of more than seventy-seven years, affords a striking illustration of how speedily a man whose name was widely known and honored in his day of active service may drop out of sight and be almost forgotten in the turmoil and seething fermentation of succeeding years, when a new race has come to the front and is absorbed in present issues, while the deeds of yesterday are only "remembered as a tale that's told."

Had Dr. Maynard's death occurred twenty-five or thirty years ago there would have been no need of telling the world who or what he was. Few of his contemporaries are left to-day. To them the mention of his decease will awaken many reminiscences of long past years, but to the great mass of readers it will be unknown.

He was a man of rare qualities and of rare acquirements, and apart from the elements of character which commanded the respect of all who knew him, and the warm affection of the wide circle of his friends—the world at large is indebted to him for discoveries the value and importance of which

DR. EDWARD MAYNARD.

can never be justly estimated, and ought to be gratefully remembered.

He was born in Madison, N. Y., April 26, 1813, entered the Military Academy at West Point in 1831, but owing to delicate health was forced to resign the same year. He then applied himself to the studies of civil engineering, architecture, anatomy and drawing, with an earnestness which was a prominent characteristic, and which could never be satisfied with smattering acquirements or with half-way work. He finally adopted the profession of dentistry, and established himself in Washington in 1835.

His discoveries in dental surgery have been of such importance and his skill as an operator was so remarkable, that it may be safely said that he has had no superior in his profession, and the honors bestowed upon him in recognition of it in this country and in Europe are sufficient proof of the truth of the assertion.

Many of the most important improvements in the instruments of dentistry were of his invention. He was the first to successfully practice (in 1838) the thorough filling with gold foil of the nerve cavity, including the nerve canals in molar and bicuspid teeth. He introduced this operation in Europe in 1845, and at St. Petersburg. The Emperor's physician, Dr. Arndt, having witnessed it, Dr. Maynard was immediately employed as the court dentist. The Emperor (Nicholas I.) offered to give him a title with the rank of major if he would remain in Russia ten years and teach and practice his profession while attached to the court. This he declined, but received from the Emperor in addition to the sum paid for his services a magnificent diamond ring.

In 1857 he accepted the chair of Theory and Practice in the Baltimore College of Dental Surgery (the first dental college ever established), and held the like position in the Faculty of the Dental Department of the National University at Washington. He received honorary degrees from leading associations in Europe and America, and for a long series of years his practice was among the highest classes in Wash-

ington, including several Presidents and a great number of Cabinet officers, Senators, Representatives, officers of the Army and Navy, Foreign Ministers and others who demand such operations as necessarily exclude all machine work.

His winning and always gentlemanly and courteous manner, his rare intelligence and the wide scope of his information, served to secure the warm personal friendship of all whom he chose to admit to such intimacy, and the large and varied circle of acquaintance he thus made with leading men of all parties, sects and opinions, gave a rare zest to his conversation and made him a most interesting companion.

But the honors and friendships he acquired through his professional reputation and practice were equalled if not surpassed by those resulting from the exercise of his inventive talents in another and entirely different field. Thousands of men in every quarter of the globe who were ignorant of the fact that he was a professional dentist are familiar with his name in connection with the Maynard rifle, which was the first breechloader that proved itself equal in its performance to the best muzzleloading rifles, and may be truly said to have served as the model which

has revolutionized the arms of the civilized world. This is neither the time nor the place for detailed statements of its peculiar features, but there are circumstances connected with its history, that in justice to the memory of the inventor should be clearly stated and put on public record.

The invention was patented several years before the war, and therefore before the demand for improved weapons had incited inventors everywhere to the study of the subject. There had been many previous attempts to construct breechloading guns, but the results had been so utterly inadequate to the wants of military service and so far below the required merits of the sportsman that they served rather to illustrate the difficulty of the problem than to aid in its solution.

The perfect simplicity and entire efficiency and safety of the system of levers by which in the Maynard rifle necessary movements of the barrel are effected can only be compared to the anatomical system by which the greatest possible ease of motion and resistance to pressure are secured in the animal structure. Yet the ingenuity here displayed was really of secondary importance compared to that of the ammunition and the method of its preparation, which involved the principle by which alone it has thus far been found possible to secure in breechloaders the same degree of precision and force that is attained by muzzleloaders.

Dr. Maynard was the first inventor of a metallic center-fire cartridge, and the instrument by which it was loaded insured the perfectly true delivery of the bullet into the barrel of the rifle, and the most exacting tests to which it was subjected served to prove that it had no superior in all essential points, while in facility of manipulation it so far excelled all others that it was at once obvious that a revolution in firearms was at hand. Innumerable efforts at improvements have since been made and are still making, many changes of models of guns have been the result, in adapting them to the necessities of modern military service, or increasing their efficiency by various ingenious devices, but in all of them the scientific principles by which Dr. Maynard first secured the prime essentials of precision and force are still adhered to and have never been improved upon. Various changes of detail in the Maynard rifle have from time to time been introduced, but in all its essential features it is the same as the original weapon and still holds its high place in the estimation of leading sportsmen and riflemen throughout the country.

Dr. Maynard has himself made many additional inventions in connection with firearms of very great value, as for instance a register which may be attached to any repeating rifle, which indicates at all times the number of cartridges that are in the magazine. He has also made a double-barreled rifle which completely overcomes the previously inevitable defect of unequal accuracy owing to the deflection of one barrel by the heating of the other. Instead of soldering the barrels together he simply clamped them by a most ingenious device, which while perfectly strong and firm, allowed the expansion of either barrel without affecting the other. Another advantage was that if desired a shot barrel might in a moment be substituted for one of the rifle barrels, or a pair of shot barrels in place of the rifles. A very beautiful model of such a gun was made and its efficiency proved by careful tests, and so high an authority as Quartermaster-General Meigs said of it that if introduced it would drive all other sporting guns from the market. But it has never been manufactured for sale, and the model alluded to is the only one in existence.

The Kings of Sweden and Prussia recognized the great value of Dr. Maynard's inventions. The former by giving him the Great Medal of Merit of Sweden, an honor rarely

conferred, and the latter by decorating him with the Cross of the Red Eagle.

The very imperfect statement given of Dr. Maynard's inventions has extended this notice beyond just limits, but the innate modesty and delicate refinement of his nature would never allow him to obtrude his claims upon the public and the services he has rendered are too important to be suffered to pass into oblivion.

As one of the very few surviving contemporaries who was honored with his friendship, I offer this tribute to his memory.

H. W. S. CLEVELAND.

The Sportsman Tourist.

ON THE NORTH SHORE.—II.

THE boys, having at last returned, threw off their jackets and went to work with willing hands in loading the boat, and were soon ready to embark upon the trip. I observed but one pair of oars in the boat, and on inquiry as to the other, received the information that they had been stolen. I was decidedly averse to leaving with one pair of oars, knowing too well the treacherous actions of the lake and the absolute necessity of two pair. We might not want them for some time, probably not at all, but when we did want them we would want them badly, I assure you. I endeavored to purchase a pair in the immediate neighborhood, but could not, and as Joe promised to make a pair at our first camp, which he did not, we got aboard and were soon abreast the murmuring waters. The morning had fulfilled the promise of the night; a soft southerly wind was blowing, the sky was an azure dome, with here and there a few pin feather clouds lazily floating, while the lake under the bright sun was a surface of broken, rippling, trembling silver. With this atmospheric condition, our progress with both sail and oar was indeed beautifully slow. The sail would flap first one side, then the other, and the day being exceedingly hot, the oarsman felt the influence, and but little vigor came from his brawny arms. We kept well in the channel, with the view to getting a tow from a passing steamer, but it failed to materialize. About noon we reached Point aux Pins, and then passing the lighthouse, which stood like a whitened sepulchre on the sandy beach, we rounded into the shore and there partook of a light lunch. While here a steamer surprised us by appearing off the lighthouse point, and though it was some distance, we hastily boarded our boat, and endeavored to reach it with the oars, but it was a vain endeavor.

We were deeply chagrined at this failure, Joe particularly, who averred that if we had gone ashore where he at first desired, we would have made the connection. My wish for a shady grove was what caused the disappointment. Neither Joe nor John liked the work before them, as the weather now was of a tropical heat, the lake like a mirror, and our objective point for the day's trip Gros Cap Island, many miles away. Although I was shaded by a broad-brimmed straw hat, my cheeks began to burn, and in order to relieve the pain I resorted to some camphorated vaseline as an emollient, but it worked *au contraire*, for the pain increased to such a degree as to make me groan in agony. Ned, whose face was as tender as a lady's was now howling from the effects of the heat, and much to my surprise asked for the camphorated bottle. It made no remark about its severity upon me and quietly passed it to him. As misery loves company I sat silently by, and saw him profusely anoint his face with the fire-eating salve. Soon there came a growl from him, and then another and another, each rising in volume until he had reached the highest note in the chromatic scale, and then he finally endeavored to solace himself by a fiery display of sturdy Saxon that made even the taciturn boatmen smile.

I could restrain myself no longer, and though my cheeks were burning as if coals of fire had been applied to them I gave way to such a fit of inordinate laughter as to fairly endanger my buttons.

Ned gave a sickly smile at my uproarious manifestations and solemnly averred that he couldn't see where the overpowering humor came in. Such stinging jokes he thought in bad taste and emphatically declared that no one but a pot-hunting fiend would ever indulge in them. We generously forgave him his unkind remarks, knowing full well they would not have been uttered had he been in his normal condition. He was crazed with pain.

I now tendered Joe the alleviating (?) bottle, but he declined it, saying, "I no sucker; too much howling in the boat now."

Gently we moved along the iron-clad coast, which was gradually growing in that picturesque beauty which never can be painted nor chanted. Successive ranges of hills, with bold rocky bluffs, from which the cedar, pine and spruce sprang, came into pleasing review, while charming little bays margined in gravel and sand, were ever and anon surprising us. The Pillars of Hercules, with their lofty crowns, were soon in sight, and then lovely Gros Cap Island in living green, nestling close to the craggy shore, was gradually developing into graceful proportions.

My attention was now called to the appearance of the sky in the west. Dark, cold and ugly-looking masses of clouds were just beginning to appear, and soon the light-flying fleeces of snowy curls and ragged feathers, with which we were greeted in the morning, began to increase their speed until they were scudding swiftly along the dome as if pursued by a relentless host. It was manifest there was to be a sudden change in the weather, and one which bade fair to give us all the breeze we desired. Every minute the wind increased, and it was not long before our little craft was sliding faster and faster through the swelling waves with the cheering froth tossing from her bows. This great lake is a terrible coquette, and will give you many a surprise in her sudden changes of sunshine and shade, calm and storm. She was now evidently intending to flirt with us, but we felt confident of reaching Gros Cap before she became terribly in earnest.

The wind at last had got down to steady work, and was blowing quite fresh, and in consequence we were plunging along over the snowy crests with a speed that was rapidly carrying us to our haven. The clouds had marshalled additional hosts, and were sailing across the sky in sombre volumes, that threatened every minute to break o'er our heads and deluge us.

Joe was sure we would make the island before the

threatened rain, and so thought I, for our boat was now fairly flying before the increasing breeze. Another mile and we would reach Gros Cap, that was now being fiercely beaten by the wicked waves. Rapidly we near its lee, and as Ned was assured of our successful landing, he burst into one of his rollicking sea songs indicative of his present feelings. It was cheering in that howling wind, and relates that

The wind blew hard, the sea ran high,
The dingy scud drove 'cross the sky,
All was safe lashed, the bowl was slung,
When careless thus Ned Hanly sung:
"A sailor's life's the life for me,
He takes his duty merrily,
If winds can whistle, he can sing;
Still faithful to his friend and king,
He gets belov'd by all the ship,
And toasts his girl, and drinks his flip."

We soon reached the island, had the tents up, a fire going, the pots boiling, and in a short time were seated at the table, taking our first square meal in camp. This over, we had all our provisions brought ashore and completely covered with oilcloth and tarpaulins. It being too rough for fishing, we sat on the rocks and watched the coming storm.

The dense black massed-up line of cloud in the west was alive with the incessant play of lightning that radiated and zig-zagged in all manner of forms. It was like watching some gigantic hangings of tapestry wrought in flame. The imagination, rather than the eye, witnessed a hundred fantastic representations—heads of horses, helmets, profiles of titanic human faces, banners and feathers, and I know not what besides. Darkness soon enveloped us, and then we sought our tents, and soon after were in our blankets, totally indifferent to calm or storm. During the night the clouds broke and it rained incessantly, in a heavy downpour, till daylight.

The storm had subsided with the dawn, but the day was dull and heavy, the skies obscured, and the air charged with vapor—a gloomy outlook for our first day in camp.

Well it was that we had taken the precaution we did about our provisions; for had they been left aboard the boat, as Joe desired, they would have been thoroughly soaked, as the rain had about half filled the boat.

It was so damp and chilly that morning, that we gathered around the fire while breakfast was being prepared. Ned got his rod ready for shore fishing, expecting to try the rocks around the west side of the island; but the trees and bushes which ran to the very edge of the lake were so moist that he declined. He however handed his rod to Joe, telling him to catch a few trout for breakfast. Joe, who dearly loved to fish, started off with alacrity on the pleasant mission, heedless of the dripping foliage. In about half an hour he returned with one little trout and a broken rod, the tube tip having snapped off. Joe stated that he hooked a very large one, which he might have saved if he had had some one to land it.

The accident to the rod, which was of foreign make, was soon repaired. This was one of Ned's reserves, and of little or no account for artistic angling. He had a splendid Mitchell rod, as well as others, which he prized highly and which he held in abeyance for boat fishing only.

After we had partaken of breakfast, the question arose as to continuing our trip, our destination when we started being Maple Bay, or remaining here for the day and trying the adjacent shore for some of the scarlet-hued beauties.

The weather was unsettled and it looked as if Jupiter Pluvius might at any moment again resume sway. Joe, who claimed to know the signs that foretell wild weather, was consulted, and fearing that his observations might fall would give no decided opinion. His reply was, "Wait a while, then we see." At this decision Ned wished to take boat and skirt along the shore for a few trout, and then return and make the trip if there were signs of clearing weather. I protested against this, knowing full well if we once started for the angle in the boat that it meant half a day's sport. With me it was either remain the entire day or at once proceed. While quibbling over this Joe had gained more confidence in regard to the situation and pronounced in favor of brightening weather, with a promise that it might sprinkle a little. These half-breeds who live on the lake seem living barometers, exquisitely sensitive to all the invisible changes of atmospheric expansion and compression; they are not easily caught in those fierce storms that come leaping with a wildness and violence that destroy and devour.

Ned finally consenting to sail at once for Maple Bay, word was given to load the boat, and away for the home of the radiant trout. The boatmen worked earnestly, and soon the boat was ready and sailing before a light breeze. We had not gone over a half mile before there was a slight sprinkle and some rueful countenances. At this manifestation of the elements we donned our rubbers and then went into all kinds of prognostications relative to the weather in prospect. Joe began to be looked upon as a false prophet, and Ned began to berate me for espousing so warmly the immediate trip to the promised land. The tinkling drops, however, soon ceased, the clouds broke away and brands of purple and violet, and pale blue and fluid gold began to shoot and quiver and broaden. The weather had cleared and the sky had become a fairy tale and the lake a love poem. Ned, our melodist, rejoiced at the happy change, and his clear ringing notes went echoing o'er the little foamy ripples and along the wave-worn and thunder-scarred cliffs as he sang:

"How gallantly, how merrily
We glide along the sea!
The morning is all sunshine,
The wind is blowing free,
The billows are all sparkling,
And bounding in the light,
Like creatures in whose sunny veins
The blood is running bright."

We had a long sail before us, along a serrated shore abounding in charming bits of landscape. Surprise after surprise constantly confronted us in bold cliffs, jutting rocks, and deep depressions, o'er which the golden sun shed an effulgent glow and the feathery foam gently beat. How delicious this sliding o'er the sparkling waves through balmy zephyrs, bright sunshine and under a dome of tender blue, radiant with morning splendor and

the dazzling satin of clouds. What nameless things pass through the mind when Nature thus unfolds her glories to the sensitive soul! They always come to us in such delightful hours as these when she entertains us with her holiest and best. T. Buchanan Read has caught the fine fervors of such moments in these stanzas:

"My soul to-day
Is far away
Sailing the Vesuvian Bay;
My winged boat,
A bird aloft,
Swims round the purple peaks remote.

"Round purple peaks
It sails and seeks
Blue inlets and their crystal creeks,
Where high rocks throw
Through deeps below
A duplicated glow."

It was fully half an hour before we reached Goulais Bay, and then we had a ten-mile stretch to the other side. The wind was still gentle, just breezy enough to make the silver ripples dance and keep our canvas straightened. It was a three hours' sail with the wind we were then having, but when we were across the breeze freshened, and we went along as quietly and swiftly as a gull on wing.

Maple Bay was reached by 2 o'clock, and happy mortals we were, for here we would have many a delightful interview with the scaly warriors

"Of the mottled sides and shapely mold,
And crimson stars with fringe of gold."

We concluded to pitch our tents on our old camping ground, it being a lovely spot, and free from the bushes which generally harbored the annoying flies and mosquitoes, and also arranged that everything should be put in perfect order after dinner, prior to our going out to trick the dandy of the vermilion dye. I had purchased before leaving home an 11ft., 7oz. split-bamboo rod of Thos. A. Chubb, of Post Mills, Vt., and was exceedingly anxious to ascertain its qualities. It was well balanced, had perfect butt, sufficiently light and springy, and if it only showed a quick action in service, was satisfied it would prove a Jim Dandy. Ned put together his Mitchell rod, which was 10z. heavier and 6in. longer than mine, and which had seen six years hard service on the Nepigon and North Shore. It was a superb rod, as I had ascertained when I tried it last year. To Ned's credit be it said, that he discarded the junk bag which he had with him the previous season. This time he was more systematic, as he had the most of his impedimenta carefully arranged in small bags and duly labeled.

His flies and leaders were in his fly-book in good form, for these he prized highly. It was only in the odds and ends and specialties he had bagged and marked. He liked originality, and it was nowhere more prominent than in his angling fancies.

He had a pet creation of a fly, which he had made, and which he put on as a stretcher. It was large and bushy, and a combination of brown hackle and red feathers, with horns and glass eyes. He would wager largely that it would prove a taking lure, and I only hoped that it would, for he had put his artistic soul into its architecture, and I was desirous that his fullest anticipations might be realized.

The boys at last had everything completed and all the provisions ready for a rain with which we had been threatened the last hour, and then they prepared a meal which was to answer for both dinner and supper. We sat down to that meal with a ravenous appetite, as we had not had a bite of anything since our early breakfast, and it was now nearly 4 o'clock. The feast over, we soon took to the boat, eager to capture a golden fin. It being conceded that the bow was the best position, we concluded to even matters in that respect by a change in seats each time we went out. Tossing up for first choice, I won, and greedily selected the bow, and consequently Ned resignedly took the stern with the remark that I would have the first chance at the two big boulders just ahead of us, where we never failed last year to secure a rise or two whenever we fished there.

As soon as the boat was a short distance from the shore I commenced casting, having a silver-doctor for a stretcher and a brown-hackle for the dropper, in order to try my rod as well as somewhat to straighten leader and flies. I was highly pleased with the action of the rod, after I had cast a few times, and if it would only prove equally as good when the quarry was at the alluring end of the line, I would then declare the manufacturer an artist and a credit to the guild, and write him to that effect when I had returned to civilization.

Coming within casting distance of the granite boulders, I sent my flies sailing toward a choice place, saw them fall as lightly as a snow flake upon the ripples and at the spot I desired, and was rewarded with a magnificent rise, and a disappointment at the same time, as I had unfortunately failed to attach him to the cold steel. Ned now followed suit, sending his pet creation near the same place, and was lucky enough to arouse and hang one, which, after a few minutes' active play, was deftly boated. It was about a 2-pounder, and a lovely specimen of the rainbow beauties that make their lair in the rocky crevices and around boulders poise.

A further whipping of the waters did not secure an additional rise, and so we continued our course along the wood-crowned shore, striving hard to coax another darling of the spotted jacket to change his element. Reaching a jutting point that disclosed fine cover in shelving and creviced rocks, I was once more compensated with a capital rise, which I was fortunate enough to impale, but which, sad to relate, escaped after I had about conquered him. Ned was in deep sympathy with me over the loss, saying, "Better luck next time," and Joe, being in the same mood, declared: "You get'em by and by." Having had experiences of the same kind I took it quite philosophically, knowing full well that the tide would soon turn.

A moment or two after this, Ned had a wolfish snap, and then a maddened trout was ploughing through the water with the fancy fly dangling from his quivering jaws. He cut up many an odd caper, and at last leaped in frenzied energy from the roughened water, showering the bright drops from his dappled coat. A dash or two more, a dive to the bottom, and then a struggle or two, and up he came and turned his mottled sides to the surface as a token of surrender, and then was gently drawn

to the net and consigned in companionship to the beautiful two-pounder. He pulled the scales at a fraction below three pounds.

Ned being satisfied with his triumphs, handed his rod to Joe, who in a short time caught two more. I had but one rise more during this carnival of sport, and am sorry to admit that the inquisitive trout departed without a scratch. I had evidently lost my lucky stone. It was assuredly not my day.

A glance above satisfied me that a return to camp had better be made without further delay, as the wind was freshening fast, the sombre clouds swelling their bulk as they rolled, while the lake was running in ridges that fell and rose against the boat with spiteful violence. We were about a mile from camp, and at once gave the word to return, and ere we reached our quarters the sky had become completely darkened, presaging rain at any moment. The boys worked the ash blades with willing hands, and soon had us in camp and around a good fire.

My return had not been heralded with blare of trumpets, as my banners were trailing and my plumes soiled. Not a fin had I to record for the evening's pastime, but I swore by the great horn-spoon that ere another sun rose and set there would be an orphanage among the tribe of *Salvelinus fontinalis* that would cause loud lamentation from one end to the other of their aqueous realm.

We sat around the camp-fire for a while, listening to the rumble of the far-away thunder as it came "wing'd with red lightning and impetuous rage," and the constant moan of the wild waves as they broke against the granite cliffs with clocklike regularity. Ned declared we would have a wet night of it, and that its inaugural was not far off, and, therefore, moved an adjournment to our inviting beds amid the balsam. No dissenting voice arising, we sought the tent, leaving the elements mustering their troops for the grand battle, which bade fair to be a tumultuous and tempestuous one, that would go rattling along with deafening canonading and livid flames from peak to peak and shore to shore.

Soon the results of the elemental strife became manifest, as a heavy downfall of rain began which lasted till 6 o'clock in the morning, with a promise of an almost immediate renewal. The imagination might conjure the fabled Jupiter with his powerful allies again letting loose the rivers, that the earth might be completely deluged.

Natural History.

SEAL LIFE ON THE PRIBYLOV ISLANDS.

AN especial interest is added to our recent remarks on the destruction of seal life by the appended memorandum just issued by Mr. Henry W. Elliott, of Washington, whose name is familiar to most of our readers. It is to be remembered that Mr. Elliott spent the seasons of 1872-74 at the Pribylov Islands, and that he again visited them in 1876. The results of his observations there are embodied in his "Monograph of the Seal Islands of Alaska," which was printed as a special Bulletin of the U. S. Fish Commission. Last season Mr. Elliott was chosen by the Government as the person above all others fitted to visit the Seal Islands again and report on their condition and the status of seal life there; for it had been stated that the numbers of seals visiting the rookeries had greatly diminished, and it was known that the pelagic sealing which had been going on for some years had seriously affected the inhabitants of the rookeries. It was said also that the lessees of the islands had killed a far greater number of seals than the terms of their lease allowed, and had used no judgment in selecting the animals to be slaughtered.

Mr. Elliott made the required inspection, and in the memorandum which follows he gives a clear statement of the condition of things at the rookeries of St. Paul and St. George, and shows that the seal fisheries there are at the point of extinction, and that unless very radical steps are taken to preserve them they will soon cease to exist.

STATUS OF SEAL LIFE ON THE PRIBYLOV ROOKERIES; THE SEASON OF 1890 AS CONTRASTED WITH ITS CONDITION THERE IN 1872-74.

At the close of the breeding season of 1874, on the Pribylov Islands, Lieut. Washburn Maynard and myself found that there were on the breeding grounds about 85,000 able-bodied bulls, 1,600,000 females (*nubiles, primipares and multipares*), and some 80,000 young males between 5 and 6 years of age, which were continually striving to get upon the rookeries, but were, as a rule, invariably whipped off by the older bulls, giving rise in this effort to the most animated fighting and extraordinary noise throughout the whole period of the rutting season.

At the close of the breeding season of 1890, on the Pribylov Islands, after the most careful and extended search, surveying every superficial foot of each one of the fifteen different rookeries with cross bearings from a great number of measured base lines, and giving close attention to the relative numbers of "bulls" and "cows," I found on these breeding grounds only about 8,700 old bulls, many of these aged, infirm and actually impotent; 640,000 females (*nubiles, primipares, multipares and barren*), and no young bulls around or near the breeding grounds.

In short, since 1885, no young bull seal has been allowed to live and grow after it reached the age of four years, if it were possible to secure it; they have all been regularly killed as they grew up, and their skins sent to London. Therefore, these breeding rookeries during the last six years have not been permitted to receive that annual supply of fresh male life, which was then, as it is now, absolutely necessary for their perpetuation and support in good form and number.

In 1872-74 Lieut. Maynard and myself estimated the number of non-breeding young male seals as they appeared on the hauling grounds of the Pribylov Islands to be at the lowest figure 1,100,000; of this grand total 250,000 were yearlings, 220,000 two year olds, 200,000 three year olds, 180,000 four year olds, 170,000 five year olds, and 80,000 six year olds. In 1890, at the height of the sealing season, I made another very careful study as to this number of young males, and my figures will not warrant the statement of there being more than 80,000 young male seals left alive on the Islands at the end of

the sealing season of 1890 (the pups new born on the rookeries must not be considered, and are not, in this connection). Of this 80,000, I calculated fully 70,000 to have been yearlings, or the pups of '89, and the balance, 10,000, was made up almost exclusively of small two-year-olds, not more than a thousand three-year-olds and a hundred or two four-year-olds were left alive on either island at the close of the killing season of 1890.

What proportion of this 80,000 will reappear on the seal islands next summer is hard to say, for the reason that these young seals will be exposed day and night from the time that they left the islands last October and November until they reappear next June and July to the deadly attacks of voracious natural enemies such as killer whales and sharks. These enemies are just as numerous as they ever were, but the seals are far less so, and that may cause, and indeed must cause a vastly greater death rate in proportion to their number now than took place in 1874, when there were a great many more seals. Also a certain percentage of this 80,000 will be destroyed along the Northwest Coast this spring by the pelagic sealers; but this number of "rising" two-year-olds is so small that it is safe to say that these seals will be so widely scattered when they return (and they are now at this writing on their way up the coast off Vancouver and Queen Charlotte's Islands en route for Behring Sea) that I do not believe that the open water hunters can get more than 10 per cent. of them, even if they do as well as that; but the sharks and killer whales will do vastly greater execution.

If, however, these young male seals that live to return next summer are not driven—are not disturbed by drivers on the islands—in four years' time from date quite a large number of them will have matured so as to be able to take up stations on the rookery grounds that are today vacant, and in the charge of aged and impotent bulls, which state of affairs, bad as it is, must get worse and worse, until these young sires arrive on the field.

Bad as the rookeries looked in 1890, they will look worse in 1891, and worse again in 1892, and still worse in 1893; the first signs of improvement we cannot reasonably expect before the seasons of 1895-96, and these rookeries will not mend as soon as this, even if that remnant of young male life, as it shall reappear on the "hauling grounds" next summer, is again driven.

The normal ratio of males to females on the breeding grounds of the Pribylov Islands in 1872-74 was an average of one male to every fifteen or twenty females.

In 1890 this ratio (despite the deadly work of the open water sealers among the females) was an average of one old male to every sixty or eighty females! (I saw many single harems in which I counted over one hundred cows).

Therefore, it is a physical impossibility for these old and enfeebled males now left upon the breeding grounds to meet all the requirements of nature there; they did not last summer; they will be weaker again in numbers and in physical power in 1892, still weaker in 1893, and again weaker in 1894. In 1894 the first relief that can possibly come to them, will come provided that handful of young two-year-old males left alive on the islands last summer is undisturbed by man there next summer and thereafter, and in 1895 the yearlings that were spared last summer, such of them as shall return, will have then matured and take their places on the breeding grounds. This infusion of fresh blood will mark a turn of decided improvement in 1896; so that in all probability by 1897 the killing of seals for tax and shipment of skins may be resumed under revised regulations.

But, one very important fact should be kept in mind; that fact is, that when killing up there is again resumed for tax and shipment, no culling of the driven herds must be allowed; all the seals driven must be taken; for unless this is done, then history will repeat itself—every three and four-year-old male will be killed as it grows up, and the rookeries soon be again deprived of that regular supply of fresh male blood which is absolutely necessary for their maintenance in their full form and number.

Of course, it goes without argument that unless some arrangement can be made whereby the wasteful and wicked work of pelagic sealing can be stopped, it is useless to try and save these interests by any regulation or attention on the islands.

HENRY W. ELLIOTT.

SMITHSONIAN INSTITUTION, Washington, D. C., April 28.

NEHRLING'S "NORTH AMERICAN BIRDS."—We have received four additional parts of Mr. Nehrling's "North American Birds," the first part of which was noticed in *FOREST AND STREAM* in the Summer of 1889. At that time we had occasion to speak favorably of this work, which it was hoped would by this time have been completed. Delays have interfered with this, and Parts II., III., IV. and V. have only just reached us. These parts contain biographies and plates of some of the thrushes, titmice, wrens, wagtails and woodwarblers, and plates of many of the species described in the work. The accounts of the different species are delightfully written, and the plates as a rule are satisfactory, which is not surprising when we remember that many of them are drawn by Mr. Robert Ridgway, of the Smithsonian Institution, the others being by Prof. A. Goering, of Munich, and G. Muetzel, of Berlin. In speaking of the parts which have just come to hand we have no reason to change the favorable opinion which we pronounced on this work nearly two years ago. If it is completed on the plan announced, Dr. Nehrling's book will be a most useful one, and will do far more to spread a knowledge of our birds among the people at large than many a more pretentious volume has done.

A SEVENTY-FIVE DOLLAR GROUSE.—Auburn, Pa., April 29.—A friend writes me under date of April 19, from the State Normal School at Mansfield, Tioga county, Pa., of a grouse that came like a rocket through the trees on the campus and struck the plate glass window in the front of the building, falling dead amid the fragments of glass from the shattered pane. He states that Professor Thomas had the bird for dinner, but thought it a rather expensive repast, as it will cost \$75 to replace the broken glass.—BON AMI.

WASPS EATEN BY TOADS.—Toads have been observed by some persons to feed willingly on bees and even wasps; and M. Hiron-Royer, who has noticed the fact, says that *Hyla versicolor* is positively frantic about wasps. He has seen one prefer them to any other kind of food, and devour them eagerly, although the sting does sometimes bring the creature to temporary grief.—*Nature*.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

TWO HOURS WITH THE BLUEBILLS.

A SWIFT-SPEEDING afternoon train has born M. and myself far from the confusion and whirl of the great city. Jangling bells, shrieking whistles and jolting vans all are left far behind, and as the April sun sinks from sight behind a bank of golden-tinted clouds we are discussing the merits of a hot supper at the old homestead and watching from the dining room windows the ever varying shades of the western horizon.

Our time for reflection, however, is short, for there is a sound of wheels outside, and the cheerful voice of E. comes floating in to our ears. As we exchange greetings with him, he queries, "Why not take a drive down to the club house?" Nothing loath we consent, and making a hasty exchange of clothing, our guns and shell boxes, decoys and lunch baskets are loaded in the wagon; and we are trotting merrily toward the winding and familiar Bark, with its usually low and sloping mud banks now submerged by the melted snows and spring rains. A drive of an hour and we are nearing our destination. The stars which thickly stud the heavens give us ample light to travel the familiar route. The air is pure and mild, and M. and I, after our long winter spent in town, are drinking it in gratefully. Noisily we rumble across a diminutive wooden bridge scarce forty feet in length, and M. can hardly be made to believe that this spans the same stream on which we are to hunt the wary wildfowl on the morrow. Here the channel is narrow and the current swift, cutting its way between hard and stony banks, but after winding southward three or four miles further broad marshes appear on either side and the stream widens out, forming a body of water many rods in extent, and presenting great attractions to the bluebills. Pausing at a point a short distance from the bridge, we hear high above us in the starry dome of heaven that wavering note caused by the jacksnipe in his evening flight. Again and again it reaches our ears as the bird soars aloft only to swoop earthward on lightning wing a moment later. The sound grows fainter and fainter still as we proceed on our way, and at last we can hear it no longer.

Presently we cross the Northwestern Railroad track, half a mile west of the little town of D. Looking eastward along the shining rails one can see scattered here and there the irregular and twinkling lights of the village. Leaving this behind we journey onward, at last turning in at the barnyard gate of the farm through which we must drive to reach the shelter of the club house. A brindled cur dog comes bounding out from a dark doorway with an inhospitable growl, but the gates are soon closed and with our lighted lantern upon the dash we are trotting briskly down through the grove lying between us and the shanty. Half an hour later we are unloaded, our team is unharnessed and a good fire is roaring in the stove. A pail of water is brought from the spring and the coffee made ready for morning. Before turning into our bunks for the night we step outside to take a final look at our team, which we have stabled in the boathouse adjoining. A beautiful sight is presented to our eyes as we emerge from the heated interior of the house to the pure outer air. The moon hitherto hidden from view by the timber around us now greets the eye as she majestically rises above the tops of the tall and slender poplars to enhance the beauty of the scene. And what a concert is also borne to our listening ears, for from every side there is swelling a grand chorus from the throats of ten thousand frogs. Not the gruff and unmusical bullfrogs, but those tiny striped, sprightly little fellows whose voices sound so pleasantly to the ear of the lover of nature. A flock of geese are heard flying somewhere out over the river channel, presumably in search of a roosting place for the night, for presently there sounds a medley of honkings and a flapping of wings followed by the sound of heavy bodies alighting. An interval of silence follows, during which even the frogs seem affected, but presently two or three, more hazardous than the rest, pipe up shrilly once more as if challenging competition, others join in and soon the old roar sounds again louder than ever. At our feet gushes a large spring, the outlet to which while it carries the surplus water away also serves us in floating our boats to and from the river some thirty or forty rods away.

A jacksnipe which had been soaring aloft for some little time now comes fluttering down and alights close by us with a light *sput* and a guttural *aiik*. Wildfowl are heard overhead on rapid wing, and altogether the evening's entertainment is one long to be remembered. M. exclaims enthusiastically as we turn to rejoin our companions inside, "Great Scott! I'd like to live here for a month."

As we are to rise at an early hour in the morning the bunks are overhauled and put in order for the night, and we turn in to fall at once into a deep and dreamless sleep lasting until about four o'clock, when E.'s stentorian tones announce that "It's four o'clock and time to get up." Three pairs of stockinged feet strike the cold floor in rapid succession. E., with his feet thrust into an old pair of sandals, proceeds to start a fire, for we are all unconsciously shivering. Our coffee pot is soon puffing out its fragrance, and after frying a few fresh eggs we are all ready for breakfast, and we can but wonder where we have found these voracious appetites with which we are provided. Long before we are through eating a glance through our little east window reveals the fact that it is high time we are on our way to the blinds. M. and I are compelled to share one boat together, so the shell boxes and guns are first stowed away with a dozen and a half of canvas decoys, manufactured at Union City, Tenn., and which, by the way, are a perfect marvel of convenience of portability, to say nothing of their lifelike appearance upon the water.

We push out into the center of the spring and pole slowly through the water cress and enter the ditch leading to the river channel. A heavy fog rests low down over the water and ere the river bank is reached and the bow of our boat headed up stream the low musical *kherr, kherr*, of the bluebill is heard on every side, although until the fog lifts not a feather can be seen. Gaining the center of the river we ascend cautiously bend after bend. Now and then a flock rises close ahead and disappears quickly in the gray mist which envelops

everything as with a veil. There is an old-time stand of mine only a little way ahead and it is toward this spot that we direct our boat. A mighty flock is found feeding contentedly in the very spot where our canvas birds are destined to sit, and carefully routing the ducks without firing a shot we are soon located one on each side of the stream with our handsome flock of decoys midway between. M. has not had time to conceal the boat which he has taken to his side of the river before a pair are seen bearing down upon us from up the stream. I am in a trying position, perched upon a tottering bog which is constantly threatening to collapse and subject me to a plunge bath, but I cannot resist cutting loose on the head bird (an old male) as he passes overhead, dropping him close in shore. No time to pick up dead now. I can see that plainly, for a pair of buffle-heads come in with a rush from the north. *Ah-room, ah-room*, a sharp report sounds from each side of the river and goes rolling and quivering through the fog. *Spat, spat*, upon the water follows. A voice from the further side of the river sings out "And the wind whistled."

One of my boots has sunk in the mud until the top is painfully close to the waterline, and there is also a horrid suspicion dawning across my mind that a certain portion of that garment covering the largest part of my anatomy is also becoming dampened. Cautiously I reach for a square piece of plank I espy a few feet distant. "Mark south!" comes from the blind opposite; and in my efforts to get in readiness for a shot I ship a few stray drops down boot leg No. 1. Bang! bang! from Charley, and a moment later I make a successful shot, which nearly proves disastrous to my equilibrium at the same time. A few seconds later I have gained the coveted bit of pine and feel comparatively safe from any further wetting, although I am still far from comfortable, crouching in from 6 to 20 in. of cold water, amid a coarse growth of wire grass. Our dead birds are fast disappearing from view down the stream, and it is decided that we had better make a hasty collection rather than lose what we have down. M. is gone but a very few minutes, but upon his return I point out to him four more birds which have fallen in the meantime. M. enthusiastically begins counting our string as soon as he regains his blind, but only gets as far as seven, when I silence him with a "Lookout, north!" for five bluebills are upon us. Our salute cuts down three of the five, and thus the sport goes on. Four geese are noted winging their way diagonally toward us. Rather too high, but two barrels of fours are sent spitefully upward, and we are favored with a single quill cut from a wing as they pass.

At 7:30 the flight slackens and we take up our decoys and gather in the dead, drifting onward down the river to the club house. Our string of twenty-nine birds fully satisfies us. We have enough for ourselves and our friends, and what more do we want?

E. not putting in his appearance, we hang our birds against the side of the shanty and expose a plate from the Hawkeye upon the scene. The pleasing picture lies before me even as I am writing this narrative and serves to bring back vividly each good, bad or indifferent shot made during one of the pleasantest morning's shoots I have ever experienced.

An eight-mile drive home in the warm April sunshine follows as soon as E. arrives with his 15 birds; and this is as keenly enjoyed as the earlier hours of the day had been. The frogs are still piping their refrain from each and every little pond by the roadside, and there is a suspicious rainy feeling pervading the air. Bird life is jubilant and brimming over with song. Great flocks of red-winged blackbirds are pouring forth their notes from every bush and tree, bluebirds clipper gleefully from the moss-grown rail fences bordering the roadside. Hosts of robins are intent on securing a breakfast from the angle-worms everywhere creeping from the ground. Altogether, the day is one not to be forgotten, and the remembrance of it will serve to tide over the long and monotonous hours of dull office routine which the future has in store for us.

GREENHEAD.

SIX YEARS UNDER MAINE GAME LAWS.

VI.—ON NON-TRANSPORTATION IN OPEN SEASON.

FOR the plain words to our visitors that have preceded, let us even use Robin Hood's own apology: "Nay, my Lord Bishop," said Robin Hood, "we are rough fellows, but I trust not such ill men as thou thinkest after all. There is not a man here that would harm a hair of thy reverence's head. I know thou art galled by our jesting, but we are all equal here in the greenwood, for there are no bishops, nor barons nor earls among us, but only men, so thou must share our life with us whilst thou dost abide here."

Most sportsmen will remember that we have had a very strict non-transportation law—at least, they will say that their impression is such. Of any twelve men here who are interested in game matters, the majority will say the same—a very strict non-transportation law, strictly enforced, recently so modified that game legally killed can be shipped to points inside the State but not outside. It will be generally admitted that from 1883 onward we had a law which practically forbade any deer, moose, or caribou to be transported from point to point, except by private conveyance. Let us hear "Special!"

FOREST AND STREAM, Nov. 13, 1884: "It is not pleasant to be obliged to say that even under the very strong transportation law of Maine deer carcasses and even moose antlers do get out of that State and are seen here * * * A fine pair of deer antlers came through the other day, and worse yet, five carcasses of venison came through last week. The name of the express company is known which forwarded them and the Maine Commissioners have been notified."

FOREST AND STREAM, Nov. 27, 1884: "Even ex-Governor Connor could not transport a deer, killed honorably in open season, from Bangor to Augusta last fall. Commissioner Stilwell when applied to said: 'Governor, I can do nothing for you under the law.' * * * This was under the first enforcement of the new transportation law in that State, which few at that time understood."

FOREST AND STREAM, Dec. 11, 1884: "As for venison, there came through from Maine the season before the non-transportation law went into effect between 1,800 and 2,000 carcasses. They actually rotted outside the Boston markets. Thanks to the good work of the Commissioners, such barbarous and wicked waste of noble game has been stopped. * * * Not a day passes but what the wardens at the large shipping points in Maine seize partridges, ducks or saddles of venison, being smuggled through to Boston or New York. The tricks of the poachers are as curious as they are numerous, etc."

FOREST AND STREAM, Feb. 26, 1885: "The Legislature was also asked to legalize transportation of game over the railroads, when accompanied by the owner, but no satisfaction to the market hunters or the market men was obtained."

Is this not strong corroboration of the all but universal

impression that the transportation of game was forbidden in Maine at all seasons? To be sure, one man is the author of the whole of it; but he asserts what we all know, that the Commissioners declared this was the law; that the wardens executed it as law; that the people believed it to be law, and that they even petitioned the Legislature for a change.

Let us examine the legal history of the subject. Our first non-transportation law was that of 1878, which read as follows: "Sec. 13. Whoever carries or transports from place to place the carcass or hide of any such animal or any part thereof, during the period in which the killing of such animal is prohibited, forfeits forty dollars." What was the change in 1883 which every one admits? We quote from the Revised Statutes, Chap. 30, Sec. 13: "Whoever carries or transports from place to place the carcass or hide of any such animal or any part thereof, during the period in which the killing of such animal is prohibited, forfeits forty dollars." Has there been a change since? *Book of the Game Laws*, 1890: "Sec. 13. Whoever carries or transports from place to place the carcass or hide of any such animal, or any part thereof, during the period in which the killing of such animals is prohibited, forfeits forty dollars."

To the self-same tune and words! That is all any one can find anywhere in our laws regarding non-transportation at any season. There is not the change of a jot nor tittle, an iota nor a comma in it. For thirteen years now we have had this non-transportation law and no other. Why is it that the Commissioners can do nothing to help the ex-governor "under the law"? Why is it that the wardens are all instructed to seize game legally killed? Why is it that the Legislature is asked to alter a law which never existed? And how could such a delusion gain ground over a whole State, when there was no change at all in the law and had not been for five years?

If not in this law there had been a change in another which seemed to affect this. In 1883 the one moose, two caribou, three deer law was passed. This law, limiting the number to be killed, also made it illegal to have more than the prescribed number in possession—a necessary measure, throwing the burden of proof upon the accused when proof by the accuser might be impossible. Whether it was intended to do more than this is not for the unlearned in the law to say; but that the phrase "to have in possession" was too sweepingly interpreted at first there can be no doubt. It was officially declared that to handle a deer in any way was to have it in possession. The strictest orders were given that no conveyance, public or private, should carry, haul, or in any manner convey more than one moose, two caribou, three deer for the season. Stage drivers were warned not to do it under penalty of seizure of all deer so carried. "This new game law," said one of the shrewdest lawyers in Bangor to another, "is a queer kind of a law. Now supposing I have three deer legally killed, and you have three that you have killed legally, and you have a sled while I haven't any. Now if as a favor you tell me to pile my deer on your sled, the whole six can be seized, can't they, by this law?" The other agreed. When I asked one of them a week ago if he remembered the conversation, he said that he did not, but until he looked the matter up he always supposed that the law would sanction such an action.

But how did this gain general acceptance? More than in any other way by the refusal of the principal railroad and express companies to transport venison. When large corporations admitted that to convey game from one place to another was to have it in possession and gave up their business with game on account of it, it was natural for private individuals to suppose that they had carefully examined the whole field. Perhaps they did according to their light, but they could not have had the best of legal advice, for we now know that no transportation company can refuse to take what is offered. Neither could our Commissioners have consulted able counsel, or they, too, would have known that common carriers cannot be said to have "in possession" what they are conveying. A little investigation would have convinced them that they had no right to interfere with the transportation of animals legally killed. Apparently this investigation was not given; for for years we have witnessed the curious anomaly of a whole force of special officers, hired and paid to execute the fish and game laws, being detailed to carry out the orders of transportation companies to their own employees—orders which themselves were untenable and illegal; and being instructed to enforce the orders not by punishing the delinquent employees, but by confiscating the goods which they received in disobedience to the commands of the company, but which, once received, the company was in honor bound to deliver safely. The transportation companies have received goods up river, and the officers at Bangor and elsewhere have seized them and converted them to their own use without even a form of law; yet it was not contrary to the laws to ship these goods, the transportation companies could not refuse to take them, and the wardens or officers who made the seizure very often transgressed every form of law in doing the same. Complicated and absurd as this state of affairs seems, it has prevailed here for years.

This is ridiculous, but it may not have been intentionally unjust at the first. Let us be charitable enough to grant that the Commissioners, wardens and railroad companies at the first thought that they were keeping the law to the letter, and that they erred only through over-zeal. Yet in the *FOREST AND STREAM* for April 24, 1884, "Special" says: "But when early last winter, Payson Tucker, superintendent of the Maine Central Railroad, issued his remarkable order to forward no more moose, caribou, deer, or other unlawfully killed [*sic*] game over his road or its branches, the backbone of Maine market-hunting was broken. He was immediately followed by a similar order from the managers of nearly every other express and transportation company with lines leading out of Maine." This admits that the order was a private one in every case. But before the year is out, as may be seen by the quotations already given, he speaks of "the strong non-transportation law;" calls those who undertake to ship game which was legally killed "poachers;" and quotes Mr. Stilwell as saying that shipping could not be allowed "under the law."

Now there was no such law and had been none. Instead of that (though "Special" may not have known it) more than a month before he wrote this last extract, and fully eight months before those previously quoted, a case had

been decided in Bangor, which seems to show that the ex-Governor could have transported his deer and could have done it "under the law."

It was the Allen-Young case, which may be found in the *Maine Law Reports*, 76 p. 80. The facts are these: Benjamin L. Young, of Milford, on Feb. 17, 1883, shipped by express for Boston two deer legally killed Dec. 30 and 31, 1882. At Bangor Thomas F. Allen, a game warden, seized them on the plea that they were shipped contrary to law—which was admitted. But Mr. Young maintained that as they were legally killed, the law prohibiting the shipment (Sec. 13, already quoted) was either defective or subject to a different interpretation. The case was carried before the full bench of judges, and Mr. Young's claim was sustained. The judges' opinion is of great interest, but too long to quote entire. "We fail to see," they say, "any motive for making the mere transportation of the hide or carcass of a deer from one place to another a crime when the deer has been lawfully killed and is lawfully in the possession of the one who transports it [the shipper? or the express company?]. Certainly one may reasonably doubt whether such could have been the intention of the Legislature; and the act being a penal one, a reasonable doubt is sufficient to make it the duty of the Court to adopt the more lenient interpretation and construe the term 'such animal' as meaning an animal unlawfully killed, as was done in construing a similar statute in *Com. v. Hall*, Mass., 410."

The trial of this case before the Bangor Municipal Court was in March, 1883. The decision of the judges was given March 4, 1884. The case itself occurred more than six months before the question of non-transportation in the open season came up. The decision was given nearly six months after the transportation managers had refused to receive venison. In giving their decision the judges must have known of this later much-discussed phase of transportation, although they do not refer to it explicitly. In framing an opinion, it is at least probable that they would word it so as to apply to cases likely to come up under the new arrangement if this change could in any way affect the question of transportation. This is their opinion: "*The transportation of the hide or carcass of a deer from place to place in this State is not unlawful at any time if the deer was killed at a time when it was lawful to do so.*" Need anything more be said on that point?

It should be noted that what the judges say of transportation "in the State," does not prohibit transportation outside of State limits. Mr. Young's deer were marked to "Boston," yet the case was decided in his favor. The judges had no jurisdiction over inter-State matters, is the meaning. There is nothing in this to support the view of a witness in the McPheters case (see below) that it is illegal to send venison out of the State, though of late this has frequently been declared.

Here, as early as 1884, only a year after the three deer law was passed, six months after transportation in open season was forbidden, is a decision which settles the whole matter so far as the duty of the Commissioners and wardens is concerned. True, it does not say whether a transportation company can carry more than three deer for the season; but it does say that any man who legally owns three deer may carry them where he pleases. If the railroad and transportation companies cannot take these deer for their owner, or think they cannot, that is their business. If they do take them it is at their own risk, not the owner's; and if anybody is to be arrested it is the plain duty of the wardens to arrest the railroads. It is no longer a question in which the game or the owners of it are concerned.

Did the Commissioners forbid the wardens to seize game in transportation after this decision? The decision was given March 4, 1884. Read what "Special" says under date of Dec. 11, 1884 (already quoted). There is no lack of corroborative testimony. Did the Commissioners know of this decision? They did. First, it was their duty to know it, understand it and act in accordance with it; second, the suit was begun by one of the prominent wardens and he was defeated—which could not fail to be known to the Commissioners; third, Mr. Stilwell himself was present at the trial before the municipal court and knew the facts. Yet the work of seizing game while in transportation in open season did not fairly begin until the fall of 1884, and was kept up until January, 1889, in spite of this decision.

It is this on the one side that makes people here believe that this interpretation of the law was not accidental.

On the other hand the action of the transportation companies laid them open to criticism on the same score. If they had refused to take any game because it made them liable to suits for damages, they would of course be liable as long as the law was in force, and that law (Sec. 12) still exists. Nevertheless the transportation companies repeatedly ran the risks of this penalty. Game was put on board the trains, and the employees allowed it. They refused to handle it themselves, but they did not interfere when the owner picked up his own deer and carried it aboard the train, even if he carried it into the passenger car, as my father did once. A guide writes me: "All parties that I have had have carried their game home, that would put it aboard themselves and watch it, but most always had a lot of cheap talk with the railroad men and wardens. But when the men hung to their game the wardens did not dare to meddle with it." In short it was not very long before non-transportation became this: No deer can be carried unless the owner is with them to keep the wardens from seizing them. The railroads, it was discovered, could carry all they pleased; they were not liable for having them in possession. The wardens, however, could seize anything that was carried—at least did seize everything they wished to. The result was that no one was responsible except the owner of the deer, whose right to convey his own property over public lines of travel was neither protected nor recognized. The cases of illegal seizure of game, belonging both to sportsmen outside and to citizens, are too many to admit this statement's being questioned. Non-transportation came to be as I have said merely a question of whether the owner was present to prevent himself being robbed. At last it became customary for the company to check deer as personal baggage, both for convenience and safety. The railroad employees no longer refused to handle it, the companies were gracious about receiving it and the owner rested easy at Bangor. Still all was not safe, as the McPheters case shows. This case has recently been settled and I have obtained the printed report of evidence, attested by the clerk of courts, from which I

quote the following to show what has been done in Bangor in the name of the law:

"Walter F. McPheters, plaintiff, called by his counsel, testified: I shipped these deer at Costigan by rail to Boston; Nov. 5, 1888. Costigan is in the town of Milford, in this county. They were checked; I took checks for them. There was nothing on them to indicate the direction or the person to whom shipped, but the checks. I have the checks now. I bought a ticket for Boston at the same time I shipped the deer. I saw them put on to the cars." * * * "The next thing that came to my attention, I heard the deer were taken in Bangor. I went to Bangor to see about them soon afterward. I received no notice from any officer or any court of any seizure. I went to Bangor to see about the deer about the 25th of November. * * * *Cross Ex.*—Q. Did you have any trouble in getting the road to take the deer? A. I did not. There was no conversation to me or in my presence by any of the agents of the company. I had bought my ticket before I asked to ship the deer."

The deer were seized by George W. Harriman, of Bangor, a private detective, warden and special State liquor constable. He admits taking one whole deer and two saddles which had checks agreeing in every particular with those which Mr. McPheters showed. He testifies: "I took them at the Maine Central depot in this city. We brought them to Mr. Page's market for storage. Mr. Mayville, Mr. Nickerson and myself were the men that took the deer. We took them directly to Mr. Page's market. I went with them. Mr. Nickerson was on the wagon with me. We left them in Mr. Page's market. Q. Did you ever see them or any portion of them again at Page's market? A. Yes, sir. We divided them; each one of us took one." A little further on: "Q. What did you seize them for; under what claim of right? Obj. Admitted. A. We supposed we had a right to, as it was *wrong to ship them out of the State*. Q. You did not then claim to have any right of seizure except upon that ground? A. That is what we supposed." The italics are mine. The answer shows how little of the law some of our wardens who have been longest in the business know, and the kind of acts in which they will engage. No evidence is brought forward to show that Mr. Harriman used a warrant. By the testimony of himself and the other two it is shown that they divided the deer among themselves without appeal to any of the proper authorities and without notifying the owner what had become of his property. The same thing has been done repeatedly in Bangor. I select this case from many others merely because the testimony was given under oath and is a matter of court record. The suit itself, though won by McPheters, is wholly indecisive, because it was brought against the marketman who received the deer instead of against the officer who took them, on account of a technicality.

The case of George W. Bennett against the American Express Company, an action to recover the saddles of three deer, is a test case. The agreed statement of facts published for the court, attested by the clerk of courts, says that on Dec. 5, 1888, George W. Bennett delivered at Newport Station on the M. C. R. R., a box containing the saddles of three deer legally killed, to be shipped by express to Boston; that the express agent was not at the station when Bennett left, but delivered the box to the express company's car, giving no receipt or bill of lading; "that said saddles were seized by Thomas F. Allen," a game and fish warden, on said fifth day of December, and removed by him from said express company's possession at Augusta, Maine, without any search warrant or other legal process, and without objections from the express company or their agents, and have never since been delivered to said express company." It is also agreed that the express company had notified its agents not to receive any venison for transportation, but that they had done so previously, and that in this case no questions were asked as to the contents of the box. Verdict for plaintiff.

The case is so important that it is worth while to quote some of the authorities which were cited at its trial, 1890. They settle conclusively the whole non-transportation question, as it was under the laws previous to March, 1891. (Italics my own):

A delivery is always sufficient if the proper servants of the company accept the goods to carry, whether any bill or entry in the books of the company is made or not. (Redfield on Carriers, Sec. 101, page 82, and the cases cited.)

Common carriers are insurers of all property intrusted to them, except against an act of God or an enemy of the Government. (Plisted vs. B. & K. Steam Nav. Co., 27 Me., 182; Fillebrown vs. G. T. Railway Co., 55 Me., 462.)

The American Express Co. did not restrict their liability, as no notice was brought home to the plaintiff, or was assented to by him. (Fillebrown vs. G. T. Railway Co., 55 Me., 462; Bucland vs. Adams Express Co., 97 Mass., 125.)

Neither can they so restrict as to release them from liability for loss occasioned by their own negligence. (Sager vs. Portsmouth S. & P. & E. Railroad Co., 31 Me., 238, and the cases therein cited; True vs. International Telegraph Co., 60 Me., 13.)

The American Express Co. surrendered the box of deer saddles to Thomas F. Allen without demanding his authority and without objection on their part or by their agents. (Statement of Facts). Carriers are not to be allowed to solve claimants' right at their peril. (Redfield on Carriers, Sec. 214, page 197.)

On service of a legal process he may surrender goods into the custody of the law. (2 Pars. Contr., 207.)

Allen had no right or authority to seize the deer saddles, as he had no warrant or other legal process. (Constitution of Maine, Art. 1, Sec. 5. U. S. Constitution, Art. 14, Sec. 1 [and other cases].) The saddles were not in the possession of the American Express Co. within the meaning of Sec. 12, Chap. 30, R. S. As a common carrier has only an insurable interest and a lien for his freight. (Redfield on Carriers, Sec. 803, page 226, and cases cited.)

Also such could not be the fact because it would be in violation of the Interstate Commerce Law. (U. S. Constitution, Sec. 8, Spec. 3.)

Common carriers cannot select what they may carry or what they may refuse, but are bound to take all which offer. (Redfield on Carriers, Sec. 100, page 82 [and several cases].)

When the box of deer saddles were taken by the defendant company for transportation out of the State, and transportation began, they became subjects of commerce, and were governed by the laws of the U. S. (Coe vs. Esol, 116, U. S., 517, 10 Wall., 557-565, 18 Fed. Rep. 10.)

Commerce with foreign countries and among the States strictly considered, consists in intercourse and traffic, including in these terms navigation and transportation and transit of persons and property, as well as the purchase, sale and exchange of commodities. To regulate it, as thus defined, there must be only one style of rules, applicable alike to the whole country, which Congress alone can prescribe. (Various references.)

That is the Bennett case, decided last year—a conclusive demonstration of the colossal humbug of non-transportation in open season. Strangers and citizens alike have given up their property to those who showed no right to seize it, who had no right, either legally or mor-

ally, and the authorities have never once come out to tell us what our rights were nor to stop the depredations. That at first this was done in ignorance is possible, though no excuse. That the authorities should have remained ignorant all these years, requires faith amounting to credulity to believe. That the railroad and express companies should know so little of the laws on which their charters were founded as to have done this ignorantly, is inconceivable. The fact that such an imposition should have been allowed to go on year after year does not greatly increase the credit which will be given to any explanations that can now be made by those who allowed it or who first schemed it. It is said here that it was done to stop market-hunting, so that the deer might be saved for sportsmen, attracting them hither and increasing the travel on the railroads. A small object to gain when obtained by the suppression of both law and right, the toleration of a scheme of systematic robbery against which private redress was hard to get, the transformation of a people that were over-trustful toward those who managed their affairs into a people hard, bitter, suspicious, accusing. Any one who has not lived near enough Bangor to know what has been done there these last seven years does not know the long story of fraud and oppression and downright robbery which I could tell in all its particulars past the possibility of doubting the recital, if I were to go into the individual cases which I have known. No possible excuse can be offered by any one engaged in such actions, but no good could come of telling more than has been told; it is enough to know that the wrong has been done and that it will not be soon forgiven.

We hope now, since the past is past and the future always has some gleam of brightness, that a better order may begin. We have a new law this winter which we understand. It is the same law that we have been drilled on these seven or eight years in advance, which has been enforced before it was on the statute books and declared to be, while as yet it was not. It reads: "Sec. 13. No person or corporation shall carry or transport from place to place any moose, caribou or deer or part thereof in close time, nor in open time unless open to view, tagged and plainly labeled with the name of the owner thereof, and accompanied by him under a penalty of forty dollars; and any person, not the actual owner of such game or part thereof, who, to aid another in such transportation falsely represents himself to be the owner, shall be liable to the penalties aforesaid."

We understand this law. It does not depend upon doubtful interpretations. It will be respected as long as it is fairly executed. If we had had this law eight years ago, or had had the one then existing executed according to its obvious meaning, there would be less reason for explaining how Maine people have come to say hard things of the game laws. On this point of non-transportation in open season, our legal right, we have been so harassed, so often called poachers and law-breakers when we were doing nothing contrary to law, that we are more lenient than we otherwise should be against actual transgressors, and toward those who have done this injustice, are—not boisterous nor vindictive, but very stern.

FANNIE PEARSON HARDY.

Editor Forest and Stream:

If a perfect history of the travels and transactions of the sportsmen in the entire Moosehead Lake region could be fully brought to light by an impartial investigation, I am satisfied that it would completely demonstrate the fact that the cases cited by Miss Hardy are only exceptional ones. On the other hand, she does not represent the "residents" of Maine as a whole. She is speaking only for a fractional part of the citizens of this State, as I firmly believe. Neither does she voice the sentiment of a majority of those residing near the great wilderness country frequented by sportsmen. I can recall cases which have come under my own observation where several hundred dollars have been paid into the treasury of Piscataquis county for fines for violation of the game laws by residents of other States.

I know that during the past three years we have suffered by a lax enforcement of these laws. I know further that as bitter complaints on account of this have come from backwoodsmen and guides in the Moosehead section who are during every summer season largely associated with the sportsmen, and necessarily influenced more or less by them, as from any other source.

Now, if these sportsmen as a class were as destructive of game in intention or in practice as Miss Hardy avers, it goes without saying that they would impress their ideas upon the guides. That they do influence them to a great extent is undeniable, and the fact that they do not as a general rule countenance or aid infractions of the laws while guiding, but that many of them are among the staunchest and most sincere supporters of the code, is to my mind positive evidence that the great mass of their employers have done everything in their power to educate them up to this standard.

I hope that as Miss Hardy has opened it, the FOREST AND STREAM will give both sides of the question. I do not feel competent to give the other side, but I hope others who are will join me.

I feel, as do many in this section, that we are, as residents, and as real backwoodsmen, being misrepresented by her.

J. F. SPRAGUE.

MONSON, Me.

PUZZLED GESE.—Springfield, Mass., April 20.—Last Wednesday morning about 10 o'clock a severe thunderstorm passed over this city, taking its way down the valley into Connecticut. An hour later the air was filled with strange and distressful cries that for a moment made the wicked tremble. The city was filled with wild geese in small flocks of from two or three to twenty, which had probably composed one or more large flocks that had met the storm and become scattered, and were finally attracted here by the electric lights. For hours they flew in every direction, probably searching for their lost mates, and uttering an unusually mournful *honk*, which told that they were in trouble. The electric lights evidently attracted and bewildered them, and probably every light was visited once or more by different flocks; and they flew so low that they barely cleared the trees and buildings, and the "swish" of their wings could be plainly heard. It was only after the electric lights were shut off that they rallied together and took their departure for the north in fairly good order.—F. L. B.

ST. LOUIS NOTES.

ST. LOUIS, April 25.—Spring shooting has been a failure in this section, say all of our hunters. The early spring was so dry that there was no water on favorite grounds, and then came cold and wet weather, which put a damper on all sports. The flight of ducks was small, and the snipe for some reason did not stop to sample our Missouri and Illinois worms. But perhaps 'tis well. Spring shooting should be abolished all along the line from the Gulf to British America.

The angling season opens auspiciously and some good catches are reported. The water at the various club grounds is reported in good condition. Angling is now to the front and shooting goes to the rear.

The trap-shooting season was opened last Sunday by the Carondelet Gun Club, in which a large number of clubs participated.

The Gilham's Lake Hunting and Fishing Club has finally obtained its coveted property, and has completed its organization. The membership is limited to thirty. The grounds are located near Wanda, Madison county, Ill. The club controls about 1,200 acres. The officers are: I. F. Burke, President; Albert Rawlings, Vice-President; Wm. Dooly, Treasurer, and Chas. E. Wise, Secretary. The shooting in season consists of duck, snipe and quail, while the angling, the secretary says, consists of "dog-fish" at present.

Our revolver shots are discussing the championship event and are getting ready for taking part, which will be duly recorded.

Among the enthusiastic salmon anglers of St. Louis may be mentioned Henry Hitchcock, E. A. Hitchcock, E. T. Allen and Mr. C. B. Burnham. In conjunction with a few other anglers of Chicago and Boston these gentlemen lease the Nipisquit River in New Brunswick. The water is controlled by the Government and is known as Government water. The gentlemen have a lease for five years, and the river affords very fine salmon and trout fishing. Another prominent St. Louis salmon angler is Mr. James Richardson, who fishes in the Restigouche. ABERDEEN.

THE WAYS OF SNIPE.

Editor Forest and Stream:

In your issue of April 23, Mr. H. Austen, of Halifax, N. S., claims that the snipe does its booming (I take it he means drumming) with his voice, and not as supposed with his wings, and that this noise is only made at dusk or long after dark. If Mr. Austen will go out to any good snipe ground when these birds are in, especially in the early part of May in the spring or September and October in the fall of the year on a dull overcast day, he will find numbers of snipe in the air circling and soaring about and drumming to their heart's content, when he will be satisfied (or I am much mistaken) that the noise a snipe makes when drumming or booming is made with his wing.

In the same letter Mr. Austen writes: "All the sound that I have ever heard in the daytime has been their *scatpe* except that on Aug. 11, 1885, when shooting on the marsh, I heard about and around me *who, who, who*, only not in very loud notes, and for quite a while was puzzled until I found running about at my feet three tiny young snipe, which must have been a very late or possibly second brood." If Mr. Austen will go out where these snipe breed, during the mating season, that is with us in the month of May, he will find that snipe sing, twitter and call. During this season snipe call one another *pete, pete, pete*. The cock bird springs into the air, flying 20 or 30 yds. before lighting again, with his tail and head up, singing and twittering much like a bobolink. One could hardly think that these tame foolish birds were the wild, swift-flying, hard-to-hit birds of the previous month.

The snipe and woodcock both drum with their wings. Woodcock drum about dusk, letting themselves down from an elevated position plump on to the ground, with wings set edgewise. Snipe generally drum on dark and dull days, letting themselves down from a high position with wings set edgewise, fifty or a hundred feet, immediately soaring up again to circle around as before. This they repeat for hours together. Years ago when snipe were plentiful on the Holland marsh, a few miles from here, I have seen upon a dull day fifty or sixty snipe in the air at one time circling and drumming; in fact, every snipe on the marsh appeared to be up in the air. I need hardly say that on such occasions the bag was small. In those good old times I remember in the month of October making a bag of 105 snipe in one day, the day was a bright warm still day.

Old Bleacher, the dog I used in those days, was a black and tan, out of a liver spaniel bitch, by a black, white and tan foxhound dog. Strange to say, in appearance he was a very handsome spaniel and a dog I never was ashamed to be seen with either on the street or in the field. All my dogs now have the bluest of blood in their veins, but I would gladly give them all for old Bleacher and the abundance of game of his days.

What a pity it is that both the Government of Canada and the United States do not pass a law prohibiting the exposing for sale all and any game. It seems deplorable to allow our game to vanish before our eyes, when by a simple enactment, such as the above, it could be prevented.

HENRY B. NICOL, M.D.

COOKSTOWN, Canada.

CALIFORNIA SEASONS.—Since I wrote you last, our Legislature has adjourned after amending the game law as follows: Extending the close season for quail up to Oct. 1, instead of Sept. 10 as it has been in the past, and making it unlawful to kill deer, elk, mountain sheep or antelope for the next two years. This has been signed by our governor, and is now the law. This is good, gentlemen, excellent! Even if our Legislature did adjourn with a very unsavory smell of "boodle" clinging to its garments, it did pass some meritorious laws, and this is one. The bill as originally introduced protected the deer for six years, but was amended so as to cover only two. The former period was just about right, but the latter will do a great deal of good, and "half a loaf is better than no bread." And, besides, if we can ever get the average legislator to grant half of what is asked and needed, we do well. And it is useless arguing with them, for *Mit der Dummheit kämpfen Götter selbst vergebens*. Which in English means: Against ignorance even the gods battle in vain. —AREFAR.

* Thomas F. Allen, of Bangor, formerly a policeman, now a private detective and game warden, the partner of Harriman above named. For some years Mr. Allen has been the leading game warden of this section.

CHICAGO AND THE WEST.

CHICAGO, Ill., April 30.—Pistagua Fishing Club officers for this year are: J. L. Kinsella, Commodore; Thos. R. Spence, Secretary; Nick J. Wilson, Treasurer. The club makes its first formal trip to Pistagua and Fox lakes May 9.

Within the past week the weather here has been warm and clear. The bass fishing has loomed into sudden prominence. A number of good catches have been made in Sand Lake, Channel Lake, Grass Lake and others of the Fox Lake district. Eight or ten heavy bass has not been unusual, and I heard of one take of 21 good fish in Grass Lake. Mr. Williamson, an artist sportsman of note in Chicago, has had some good fishing. He says the bass are taking flies now, as he learned by dropping insects to them from a bridge below which some were lying. He counsels a large black gnat or other dark fly. Mr. Benner, a fly-fisher of the Wabash, Indiana, says that a bucktail fly (or hackle made from the mottled hairs of the deer's tail) is the best fly they can use in the early spring on that stream. The Fox Lake bass have mostly been taken on the surface frog. The bass have not yet begun to spawn in those lakes. I suppose it would be better to wait till they have spawned, but that would often mean till the end of July, as these fish seem to have no sort of sharp season at all for that process in these waters.

Two of our well-known sportsmen will about the beginning of June run the Kankakee by boat from Mak-saw-ba down, being out a week or so. They want bass. Mr. Strunk, of Moline, says that later in the summer is better for bass, and that pickerel would make the chief catch in May or June; but I am inclined to think a good many bass could be picked up in early June. I suppose the best bait then would be the minnow, then live frog, then spoon, then fly. The Donaldson and Ferguson, though apparently very gaudy for so clear a stream, I have found most successful on the Tippecanoe and Kankakee in the summer. Theoretically I do not see why the bluebottle, Governor-Alvord or Montreal should not be better. Bluebottle is the leading fly for summer fishing on the lower Fox River. At Aurora the jungle-cock has a high place. I should think jungle-cock, bluebottle and say Montreal would be about as good flies as any right now on the Kankakee below Moline.

A young man who fishes the Des Plaines, within fifteen miles of Chicago, came in this week with what my informant called a lot of "croppies." I have reason to think they were rock bass or "goggle-eyes," from the fact that my said informant called the rock bass we lately caught on a little trip "croppies." He calls the croppy "silver bass." And so it goes. We need an act for the proper nomenclature of common fishes. A friend asks me if the rock bass will take the fly. I should say they would, and so will croppies. Best in the evening.

Billy Werner, erstwhile known as caterer to the Possum-Club, is to take charge of a restaurant on Dearborn street, and the club is to have a big room for itself. It is probable that a summer meeting will be held before long.

It is very likely that the Kankakee Protective Society will be organized at a very early date. The boys are moving slowly, because they don't want to make any mistake. Prominent members of Mak-saw-ba, English Lake, Cumberland and Diana clubs have already declared in favor of the movement, and it will in due course be made I hope. A great deal of good can be done along the Kankakee at a very low expense, and it would be a shame if the gentlemen interested in that stream did not combine for this purpose.

I hear from men who saw it done that one of the Paddocks up above Fox Lake was shooting fish last week. The Paddocks are summer-resort men. They take this way of informing good sportsmen that they want their trade. My informant does not know the particular Paddock, but saw the act and saw the man, and was told it was Paddock. He can perhaps identify the man, and I shall see the Fox Lake Association and ask them to prosecute if they can find a case.

Pickerel have been running all over Cumberland marsh and the club men have been spearing them in the ditches. I don't see how they can say much against the natives spearing legal fish then, do you?

Mr. C. S. Burton, city passenger agent of the Big Four road, snook off after trout last week not far away from Chicago, and came back with nine, one weighing a pound and a half. To publish the stream would be to ruin it, and I will not give the name under the circumstances.

Mr. J. L. Wilcox and Mr. Parker last week were after trout on the Kinnikinnick, above St. Paul, and got 400, sending some nice boxes down to their friends.

About those snipe; no one knows where they are. No one has killed any. A good many plover have appeared. Frank Place and Turtle were out on the Say yesterday after snipe and plover. Italian Joe has been shooting plover somewhere down in Indiana for two weeks. Percy Stone says the plover are flying around Wheaton in good flocks now. Fred Donald killed sixty-eight plover at Gilman, on the I. C. R. R. last Saturday, and says if he had had decoys he could have bagged 200. This is top bag, so far as I know, on the plover.

This week Billy Mussey, Dr. Malcolm, L. R. Brown and George Andrews were out after snipe on Mak-saw-ba marsh, and they met a singular incident. Once before I told in these columns of a jacksnipe which Mr. Mussey saw alight in a tree. This same thing happened again in the sight of Mr. Mussey and his friends this week. The bird was flying over the timber, darting and "booming" for several minutes and seeming to have perfect control over itself. Finally it lit on the top branch of a very large dead tree. After watching it some time one of the party started after it, when it flew, and shortly after that alighted on another tree not far off. Again an approach was made to it, when it pitched to the ground not far off. When it arose Mr. Mussey killed it. On examination this bird was found to have lost an eye, probably not very long before, for the cavity of the socket was terribly fly-blown. Doubtless the bird was in agony and it was a mercy to kill it, but whether this had anything to do with its singular conduct is something which can not be said.

Numbers of our sportsmen have been down with the prevalent malady, the "grippe." Mr. R. B. Organ is just recovering and looks badly. He is in poor shape to shoot his race with Alex. Loyd, billed for an early date, he to shoot at 100 birds and Mr. Loyd at 103.

Pleasant days and warm weather here make it hard to

think of cold and ice; yet it was within this month that there happened near the boundary line of Minnesota one of those terrible tragedies which may befall the frontier hunter. Some weeks ago a hunter by the name of McKinnon froze both his feet and was confined to his cabin. Mortification set in and the poor fellow amputated both his own feet. Alone and perishing, he was recently found by two other hunters, who took him in to Winnipeg, where his recovery is very doubtful. E. HOUGH.

FOREST AND STREAM CLUB.—Belleville, Canada, April 20.—Rumors of deer killing having been looked into by Constable Sweet, who is an officer of the Forest and Stream Club of this city, led to arrest and the conviction last Saturday of C. W. and N. Lake, who were fined \$16.20 each. This was a very important case, as it is stated that about fifteen deer, forming a yard, were all destroyed, and the majority being does and heavy with young, neither the venison nor skins were of any value at this season to the butchers. The annual meeting of the Forest and Stream Club was held on Thursday night last, when, after two new members had been admitted, the following officers were elected: President, Henry Corby, M.P.; first Vice-President, W. H. Biggar, M.P.F.; second Vice-President, James Lowrie; Secretary, T. W. R. McRae; Treasurer, Richard A. Davis; Directors, R. S. Bell, Geo. A. Frost, W. P. Clarke, Henry Pretty, James H. Mills, John Brasier, Wm. Ormond. A comprehensive programme for the season was adopted. In trap-shooting, Mr. Crosby offers a prize of \$10 for the senior class, and Mr. W. H. Biggar donates a like amount in the junior class. The club gives second and third prizes of \$5 and \$3 respectively in each class. In rifle shooting Mr. Corby also offers \$10, divided into prizes of \$5, \$3 and \$2 in the match, and the club gives like figures for aggregate. Trap shooting matches begin on Thursday, May 28, and will be held fortnightly. Rifle matches commence on Tuesday, May 26, and will be held weekly. In angling and trolling, Mr. A. H. Crosby offers a handsome rod case for largest black bass, Mr. Brasier offers a felt hat for largest maskinonge, and Mr. T. Ritchie will give a prize for fly-fishing. Season from June 15 to Oct. 1. Competitions for money prizes will be held on Aug. 14 and Aug. 22, the awards being for largest black bass and largest catch of black bass on those days. The membership of the club numbers 172.—R. S. B.

OHIO GAME PROSPECTS.—May 2.—*Editor Forest and Stream:* We have good prospects here for an abundance of game this fall. Hundreds of quail being left over from last season makes a better outlook than we have had for many years. Unless the season should be extremely wet, so as to interfere with hatching, we have nothing to fear for sport, unless it should be failure to gain the farmer's consent to hunt on his premises. Our State laws now protect the farmer in that manner, as well as the quail, and in several townships last fall the farmers allowed no hunting at all. I notice a few jacksnipe this spring and a number of flocks of plover. Have not seen any of the latter in this county for a good many years until this spring. There was a 14-pound scale carp caught in the Olenantay River at this point last week. A number have been taken this spring from 5 to 7 lbs. They originally escaped from fish ponds. The river is very small here. The Liberty Gun Club is a new organization that promises to be born soon. Long may it live, as its members will chiefly be farmers, and when they are interested in the preservation of game and sport in general, it includes men whom we could not count on heretofore. We have a good game warden, Dr. Lee Wentz, of Delaware, but I believe he is hardly strict enough.—YOUTH (Hyattville, Delaware County).

OHIO.—Cadiz, April 15.—Any amount of rabbits and quail left over to replenish the stock for next season. I have flushed several coveys lately with as high as ten to a dozen birds in; and rabbits are very plentiful; can start them any day. My beagles have good runs two to three times every week. As they run at will, hardly a day passes but what they have a short run, as the rabbits go right to earth this season of the year.—S. C. G.

JOHN A. STEELE, of Ohio, who, while on a hunting trip in North Carolina, was accidentally shot in the knee and was sent to Washington for treatment, died April 29. He was the son of the late John Steele, one of the best known of the prominent men in the early history of the "Western Reserve" and the founder of the town of Painesville, Ohio.

PROGRESS OF LAKE ST. JOHN.—Lake St. John has become so popular a summer resort, that the hotel accommodation there has been quadrupled during the present winter. This has been done by enlarging the Roberval Hotel by the addition of two immense wings, so that the house now has accommodation for three hundred guests, instead of one hundred as it had previously. The building commands a magnificent view of Lake St. John. It has a perfect system of its own water supply and the facilities, a very fine dining-room and balconies, and will be lighted by electric light. To provide for the comforts of sportsmen, a fine new hotel with accommodation for one hundred guests has been built on one of the islands of the Grand Discharge of Lake St. John, in the very centre of the best fishing grounds for that celebrated and unique species of fresh water salmon called by the Montagnais Indians "Oulmiche." This hotel will be worked by the Roberval Hotel, and the fishing privileges will be free to all guests of either house. A steamer will run daily between Roberval and the Grand Discharge, a distance of thirty miles, in connection with trains on the Lake St. John Railway. At Lake Edward an excellent hotel has been built on the border of that widely celebrated trout lake, so well known for its large fishes. Lake St. Joseph, which is less than an hour's ride from Quebec, a new wing is being added to the hotel, which will double the present accommodation of this delightful summer resort. The train service between Quebec and Lake St. John is also going to be much improved.—*Quebec Morning Chronicle.*

WEST SHORE RAILROAD.—The superbly built, magnificently equipped, double-track line, extending from the West. Three fast express trains daily in each direction. Wagner palace sleeping cars and buffet sleeping cars attached. The only all-rail route to the Catskill Mountains; with drawing room and buffet smoking cars run through without change between Philadelphia, Jersey City, New York and Catskill Mountains. Saratoga limited express trains during the summer season. Special trains for the accommodation of travel to and from Lakes Mohawk and Minnewaska, Shawangunk Mountains and all points in the Walkill Valley. Connection in Jersey City station with Pennsylvania R. R. thus avoiding the long transfers through New York. Tickets via West Shore at all ticket offices of all competing lines. For time tables and full information address C. E. LAMBERT, General Passenger Agent, 5 Vanderbilt Avenue, N. Y. city.—*Adv.*

A BOOK ABOUT INDIANS.—THE FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

BOUND FOR MAINE STREAMS.

AT this writing the ice has not left the celebrated Maine trout lakes, the Rangeleys and Moosehead. But the Sebago waters are clear; Weld Pond is clear, and a few landlocked salmon are being taken. Still, I do not hear that any considerable catches are being made. Opinions differ as to when the Rangeleys will be clear of ice, though this is a matter of a great deal of interest at this time to the rod and reel sportsmen. Indeed, it is seldom that the interest has been as great. Sportsmen are fitting out almost regardless of expense, and the tackle buyers include men of wealth and men that are not as rich. They buy everything, from cheap wood rods and cheap lines and reels to the very best outfits that are to be had in the tackle stores. Flies that cost \$4 the dozen to import are not good enough for the salmon fishermen this year. A well-known tackle dealer had in his hand on Saturday a box, not bigger than the box that holds 100 shotgun shells, on which he had just paid duty at the Custom House to the amount of over \$20. The box contained Scotch flies.

But as to the ice. Opinions now suggest that it will leave the Rangeleys somewhere from the 8th to the 15th of the month. Mr. Farmer, well known at Phillips and Rangeley, who has watched the ice for years and rarely failed in judgment, says that the ice will leave about the 15th. Mr. Marble, of the Rangeley Lake House, says that it will go about the 8th. From Moosehead the ice will be likely to go a day or two earlier than from the Rangeleys. Boston sportsmen are ready. The telegraph will announce the moving of the ice from this celebrated trout lake, and the first train from the Hub will have a number of Moosehead sportsmen on board. The parties are numerous and greater in point of numbers this year than usual. The Linder party is made up of old hands at the business. They will not follow closely the going out of the ice, however. They prefer to wait a few days for warmer water and weather, with which fly-fishing comes. They have one of the best steamers at Moosehead engaged to meet them at Greenville, and this boat is at their disposal during the entire trip. The party is composed of Mr. George Linder, of the firm of Linder & Meyer, his partner, Mr. C. H. Maynard, Benjamin Hurd, well known in the wholesale grocery trade, Mr. Geo. S. Stockwell, of the boot and shoe trade, and a son of Mr. Shotwell, for many years the owner of the Boston *Journal*, and Mr. Garret Schenck.

There is another party which is anxious that the Linder party shall be through with that steamer by the 10th of June, or before, if the weather and the water is warm. It is the Kineo Club, that has visited Moosehead every year about the 10th of that month for several years. The club contains some of Boston's first trout fishermen and sportsmen. Mr. J. B. Thomas, of the Standard Sugar Refinery, is commodore of the club. The members are J. F. Nickerson, of the wholesale grocery trade; J. Walter Sanborn, of the flour and grain trade; Frank Wise, of the flour trade, W. S. Hills, of the flour trade; Mr. Beal, of the dry goods trade, and Mr. Lauriat, of the book firm of Estes & Lauriat.

Another very jolly party is about ready to leave for Moosehead and will go about as soon as the ice is out. It is the Harry Moore party. It is made up of Harry B. Moore, of the grain trade, Geo. C. Moore, a manufacturer of North Chelmsford, Mass., Harry Platt, son of Senator Platt of New York, and of the United States Express Co., H. M. Stephenson, a well-known Boston architect, John A. Faulkner, of Lowell, and Calvin Austin, manager of the Bangor & Boston Steamship Co. They also charter a steamer and many are the adventures that they pass through. Harry Moore's father was with them last year and, doubtless, would be this year but for a longer trip and visit to the West. He is over seventy and yet is as fond of fishing as when a boy. It was he who met with a little mishap at Moosehead last year. He got wet. The boats used there to fish from, as well as those at the Rangeleys, are not so very heavy, though counted very safe for light boats. They are built "double-enders" and they scarcely weigh above 100 lbs., though from 13ft. to 16ft. in length and from 3½ to 4ft. beam. One not accustomed to them should "part his hair in the middle," if he intends to fish as he would from yawl boat. They ride like an eggshell over the roughest water, if the guide and the fisherman both understand their business. Mr. Moore was scarcely accustomed to a boat so particular. He got along very nicely till about the third day. He had taken several trout. The seat was hard and he was tired. He thought that he would just stand up and stretch his legs and light his pipe. He did so. The boat was in for being unloaded and out from under him in an instant. He clung to the craft, however. The steamer was near, and Harry soon had his father on board and backed up against the boiler to keep warm. The guide says that the first remark of Mr. Moore was: "I declare, I believe I have lost my pipe, and the big trout is gone, as sure as preaching!"

Mr. Walter Hill and wife will go to Moosehead, as mentioned in my former letter, but it may be added that they will be accompanied by Miss Arnold, a lady friend from Cambridge. This will be Miss Arnold's first trip to the Maine trout waters, and the chances are that she will be as much charmed as was Mrs. Hill with her initial going-a-fishing.

Among the many parties that will go to the Rangeleys this season may be mentioned Mr. Bayard Thayer and his brothers and friends of Birch Lodge, on Richardson Lake. The Stevens party, made up of Mr. Stevens, his nephew, Mr. Smart and Mr. Shattuck. They go to their own camp, Camp Vive Vale, at The Narrows. Mr. Shattuck has a record of a 9 lbs. trout taken at the Narrows. Mr. Stevens is noted as one of the most successful fishermen that ever visits the lake region. Mr. G. N. Smalley, with his friend C. Z. Bassett, of the firm of Geo. B. Appleton & Co., in the fishing tackle trade, will make a tour of the Rangeleys, starting about May 25. Mr. A. S. Foster, of Lamkin & Foster, in the boot and shoe trade, with J. F. Rogers and other friends will early visit the Rangeleys. A party of Lynn sportsmen are early booked for the

Rangleys. They go every season, and are very successful. Their names are M. P. Clough, Frank Keene, J. S. Bartlett, and a brother of Mr. Bartlett, whose initials I have not at hand at this writing. But I promise him that if he catches a big trout that I will find his initials, even if it requires a special trip to Lynn for that purpose. The boys were with this party last year and caught the big trout. Mr. Harry Dutton and wife, of the dry goods firm of Houghton & Dutton, will early go to their beautiful camps at Cupsuptic. They spend a good part of each season there with numerous friends. The celebrated Houghton & Dutton camps are in charge of Billy Soule, one of the best guides in the Rangeley region. Mr. Geo. T. Freeman, of Harrington & Freeman, jewelers, will make a few days' trip to Camp Stewart, with friends, about May 25. Mr. Mark Hollingsworth, with his friend T. B. Stewart, will go to the Upper Dam as soon as the ice is out. Mr. Stewart will spend a good part of the season there as in seasons gone by. Mr. Hollingsworth is an artist as well as a sportsman. Mr. Hatch, of Henry & Hatch, boot and shoe auctioneers, with a party of friends, is booked for the Rangeleys. Mr. Hatch is an old-time visitor to these waters.

Other parties are also booked for the Rangeleys. The Col. H. T. Rockwell party is one of the best known parties that visits the Rangeley Lakes. Besides the genial Colonel may be mentioned Mr. E. B. Haskell, of the Boston Herald, Mr. Frank Priest and several others. The Tuttle party must not be forgotten. This party goes to their beautiful summer home, Lake Point Cottage, early in the season. Numbers of the Oquossoc Angling Association will early be at their camps.

Mr. Hall, with Rice, Kendall & Co., will make a trip to some celebrated trout waters in the vicinity of Yarmouth, Nova Scotia, in due season. He will be accompanied by friends, and they are sure of trout. Mr. Daniel Gunn, a friend of the FOREST AND STREAM, mentions a letter which he received from the same fishing grounds last week, stating that already some good creels of trout had been taken there. Mr. Gunn and Mr. Hall both slip away quietly down there, and each time they come back much pleased with the spot they have found. Mr. Gunn also fishes for sea trout in that part of the country. He has a record of a perch, a pickerel, a trout and a rattlesnake all on the same cast. But a part of that story—the true part—has already been told in FOREST AND STREAM.

Salmon fishing at Bangor is not proving a success this year. A gentleman came back to Boston the other day. He had been there for a week, and had tried the salmon faithfully, with a result of only one, weighing some 12lbs. He is discouraged, and does not believe that there is to be a run of salmon at Bangor this year. He thinks that either the netting from the river below, or the fact that considerable of the restocking has been in the streams below Bangor, is to blame for the lack of salmon there this year. He says that but few outside sportsmen are staying at Bangor now, though the pool is very thoroughly fished by local fishermen. His idea is that if the salmon restocking fry are put into the streams below Bangor that they return to these streams to breed, instead of coming up to Bangor. In connection with this subject it may be mentioned that Mr. F. R. Shattuck, well known to the readers of the FOREST AND STREAM, has word from Chatham of the taking of a 37lbs. salmon in the weir at that point. The fish was brought to Boston for sale, though the neighbors offered ninety cents a pound for it.

SPECIAL.

NEW ENGLAND FISHING.

THE ice is out of the Sebago waters and the landlocked salmon fishermen are abroad. A Portland gentleman (I did not learn his name) has taken two, one of which weighed 10lbs. Other parties in Maine are at the Sebago Lake, and the report is that the salmon are following very closely upon the schooling of the landlocked smelt, and their movement up the streams to spawn. It is a curious feature, in regard to this curious fish, that they follow the smelt each spring, and that then is about the only time to take them. One or two Boston parties will also go to the Sebago for landlocked salmon. One party is already made up to go next Friday. It consists of Mr. L. D. Chapman, salesman with Dame, Stoddard & Kendall, well known fishing tackle dealers in this city; Geo. Rogers, a Boston cod dealer; L. K. Harlow, a Boston artist; Dr. Defriez, of Brookline, and N. E. M. Webster, of Boston.

The ice is not out of the Rangeleys, nor is it out of Moosehead at this writing. But all the same I believe that the interest in the moving of the ice in those trout waters has never been greater than this year. It would be no exaggeration to say that fifty prominent business and professional men are waiting for the news of the going out of the ice from those lakes, and by this I mean that they are men with their tackle all ready to the last sinker in place, ready for the word that the ice has gone out. They then will take the first trains for the old fishing grounds. Year after year they do the same thing, and in these fishing trips they renew their youth and gain strength for another year with the battle of life. Gray hairs begin to mark the kindly visages of the most of these veterans with line and rod, for veterans they are and there are apparently few to take their places. Indeed young men in these ranks are few; they are old and middle-aged. Mr. Chapman, mentioned above, will supplement his landlocked salmon trip by a trouting excursion to Richardson Lake as soon as the ice is out. He will doubtless be accompanied by a party of five or six, though only three or four are now sure of going.

Prominent among these will be Mr. G. W. M. Guild, a Boston jeweler, who has a record of a 9½lbs. trout taken at the Narrows, Richardson Lake, last year, a note of which the FOREST AND STREAM had at the time. He will be accompanied by his friend Mr. Fox, of New York. Mr. Fox also has a record of an 8lbs. trout on the same day as Mr. Guild secured his trout. But his success was nipped in the bud. The day was a very cold and windy one. The two happy fishermen concluded to go ashore soon after they had taken their big trout. They landed at the wharf of Camp Vive Vale, in order to wait for the downward trip of the little steamer to take them to the Middle Dam. The hands of the guide were slippery, Mr. Fox's trout was heavy, and down he went between the boat and the wharf. They waited till the afternoon boat, hoping that the trout, apparently dead, would rise. But they waited in vain, and poor Mr. Fox went back to New

York bemoaning his fate. He has been to those lakes many times and has not yet succeeded in saving a big trout. May his success be better this year.

Mr. Walter Hill, of John P. Squire & Co., the noted Boston pork packers, will again go to Moosehead this year. He will wait till the weather is fairly warm, for Mrs. Hill will accompany him. Mrs. Hill is a daughter of John P. Squire. Last year Mr. Hill proposed that she take the trip; she was hardly in favor of the idea, never having had any experience with line and rod, but she was willing to try it "just for once." She succeeded in landing several fine trout for Moosehead and was much pleased with her success. This year she was the first to propose the trip to Moosehead in that family, rather than any other vacation.

The Kineo Club will go to Moosehead soon after the first of June. They go for fly-fishing only, not caring for trolling. This club is made up of Mr. J. B. Thomas, of the Standard Sugar Refinery, a prominent officer of the American Sugar Refining Co. Mr. Thomas is also commodore of the club. The other members are J. Walter Sanborn, Frank Wise and W. S. Hills, of the flour and grain trade; H. S. Nickerson, of the wholesale grocery trade; Mr. Beal, of Beal, Higgins & Henderson, of the dry goods trade; and Mr. Lauriat, of Estes & Lauriat, a well-known book firm of Boston. This club always engages one or two of the little steamers that ply upon Maine's inland sea, and they enjoy life only as such men can enjoy it.

But one of the largest parties to the Maine lakes this spring will be the one planned by Mr. A. N. Parlin, of the Magee Furnace Co., of Boston. Mr. Parlin is a Maine boy, and visited the Rangeleys in his early boyhood. It was then that the love for such outings was acquired, and he has succeeded in instilling something of his enthusiasm into his partners and friends. He has almost annually visited Moosehucmagantic for some twenty years. Rarely has he missed a year, and he has been twice a year with sufficient frequency to more than make up for any loss of an annual trip. With him this spring will be Mr. Geo. B. Clapp, a retired Boston broker; Mr. John Magee, of the Magee Furnace Co., with his wife and daughter; Frank A. Magee and wife; Mr. A. M. Kidder, wife and daughter, of Plymouth, N. H. Mr. Kidder is of the firm of A. M. Kidder & Co., of Boston and New York. The party will also consist of Mrs. Pratt, of St. Louis, and Thomas Cunningham and wife, of Boston. Mrs. Cunningham has a record of a 10lbs. landlocked salmon last year.

The brook fishermen are having some sport in the streams in Massachusetts and Connecticut. Mr. Toby, salesman with Jackson, Mandall & Daniell, with a friend, fished a brook in the western part of the State the other day, with the result of a handsome string of trout. The brooks are now low in this State and the weather is fine. Those who visit the streams with rod and reel are generally happy with fair creels, and doubly happy in the outing.

The question of the ice leaving the Maine lakes is still an uncertain one. Summing up all the opinions that I can get from the Maine papers and from private letters, and then striking an average, that average indicates about the 10th of May for the ice to leave the Rangeleys, and a day or two earlier for Moosehead. Still, very much will depend upon the weather. The woods are still well supplied with snow back in those regions, and the streams are very high. On the first of May it will again be legal for everybody to fish Maine waters. The inhabitants of the State, who can fish during the months of February, March and April, for their own use, have taken some good creels of trout from the streams in the southern part of the State.

The latest announcement in the line of controlling the forests and waters is that the board of directors of the Megantic Club has secured the camps at Big Island Pond lately operated by Julian K. Viles and Kennedy Smith, and executed a five years' lease with the Berlin Mills Co. for the whole Seven Ponds township. Such is indeed the case. Another public fishing and hunting resort has become the extension of a preserve of a powerful club, and strangers will be invited to stay away.

Capt. Fred C. Barker writes the Phillips Phonograph that four caribou seem to be spending the most of their time about the Bemis end of Moosehucmagantic, as they have been seen several times from the camps. The other day they came out on the lake to within a mile of camp and stayed around all the afternoon. With the aid of a good glass parties at Bemis get a fine view of them.

SPECIAL.

AN ACCIDENTAL BASS.

Editor Forest and Stream:

Last summer while fly-fishing for black bass I was casting along as we were floating through some shallow water, when my attention was attracted by a large bass jumping out of the water several times some distance below us. I told W. to row down there and we would try him. We anchored the boat about 75ft. above where we saw him jump. I cast and changed flies till I was sure I had none that suited him, and then we concluded to try bait-fishing, as they were not taking the flies very well that day anyway. I took off my flies and baited with a helgramite and a stone catfish and let them float down over where he had been jumping, in a place where the water was quite deep, but no bite. After we had remained there a few minutes I commenced to reel up my line slowly, when I felt a peculiar jerking, such as I had never felt from a fish before—it would feel the same as if you were pulling in a bass that would weigh 3 or 4lbs., and then it would slide along as if you were drawing it over a board, and so it went, until my line was reeled up so that I could see my leader; then imagine my surprise to see a bass jump out of the water 75ft. or more below us still fast to the line. While I was trying to think whether I was awake or asleep, W., who was looking down in the water, says, "You are fast to another line;" and sure enough one of my hooks had caught around the line which the bass was fast on. The other end of the line was under and above the boat and was fast to something on the bottom of the river. The line was a cheap cotton line about 100ft. long, with a nail for a sinker, and my hook sliding along on the other line was what I couldn't account for. The bass weighed 3½lbs.; it had been speared or hurt in some way, so that it was blind in one eye and it was healed up so you could hardly see where the eye had been.

TOWANDA, Pa.

THE CASTALIA STREAM.—I.

THERE has been more or less writing about and around the Castalia trout stream of northern Ohio for some years, the topic being of natural interest, but if anything like a thorough investigation of the history and present condition of the streams and its clubs has ever been made by any paper but FOREST AND STREAM, I confess I do not know when or where that was done. Within the past thirty days I have at the suggestion of this journal spent a week or so upon and near this singular stream, making whatever effort seemed possible to learn the earliest and latest facts concerning it. The result has been quite a little mass of data, which in the total would be enough to make a little book. Indeed, I may fore-run a little and say here that one of the Castalia clubs is even now compiling a little book for publication, which shall cover all history of the stream. FOREST AND STREAM's history cannot be so long as that; but it would go hard if nothing interesting could be found in it, for certain it is that there hardly exists in the whole settled portion of our country a stream more unique, more mysterious or more interesting from a dozen points of view.

Early in this century, though Kentucky had long been settled and the Indian wars along the great north and south hunting trail been brought to a close, much of Ohio still remained unwholen from the wilderness. Even to-day you can see portions of the great forest standing along the shore of Lake Erie, with edge as sharp cut as where the mower shears the tall standing grain. But long before all this, and before the Indian wars were settled or well begun, and before Ohio was a State, and before the United States had been born, the strange stream of the Castalia Valley had been seen, visited and commented upon as a singular freak of nature. The earliest printed record of such comment is to be found in the book published in 1765 by one Major Rogers, of the British army. Let us hope that the club in looking up its history will get hold of Major Rogers's book. If they wish to find this book, let them look up Col. E. A. Scoville, once of Cleveland, and ask him for the tin pail of the Castalia stream. There is more history on that little tin pail than in all our journals, probably, and the pail itself has a history. Years ago, in the early days of the trout regime on Castalia stream, Mr. Miller, the present keeper of the lower club, caught some trout from the stream and gave them, inclosed in this historic vessel, to Mr. O'Heagan, then of the Ohio State Fish Commission. The Commissioner had the record and the leading facts of the history of the stream painted on this tin pail, and it is said that in this script was reference to Major Rogers's book. And now comes some arrant thief, stealing this historic trout pail, so that a lapse occurs in its history. A clue, however, is obtained, the relic is traced, and again Miller, the original donor, gets possession of it, subsequently giving it to Col. Scoville. Its present whereabouts are unknown, but it certainly should be secured by the Lower Club and placed beyond further change as one of its most valued possessions.

What Major Rogers saw, or what the little tin pail saw, or what the warriors of the Great Nations saw, was much what you may see to-day; a stream not over six miles in length, but with a total fall of 45ft. in that distance, flowing from great cavernous spring holes in whose depths the water seems a weird and ghostly blue, running between low banks, always just this rapid, always just so full, always clear and always just so cold. The course of this stream was then as now, down a wide and level space of country, hardly different enough from the adjacent swells to be called a valley, and yet distinctly divided from the country near by in certain natural characteristics. In earlier days there were some heavy thickets scattered along this short valley. They find scores and scores of great elk and deer antlers close beneath the surface in the spots where these copes once stood. Keeper Miller has found 200 of these antlers on his farm. Men who live now will tell you how once the wild grape vines matted over these thickets so densely that a man could walk upon the top of them, while if he should break through he would find room beneath to walk upright. These thickets were once inhabited by droves of wild hogs, and this was the scene annually of a great fall pork hunt by the settlers.

Under all the valley surface there lies a most singular rock, a coral-like limestone, more porous than pumice stone, the like of which is not found in all the country-side near by, nor in any part of the country now known. In Castaliatown, in Sandusky, and other towns of that region, you can see masses of this rough fantastic rock heaped up as lawn ornaments. Within a few years the value of this product has been learned, and now by boat and train, far and wide, the "Castalia stone" goes to a paying market. It is chiefly used in paper factories in a pulverized form for a stock filling. Much of it is shipped as far east as Maine.

Blue, cold, forbidding and mysterious, the stream ran down its mysterious valley, and many saw it who turned from it with a shiver. Strange beings ruled that valley, it was sure, and an unholy blight rested on the stream beyond all question, thought the early settlers. They shunned the valley, and it was long left untouched, the stream all the time running through it, telling to itself the story of its mysterious sources under the earth, always just so large, so blue, so cold, so strange. Enchantment, beyond doubt. Because, from head to mouth, in all the clear, pure water, fish would not live in the Castalia stream! That was known and settled long ago. Put a big strong fish in one of the great "blue holes," as the giant springs are even now called, and the blue dismal depths at once became its sepulchre. Now, that meant that the stream was nothing less than bewitched, enchanted, uncanny, dangerous and good to leave alone. So the elk and the deer claimed the thickets, and a few great trees stood up over the valley, and the stream ran on and on, how long, only the stars knew, from whence, not even they could tell, though the stars are counted wise.

Enter now upon the scene one R. H. Haywood, a man with money and not afraid of mysteries. The more mystery the better. He picked up the land along the haunted valley in great lumps, the owners "guessing it off," for payments often absurdly small. Mr. Haywood sometimes resold over 100 measured acres out of a tract he had bought "guessed off" for 40 or 50 acres. Mr. Haywood resolved to harness the Castalia stream, spirits and all. Unwise resolve. He might have known it would ruin him, and ruin him it did. He spent \$80,000 in cut-

ting the great raceway through the valley which even to-day gives the stream its rigid artificial look for miles, built a mill, made further improvements and altogether sought to take possession of the stream. The stream resented it, rebelled and ruined him. "Nothing but trout and pleasure for me," said the stream, "I will not turn a wheel!" And to-day it is wheelless from spring to mouth, full of trout and full of pleasantness. Only the raceway remains, miles and miles of it, as it was cut 53 years ago by a man whose name is nearly forgotten.

Three things now remain to be established; who first suggested that trout would live in the Castalia stream, who first put them there and who first protected them? These questions run before the history of the two clubs which now own the stream.

Not long ago FOREST AND STREAM published the obituary of a man prominent in Ohio sportsmanship and natural history circles—the late Dr. Sterling. That learned enthusiast was acquainted with the Castalia stream in the '50's. So was that father of fishculture, the late Dr. Garlick, whose work antedates even that of the beloved Seth Green. Dr. Garlick's book, "Fish Culture," bears date of 1857. It was either Dr. Garlick or Dr. Sterling, both Ohio men, who first conceived the idea of planting trout in the fishless Castalia stream. Dr. Sterling claimed that it was himself who first analyzed the water of the stream and found it almost identical with that of the famous Caledonia stream where Seth Green conducted his work so successfully. Soon after this, says Dr. Sterling, the experiment was tried. Yet now comes Mr. Milton P. Peirce, of Columbus, O., and claims that when he was a boy, and a student at Cleveland, he saw Dr. Ackley and Dr. Garlick bring in strings of trout from this same stream. I have this only on hearsay, not from Mr. Peirce, but if Mr. Peirce thinks trout were native to this stream, this being much in support of his well-known idea that trout cannot be successfully planted, he is sadly mistaken. I do not know how old he is now, or was when he saw these trout, but it is known to a certainty that trout were planted in this stream upon the suggestion of either Dr. Garlick or Dr. Sterling, made in 1867 or 1868. The first trout fry were planted on the 17th of March, 1873, by Mr. Hoyt, who owned the mill and dam then upon the upper stream.

And now the weird tales about the stream seemed about to be verified. The trout were put in above the dam and in the great spring known as the Upper Blue Hole. They promptly died. Wonder was expressed at this, as later it was found that when the dam was opened the fish did very well in the live water. Scientists have found the reason for all this now, and have solved the mystery of the once lifeless stream. It is easy to see now that the immense body of water coursing from below the surface of the earth is altogether un aerated, and, therefore, unfit for an oxygen-loving fish like a trout. Pass this water over a dam, break it up, stretch it up, and it is perfect for trout, and verifies the analysis. It is learned now that for about two weeks of the year, in February, when the snow is sweeping into the rocks below the earth, trout can and sometimes do get into the great spring and live there. At the close of that brief season they leave the spring or die. The snow water may carry a little different quality of breathing matter with it.

Very well. Mr. Hoyt tried again. He had some good breeding troughs put in, and soon had a nice lot of young trout. Unfortunately, he also had a lot of neighbors of the "tough" variety. These complained of the back water of the dam. They drained his pond, broke into his breeding troughs, and made him all sorts of trouble, including certain lawsuits. Mr. Hoyt won his suits, but soon thereafter his mill was mysteriously burned. Angry and disheartened, he smashed open his dam, destroyed his breeding troughs and left the country. He went back to New Hampshire, and is there now. Mr. Scott Robinson, who is getting up the club history, is in correspondence with him now.

After the trout were let out all through the stream they seem to have been forgotten for a while. Three years after that time Mr. C. W. Sadler, of Sandusky, caught a nice basket of trout, away down the stream. The word got gradually, and then the murderous natives went to work with nets, spears and guns, and did all they could to exterminate the beautiful fish, which had now attained a good size. The stream was full of these natural fish. Of this I shall speak later.

The fact was now established that trout would grow and thrive in this stream. It was not a sporting club which first took advantage of this. The first man to protect the trout of Castalia stream was A. G. Miller, the present keeper of the "Lower Club." Miller was then a farmer of very ordinary means, but he was shrewd and able. Now he has an elegant home, vast barns well filled with horses and beef cattle, and a valuable farm stretching wide over the enchanted valley. He is a township oracle and authority now, but still a trout fisher and a lover of the trout, as he was that year in the late '70s when he leased the fishing rights of the lower stream for two years at the noble sum of \$5 a year.

Miller had trouble with the natives, who wanted the trout. He has counted 21 men with forks, spears and guns, standing over the spawning beds killing the big trout. On one occasion he had to go to his house for his gun before he could drive the fellows away. Gradually he broke up this sort of thing to some extent. Then for a while he charged 50 cents a day for the right to fish the stream. Soon after that he saw the thing was growing too big for him to hold down. The fulfillment of fate had come. The stream had not a wheel upon it. It would not work. Its destiny was trout and pleasure.

Mr. Lee McBride, of whose courtesy on this quest earlier mention has been made, heard of these trout about this time, and he and Mr. Frank Mason, both of Cleveland, came down and looked over the country on the advice of Mr. Adams, of the upper stream. They found Mr. Haywood holding the lower stream, mill sites, etc., and of him they got the refusal of a ten years' lease. Returning to Cleveland, they formed the club now generally known as the "Lower Club." This was incorporated as the "Castalia Sporting Club." Its lease was first made in 1878. So club life on the Castalia stream is a matter of only thirteen years. The trout were first planted as fry only eighteen years ago.

The club lease proved valuable. Mr. Haywood became financially embarrassed. He had mortgages upon his land, and foreclosures followed. The existent lease was a lien upon the property, and in the legal shake up the plucky little angling club, never over twenty-five mem-

bers, but wealthy and determined, got title to the whole property along the stream, from the line of the "Upper Club's" property clear to the mouth of the stream in Sandusky Bay. They spent nearly \$40,000 at the start in their two purchases and put up many improvements, but they got their stream hard and fast and it did not take long to stamp out the poaching absolutely. There is no trouble at all with that now.

In October, 1879, the so-called "Upper Club" was organized. It is a large club, numbering 67 members, and at first was made up largely of Sandusky and Toledo men, though many Cleveland men joined later. Their first lease was of the Castalia Milling Co. and ran for 20 years at \$50 a year. Then the milling company began a systematic series of annoyances and squeezed the club into sacrificing their lease and buying their property, which they did, and thus got their stream in safe keeping also. They have about \$40,000 invested in their property also. These figures do not represent the total amounts spent by either club, but are less than such amounts. The Upper Club has spent about \$8,000 in making new stream beds.

These, then, are the two clubs which control the stream, owning every foot of it, and such is a rough sketch of the history of the stream. Here we must abide for a week at least, for newspaper space is a limited affair, but in the next writing I shall try to tell something more about the clubs, and about the stream and about the trout. The stream is literally alive with trout and it is a pleasure even to write about them both.

E. HOUGH.

THE NEW HAMPSHIRE TROUT SEASON.

Editor Forest and Stream:

I send you a copy of the acts proposed by our last Legislature for the *Book of the Game Laws*. You will see that we have had a new trout season fixed, placing us legally in the same latitude as Pennsylvania. I can only say that the change was uncalled for and is utterly unwarrantable and unjustifiable. It is said to be the work of a couple of young men in Manchester who wanted to get at the trout brooks in the southern part of the State before the first of May. One of these young men was a member of the Legislature, and being a son of Col. John B. Clarke, of the Manchester *Mirror*, was placed at the head of the Fish and Game Committee of the House. Aided, as I understand, by a young lawyer from Manchester, they drafted a bill, changing the dates as shown, and got it through both House and Senate without any one knowing anything about it. I had received private advices from Manchester that some such game was in progress and had requested the representative from our town and the senator from our district to look out for it, but being in Concord on the last days of the session, I found it had passed both Houses without either of them knowing it, and it was probably "squirreled through" by the common legislative trick of being "read by the title."

The Fish and Game Commissioners were not consulted and knew nothing about it, and I met them both at Concord the last day of the session, where, having heard of it, they had come to get the Governor to veto the bill. I also saw Gov. Tuttle myself, and he told us all that he would gladly do so, but that the persons interested had been smart enough to get it incorporated in the Revised Statutes by the Commission who were making the usual decennial revision of the Statutes, and he could not veto it without destroying all the laws of the State! It was a smart and nasty trick, and our Legislature only meeting biennially, we cannot repeat it for two years. We had just got the northern New England States into line. Vermont having changed from April 1 to May 1 at the last session of her Legislature, and Maine, New Hampshire, Vermont and the Forest Reserve of New York, all in the same latitude, opened the trout season the same day, May 1, when these two youngsters take advantage of the accidental official position of one of them, and upset the "whole kettle of fish," fixing the laws of the State on their own basis without any knowledge of the State officials or any call from the people of the State. I have been in Manchester since, and found many of the oldest anglers very indignant, all saying that if any change was to be made it should have been to move the opening day two weeks later, to May 15.

The result has been that all the boys in the State have been tramping the brooks for a fortnight, and although they have caught very few trout, they have worn a good path by the side of every stream. I was out yesterday for my May opening, and saw more boot tracks than trout. However, I caught a dozen, of which I returned five to the brook as too small, but the seven I brought home, from 6 in. to 10 in. long, gave my small family a good breakfast.

The brooks are yet very low and the water clear and cold, and we need a good warm rain, of two or three days' duration, to wake the trout up. Only one of those I caught yesterday had life enough to make a rush for the hook, and he was so small that he was soon back in the water again.

My old beacon fires, the red blossoms of the swamp maple, are not lighted yet, and it is not much use going for trout till they are. I shall wait a week or two longer before I try again.

ANGLER.

FOR "FOREST AND STREAM" READERS.

WE have secured, for the private information of the readers of FOREST AND STREAM, knowledge of a number of streams and lakes easily accessible from this city, where we believe that good fishing for trout and black bass may be had. This information, much of which comes from private sources, we are not at liberty to print, but we shall be glad to furnish it without charge to a limited number of the readers of FOREST AND STREAM who may apply for it, either personally or by letter.

COLD-SPRING-ON-HUDSON ASSOCIATION.—Albany, May 1.—The Cold-Spring-on-Hudson Fish and Game Protective Association has been incorporated with primary objects to protect fish and game from illegal capture and the restocking of depleted rivers, lakes, and streams with fish, and the fields and forests with game, and to aid and assist in enforcing the laws relative to the preservation of fish and game. The managers are William H. Haldane, Richard Giles, Sylvester B. Truesdell, Thomas S. Boyd, Irving P. McCoy, Charles De Rhau, Jr., William Church Osborn, Arthur Ingraham, Chalmers Dale, and Samuel Sloane, Jr. The principal office is in Cold Springs Village.

ONONDAGA ANGLERS' ASSOCIATION.

HOW is this for a record for '91 up to date? The work was done by Deputy Harrison Hawn, assisted by Geo. Crownhardt and Harry Jackson, hired especially by the association. The lakes and rivers have never been so free from illegal fishing as now. Netters are giving up their work on Oneida and Onondaga lakes and the rivers. Since March 31 sixty trap nets have been taken from the lakes and rivers, valued at \$1,500, and thirty-nine arrests made. Our Mr. Jackson attempted to arrest four netters. They attempted to kill him and made a mistake. Mr. Jackson was obliged to use a pistol and shot one of them quite badly through the neck. Those netters would have killed him if they had had a chance. All were arrested except one who left for parts unknown. This record cannot be beaten I think.

It does not look as if our present Commission and Supt. Pond were not doing their duty. We owe our success to the assistance received from them. We have just got our hand in. Look out for the bulletin later. It is only about a year ago when twelve members formed an association. There are now 250 members with associations formed all around us. We have members who go out and help our game protectors. Gen. R. U. Sherman has a great many friends among us, so has Mr. Drew. Mr. Carr has done us good service and is a good and efficient officer. Mr. Hawn was at Skaneateles and formed an association there, who, with the assistance of Mr. Pond, have done efficient work on that lake. We would be pleased to have our neighbors at Utica join us in the work, as we feel that we are keeping their grounds clean when we take care of Oneida Lake. It costs money; we cannot do this work on wind. Last year we invested \$500 in this good work, and now we ask our neighbors to help us. Mr. Drew contributed \$10, and I do not know of any other moneys being expended on this lake by our Utica friends last season. The annual report of the Utica Association shows that they expended about \$27 last year.

We cannot say too much for our present Commission and Pres. Blackford for the assistance they have given us through Supt. Pond, who does not say, "Go on, and I will follow," but always takes the lead. Such an officer cannot help but be successful. We have no rooms, nor give no fine suppers or entertainments. We meet in the Business Men's Association rooms, and have a meeting the first Thursday in every month, and subject to call. All money received is expended in the good work. All trap nets which have been taken were well filled with game fish. We do not forget also the assistance of Mr. Schackelton which he has given us on Oneida Lake. He has done excellent work for us.

If this good work is continued, readers of your valuable paper will find the best fishing grounds in the State of New York on these lakes and rivers. I would be pleased to give them any information they desire. Our association has a special protector in Harry Jackson, who is paid wholly by the association, and we do think he is as good a man as we could have on the force, and we also do not forget the work which is being done by Geo. Crownhardt.

Mr. Monroe Green, of the State Hatchery, gave us a call, looking up the result of the many fish received from State Hatchery in this section. There has been a great showing on California trout in Onondaga Creek. One catch of 13 running from 1 to 3 lbs. 14 oz. The writer has taken two; one weighing 3 lbs., the other 2½ lbs. This shows the good work of State Hatchery.

Since writing the above, received telephone message of three more trap nets having been taken on Oneida Lake; Skaneateles Lake, eleven nets and two seines.

HENRY LOFTIE.

RAINBOW AND BROOK TROUT CROSS.

Editor Forest and Stream:

I thank my friend L. M. Brown for his corroboration of my statement made some time ago in the FOREST AND STREAM that I had observed these two fish together in the spawning beds and the *irideus* was evidently engaged in pairing with the *fontinalis*. In reply to your objection I wrote to the effect that according to the U. S. Fish Commission agent in California, the spawning seasons of these two species overlap, thus making it quite possible for a cross to be effected in January. Mr. Brown knows more about my waters than I do myself, as he is an ardent fisherman and has far more leisure at the season than I have, being much occupied in my literary profession. His testimony, however, has corroborated my experience in regard to the actual cross of these fish, and when I doubted the fact ascertained by taking fish that seemed to be crosses, his statement often repeated that he had taken such fish confirmed my own belief.

There can be no possibility of any artificially crossed fish having been introduced here, as I have been the only person who has stocked the streams, having been supplied by the kindness of Col. M. McDonald, U. S. Fish Commissioner, with live fish and eggs for four years past, and no other person has taken interest enough in the fishing to introduce any fish of any kind. As by my residence here I have better opportunities of procuring specimens of the cross than any one else, I will take pleasure in sending some preserved specimens the coming season for your study. The crossed fish have the black back of the *irideus*, with a rather obscure redness of the sides, but the iridescence of the scales is conspicuous. As to the game qualities of the *irideus*, there is no comparison with those of the *fontinalis*; the *irideus* behaves more like a salmon, leaping out of the water and fighting with extraordinary persistence. A friend spent half an hour last summer in landing into his net a 10-inch fish with a very light rod, and I spent even longer time in securing a 21-inch fish with a light fly-rod, and then only got it by its leaping into the boat. The large fish keep in the deep waters of my pond. I have not known of one larger than 10 in. being taken in the stream.

HENRY STEWART.

HIGHLAND PARK, N. C.

LAKE KEUKA TROUT.—Dundee, N. Y., May 2.—*Editor Forest and Stream:* On Saturday, April 25, 1891, Major Gibson, of Catawba, N. Y., caught a trout in Keuka Lake measuring 33 in. in length, 21½ in. in circumference and weighed 17½ lbs. This breaks the record for a number of years. This fish was taken to Penn Yan by J. M. Washburn, of the Lake Keuka House, where he had it photographed. It was afterward served for dinner at the Benham House in that place and pronounced "very good" by all who partook of it.—GUY GRUNDY.

PIKE CALLED PICKEREL.

Editor Forest and Stream:

Mr. Bean, in his description of the pike and pickerel in your paper of the 6th ult., says of the largest pickerel that 8lbs. is a large weight, the average being smaller. Now, a question arises from my having seen an article in a paper published in Reading, Mich., wherein a man named James Courtwright is said to have caught a pickerel from Sand Lake which weighed 26lbs. A number of us thought that a huge fish story, and a controversy arose which we ask you to please decide. What is the weight of the largest pickerel caught? Also, are those fish which inhabit the small lakes of Michigan genuine pickerel?

SERGEANT.

FORT KEOGH, Montana.

[There is great confusion in the common names of fish belonging to the pike family. The common pike in some parts of the country, as for instance at Lake George, N. Y., is generally called pickerel. The pike, as you know, grows to a weight of even 40lbs., and this is doubtless the fish called pickerel in some Michigan lakes. The true pickerel is not known to exceed a weight of 8lbs. Dr. Bean used the name pickerel for the smaller fishes to which the name is referred in most parts of the East and a large portion of the West. The name pickerel is not confined, however, to the pike family, but is frequently used for a very distinct fish, the pike-perch or wall-eyed pike. We shall soon publish the concluding portion of the account of the pike family, and this will contain illustrations which will enable the angler to distinguish clearly between the pike, the pickerel and the muscalonge.]

AN ALBINO BROOK TROUT.

Editor Forest and Stream:

A few days ago Mr. E. G. Blackford, President of the New York Fish Commission, sent me a most singular and beautiful brook trout, which he obtained from the Lackawaxen, near Mount Pleasant, Wayne county, Pa. The fish is an albino and must have been lovely in life. Nothing of this kind has previously come to my notice in the many thousands of brook trout which I have seen, and I can not now recall a similar albino among any members of the salmon family. The specimen has been forwarded to the National Museum.

The length of the fish is 6 1/2 in. The upper jaw reaches to somewhat behind the posterior margin of the eye. The teeth are well developed, those on the tongue being largest.

The head and body are pale golden yellow in color, and the dorsal fin is entirely golden with the exception of two very faint pale bands across its middle portion. Three small, but distinct, crimson spots on the left side of the body below the lateral line in the space between the middle of the pectoral and the end of the dorsal. The caudal fin is golden also at the base and crimson over the rest of its surface. The pectorals, ventrals and anal are crimson. The ventral has a whitish outer edge, the anal with a similar edge bounded behind by a thin, dark stripe. On the right side of the body there are three crimson spots, of which the third is the smallest and on the lateral line. Very faint and pale parr marks on the sides with smaller markings between them, these markings so faint as to be readily overlooked. No trace of reticulations anywhere.

T. H. BEAN.

ANGLING NOTES.

WHEN people go a-fishing they sometimes catch something besides fish. An angler who lives near the Raritan River, and often enjoys a day's fishing there, reports that in addition to a 15-pound catfish, he caught at different times during the season the following: One scythe, one water bucket, 15ft. of heavy tow line, one rod tip with 50ft. of line attached, and a few other odds and ends in the way of tackle. He does not mention the bait he used. A few seasons ago, a gentleman chumming in the Great South Bay for bluefish, hooked up a line and carefully hauling it in brought up a fine Newport bass rod, with a very elegant rubber and German silver steel pivot reel attached. It was not much injured and only cost a trifle to put in order. It must have cost when new at least \$70.

A letter from the Restigouche reports that the ice is breaking up and moving out of the lower part of the river. He says, "If warm weather continues, look out for a telegram, as we shall have the earliest salmon fishing on record." Reports from the Adirondacks and Maine also indicate a very early season, and many parties are getting ready to start. Unless wet and cold weather sets in again, it will be safe to count on lake trout fishing by the 10th of this month.

Striped bass are now being caught, and last Sunday a few sea bass were taken in Jamaica Bay; so we may consider the fishing season fairly opened. The 204-pound striped bass, mentioned in last week's issue of this paper, was caught on a white worm.

There never has been such an immense crowd of people visiting the trout streams as has been witnessed this season. All the well-known resorts in the Eastern and Middle States report that they are full to overflowing. Some had good luck and many more bad, if it can be called luck. If those interested, that is the tavern and boarding house keepers and also the railroads, will see that the streams are kept stocked and the laws enforced, they will reap a harvest. Every year the interest in fishing seems to increase and people find that it does them a world of good to take a breathing spell, even if only for a day or two, among the woods and mountains and along the streams. Many of the railroads and owners of summer hotels are doing good work in the way of restocking, but there is one thing they do not insist upon, and that is that their guests shall not bring in fingerlings. The beginner finds that it requires more skill than he possesses to capture good sized trout, so he has recourse to the little side streams which should be preserved as feeders and there slays his fifty or a hundred baby trout with bait and brings them in with great satisfaction to himself and to the disgust of all anglers. Then there is another nuisance met with at all angling resorts, and that is the fish hawk, and it might be spelled hog. This is sometimes a country man who fishes either for the hotels or for would-be anglers who must bring home a cart load of fish, or often it is a boarder from the city who is staying through the

season. In either case they are very expert, using flies, minnows or worms with equal skill; they know every foot of the stream and where the big ones live, they are at it from morning to night, day in and day out, and keep every trout to send away, to friends they claim. No one objects to a man being skillful or successful, but there should be a limit put on a man's catch. No sooner do a number of men start a club than they put a limit to their members' catch and if this is necessary on preserved waters it is still more so on an open stream. Personally I think 25 fair sized trout is enough for any one to kill in one day, and let weight and not numbers mark the best angler.

Good-bye to the dear old Adirondacks! Another railroad has just been incorporated to cut it in two sections running from North Creek to Malone. It is too bad, but nothing can or will deter rich men from making more money. What do they care?

SCARLET-IBIS.

POTOMAC RIVER FISHING.—Washington, D. C., May 2.—In company with Walter Caulfield I went fishing today in the Potomac, near Georgetown, opposite the small rocky islands known as the Three Sisters. We used worms for bait and the usual rig of handlines and sinkers with boats. We tried unsuccessfully from the river bank for a while and then borrowed a boat and anchored in the stream in about 8 or 10 ft. of water. The tide was low and there was a stiff wind blowing up the river. Several other fishermen on the shores had no better luck than ourselves. In about three hours we caught from our boat sixty-three perch, the largest averaging about 10 in. in length. Another boat fishing four lines had more than twice as many white perch as we. A few yellow perch were caught, but these were small. About 2:30 P. M. the fish suddenly and almost entirely stopped biting; this, I suppose, was owing to a turn of the tide. Near Little Falls, a few miles away, a man caught 140 white perch in a little eddy, using worms for bait. It seems to be the usual experience that shore fishing is about useless waste of time for these fish, at least here. Near Chain Bridge there have been some good catches of black bass, but it is too bad to take them now, when so many of them are full of eggs.—PAUL MORRIS.

A LARGE LEATHER CARP.—Washington, D. C.—In passing through the market to-day my attention was called to a monster carp lying on one of the fish stands. Several of the marketmen told me it is the largest they have seen from the Potomac. This fine one was caught in the shad seine of Wm. M. Neitzey, at Stony Point. Thinking that the readers of FOREST AND STREAM may be pleased to know something about the measurements of this fish I have recorded the following data: Weight, 24lbs.; length, 33 in.; head, 7 in.; tail fin, 6 in.; middle rays of tail fin, 3 in.; depth of body, about 1 1/2 in.; least depth of tail, 4 in.; length of barbel, 1 in. The dorsal fin has three spines and twenty-two soft rays. The third anal spine is very stout and 4 in. long. The carp are pretty constantly to be found in our markets and sell readily at a moderate price.—BONART.

PENNSYLVANIA NOTES.—From Hon. H. C. Ford, president of the Pennsylvania Fish Commission, we learn that numerous salmon measuring 5 to 6 in. in length were caught by anglers in the upper Delaware River last fall and supposed to be a new kind of trout. They were doubtless some of the 100,000 fry deposited near Hancock and Deposit in the preceding February. The fish basket bills in the House and Senate of Pennsylvania were defeated only after a spirited and somewhat protracted fight. Mr. Ford fears that the continued dry weather will lower the trout streams too much for good fishing. Low water in the rivers is just the thing for black bass in summer, but for the trout livelier currents are required. Shad were running through the Lackawaxen fishways on April 19.

BROOK TROUT IN IOWA.—Waukon, Iowa, April 29.—Editor Forest and Stream: On the 25th inst. the writer, together with two friends, went about eight miles northwest of Waukon, Iowa, to a small stream called Patterson Creek and caught what is considered in this section of the country a fine string of brook trout; the largest one weighing 13oz. and the smallest 6oz.; and you may believe that we were a proud trio, as it is a rare thing in this county to see a string of brook trout. There are several streams that would by stocking make fine trout fishing in a few years, and we hope to have them stocked in the near future. We have excellent bass and pike fishing within a few miles of Waukon, Iowa.—A CONSTANT READER OF FOREST AND STREAM.

"MONARCH OF THE POOL."—The address of Mr. L. M. Gerrish, mentioned in this article last week as one who would guide to the trout waters therein described, is Brownville, Me.

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Dog Show of the Youngstown Kennel Club, at Youngstown, O.
Sept. 9 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.
Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. Stone, Sec'y and Supt.
Sept. 22 to 25.—Inaugural Dog Show of the Montreal Exposition Company, at Montreal, Canada.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Secretary.
Nov. 10.—Eastern Field Trial Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.
Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. C. H. Odell, Sec'y, 44 and 46 Wall Street, New York City.
Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

THE VREDENBURGH-PESHALL CASE.

OUR report of the trial last week gave a concise but comprehensive and intelligible review of the case. We supplement it to-day with the text of Judge Martine's charge to the jury. A fortnight ago, while the trial was in progress, we spoke of the manifest fairness which characterized Judge Martine's rulings, and the same spirit of judicial impartiality is recognized through the charge. Just what effect the charge had on the individual jurors, we have not learned, but as was reported last week, the acquittal of Mr. Peshall for having said the accounts were "juggled" was arrived at only after the jury had looked into the books in the jury room.

We understand that Mr. Peshall will now apply to the courts for a mandamus compelling the A. K. C. to remove the suspension put upon him in secret meeting and without a hearing last September. As the courts have repeatedly ruled on this point, there is no doubt that Mr. Peshall will be restored to his rights.

THE COURT'S CHARGE.

Gentlemen of the Jury:

I suppose it will not be amiss in a case that has taken as much time as this has taken, to get at the facts, to let you determine whether guilt or innocence is here presented, to congratulate you that you are now about to be discharged from the further consideration of the case. The case is now to be submitted to you for you to determine whether a citizen of this community has been libeled.

But you will well ask, What is libel? because it has been the subject of much consideration by the writers upon law, and has been the subject frequently of consideration in courts of justice. I may say to you that this accusation, that a charge of this character is not a charge of a trivial character, in that it is claimed that it is a charge which offends the person against whom it is aimed, because it brings him into disrepute and holds him up to contempt, and is entirely and hatefully. Therefore, although it is called a crime, and it is a crime of a lower order, considered so great, in the scale of crime, as that other class of crimes which offends the person, such as assault with a weapon, still, gentlemen, it is a crime which we have to consider in these courts of justice just as we would any other crime of the same grade.

The ground of the criminal proceeding in cases of this kind is the public mischief which the mere writing of the article does in alienating the minds of the people from religion and good morals, rendering them hostile to the government and magistracy of the country, and where particular individuals are attacked in causing such irritation in their minds as may induce them to commit a breach of the peace, and it is for that reason that libels can be brought to the criminal side of the bar.

"Slander in writing has at all times, and with good reason, been punished in a more exemplary manner than slanderous words, for, as it has a greater tendency to provoke men to breaches of the peace, quarrels and murders, it is of much more dangerous consequence to society."

"A libel, in its strict legal sense, consists of slander expressed in any other way than by mere words. If it were simply the word of mouth, it would be slander. But when the slander is expressed in writing, then the law calls the slander libel; and it may be expressed by printed slander it may be conveyed by figures, it may be conveyed by signs, by pictures or other symbols; and it may be defined as a censorious or ridiculing writing, picture or sign, made with a mischievous and malicious intent toward government, magistrates or individuals," and the charge here is that it was done against an individual.

"Any slander, either expressed in printing, writing, signs or pictures, tending either to blacken the memory of one that is dead, or the reputation of one who is alive, and to expose him to disgrace or contempt is indictable."

Now, gentlemen, to substantiate the charge made here there must be accompanied or followed by publication. Publication, in this sense, does not mean the advertising it, necessarily, in a newspaper, but there may be various modes of publication. The publication may be made by reading the article to a person who may be met on the highway, by showing it to a friend, or by sending it to him, or by any other means, so that he shall publish it. Therefore, I say to you that it does not mean solely the publication in a newspaper. But, in this particular case at bar, it is charged that that was the mode and method of publication—to wit, that the publication was caused by this defendant to be made in a newspaper known as the FOREST AND STREAM.

It is charged that the publication was his inducing act, and that it was he who sent that manuscript to that matter, of which he says he is the author, to that newspaper, and that that was his mode of publication of that matter.

If that matter was not libelous there was no harm in that publication, and no offense was committed.

In this case, unlike any other character of case that may be submitted to a jury, the law gives you a very great, a very wide latitude of view, and it is easy work for you to pronounce that it is libelous. The Court cannot say, "If such was the language, that is libelous," because you are to determine whether it was libelous, and if it was not libelous, no offense has been committed.

The Constitution of this State has said that the jury, in cases of this kind, shall be the judges both of the law and of the facts; and I confess, gentlemen, that I have had some difficulty in instructing myself as to what the motive or reason was that led those persons who took part in that constitutional convention to ingraft this provision into the Constitution itself. There may be some question as to just what that reason was. But, gentlemen, in view of the fact that "there is no specific and precise definition to be found of what facts and circumstances constitute a libel, and that consequently it is difficult, if not impossible, to pronounce that any writing is, per se and exclusive of all circumstances, libelous; that its libelous character must depend on its intent and tendency, and the one and the other of which, being matter of fact, must be found by the jury," it may be that those who ingrafted this into our Constitution had that in view, for certain it is that it is difficult, if not impossible, sometimes to pronounce that any writing is per se libelous, that exclusive of all circumstances it is libelous. Its libelous character depends upon its intent and tendency, so that the jury must say what was its intent and what was its tendency, and whether it was libelous under all the circumstances. This defendant is indicted under the section of the code which defines libel, and it reads as follows:

"A malicious publication, by writing, or otherwise than by mere speech, which exposes any living person to hatred, contempt, ridicule or obloquy, or which has a tendency to injure any person in his business or occupation, is a libel."

I have read only so much of that section of the code as, in my judgment, bears directly upon this case, or such portion of it as may be claimed by any party. I leave it to you to determine whether this accusation may come under. Before there can be a libel you must find that there was a malicious publication, by writing, or otherwise than by mere speech, which exposes a living person to hatred, contempt, ridicule or obloquy, or which has a tendency to injure any person in his business or occupation.

You may ask yourselves, then, was this a malicious publication—this libelous article, so claimed, which is in evidence before you—was it a malicious publication? Did it expose a living person to hatred, to contempt, to ridicule or obloquy, or had it a tendency to injure a person in his business or occupation?

Was the publication malicious?

Our code says:

"A publication having the tendency or effect, mentioned in section 100, and which is not to be deemed malicious, if no jurisdiction or excuse therefor is shown."

Of course, the contrary follows. If justification or excuse is shown it is not to be deemed to be malicious.

"The publication is justified when the matter charged as libelous is true and published with good motives and for justifiable ends."

I charge you, gentlemen—but recollect in this case that you are to determine both the law and the facts—I charge you—I ask you the question whether, if the publication was true, and still was published with malicious intent, whether it is a libelous publication. I shall not undertake to determine any question of law in this case in submitting the case to you for your determination. The publication is excused when it is honestly made, in the belief of its truth and upon reasonable grounds for this belief, and consists of fair comments upon the conduct of a person in respect of public affairs, or upon a thing which the proprietor thereof offers or explains to the public.

Now, gentlemen, these persons were all associated together in some way—as to what their respective rights in that association or upon the publication were, you determine upon the proof. But certain it is that all the persons who have been before you, whether as officers of this Kennel Club or as delegates to it, all had interests, all had a concern in the affairs of that association, and I shall leave it for you to say whether this defendant, as it is admitted he did in this case, when he, from time to time, demanded further and additional information than that which had been theretofore

given as to the accounts and management of the club, whether he was justified in so doing, and whether what he published was published honestly in the belief of the truth of the publication, and for meritorious, just and proper ends.

As I have already stated to you, there must be a publication, there must be a making public of the written matter, and that publication, as I have already told you, may be made by reading the alleged libelous matter to another person, or by showing it to another person, or by circulating it; and it is here charged that the mode or method that the defendant elected in publishing the alleged libel, as the people claim, was that it should be published in this paper, the FOREST AND STREAM.

In this case, the defendant says that he is the author of the article complained of. So you will not have any difficulty on that question—that he wrote that article. The statements in that article are his, and they emanated from him, but it is claimed, on the part of the defense, that they are not libelous, and that is one of the questions in this case that you have got to determine.

Here is what you have got to determine, gentlemen: It is conceded by the defendant that he wrote this article. Did he publish it? If he did, was it libelous, is it a libel, was it malicious? Or, is it true, and was it published with a good intent and purpose? If you conclude that it was not a libel, then, of course, you will acquit the defendant, and I shall say upon the evidence that it was true, and was published for good purpose, upon the evidence that it was published for good purpose, upon the evidence that it was published for good purpose. But, if you shall say upon the evidence that it was a malicious libel, published with a wrongful intent, then you will do in this case as you shall determine.

To enable you to determine whether it is a libel or not, you must consider the law, and then take into consideration all the circumstances of the case, and the law with which the act was done, determine upon the whole evidence whether the act done be or be not within the meaning of the law.

"Upon every indictment for libel the jury have a right to judge, not only of the fact of the publication, and the truth of the innuendoes, but of the intent and tendency of the paper, and, whether it be a libel or not; and, in short, of the whole matter put in issue upon such indictment or information."

"As a libel is a defamatory publication, made with a malicious intent, the truth or falsehood of the charge may in many cases be a very material and pertinent consideration with the jury, in order to ascertain that intent. There can be no doubt that it is competent for the defendant to rebut the presumption of malice, drawn from the fact of publication; and it is in consonance with the general theory of evidence that the defendant should, that the defendant should be allowed to avail himself of every fact and circumstance that may serve to repel that presumption. And what can be a more important circumstance than the truth of the charge, to determine the goodness of the motive in making it, if it be a charge against the competency or purity of a character in public trust, or of a candidate for public favor, or of a charge of action in which the community have an interest, and are deeply concerned?"

You may say that this reading may not have application to this case because this is not a charge made against a public officer or a candidate for public favor, or a matter in which the community are deeply concerned. But, gentlemen, these men were all members of the same association. It is claimed, on the part of the people, that the defendant had the right to the information as to the proof by him. I shall leave you to determine, upon the proof, whether he had or not. It was an association, certainly, in which all those connected with it were interested, and therefore you may ask yourselves whether the defendant was justified in the statement that he made, whether the charges made are true, because, as I have said, if you find them to be true, it is something that you have the right to take into consideration, in considering the defense.

Now, that does not mean that every time a person may know something true to another's disadvantage that he has the right to publish that matter, but it means that where persons are associated together and have a common interest, and where there may be something connected with the affairs in which they are commonly interested, which should be criticized, no fault can be found with just criticism. But if it be followed by publication then you may ask yourselves: Was there malice in the publication? If the publication be alone among those jointly interested, that is one thing; but if it be a general publication, a widespread publication to the entire world, even to those who have no interest or concern in the matter, then you may ask yourselves: Was the charge true? Was it malicious and does it come within the section of the Code?

"To shut out wholly the inquiry into the truth of the accusation is to abridge essentially the means of defense. It is to weaken the arm of the defendant and to convict him by means of a presumption, which he might easily destroy by proof that the charge was true, and that, considering the nature of the accusation, the charge was true, and the time and the place, and the situation of the person implicated, his motive could have been no other than a pure and disinterested regard for the public welfare. At the same time this doctrine will not go to tolerate libels upon private character, or the circulation of charges for seditious and wicked ends, or to justify exposing to the public eye one's personal defects or misfortunes. The public have a concern with, and are they injured by such information, and the truth of the charge would rather aggravate than lessen the baseness and evil tendency of the publication. It will, therefore, still remain in every case, a question for the jury, what was the intent and tendency of the paper, and how far the truth in the given case has been used for commendable or abused for malicious purposes."

That brings me, gentlemen, to this suggestion: criticism, fair, just and proper criticism, is no offense. A person is entitled to criticize the acts of another, and he is especially entitled to criticize them within fair and reasonable rules. If he be an officer of an association with which he is connected, or if he be a public officer.

He has been asked by the defendant to charge you especially as to a certain doctrine as to the law, laid down in a work upon the crime of libel, and, indeed, it seems to be the law, and therefore I shall charge it as he asks.

"As criticism is opinion, it can never be primarily material to inquire into its justness. The right to criticize implies the right to judge for one's self of the justness of criticism. It would seem to be but a delusion to say one has the right to criticize, provided the criticism be just. The justness or unjustness can never be more than matter of opinion. The test always is, was the criticism bona fide? Is it like the case of one writing concerning the sanity of another. The test of the justification is not, was the statement such as a man of sound sense would have made? But was it the honest conviction of the publisher? Although that was a case of intent or giving an opinion or criticism, it was, in fact, a criticism concerning the person, and found its justification, not in its being a criticism, but because the publication was made to protect the interest of another. When it is argued that the right to criticize rests upon the interest which the community generally may have in the subject of the criticism it is a confusion of two different and distinct rights. The community has no more interest in the person or reputation of one individual than it has in the person or reputation of any other member of society. Nor is there any foundation for the distinction sometimes attempted to be drawn between the public and the private character or standing of an individual. In this country everything, either by speech or by writing may be discussed for the benefit of the public."

If discussion has been nothing more than that which was fair, temperate and calm, then such a person would not be a proper subject for an action for libel.

"Every individual has a right to comment on those acts of public men which concern him as a subject of the realm, if he do not make his commentary a cloak for malice and slander. There is, indeed, a private distinction between publications relating to public and to private persons, as regards the question whether they be libelous."

But the defendant claims that the publication complained of is not libelous, because, as he claims, the article was written against a thing, to wit, the association or club, and not as against the individual, and I charge you that it is the law that, if it be written against a corporation or a thing, it is not libelous, and that the article is not libelous, because it is charged here that he libeled the individual, and that, for the purposes of this case, if you shall find that it was a libel against the association, and was no libel against the complainant in this case, then the defendant cannot be convicted.

Let us see what the learned writer has said upon that subject. Mr. PESHALL: If Your Honor please, would you allow me to interrupt you? I go a little further than that, and say also that it was criticism of a report, published in the same paper, to the public.

THE COURT: Of course, gentlemen, there is another doctrine that applies in this case. Every man has the right to defend his character against false persons. It is a duty which he owes to himself and his family, and it is claimed in this case by the defendant that his character was assailed or attacked, and that what he wrote was by way of defense. It is for you to say whether that contention is warranted in this case by the evidence or not.

That is his claim. It is a fact in the case to be determined by you. Every man has a right to defend himself when attacked,

whether it be by an assailant who attacks him on the highway, with the intention to do him injury or wrong—he can then defend himself. Equally, if his character be assailed, a person has a right to defend. But he must defend within the legal rules, he must defend within the legal bounds. He is not permitted to commit an overt act upon his own part, or go further than to meet or repel the attack on him. It is a question for the jury to determine, in any given case, how far he can go or if he has gone further than he should have gone. He must judge when he writes his article, he must be careful to guard himself, and it is for the jury to say, when he writes an article or letter, if he has gone further than to merely defend an attack on himself.

First, was there an attack upon him; and, second, if there was, was the article written in defense; and, third, did the article go beyond the bounds necessary to defend? These are questions for the jury.

Communications, therefore, made in fair self-defense are privileged. If a man is attacked in a written article, he may write and rebut the charges, and he may at the same time retort, where the retort is a necessary part of the defense, or fairly arises out of the charges made against him. A person who begins a war by writing cannot subsequently come into court and complain that he has had the worst of the fight. But if the person who undertakes to defend himself, with malice, and with a bad intent, to defend, then it is a question for the jury, depending upon the circumstances of the case, to determine whether he has gone beyond the legal bounds of self defense. Certainly he can then do nothing to defend."

I have been also asked by the defendant to call your attention to one or two other principles laid down in the books, and, as it is the law, if I may charge you to comment on these acts of public men which concern him as a subject of the realm, if he do not make his commentary a cloak for malice and slander."

I charge you that, of course; it is the law. Now, gentlemen, a single suggestion, and I shall leave this case to you, for you to say just what you think of this publication. We cannot dismiss it because we may think that the matter may not be very material to the public, or in any way or the other, it is here under the color of law, it is here under color of right, and we have to determine it on the evidence. The length of time that this case has taken to submit to you calls your attention also to the fact that, if through any mistrial you should not determine this case, again the same matter may be perchance required to be redone in a court of justice, to the end that another panel such as yours may be required to try the case. There seems to be much of interest in the question involved in this case, but with that you have nothing to do whatever. The question that you are to determine is: Is this a malicious libel, written for a wrongful purpose, or is it matter privileged, is it true and justified, printed for a just and proper reason?

I have intentionally refrained, gentlemen, from going into the figures in this case, which gentlemen on the other side of the bar tells you that he has never been able to ascertain what those figures mean, and says he does not know now. I observed that the learned District Attorney avoided any allusion to the figures in this case, and I, of course, cannot divine what course you will take as to the figures in this case, but it may be a material fact for you to determine in this case—were those reports, as rendered by the secretary and treasurer, true and correct, or were they honest reports, such as a person in his situation should render, or were they justly or unjustly attacked?

Whether you shall, in order to determine that, go through these entire figures or not, is a matter for you, but were the figures—because it is the figures in the accounts, sometimes coming in one form or in another—much was said about this book and this case, and that was the different sources, it was claimed that the figures came—were the reports made by that secretary and treasurer a just, honest statement of his stewardship of that club? The defendant says no. He says that he has always claimed, and would show in a court of justice, that they were not true, and would show the truth of the allegations made by him in the article that he says he was the author of, and it is a question for you to say who was the publisher.

Now, has he shown that the figures were not true? Has he shown the truth of the article which he says was written by him? As you shall determine those questions you may be enabled to determine the main question, as to the guilt or innocence of this defendant under this accusation of libel. Mr. Wilmerding tells you that after the article was written, the defendant brought the paper to him and showed the article to him. Mr. Wilmerding tells you that he read it and that he advised this defendant against this publication, and he says that the article was an article addressed to the newspaper, the FOREST AND STREAM, and that the defendant then and there declared to him that he was going to publish that article. It is for you to say whether you believe Mr. Wilmerding. Has his statement in that regard been disputed or questioned? And you will call to your mind, you will call to your aid, when you come to determine the question whether this was the defendant's publication, the testimony of Mr. Wilmerding, if you believe it. Treat it as you will. He is a witness in the case. If you think he does not tell the truth you have a right to say so. But if you believe that statement to be true you may reach findings upon it as you may determine to base upon it. You may give it such weight as you think it is entitled to.

Mr. Anthony tells you in his testimony that he saw the article at the time of its publication and that he had a conversation with the defendant thereafter, and that he said to the defendant, "You did what you threatened," and the defendant said that he had done what he said, and that he would follow it up to the bitter end and prove the truth of the publication. When you shall ask yourselves whether the defendant was the publisher, whether he published it, you may also call to your aid the testimony of Mr. Anthony. Did Mr. Anthony tell the truth on the witness stand? You can ask yourselves that question, because every witness puts himself in that position when he goes upon the witness stand, that the truth of what he says he goes shall determine whether it is a truthful witness or not.

First, then, you must come to the conclusion that the defendant wrote the article because he said that he did. If you shall come to the conclusion that he published it, then, was it malicious, was it a malicious publication? And I may say to you that malice may sometimes be presumed from the publication of the article itself. But you must take into consideration the article and all the surrounding circumstances in asking yourselves whether it was malicious. It is claimed that it was a malicious article, and that it affected the character of this complainant, because it is said that the article charged that the reports made were false and fraudulent; false, because they were not true, and fraudulent, because they had been made with the intention to deceive. You have the right, gentlemen, to take into consideration in this case the position which complainant occupied in that club, as its treasurer and secretary, the manner in which he handled its moneys and finances, his method and mode of earning a living as secretary and treasurer, upon a salary, in that club. Were the words defamatory, were they malicious, were they published with a malicious intent, and was there a design to injure, was the effect of such publication to injure the complainant in his business?

I shall leave it to you to say whether the effect would be to injure the individual or the club alone; and, in considering that, you have the right to consider the position that it is conceded this complainant occupied in that club as an employee, at a salary—a salaried officer, and that you shall say whether it is or not—but an officer, at all events, in the receipt of compensation—were those words calculated to injure him, and were they published with intent and design? "In all cases of libel, where a statement is published which is libelous the law presumes the publication to be malicious, until the contrary is shown."

It is for you to say, gentlemen, on the whole evidence, whether this was a false and malicious publication, or whether it was a true and just publication, and one that should have been published for just and lawful and proper ends. You are the judges of the law and the facts, and may require proof, not only of the publication, but of its falsehood, and that it was maliciously made. Upon this whole case, gentlemen, I am going to submit it to you now for your determination. Was this a libel or not? Is this defendant guilty or not guilty of crime? You may find one of two verdicts—guilty or not guilty.

One other word, gentlemen.

This defendant did not take the witness stand in his own behalf. Nor was he obliged so to do.

Our statute says that the fact that a witness does not take the stand in his own behalf shall furnish no presumption as against him. No presumption, then, is to be taken as against a defendant who does not take the witness stand in his own behalf. He has the right to sit at the bar and say, "Prove your accusation against me." He has the right to stand mute if he sees fit, and wait for proof, and say, "You are to take no presumption against me by reason of that."

If, upon this whole case, gentlemen, you shall have a reasonable doubt as to the guilt of the defendant, the defendant is entitled to the benefit of that doubt, and to an acquittal at your hands.

Now, what is a reasonable doubt? Such a doubt as the evidence has generated in your minds. It is not a doubt that you are to inject. It is a doubt that is born of the evidence itself, and if, after a careful examination of the evidence itself, a comparison of the evidence among yourselves, a full, fair and impartial examination of the evidence, you should be in doubt, the defendant is entitled to an acquittal. So it is as to all the questions in this case. If there should be doubt, under the circumstances that I have suggested, you must solve that doubt in favor of the defendant and acquit him.

But if after you have examined the evidence thoroughly it shall leave you with a firm belief, an abiding conviction, a reasonable satisfaction that the case against the defendant is made out, then you have no reasonable doubt, because you cannot be at the same time in a state of reasonable doubt and of reasonable satisfaction.

Now, gentlemen, I hope you will determine this case uninfluenced by any extraneous circumstances, uninfluenced by sympathy, uninfluenced by the position of the persons concerned on the one hand or the other, or by a feeling that the laws of the State have been violated and that somebody ought to be punished, unless the evidence satisfies you that the defendant has brought himself within the law upon the charge and trial here. Treat this defendant fairly. He is an intelligent man, and he has stood at this bar to plead his case before you, and he is entitled to fair treatment at your hand. Treat him fairly, but give him no more than any other defendant who may come to the bar is entitled to. This case should stand before you just like any other case. If the defendant is guilty, your verdict ought to say so. If on the contrary the evidence you do not believe that he is guilty you will say not guilty.

I leave the case to you for your determination.

MR. MCINTYRE: I ask if your Honor please, that the jury may be allowed to take the article in evidence with them.

THE COURT: Yes. What is in evidence, they may have by consent.

MR. PESHALL: One more thing. It is for the jury to determine whether that applies to the club or the individual—that article.

THE COURT: Certainly. I have said that, and I say it now. The jury may take with them anything that they desire that is in evidence.

MR. PESHALL: I desire also that the article shall be given to the jury which was written and published—the two letters.

THE COURT: They are in evidence?

MR. PESHALL: Yes, sir, here they are—in my book.

MR. MCINTYRE: Then take them out of your book. I do not propose to put your book into the jury room.

THE COURT: If those letters are in evidence, the jury may take them. You may retire, gentlemen.

MR. PESHALL: I will tear the page out of the book. Here it is.

A STRAIGHTFORWARD CHALLENGE.

Editor Forest and Stream:

I have read Mr. Laidlaw's letter in your issue of April 30, and as that gentleman does not desire newspaper discussion I will endeavor to meet him on one of his own three grounds—fun, money or marbles. I am a business man, with no time for fun or marbles, but with a little money, and I inclose \$100 to be covered before your issue of next week, as a wager that my bitch Amazement can beat Oban under one or more official judges of the American Spaniel Club, to be mutually agreed upon, each party to send his dog for inspection when and where called upon to do so by the judge or judges selected, expenses to be paid by the loser, the judge or judges to find their own handlers, and neither owner to be present. I mean this as an honest acceptance of Mr. Laidlaw's offer. I am prepared to abide by the judges' decision, and will shut up if I am wrong; but I believe in fair criticism in the public press, and have no doubt this test will prove that my comments were fully justified by the facts.

I desire it to be known that the criticism which I have sent for this issue over my signature, was written and mailed before receipt of the issue containing Mr. Laidlaw's letter.

In conclusion, I answer the charge as to my "peculiar" letter by stating that, as appears on its face, it was in answer to a similar one from Mr. Laidlaw himself, and that it has never been repudiated by him.

G. BELL.

TORONTO, CAN., May 4.

[I have received a lengthy letter and report on the spaniels at Cleveland show from Mr. Geo. Bell, in which he takes Mr. Nelles to task on his judging, both at Chicago and Cleveland. Its publication will do no good, and will only tend to mutual recriminations with which the FOREST AND STREAM does not wish to fill its pages. If some of our many cocker breeders would only give us now and then descriptions of their dogs, their experiences in breeding them to their view of the standard and accounts of the many enjoyable days they must have with them in the field, how much more interesting the cocker question would become to the average reader. This antagonism that seems to prevail among certain spaniel men, and which is given voice to from time to time in the kennel press, leads to no good purpose, but the reverse. Draft for \$100 on the Bank of New York received and held subject to Mr. Bell's disposition.]

AN INTERESTING QUESTION.—New York, May 4.—*Editor Forest and Stream:* A few days since a rabid dog passed through my place, biting three of my dogs, which I have destroyed. I had three or four other dogs loose at the time, which I do not know for certain if they were bitten or not, no marks of bites showed on them, but as they were playing with those bitten at the time it happened, it is possible they may also have been bitten. I have these animals securely locked up, and what I desire to learn is how long they should be treated with suspicion and kept confined after the time of being bitten, if they have been? They are all valuable animals, but having a number of children on my place I cannot afford any risks. What do you advise? I might add there is little doubt of the dog being mad, for after learning where he had been killed I had him dug up and examined by a veterinary surgeon.—H. N. M. [Unless you can find the marks of the teeth there is no danger. The period of incubation is from one to five weeks, as a rule, you can therefore use your own discretion in the matter.]

DEATH OF MAUD NOBLE.—Brockton, Mass.—*Editor Forest and Stream:* I am sorry to inform you that I have lost my Count Noble bitch Maud Noble. She was down with distemper and pneumonia set in, and with all our efforts we could not save her. She was bred by E. A. Hight, Lynn, Mass., out of Katie Bervyn, by Count Noble. She was shown in the Boston show, where she contracted distemper, and received vhc., but three of our most competent judges said she should have been placed higher, and one said she ought to have won second easy. She was a litter sister of Blanche Noble, recently purchased by A. M. Tucker, Charlestown. I feel my loss most severely, and think it will be a long time before I find one that will fill her place, as she had shown some great field qualities.—CHARLES H. LEONARD.

ST. BERNARD CLUB MEETING.

At the adjourned monthly meeting of the board of governors of the St. Bernard Club of America, held at the Hoffman House, New York city, on Tuesday evening, April 27, the following were present: W. H. Joekel, Jr., B. P. Johnson, J. O. Thurston, Jacob Ruppert, Jr., Mr. Wells and K. E. Hopf in the chair. Sidney W. Smith, of Leeds, England, who is a member of the club, was present as a visitor. R. T. Rennie, of Woodside, N. J., was elected a member. K. E. Hopf tendered his resignation as president of the club; B. P. Johnson then took the chair, and after a few appropriate remarks on the part of J. O. Thurston, secretary, expressing the appreciation by the board of governors and the club of the services rendered to the latter since its organization by the retiring officer, his resignation was accepted with regret. The members of the board living at a distance had been requested to vote by mail for the election of a new president, thirteen votes in all were cast (out of fifteen), the majority being in favor of W. H. Joekel, Jr., who was elected. K. E. Hopf congratulating the club on its choice, E. B. Sears of Boston, was elected treasurer to succeed W. H. Joekel, Jr. Sidney W. Smith was given an opportunity to say a few words in regard to the breed. He thought that with the stock we have here now we ought to be able to compete with England and Switzerland, provided that the mating be done more carefully and more with a view to produce typical stock than simply to supply the market. The meeting then adjourned. K. E. H.

MEMBERS' SHOW AT HAMILTON.

The last of the series of members' meetings for the winter season was given in the Foresters' Hall on the evening of Wednesday, April 23, by the Hamilton Kennel Club. There was a large attendance, over a hundred members being present. In the absence of the president, Mr. Andrew Murdoch, first vice-president, occupied the chair. Thirty new names were submitted for membership and were passed unanimously. The breeds judged on this occasion were collies, St. Bernards, Newfoundlands and black and tan setters. The animals led into the ring were as good as the lot shown at the last club meeting, but to this, of course, there were some notable exceptions. Mr. Andrew Laidlaw, of Woodstock, was judge, and performed his duties carefully and impartially, giving perfect satisfaction. He brought with him for exhibition his famous black cocker Oban, which created such a favorable impression at the Westminster Kennel Club show in New York. The little dog was warmly welcomed, all the more so as he is a Hamilton puppy, having been raised here by Mr. Charles Searle, who disposed of him a year ago to Mr. Laidlaw for a song, little knowing what a treasure he was parting with.

Dr. Nelles, of Brantford, was also a visitor at the exhibition, and brought the well-known Brantford Red Jacket with him to show him to the Hamilton dog fanciers.

Dr. Mole, V.S., read a capital paper on "Mange and Skin Diseases in the Dog." The secretary reviewed the winter's work, and his address was full of encouragement and hope for future success. The fall bench show is to be held on Sept. 9 to 11, and no pains will be spared to make it a grand success. The judges selected by the committee are: Miss A. H. Whitney, Lancaster, Mass.; Mr. H. W. Lacy, New York; Mr. J. F. Kirk, Toronto. Mr. Kirk has been asked to judge all the spaniel classes, and has accepted.

Miss Whitney will, if she comes, have charge of mastiffs, St. Bernards, great Danes, Newfoundlands, pugs and miscellaneous classes, while Mr. Lacy will get the lion's share of the work with the balance of the show. SAD.

DENVER DOG SHOW.

The second annual bench show of the Continental Kennel Club opened April 22, and continued till the following Friday. During the opening day there were fully 1,500 people at the show, and the box office receipts were something over \$350, and the attendance throughout the week was good. The club made a good move in giving a prize for the largest number of dogs exhibited by any one person. By so doing they got many of the finest animals exhibited at Chicago, and many others which were attracted by the class of animals entered. Judge A. C. Waddell, of Kansas City, began his work soon after the opening. He remarked at the close of his day's work that there was more fine blood in this exhibit than he had ever seen in any show of its size.

AWARDS.

MASTIFFS.—Dogs: 1st, H. Wyeth's Gladiator; 2d, E. P. Graves' Max. Bitches: 1st, A. L. Weston's Mollie Comedy; 2d, F. P. Graves' Callotia. Puppies: 1st, Graves estate's Duke of Denver.

ST. BERNARDS.—ROUGH OR SMOOTH.—Dogs: 1st, B. R. Geddes' Caled; 2d, F. Trimmer's Hackney Monk. Very high com., H. S. Waldo's Victor and Mrs. J. L. Ferguson's Sir Rhono. High com., J. J. O'Brien's Pemberton. Bitches: 1st, Edward Jones's Nellie. Puppies: 1st, John W. Morey's Zeus.

BARZOIS OR RUSSIAN WOLPHOUNDS.—Dogs: 1st, 2d and very high com., P. H. Hacke's Zloem, Czar and Ivan. Bitches: 1st and 2d, P. H. Hacke's Prokaza and Czarina.

GREYHOUNDS.—Dogs: 1st, 2d, very high com. and high com., St. Patrick Kennels' Adonis, St. Patrick, Monk and Hurricane. Very high com., E. G. Rowe's Ben Harrison. High com., E. G. Howell's Blue Beauty. Bitches: 1st, 2d and very high com., St. Patrick Kennels' Daisy B., Pearl of Pekin and Irish Lass. Very high com., J. A. Murtland's Hater. Puppies: 1st, 2d and very high com., St. Patrick Kennels' Miss McGinty, Blizard and Handy Andy. High com., J. A. Murtland's Oid.

POINTERS.—CHALLENGE.—Dogs (55lbs. or over): 1st, Acme Kennels' Trinker's Chief. Bitches (50lbs. or over): 1st, withheld; 2d, John Jones's Nellie Buckles. Dogs (under 55lbs.): 1st, Mrs. H. DeMonco's Sergeant Glen; 2d, Elms Kennels' Nasso Bow of the Elms. High com., A. DeMonco's Westwood Doc. Bitches (under 50lbs.): Equal 1st, Elms Kennels' Patsy Bang and Otsego of the Elms; 2d, Elms Kennels' Hester of the Elms. Very high com., J. S. Glascock's Free Coinage and Graphic's Corrinne.

ENGLISH SETTERS.—CHALLENGE.—1st, Elms Kennels' Monk of Furness.—OPEN.—Dogs: 1st, Claremont Kennels' Zippo II; 2d, Elms Kennels' Nordeck of the Elm. Very high com., John W. Schuneman's Tom Gladstone and Ed. J. Schuneman's unnamed. Bitches: 1st, Elms Kennels' Iphig of the Elms; 2d, Claremont Kennels' Sandy's Gift. Very high com., John Jones's Sis.

IRISH SETTERS.—CHALLENGE.—Dogs: 1st, G. H. Covert's Ch. Elcho, Jr.—OPEN.—Dogs: 1st, F. G. Patterson's Dawn; 2d and reserve, G. H. Covert's Blue Rook and Ben O. Very high com., Claremont Kennels' Claremont Patsy. Bitches: 1st and 2d, G. H. Covert's Kildare Ruby and Red River Jessie. Reserve, G. E. Everett's Corinne. Very high com., C. P. Hubbard's Jessie Jones and Geo. H. Covert's Red Belle.

GORDON SETTERS.—CHALLENGE.—1st, C. W. Smith's Tom II.—OPEN.—1st, Emma Neill Bie's Topsy.

FIELD SPANIELS.—Dogs: 1st, Cassidy's Fleet; 2d, J. C. King's Tucker. Very high com., Henry Altman's Gyp Obo. Bitches: 1st, Henry Altman's Retta II.

COOKERS.—Dogs: 1st, F. Guitman's Rex G.; 2d, H. Bohm's Pippo. Bitches: 1st, H. Bohm's Lady Sylvia. Puppies: 1st, S. H. Levery's Dell; 2d, Henry Solms's Fannie.

IRISH WATER SPANIELS.—1st, C. M. Hampson's Barney O'Connor; 2d, H. M. Bostwick's Barry.

CLUMBERS.—1st, Mrs. K. W. Weston's Bustler; 2d, Claud King's Rex of Edisto. Puppies: 1st and 2d, S. H. Levery's Lady Florence and Ivanhoe.

COLLIES.—Dogs: 1st, Carlwrie Kennels' Roslyn; 2d, J. Parse, Jr.'s Mack. Bitches: 1st and 2d, Carlwrie Kennels' Louie Lory and Murrmaid. Very high com., J. Parse, Jr.'s Nellie. Puppies: 1st and 2d, Carlwrie Kennels' Ripple and Smoky; High com., W. G. Haines's Rover and Jumbo.

BEAGLES.—1st, Middleton Kennels' June M.

BULLDOGS.—1st, W. C. McArthur's Jack Spratt.

BULL-TERRIERS.—1st, W. J. Byron's Dufferin.

FOX-TERRIERS.—Puppies: 1st, F. M. Shoerlor's Jo Jo.

SCOTCH TERRIERS.—1st and 2d, A. F. Heintzler's Bessie and Bonnie Leach.

YORKSHIRE TERRIERS.—1st and 2d, R. Stanley's Damfino and Fred.

DANDIE DINMONT TERRIERS.—1st, H. J. Limzer's Border Clicker.

PUGS.—CHALLENGE.—1st, Acme Kennels' Lord Nelson.—OPEN.—Bitches: 1st, Robert Graham's Daisy Deane.

BLACK AND TAN TERRIERS.—1st, A. W. Smith's Buffalo General.

SPECIALS.

Bankers' special, \$100; \$65 to first, \$35 to second: Best kennels of five dogs, irrespective of breed, owned by one person not a resident of Colorado, three kennels to compete. Elms Kennels' St. Paul first, Kilarney Kennels' Chicago second. Real estate dealers' prize, \$100—\$65 to first, \$35 to second—to the first and second largest exhibit of dogs irrespective of breed, by one person. John Naylor, of Chicago, with 25 entries first, Bartels and Lemoine, Denver, 11 entries, second. Hotel and restaurant prize, \$100—\$65 to first, \$35 to second—first and second best kennels of four dogs of one breed owned by one person, a resident of Colorado, Wyoming, Utah or New Mexico: Carlwrie Collie Kennels, Mrs. Rand, first; St. Patrick Kennels, Bartels & Lawrence, second. Best pointer spaniel, \$5, Bert Cassidy's Fleet. Best bull-terrier, a handsome chiving set, J. Bryson's Dufferin. For the second best dog, irrespective of breed, owned and entered by a lady resident of Denver, Carlwrie Kennels' Roslyn.

THE BEAGLE TRIALS.

Editor Forest and Stream:

The adjourned executive meeting of the National Beagle Club met at 266 Washington street, Boston, Mass., on Friday, May 1, President O. W. Brookings in the chair. Minutes of last meeting read and approved. Dr. W. A. Power, chairman of incorporated committee, gave report, saying that business of that kind necessarily moved slow but the committee expected to have the affair well under way by the next meeting and would make a much fuller report at that time. Each member of the executive committee made his report as to grounds seen during the week, but of course as each one's time was limited, not very much could be done. This is a very important affair and one that needs the hearty co-operation of every one at all interested in the beagle field trials. On this fact depends the success of the field trials. Good grounds will assist to run off the heats in the shortest possible time, so that a long drawn out series may be avoided. Every one who has in view a good place where rabbits are plentiful and the grounds more or less open, would confer a great favor by letting the executive committee know either through FOREST AND STREAM or by personal letter to the secretary. It is the desire of the club to run the trials where the largest entry can be secured. If New York State and vicinity can furnish enough entries, the club will hold a field trial there and the same may be said of any other district or State. This club is not run by a clique, but by gentlemen who have the welfare of the beagle hound at heart. The secretary was instructed to write to all the sporting papers soliciting information of desirable grounds to run the field trials on. The revision of running rules was then taken up, a copy of which I hope to send you next week. The meeting was then adjourned until Thursday, May 7, 1891. HUBITE.

DOG CHAT.

The Irish Setter Club, having assigned Messrs. H. Clay Glover, V.S., James B. Blossom and Louis Contoit the task of drafting the new Constitution and By-Laws, they have made their report. We have not space to publish it in its entirety, for one set of laws being much like another there is little need. Section 2 says: "The object of the club shall be to promote the breeding of pure Irish red setters; to develop and bring to perfection their natural high qualities for field use; to define and publish a description of their type for breeders, competitors at field trials and bench shows and others, as the standard by which Irish red setters should be judged, and to encourage the competition of Irish setters at such places." The election of officers will be at the annual bench show of the W. K. C. The annual dues are set down at five dollars, and the club will donate the largest proportion of prizes to the recognized field trial or bench show which offers the most inducement for the competition of Irish setters. Committee meetings are to be held at least once every five months. The latter part of Section 12 reads: "He [the secretary-treasurer] shall collect and have charge of all moneys belonging to the club; shall pay all bills and submit the same for approval to the committee; and shall furnish each member, upon application, in January and July of each year, a list of names and addresses of members, and details of receipts and payments." The club is in a healthy condition, and if the proper location is chosen for the coming trials, considerably further east than Bicknell, Ind., where one member has suggested they be held, there is no doubt but that the breed will receive a much needed fillip, though the Irish setter classes, we must admit, have been well filled at nearly all the spring shows, which proves that if properly handled there is plenty of material wherewith to bring the breed up to the position it aspires and is entitled to. We trust, therefore, that all breeders who are interested in the Irish setter will join the club, and having joined, work hard to carry out its intentions.

A governors' meeting of the Eastern Field Trials Club will be held May 12, at Mr. F. R. Hitchcock's office, 44 Broadway, New York city, at 3 P. M.

Mr. Moore writes us that old Plin is a "dandy," and he is more and more pleased with him every day. As this dog has hardly been used at all in the stud the last few years, there is no reason why he should not, if kept in good condition, do yeoman service for some time to come. After prolonged traveling and confinement, it is wonderful how some aged dogs will pick up when turned out to grass, as it were. We remember old champion Mec, the sheepdog, who, after several years of "mug hunting," was thought to be a good subject for the retired list; but a year on the moors of Yorkshire, tending the sheep, brought him out as fresh as paint and enabled him to do another year or two's winning against much younger dogs.

Rather late in the day our Philadelphia contemporary makes a plea for the quarterly publication of the Stud Book, intimating that the energy devoted to the publication of the Kennel Gazette be turned to the former more useful channel. Quite right. This is what has been advocated by us for some time. The Stud Book, as now published, is not as complete as it might be. The indexing of the different breeds showing the number and nature of prizes won by each dog during the past year is a good move, but might have also, easily, served as a page and number index as well, the dog's name following the name. We receive numerous queries asking for the registered number of certain dogs. To find them we must wade laboriously through every volume of the Stud Books. In volumes IV and V, only do we find an index, and the help that these are to the searcher convinces one at once that every volume should have one. The plan of the A. K. C., where one has simply to turn to the breed, when page and number is at once found, should be the one followed. Here is a sample question in our mail this morning: "Will you be kind enough to inform me the registered number of Jessie, owned by T. H. Welch, also her pedigree? It is in the 1,700 somewhere." Now as the book is arranged at present it would take an hour to go through the 1890 volume to find the particular Jessie required. If the A. K. C. system was followed it would be a matter of only two minutes. The point is made at once apparent to

any disinterested person. A properly arranged Stud Book is worth any number of Kennel Gazettes to the breeder, and this they will find out in the long run. Therefore let our breeders who pay for the Stud Book and support it demand that the volume be issued quarterly and properly indexed. It would save trouble to all concerned, both editor and breeder, in the end. If the breeders wish this, let them so instruct the delegates of the club they belong to and have things arranged as they desire. The opinion of breeders is also invited on the subject, and suggestions offered in the proper spirit will, we are convinced, be taken advantage of by the Secretary of the A. K. C.

The Chestnut Hill Kennels now give the breeders of this country such an opportunity both to win prizes and provide themselves with the best stock as may not happen again in many years. All their dogs, with the exception of the two Flurrys, which no price could tempt Mr. Harrison to part with, are now put on the market. When these are disposed of their places will be filled by dogs of some other breed which they will take up, and whatever breed is lucky enough to command Mr. Harrison's attention, depend upon it, the best will be found at the kennels on the Hill. The Irish terrier pair of their kennel will now receive more attention, and doubtless we shall soon hear of some "Brickbats" being hurled across the pond in the near future.

Mr. C. H. Hammond, of Salem, Mass., writes us that he has purchased two liver and white cockers from a California kennel. They stood the journey of 3,000 miles in excellent shape, and much credit is due to the express company which had them in charge. We fancy this is rather reversing the order of things, and "bringing coals to Newcastle" is a saying that occurs to one at once.

After several years' rest, Montreal, Canada, is to have a dog show, and a telegram from Dr. Wesley Mills informs us that the Montreal Exposition Co. claims the dates Sept. 22 to 25. This will make it follow Toronto and come the week before Ottawa, a good arrangement as far as convenience goes, and we suppose that no better, under the circumstances, can be made. The circuit as now arranged is Hamilton, Toronto, Montreal and Ottawa, and if London intends to come in on the same dates as last year it means a clash with Montreal and a consequently inferior show for each. We presume that for wins to count, the Exposition people will have to make application to the A. K. C. or C. K. C. for membership, and as the next quarterly meeting of the A. K. C. is on May 21, there is ample time for them to attend to this essential part of a show.

Dr. Glass, of Philadelphia, has reported to the Chestnut Hill Kennels that Scottie was poisoned by arsenic. This is a very serious conclusion, and should be the subject of strict investigation. The Chestnut Hill Kennels offer a reward of \$100 for any information sufficient to prove who was responsible for this poor dog's death. Mr. Jarrett in his letter to us adds: "It is absurd to suppose that the dog was suffocated, as Flurry III., who was also in the box, was all right, and then again the box has been in use all this season and is of the same size, same amount of ventilation, etc., as those we have been using since the kennel was started." The subject should be given the widest publicity and every effort made to bring the miscreant to justice.

We hear that Miss A. H. Whitney and Mr. C. H. Mason have accepted the invitation to judge at the Toronto bench show in September next. This reminds us that the Toronto dailies seem to be made the medium by certain people to discuss questions which strictly belong to the Canadian kennel organ. The position of judge is a thankless one at best, but if in addition to this they are to become the subjects of abuse in such a public manner it will not be long before our Canadian friends will have to choose judges from among their own fraternity.

The beagle Brittle, which won first at the recent Boston show, has been sold to Mr. J. Rudolph Groves, of Ellicott City, Md.

Mr. W. Stewart Diffenderfer has sold the noted St. Bernard bitch Pleiad to Mr. Thos. Waters, Jr., of Baltimore, Md.

Referring to our advertising columns we find that the Maryland Kennels have placed their new purchase, the St. Bernard Conte (14,540) at stud. This dog has a beautiful head and markings, and strong as he is in Bonivard blood his services should be in good demand at the useful price at which he stands. Hepsy and her puppies are doing well, the latter growing rapidly.

Walking leisurely up Broadway the other afternoon we dropped across a bit of English St. Bernarddom. Standing on the steps of the Astor House we saw Messrs. Sidney W. Smith and H. G. Sweet in earnest conversation. A pleasant half hour's dog chat was the result. Mr. Sweet afterward dropped into our sanctum to look over the English papers. He is over here for the benefit of his health and went to Chicago last Monday and will then journey on to Toronto, Canada. While talking over dog matters on the other side, he expressed himself as much interested in the subject of International sweepstakes for the big show in 1893 at the World's Fair, which we suggested some time since. He is confident that many English breeders would send dogs over and attend themselves, and would do so himself. He suggested that in the more important breeds an English and an American judge should be selected to act together. This is a good plan and would create confidence on both sides.

Mr. Sydney Smith called upon us Friday last on the eve of his departure for England. He sailed on the S.S. Umbria last Saturday with Mr. Samuel Mann, who goes over to bring the new purchases back. Mr. Smith has certainly enjoyed his trip immensely, and who would not after disposing of three dogs for nearly \$10,000? Mr. Smith further stated that he had completely regained his health, and, according to his own words, "felt as young as ever he did." We therefore chime in with the English Stock-Keeper this week—"God save the dollar!"

It seems to be the fashion nowadays to make dog-buying commissions an excuse to visit England and the continent. Mr. R. J. Stephenson, of Hyde Park, New York, is the latest voyager with designs on some of England's dogs.

The "kennel man" of FOREST AND STREAM, fired with an enthusiasm for the gentle art, invested in a rod and line, and being himself to the placid waters of the Hudson opposite Riverdale last Saturday, cast his line upon the waters at full tide. The result of two hours' patience was one striped beauty of 4½ lbs. and another 1½ lbs. There was joy in the camp and the line was wetted at both ends.

The American Bull-Terrier Club held a meeting in Boston, April 27, at 7 P. M., when the following officers were elected: President, Dr. J. S. Saunders; Vice-President, W. A. Power; Treasurer, W. C. Hook, and Secretary, H. J. Harris. The executive committee includes the above names with G. H. Huse, N. A. Knapp and R. Weimer. Application will be made to the A. K. C. for admission. The constitution and by-laws have been drawn up and the initiation fee set at \$1, annual dues the same. We do not think the club has made a wise choice in the selection of the name—the American Bull-Terrier Club. The terrier as we see it in the popularly

named "round-headed bull-terrier" is nothing more than the old English bull and terrier. It is not an American terrier at all. To keep it more distinct and to obviate any conflict with the modern bull-terrier, the terrier accepted in the show schedules and the only one generally recognized as the bull-terrier, the name should have been "The Bull and Terrier Club." Such a name gives one at once an idea of what style this terrier is. Under the other name it is bound sooner or later to conflict with the white bull-terrier in the popular mind.

Mr. Hopf will start for his new home on the Pacific slope next Tuesday. We are certain that he will carry with him every good wish for his success in the new country. We understand that a testimonial is being arranged for, and we trust a befitting one will be allowed to show the appreciation in which he is held by his fellow St. Bernard breeders.

In the *Kennel Gazette* for April there is no mention whatever of a trial, which must have had a good deal of interest both for the A. K. C. and its members. The question naturally arises: Where are we to look for official news? The answer is not far to seek—dogmen must read such kennel papers as *FOREST AND STREAM*, whose concise and intelligible report of the proceedings of the celebrated trial has been the cause of much favorable comment. We also notice in the last issue of the *Gazette* that the list of disqualified members is omitted for the first time, and the plan suggested by us some time since substituted, that any club wishing information as to persons under disqualification shall apply to the club for it. It would have been better if such a plan had been pursued from the beginning.

Collies hold their own it would seem in England despite the great prices realized for St. Bernards lately. Ormskirk Dolly, which Captain Heaton purchased some time since for \$500, has now gone to the kennels of Mr. Pamure Gordon, president of the Scottish Kennel Club, for the neat consideration of \$1,000.

Mr. James Hutchings, of Exeter, England, has just sold eight mastiffs of his own breeding to a gentleman who takes them with him to the East Indies.

Mr. Tom Stretch, known heretofore as one of the most fortunate of collie breeders, has at last had his turn of ill luck. At the Kennel Club show he bought the young collie Black Diamond for \$500, but distemper developed on its arrival at the new home and death ensued after an illness of only five days.

Mr. Sydney W. Smith has just purchased eight fashionably bred St. Bernards from Scotland. Three of the bitches are by Alton and stand 30in. at eight months old; another pup is a smooth, only three months old, for which Mr. Smith paid the largest price yet heard of for so young a pup.

Mr. Geo. Bell has sold his Irish terrier Brickbat, first at Cleveland, to Mr. P. J. Smyth, of Toronto.

Mr. Tracy in his report of New Orleans show in the *Kennel Gazette*, makes a good point when he says: "The judges protested against the offering of specials to be competed for by dogs of different breeds, and declined to judge some of that kind where the prize offered was a patent nostrum worth about fifty cents, and only offered for advertising purposes. If men wish to advertise in this way, the judges think they should be required to give enough value to be worth the trouble of getting the dogs into the ring." This is quite true and it should be the care of bench show committees to see that such farcical specials are not imposed. Follow the plan of the W. K. C. which returned to the owner, last February, a five dollar check which was to be awarded for the pug having the best curl.

The Mohawk Valley Poultry Association and Kennel Club will hold their fourth annual show at Gloversville, New York, Dec. 29, 1891 to Jan. 2, 1892. Mr. C. H. Mason has been asked to judge all classes and has accepted.

The New Jersey Kennel Club will hold a meeting at Taylor's Hotel, Jersey City, on Thursday evening, May 7 for the election of officers for the ensuing year.

SAN FRANCISCO DOG SHOW.—The bench show held by the California Kennel Club opened April 29 with an excellent entry of dogs. The quality was an improvement on that of former years. The show is well arranged, and the hall, being decorated with flags and bunting, presented an attractive appearance. The pointers and setters contain the quality of the show. Great Danes and St. Bernards show a great improvement, and the terrier classes, especially fox-terriers, were well represented for a show so far West. The pointers, especially in the heavy-weight classes, gave Mr. Davidson, the judge, a good deal of work to decide upon the winners. The judging was not completed the first day. A complete list of the awards and a full report of the show by "Namquoit" will be given in our next issue.

MASTIFFS IN CALIFORNIA.—San Francisco, Cal.—*Editor Forest and Stream:* I measured an English mastiff to-day that bids fair to rival Ingleside Maximilian. He is one of the same litter, by champion Ilford Chancellor—Madge Minting, and is called Ingleside Crown Prince. At one year old he measures 28in. in girth of skull and 16½in. in girth of muzzle, measured with a steel tape tightly drawn. He stands 32½in. at shoulder (tape measure) and weighs 164lbs., and is not in full flesh. His bone is excellent, limbs straight and strong, mask good, expression good, ears of good size and well hung. His owner, Mr. McKee, offers his services free to approved bitches for the good of the breed.—NAMQUOIT.

MEASURING BEAGLES.—Cookstown, Ont.—*Editor Forest and Stream:* How often we see mentioned in the records of the different bench shows, disputes over the height of the beagles on exhibition. Let any person who is not quite sure as to the correct height of his dog, nail a 2 by 4in. scantling to his fence or stable, with the 2in. side up, and place the dog to be measured upon it, the little fellow will press against the wall and stand his full height, he cannot stand higher, the owner can then mark the exact and correct height of his dog on the wall.—H. B. N.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

L. B. S., New York City.—I have a collie dog about 17 months old. When put with a female for the purpose of breeding he showed no inclination whatever. Is there any way to make him more ambitious. Ans. The dog is young yet. Feed nutritious food and give plenty of exercise.

A. J. C., Washington, N. J.—I have a water spaniel 2½ yrs. old whose hindquarters are completely paralyzed. For several weeks past I have noticed a gradual weakening of those parts, ending in above result. His appetite seems to be good, and I am at a loss to know the cause. I am positive that the animal has not been hurt or injured in any way. Can it be the effect of poisoning? What can I do for it? Ans. It may be caused by worms. After fasting 24 hours give Stedman's arcau nut, advertised in our columns.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Ohio Nell. By W. B. McClood, Hyattville, O. for liver and white ticked pointer bitch, whelped Jan. 12, 1891, by Dixie of Devonshire out of Kittie Clyde.

Jack Mason. By Geo. L. V. Tyler, West Newton, Mass., for seal brown cocker spaniel dog, whelped Sept. 10, 1890, by Cherry Boy (Ebony—Lofty) out of Flossie T. (Col. Stubbs—Pet).

Gabe. By G. L. Sterling, West Superior, Wis., for lemon and white English setter dog, whelped Sept. 23, 1890, by Count Howard (Sir Alister—Mena) out of Donna Juanita (Rockingham—Donna).

BRED.

Prepared Blanks sent free on application.

Princess—Horace. Flour City Kennels' (Rochester, N. Y.) mastiff bitch Princess (champion Ilford Cromwell—Brenda) to their Horace (champion Minting—Duchess), April 14.

Minna Minting—Horace. Flour City Kennels' (Rochester, N. Y.) mastiff bitch Minna Minting (champion Minting—Minna) to their Horace (champion Minting—Duchess), April 27.

Lady Dorothy—Ilford Chancellor. Flour City Kennels' (Rochester, N. Y.) mastiff bitch Lady Dorothy (champion Hotspur or Orlando—Wanda) to their champion Ilford Chancellor (champion Crown Prince—Brenda Secunda), March 25.

Lula Minting—Ilford Chancellor. E. L. Kimball's (Jackson, Mich.) mastiff bitch Lula Minting (—Bess) to Flour City Kennels' Ilford Chancellor (champion Crown Prince—Brenda Secunda), March 11.

Nora—Horace. E. L. Barnes's (Wellesville, N. Y.) mastiff bitch Nora to Flour City Kennels' Horace (champion Minting—Duchess), April 19.

Kairn—Ilford Chancellor. Wyeth Kennels' (St. Joseph, Mo.) mastiff bitch Kairn (champion Minting—Breeze) to Flour City Kennels' champion Ilford Chancellor (champion Crown Prince—Brenda Secunda), March 26.

Rosebud—Soggarth. John Keegan's (Brooklyn, N. Y.) St. Bernard bitch Rosebud (Monte Rosa—Kleine) to his Soggarth (Lord Bute—Lady Lottie), March 2.

Rumson Lilly—Ben of Brandon. H. Johnson's (Fair Haven, N. J.) pointer bitch Rumson Lilly (Mainepring—Marguerite) to D. B. Keeler's Ben of Brandon (Croxieth—Blanchet II.), March 20.

WHELPS.

Prepared Blanks sent free on application.

Papoose. G. W. Amory's (Milton, Mass.) pointer bitch Papoose (Tammany—Lucia), April 12, four (two dogs), by his Joe (Beppo II.—Sal).

Carrie R. F. C. Rochester's (Logan, O.) pointer bitch Carrie R. (Meteor II.—Carrie), April 20, eight (four dogs), by G. Falcon's Bang Graphic (Graphic—White Rose).

Rosebud. John Keegan's (Brooklyn, N. Y.) St. Bernard bitch Rosebud (Monte Rosa—Kleine), May 1, ten (five dogs), by his Soggarth (Lord Bute—Lady Lottie).

Rideau Flossie. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Rideau Flossie (champion Obo—Gyppling Floss), Feb. 13, six (two dogs), by their Obo, Jr. (champion Obo—Nellie).

Flora Kay. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Flora Kay (Obo, Jr.—Princess Tiney), March 27, six bitches, by their Bob Obo (champion Obo—Nellie).

Cleo. Rideau Kennels' (Ottawa, Ont.) cocker spaniel bitch Cleo (Hecho—Black M.) March 1, six (three dogs), by their Bob Obo (champion Obo—Nellie).

SALES.

Prepared Blanks sent free on application.

Jack Mason. Seal brown cocker spaniel dog, whelped Sept. 10, 1890, by Cherry Boy out of Flossie T., by Geo. L. V. Tyler, West Newton, Mass., to Eugene Cahoon, Franklin, N. Y.

Joe—Merry T. Whelps. Two black cocker spaniel bitches, whelped May 23, 1890, by Geo. L. V. Tyler, West Newton, Mass., to G. L. Wilkenson, Beloit, Wis.

Ko-Ko. Pug dog, age and pedigree not given, by Jas. Bowden, New York, to G. T. McCuen, New Orleans, La.

Glen Jarvis. Dark red Irish setter dog, whelped Feb. 23, 1890, by Echo, Jr., out of Maud, by John A. Jaun, Jr., Onley, Ill., to Glendyne Kennels, Bristol, R. I.

Gabe. Lemon and white English setter dog, whelped Sept. 23, 1890, by Count Howard out of Donna Juanita, by Jas. W. Wood, Poughkeepsie, N. Y., to G. L. Sterling, West Superior, Wis.

Ohio Nell. Liver and white ticked pointer bitch, whelped Jan. 1891, by Dixie of Devonshire out of Kittie Clyde, by Capt. W. M. Hilbilde, Mansfield, O., to W. B. McClood, Hyattville, O.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE REVOLVER CHAMPIONSHIP.

TARGETS for trial score in the amateur revolver championship match are now ready and may be had on application by mail at this office. Already large numbers of the targets have been sent out, and from the sample scores sent in it looks as though the postal card size chosen for each shot target was amply large enough. Galleries anywhere will be supplied with the targets for the use of their patrons in practicing for the match. Samples have been sent abroad, to tell our cousins over there what is the most important matter now before the American revolver world. There is a broad field for experts in this line among the policemen of this city. Each one is required to own and carry a revolver, but singularly enough no provision is made for any drill or practice in the use of the arm. A few of the officers do use the weapon and get very excellent records. They will appear as contestants in the race for the Walter Winans trophy. What is true of this city is true of many other, so far as having a large body of men who should be good pistol shots directly in the line of duty. Military officers too promise to furnish their quota of expert contestants. The arrival of large photographs of the trophy will enable a cut of it to be given in an early issue of *FOREST AND STREAM*.

THAT FULL REVOLVER SCORE.

Editor Forest and Stream: You reported last week that at Conlin's gallery, on April 25, Mr. E. Wassermann, of New York, succeeded in making the wonderful record of a full score on the standard decimal target, hitting a ring a half-inch in diameter six consecutive times with

the S. & W. .40cal. revolver, distance 12yds. This report was correct, save as to the make of the revolver. It was a Colts .44, a weapon which had been presented to Mr. Wassermann by President Hall, of the Colts Co. I send you a fac-simile of the target.

CENTER.

ZETTLER RIFLE CLUB.—Season shoots at Charles Wissol's Cypress Hill Park, L. I.: May 10, 24, June 14, 28, July 12, 26, Aug. 9, 23, Sept. 6, 20, Oct. 4, 18, and Nov. 1. Ring target open to members of the club only—man target open to everybody. Tickets unlimited, entrance fee 25 cents for three shots. After deducting the expenses for targets, etc., the balance of the money shot in on each day will be divided into four prizes at the ratio of 40, 30, 20 and 10 per cent., to go to the four men making the four highest scores, the best ticket of each man to count. The first premium, a handsome trophy, valued at \$50, presented by President B. Walther, will be awarded to the marksman who obtains the greatest number of red flags during the season; a fine gold medal, valued at \$30, presented by Mr. Joseph Banzer, will be awarded to the marksman making the second highest number of red flags during the season; \$20 in gold, presented by Mr. C. Wissel, will go to the marksman making the third highest number of red flags during the season. Shooting on the man target will begin at 9 o'clock A. M. Shooting Committee: L. Flach, H. Holges, V. Steinbach, R. Busse, P. Ross, B. Zettler, shooting master, G. A. Schürman, sec'y, F. Hecking, cor. sec'y. Cypress Hill Park may be reached from New York via Brooklyn Bridge, Fulton, Grand or 23d street ferries, by Union Elevated, Myrtle avenue or Bushwick avenue horse cars to Ridgewood (city line), from there per Cypress Hill dummy direct to the park.

The club opened its season shoot at the 200yd. range, Cypress Hill, on April 27. Light fair, but wind very tricky. The greatest number of points on the ring target was scored by F. Ross, 101, 203 out of a possible 2,000. The best individual scores were: F. Ross 220, J. A. Boyken 217, H. With 209, G. Busse 185, Fabarius 168, V. Steinbach 211, H. Halges 212, M. B. Engel 206, L. Flach 224, G. A. Kohlmetz 204, M. Dorrier 224, G. Lober 209, E. Busse 210, B. Walther 208, B. Zettler 183. The competition on the man target, which is open to all comers, was very sharp, F. Ross leading for a long time with a score of 54 out of the possible 60. But in the 20 line, during the season. The thirty-eight red flags were shown by the markers as follows: B. Walther 9, R. Busse 8, Dorrier 6, L. Flach 5, M. B. Engel 3, H. Halges 3, F. Ross 2, Dr. J. A. Boyken 2, G. Krauss 1.

SYRACUSE, April 29.—These scores were made at the shoot of the Syracuse Rifle Club at the range in Onondaga Valley this afternoon:

Dalley	7	10	9	6	10	7	10	9	9	86
Stillman	9	9	8	8	10	8	5	4	8	67
Knapp	6	7	7	5	7	4	4	9	9	67
Lathrop	8	6	4	8	5	8	7	8	7	67
Reynolds	8	4	6	7	6	9	7	8	5	66
Ball	4	8	7	5	8	5	6	5	2	56
Best:										
Dalley	10	6	7	8	8	6	10	8	9	80
Stillman	8	6	9	6	10	8	10	8	9	81
Reynolds	5	7	8	6	7	6	7	6	7	66
Ball	6	7	4	5	7	9	6	6	5	62
Knapp	4	5	3	7	7	7	7	3	7	58

BOSTON, May 2.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day. The club was able to 1 o'clock wind prevented high scores and disgusted not a few of the shooters. The trap-shooters of this association will begin their regular shoots some time this month. Following are the best scores made to-day, distance 200yds., Standard American target: All-Comers Rest Match—J. Francis 111, S. Wilder 100, J. N. Frye 100, A. H. Ballard 103, J. N. Eames 105, E. Daniels 103, M. R. Barker 104, M. T. Day 103, W. F. Peters 101, D. D. Winn 98, A. S. Hunt 96, A. N. Mann 93, J. B. Hobbs 92, W. Conway 90, J. French 88, M. T. Weeks 87, T. Hastings 83. All-Comers Off-Hand Match—A. Sharp 78, J. B. Thomas 77, M. T. Day 76, D. N. Winn 72, A. S. Hunt 67. Pistol Match, 50yds.—W. Charles 89, M. E. Day 87, A. N. Mann 81.

HARLEM RIFLE CLUB.—The grand opening shoot of the Harlem Rifle Club will be held at Union Hill Schuetzen Park, Monday, Tuesday and Wednesday, May 11, 12 and 13; \$750 will be given by the club in 76 cash prizes and premiums on targets; open to all comers. Festival will be held "rain or shine." Route to the park: Take Barclay street, Christopher street or Fourteenth street ferries from New York, thence horse cars direct to the shooting park. H. C. Kaves, Pres.; E. W. Busby, Vice-Pres.; J. A. Boyken, Treas.; W. H. Cochran, Sec'y.

GARDEN CITY RIFLE TEAM.—Tuesday evening, April 28, at Geo. McCune's shooting gallery, 146 South Halseid street, Chicago, 20 line, during the season. The thirty-eight red flags were shown by the markers as follows: H. C. Kaves, Pres.; E. W. Busby, Vice-Pres.; J. A. Boyken, Treas.; W. H. Cochran, Sec'y.

NEW YORK, April 28.—The following scores were made by members of the Empire Rifle Club at their regular weekly shoot: W. Rosenbaum 84, A. Stahl, Jr., 81, W. Miller 88, A. Novak 87, C. Zettler, Jr., 87, H. Zettler 84, J. Zettler 78, W. Maisenholder 78, G. Hillmeyer 70.

NEWARK, N. J.—It is likely that the Zettler Club portion of the telegraphic match between teams of 15 men each, from the Zettler Rifle Club and the California Schuetzen Verein, will take place in the Newark Shooting Park. The distance will be 200yds.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the *Forest and Stream*, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

May 5-7.—Anburn, N. Y., Gun Club Tournament. \$500 guaranteed. Professionals barred. Chas. W. Bristol, Sec'y.

The total surplus for the day was \$202.50, of which 40 per cent. went into the purses and 60 per cent. went to averages, 20 and 10 per cent., to expert averages, and 20 and 10 per cent. to amateur averages. A very strong wind blew across the traps and made shooting very hard. All the purses were filled and everybody was pleased. The various backed tents of the members of the Association in a half circle back of the traps made a most attractive background and are nicely situated, and are well adapted for a large tournament. The principal feature of the day's shooting was W. Woiwdenroff's breaking 20 straight under expert rules.

Figure 10.10. A graph of the function $f(x) = \sin(x)$ for x in $[0, 2\pi]$. The function is periodic with period 2π .

I walked over to my tent, carefully rubbing my bruises as I went, and inspecting with interest a new and conspicuous phrenological development on the back of my head.

Arrived at my tent I procured a fresh pipeful of tobacco; and while I was lighting it three giddy young gushers of the female persuasion crowded into the one seat of a single buggy came driving briskly by the camp all in a giggle; and as they passed they threw three big flowers in among the canoes.

"Here, Commodore!" sung out Lacy, as he picked up the biggest one and tossed it at me as I stood profile to him, just getting a good "draw" on my freshly lighted pipe. The dainty souvenir whizzed past my face, taking my pipe with it and landing it in the river. With an emphatic exclamation which I still consider not unjustifiable under the circumstances, I took the stem from between my teeth and threw it after the pipe, and then walked over to my tent, amid the suppressed snickers of George and Lacy, stepped carefully in and seated myself firmly on my camp-stool, so as to make sure I could not fall out, closed and fastened the tent flaps tightly all around, so as to make equally sure that nothing could fall in; then having taken all possible precautions, I produced a cigar, lighted it and succeeded in accomplishing my morning smoke without further mishap.

An examination of the club larder at lunch time had developed the fact that we were running short on provisions, the last of the bacon and eggs having disappeared at breakfast; and as it had not been deemed advisable to lay in a new stock at the end of the cruise we had not replenished the evening before; so George rigged up his fishing tackle, putting on a couple of trout hooks baited with worms and proceeded to catch some small fry to flank the eel already caught that morning for the supper and breakfast still to come before we broke camp for home. Lacy assured him that any other excuse would answer just as well; but George protested that we were out of meat and the excuse was sufficient; at any rate it was not worth while to go behind it, and he was soon landing perch and suckers, with an occasional small bass at a most gratifying rate.

There was a square hole or well in the middle of the platform walled with timbers; leading down through the stone filling of the crib some 6 or 8 ft. to the river below, in which was located a hydraulic ram which supplied water to several of the residents in Riverton, a quarter of a mile away; and as George caught his fish he strung them on a stringer and lowered them into this place for safe keeping. He soon had a fine string lying in the shallow water at the bottom of this well, and about supper time Lacy went to get them in order to clean and prepare them for the frying pan.

We were startled by a yell, and looking up in alarm we beheld him leaning over the hole in open-mouthed amazement, while his eyes stood out like beads.

"Great Scott, fellows! just come here!" he exclaimed in a suppressed yell.

We hurried along down the platform and joined him at the well. To our amazement the hole was literally swarming with snakes, which were making desperate efforts to swallow the fish. They twisted and lashed around and fought over the fish precisely like pigs over a trough. It was impossible of course for them to swallow the fish, as the stringer holding them all together effectually prevented it, even if the fish had not been entirely too large for the wonderfully elastic throat and neck of a snake.

We promptly decided that we did not care for fish for supper, and Lacy took occasion to assure George that it was no more than he expected, and that he could not expect any luck to attend his fishing on Sunday; but we remained silently over the well for some time watching their maneuvers with great interest. One would take a fish in its mouth and give it a powerful jerk or shake to clear it from the stringer, while another and perhaps larger one would savagely slash and strike at it and drive it from its prey, only to repeat the same ineffectual maneuver. Numbers of them had their mouths fastened upon the fish; frequently two or three were fastened upon the same one, their jaws and necks distended to enormous proportions, vainly endeavoring to swallow them.

"I wonder if they really could swallow these fish if they could get at them, head first?" said George.

"I don't know," I replied. "I wish that they were loose so that we could see."

"Perhaps I can get them up without frightening the snakes and take them off the string," he continued.

"I doubt it," I replied. "Snakes are very timid creatures, especially the harmless varieties, like these water snakes."

George cautiously leaned over and reached down until he got hold of the peg on the end of the stringer which was tightly stuck into a crevice in the curb of the well, and gently attempted to draw the fish up, but at the first movement there was a whizz and a splash and a glitter of wet, scaly forms, and in an instant every reptile had vanished from sight.

George cut the string and let the fish drop back again, loose, in the well; but although we watched for a long time, and returned at intervals until it was too dark to see down into the hole, not a snake was to be seen again.

"This is a famous fishing place, isn't it?" Lacy remarked as we were smoking our evening pipes around our little blaze of a camp-fire, while the full moon rode in brilliant beauty overhead, flooding the entire landscape of river, bluffs and trees with her silver radiance, bringing out the white sides of the mill and the old covered bridge into such prominence that every seam between the planking could be seen as though in the bright glare of the noonday sun. Her silvery image was reflected from the deep, still water above the dam, bringing out the dense black shadows of the trees into sharp contrast, while from the broken, choppy rapids below, her long, silvery sheen sparkled back at us in countless diamond points of light, and the quiet night was impressive in its loveliness. A distant church bell tolled slowly, its notes mellowed by the distance, while the mournful call of the whip-poor-will alternated with the gentle *hoo-hoo* of an owl. The far-off howling of a dog, lugubriously baying at the moon, sounded ludicrously distinct upon the calm stillness, while the chatting and laughter of a little group of idlers at the railroad station a quarter of a mile below, on the other side of the river, came distinctly to our ears. The meteor-like headlight of a train came shooting along in the dense black shadows under the opposite bluff from up the river, leaving a trail of sparks and a cloud of smoke floating gently away over the water into the bright night, while the train rolled up to the station and stopped, in a bright, cheerful glare of lights, ringing of bells, hissing of steam and hum of voices, and then, with a few short, sharp coughs and puffs of black smoke, went roaring away over the more distant railroad bridge, upon which we presently observed the lantern of the night watchman go twinkling across, alternately flashing out, like a little faint star, and disappearing behind the bridge timbers, while above all rose the deep, steady, subdued, dominating roar of the big dam, with the murmuring wash of the rapids below.

"Yes, Riverton is one of the most noted fishing places on the river, or, indeed, in the State," I replied to Lacy's query.

"Why is it, I wonder?" he continued.

"Well, aside from its accessibility by rail, there are two rivers here for one thing," I answered. "The North Fork comes in down below there half a mile, just under the lower railroad bridge, and generally one stream or the other is clear. It is not often that both are muddy at the same time, except in the regular season of freshets, in the spring, and—"

"It is just our luck, however, that both are muddy now," George broke in, discontentedly.

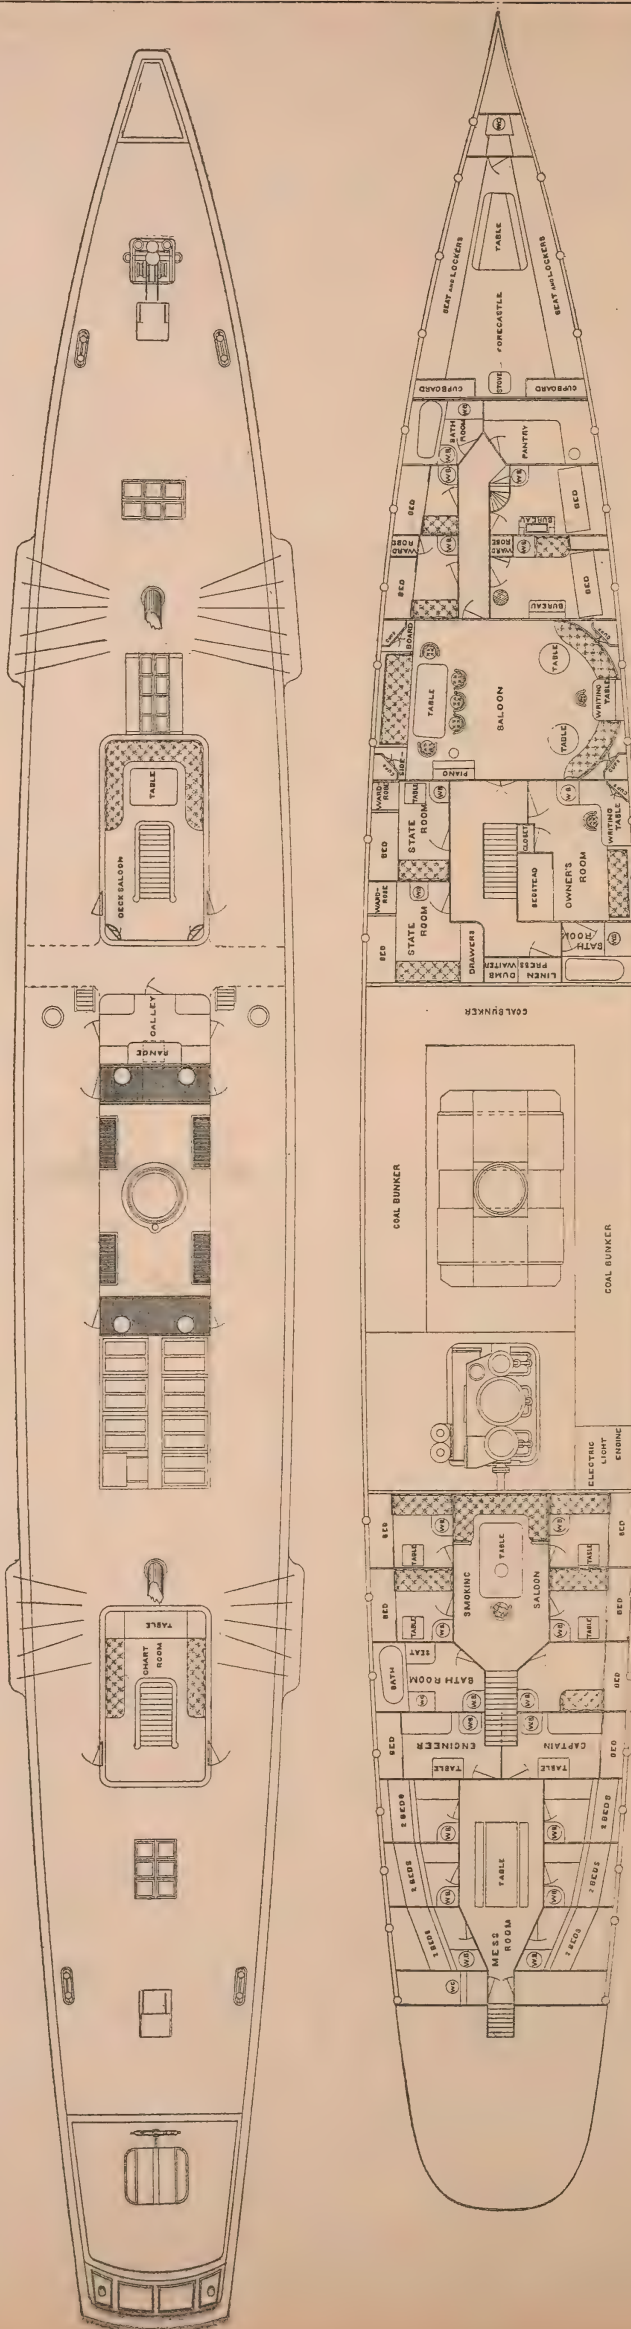

"Yes, you're right there, brother," said Lacy.

"That's very true," I continued. "But it more frequently happens that when one is muddy the other is clear, and the bass leave the muddy water and at once swarm into the clear stream; and as both streams have high dams which the fish cannot pass, at about the same distance above the point of junction—say half a mile—it follows that there will be a little piece of clear water between the dam and the junction in one or the other of the streams, and this piece of the clear water is apt to be full of bass. Some phenomenal catches are on record as having been made here under such circumstances. Then again, there are no dams between here and the Potomac, fifty odd miles below, that are of any consequence; there are two or three old broken-down stone dams and the usual number of fish dams, but they are all easily shot by canoes descending and by bass ascending, and the first real obstacles to their free ascent of the rivers are met with here, in the shape of these big, high dams; and they, consequently, accumulate here in swarms at the bases of the obstacles."

"How do they pass the dams, I wonder?" said Lacy. "Of course they get over some way, for there are plenty of bass in the entire rivers, even up in the remote head streams—North, Middle and South rivers, in Augusta county."

"They go up the shoots or over the dams in high water," said George.

"I declare fellows I am right sorry we are not going on through to Harper's Ferry," said Lacy, as he refilled his pipe and asked George for a match, which he struck on his boot heel and applied to his pipe, while the alternate rising and sinking of the little flame as he puffed away (the blaze of the camp-fire having long since subsided into the dull red glow of a bed of coals, half obscured by a white film of ashes) brought out the canoes, tents and camp equipments, nestling in the dense shadow of the great elms, into curious prominence at each puff—a stray paddle leaning against a tree—the striped fly with the tinware in a polished shine.

DESIGNED BY ALFRED H. BROWN, N. A., 1889.

STEAM YACHT "SEMIRAMIS," 703 TONS.

SAIL PLAN OF STEAM YACHT "SEMIRAMIS."

ing heap upon the little table under it—the camp stove—the fish ing rods leaning against the tent supports—the white muslin bags containing provisions hanging around from twigs or nails driven into the trees, out of reach of prowling “varmints” and gleaming ghostly whiffs of the momentary flames—all being distinctly observable without apparent notice being taken by them.

“Well, it’s an easy matter to reconsider, and buy some more provender and resume the cruise in the morning,” I replied. “For my part, between the unusual heat and the unusual low water, I don’t care for any more cruise in mine. In fact, I would not paddle that big, heavy ship of mine through the miles and miles of ‘eddies’ between here and Harper’s Ferry for her value twice over.”

“Well, I really agree with you,” said Lacy. “We’ve been out two weeks and have had a royal good time, and a fine cruise, and I think, under all the circumstances, we might as well go home; but we’ve had such a good time I am very sorry indeed now it’s all over, that it is over. What are your views, George?”

“I vote to go home,” replied that individual, removing his pipe from his mouth. “The cruise has been a success from beginning to end; but it’s too hot and the river’s too low, and the worst of the river is still before us if we go on.”

“Why, how do you mean?” said Lacy.

“He means simply that the remainder of the trip on the present stage of water is but little less than hard work all the way through,” I replied. “There is considerably less fall in this part of the river than above, and this fall is by no means evenly distributed; nearly half of it—fully 100ft. being found in the six or seven miles at the lower end, down near Harper’s Ferry; and we will have nothing but several days of hard work at this end of the cruise. Why, ‘White Horse Eddy’ alone, down near Berryville, is six miles long, and you know what that means.”

“Yes, it means paddle, boys, paddle, over that much absolutely still, currentless water, the way the river is now,” added George, as he rose and walked over to his tent, while Lacy and I followed his example.

Monday morning dawned cold, wet and drizzly again, with a clammy fog wreathing its gray folds around the trees; which loomed up vaguely overhead, and under whose smoke-like folds the cold, black surface of the river could but dimly be discerned; and the forbidding roar of the invisible dam below seemed subdued and far off to our ears and we unwillingly tried to get on. There was a steady drip, drip, from the leaves overhead upon our tents, and the temptation to linger among our warm blankets was great; but our train passed at 9:30 and we had no time to lose; and we were speedily shivering under the protection of the fly and disposing of our last breakfast, which consisted principally of George’s big eat, which had been despatched the evening before and mailed through the head to a tree, and its tough slippery hide stripped off by means of a pair of pliers; supplemented by fried potatoes, hot coffee and biscuits.

I had already arranged with a wagoner to haul our canoes across the village to the railroad station (the little hamlet did not possess a dory); and by the time we had them packed and ready for him he was on hand with his wagon, and the Frankie, Ross and Clyde were soon lying companionably side by side on the depot platform, their cargoes all snugly packed inside, the hatches fastened down and the muslin aprons tightly drawn over the foot and half open space which remained for the crew and securely fastened, while the long bow and stern painters of each canoe were tied together and wrapped round and round the canoes, and the fenders to protect them while in transit.

Half an hour later the staid and dignified occupants of the rear sleeper of the daylight train on the Shenandoah Valley Railroad looked with grave disapproval upon the sudden irruption of three tramp-like individuals, clad in flannels and short unmentionables, much worse for the wear, low stockings, canvas shoes and slouch hats (for the unsightly but useful helmets had been relegated to the most recesses of the canoes) carrying their personal belongings in rough yellow oiled canvas navy bags, who descended themselves in the stateroom at the rear end of the coach.

They appeared to be in solvent circumstances, however, in spite of their disreputable appearance, and beyond testing the capacity of the buffet to its utmost—proved to be entirely harmless.

Stanton was finally reached in the midst of a drenching rain-storm, and we were only too glad to take a close-covered carriage, which possessed the additional advantage of getting us through the streets of the city in our disreputable attire without attracting an undue amount of attention, for your canoeists is a modest fellow and shrinks from notice—when clad in his cruising habiliments—and Lacy was soon landed at his home, while George and I in the seclusion of our rooms at the Hotel Mozart, doffed our canoeing rigs and donned the apparel of civilization again; and as we came down stairs and received the cordial greetings and congratulations of our friends we realized that the cruise was now but a pleasant regretful memory, already laid on the shelf in our minds along with our other cruises, and remembered among the things of the past.

BROOKLYN C. C.—The full programme of the Brooklyn C. C. is as follows: May 9.—Opening—Paddling and trophy races. May 29 to June 2.—Annual cruise. June 27.—Annual regatta. 1. Junior sailing race, 1½ miles. 2. Senior sailing race, 3 miles. 3. Canoe racing, 1 mile. 4. Tandem paddling race, 1½ miles. 5. Deck canoe paddling race, 800 yds. July 25.—Swimming race, 100 yds. Sept. 12.—Combined race, 3 miles. Sept. 26.—Closing of season—Sailing and paddling trophy races. No regular club races except during the season. Trophy and cup races open only to members. All other races, except swimming, open to members of A. C. A. or any recognized canoe, yacht or athletic club. Swim-

ing open to A. C. A. members only. Special programme will be announced on each race day. The “Record” for club members will be made up from: Unlimited sailing, first challenge cup, first and last double blade paddling, combined and swimming races. Regatta Committee—Com. Jos. Rudd, Jr., ex-officio; M. M. Davis, John Johnson, R. J. Wilkin, Chairman. Challenge Cups (for members only).—Sailing cup, presented by Mr. Thomas G. Budington, in 1886; 3 miles on triangle. Sail from 75 yds. Time limit, two hours. May be held five days, and then subject to challenge. Blue silk pennant. Paddling trophy, presented by Mr. Joseph Rudd, Jr., in 1891, 800 yds., straight. Competed for by either single or double blade, but must be defended by a similar blade and canoe. Subject to challenge five days after race. Red silk banner. Pagan cruising trophy, presented by Mr. Chas. P. Weekes, in 1891. Sail limit, 55 sq. ft. Sail from 75 yds. Time limit, two hours. May be held five days, and then subject to challenge. The regatta committee to arrange in camp each race, time limit, etc. No standing rig or special racing appliances allowed.

A HANDY CANOE TENT.

THE tent shown in the accompanying illustrations, the invention of Mr. A. S. Comstock, of Evanston, Ill., is especially adapted for canoeing and boating, being very compact for stowage

and yet giving room where most needed. It is a shore tent, set with but one pole, and is of a pyramidal form, the back having a wall. Along this wall is room for a bed for one or two, while at the front, near the pole, there is sufficient height to allow a man

to stand up, thus combining floor room and standing room where most needed, and with a minimum of weight and bulk. A special feature of the tent is the triangular fly, which may be used either as an awning and screen for the door, or by reversing it as a fly in case of rain. The tents are made in various sizes, the smallest being suitable for two persons.

A. C. A. MEMBERSHIP.—Central Div.—N. L. Weathersee, Troy, N. Y. Eastern Division—Edward Shattuck, Jr., Winchester, Conn.; J. R. Bartlett, Jr., Boston, Mass. Northern Division—H. W. Mowat, Toronto; E. C. Arnoldi, Montreal; G. E. Hague, Kingston; C. S. Clarke, Ottawa. Atlantic Division—T. E. H. Barrington, Washington, D. C.

Yachting.

Model Yachts and Boats. Their design, making and sailing, with designs and working drawings. Postpaid, \$2.

SEMIRAMIS.

THE steam yacht shown in the accompanying drawings is of a type but little known as yet on this side of the Atlantic, but which is each year increasing in numbers, and which is likely before many years to far outnumber the fast river or day boats of great size which have thus far made up the large tonnage of the steam pleasure fleet. This type of yacht has as yet received but little attention from American designers and builders, the examples now in the American fleet, *Alva*, *Namouna*, *Catrina*, *Suitana*, *Utowna*, *Corsair* and *Conqueror*, being all of British design; as is the *Semiramis*, her designer being Mr. Alfred H. Brown, N. A., of London. Mr. Brown has made a specialty of steam yacht designing, among his larger yachts being *Eros*, of 737 tons, length 219ft., beam 27ft.; *Star of the Sea*, a composite vessel of 553 tons; *Merric England*, also composite, 411 tons; and the present vessel, of 703 tons. Her dimensions being as follows:

Length between perpendiculars.....	206ft. 4in.
Length l.w.l.....	194ft.
Beam extreme.....	27ft. 1in.
Least freeboard.....	6ft.
Depth moulded.....	18ft.
Depth hold.....	14ft. 6in.
Draft extreme.....	14ft. 6in.

The yacht is of steel throughout, the hull and engines being built by Ramage & Ferguson, Leith, in 1889. She is classed 100A but Lloyds and marked “Lloyds M.C.” in red, her machinery having been surveyed by Lloyds while building. Her engines are triple expansion, cylinders 18, 29 and 47in. by 33in. stroke, indicating 730 H.P. Her bunker capacity is 150 tons, the consumption at 10 knots being 8 tons; while on 12 tons she has made a steady speed of 12 knots. It is expected that on long cruises she could easily steam 4,000 miles at 10 knots on her bunker coal. The total space given to the machinery is 47ft. 6in.; engines 15ft., boiler, double ended, of steel, 160lbs. pressure 27ft., and thwartship bunker 5ft. 6in.

The space below as shown in the cabin plan, is very large and excellently arranged. The main saloon is 15ft. long and 22ft. wide, finished in fumed mahogany, the panels being hand painted. The furnishing includes a large table with two smaller ones, a writing desk, corner cupboards, a sofa and a large semicircular divan, two sideboards, a piano, and large revolving arm chairs at the table. Aft the saloon is the owner’s private room, also finished in fumed mahogany, with large bedstead, writing desk and sofa, a bath and toilet room adjoining. This room, with two smaller staterooms for guests, finished in birdseye maple, opens on the main passage at the foot of the companion, there being at the after end a dumb waiter to the deck and hold, and a press and drawers for linen. Forward of the saloon is a second passage, leading to a bath room and pantry, on which open four more staterooms, two of them quite large. These, as well as the 5 after staterooms, are finished in white enamel, with polished black walnut fronts to sofas, bedsteads, etc.

Immediately aft the engines is a smoking saloon, 16x9ft.,

finished in polished American oak, with large table and sofa. From this room open five staterooms, finished in enamel, as described, and a large bath room. The mess room is 18x9ft., with six staterooms for petty officers, in addition to large rooms for the captain and engineer.

On deck there are two teak deckhouses, a bridge, and a teak steering house on the latter, not shown in the drawings, as it was subsequently added. The forward house is 19x9ft. 6in. inside, forming the deck saloon. The after house is 3ft. shorter and fitted up as a chart room. The galley is in the fore end of the boiler house, on the main deck. The plumbing of the yacht is very complete, each of the three baths being heated by steam. Electric lights are fitted throughout, even to the stoke holds, the engine and dynamo being located, as shown, on the starboard side of the main engine room. The steering gear and capstan are both operated by steam. The rig is a schooner, with yards on the foremast. The *Semiramis* was built for Mr. John Lysaght, who still owns her, though he will probably replace her by a smaller vessel, for which Mr. Brown has prepared plans. During his ownership the yacht has done a good deal of cruising, visiting Norway and the Mediterranean.

THE CHANGES IN NEW YORK BAY.

THE changes in the lightships and buoys about New York Harbor, which will be made next week, will necessitate alterations in the courses of the New York, Seawanhaka, Atlantic and Corinthian, as well as the smaller clubs, as the familiar marks, such as Buoy 10 and Buoy 8½ will be obliterated, new ones taking their approximate places. On April 28 the New York Y. C. held a special meeting, at which the changes were made in the club courses, so that they will be as follows:

No. 1—Start across an imaginary line drawn from the judges’ boat anchored to the east of Buoy 11, and about two cables’ lengths from it to Buoy 14 near Southwest Spit, passing to the west and south of it; thence south of Buoy 12 and north of Buoy 5, off the point of Sandy Hook, to Sandy Hook Lightship, turning from the north and east and returning over the same course. This will shorten that course about 1½ miles.

Course No. 2—The same as course No. 1, substituting Scotland for Sandy Hook Lightship. All yachts must pass to the eastward of West Bank buoys No. 7 and 9, both going and returning.

Course No. 3—Start from an imaginary line between Buoy 14, near Southwest Spit, and a mark boat anchored south of it; thence south of Buoy 12 and north of Buoy 5, off the point of Sandy Hook, to and around Sandy Hook Lightship, turning it from the north and east, thence to and around a stakeboat anchored near the buoy on Shrewsbury rocks, turning it from west and south. This will lengthen the course a little.

The club also adopted new devices and ribbons for the uniform caps, which are not to be copyrighted. The insignia of rank for members’ caps will be a gold furl anchor and the club flag crossed. For captains two foul anchors over the club flag. The commodore will have a star on each side of the latter device and one above it. The vice-commodore a star on each side of it, and the rear-commodore one above it. The rating badges will be for sailing masters silver anchors on the right sleeve; mates on the left sleeve; quartermasters an eight-spoke wheel; boatswains an eagle and coxswains crossed oars.

The annual dinner of the club will take place to-night at Delmonico’s.

THE CORINTHIAN MOSQUITO FLEET.—Some important changes are now in contemplation in the Corinthian Mosquito Fleet in order to adapt the rules to the new 25-footers. The present limit of the fleet is 20ft. l.w.l., which it is proposed to extend to 25ft. As some of the 25ft. corrected length racers will be over 25ft. l.w.l., it is proposed to admit them to the class, provided that their racing length does not exceed 25ft. The class limits will probably be arranged as follows: Under 15ft. l.w.l., 15 to 18ft. l.w.l., 18 to 21ft. l.w.l., and 21 to 25ft. l.w.l., or if over 25ft. l.w.l., not to exceed 25ft. corrected length. The two smaller classes will race under the present allowance of the fleet, 6 seconds per foot per mile, which has worked very well in practice; but the two larger classes will race under the Larchmont rules and allowances. The limit of crew will probably be extended to three men in the largest class. It is proposed to hold monthly races for the 25-footers and other small craft through the season.

THE NEW 25FT. CORRECTED LENGTH CLASS.—Com. Lawton, of the Atlantic Y. C., is ready to present a cup for this class, providing 4 yachts will start. The Corinthian Mosquito Fleet has under consideration a proposal to enlarge its limits to take in the new class, in which it will give a race on Memorial Day. The first of the class was launched on April 27, at Webber’s yard, New Rochelle, Mr. L. J. Boury’s Smuggler. Apart from the merits of her design, she is remarkable as a specimen of fine handwork. She had her trial under sail on Saturday. Mr. Webber is now at work on a slightly longer and narrower craft for Mr. O. G. Jennings, to be named *Needle*. Mr. J. C. Summers, of “Who Won?” fame, will have a third, to be named *Colleen*.

LIEUTENANT HENN.—Lieutenant and Mrs. Henn have been in New York for some days. Mrs. Henn sailing on the *Umbria* on May 2, with a colony of five coons captured in Florida. Lieutenant Henn will remain for another week, to be present at the dinner of the New York Y. C. on Thursday. *Gaitea* is now fitting out at Plymouth under Captain Bradford’s charge and her owners will join her on their return. Lieutenant Henn will buy or build a shoal draft yacht this summer, taking her to Florida for the winter.

REPRESENTATIVE AMERICAN YACHTS.—We have received the second part of Mr. Peabody’s handsome book, containing 10 photographs of the leading 40-footers. The plates are printed in different tints, and each is artistic enough to be framed alone. Mr. Geo. A. Stewart, of the *Boston Globe*, contributes a brief but interesting history of the boats and of the 40ft. class, including the records of two seasons, 1889-90. The agent in New York is Wm. Cullen, 61 William street.

CORINTHIAN NAVY.—The following members have been enrolled during April: New York Bay Squadron: J. J. Finlay, W. H. Blankley, Long Island Sound Squadron: Geo. Vassor, Jr., A. H. Sleight, Walter Eichbaum, W. W. Hollingsworth, S. S. Brewster, A. H. Day, S. B. Pirie, Delaware River Squadron: G. W. Holloway, L. N. Chevrier, J. M. Coward, M. R. Muckel, Jr., H. Whitehead, T. C. Smith, East River Squadron: L. C. Hopperd,

FIXTURES.

- MAY.
2. San Francisco, Opening, Sausalito.
3. San Francisco, Squad. Sail.

- OCTOBER.
7. Brooklyn, Fall, Gravesend Bay.
17. San Francisco, Closing Day.

NEW JERSEY Y. C.—The annual meeting of the New Jersey Y. C. was held on April 30, the following officers being elected: Com., John Ortleib; Vice-Com., Richard Green; Recording Sec'y, J. E. Clarke; Financial Sec'y, Bernard Deetjen; Corresponding Sec'y, Louis Wunder; Treas., E. W. Ketcham; Meas., Daniel O'Brien; Regatta Committee, Thos. McArdle, Bernard Deetjen and E. W. Ketcham; Trustees, E. A. Stevens, T. Butts, John Ortleib, Paul Leeger and E. W. Ketcham. The annual regatta will be sailed on Wednesday, June 17.

HULL Y. C.—The new house of the Hull Y. C. will be formally opened on June 9. On the lower floor will be lockers, baths and three bowling alleys; on the next a billiard room, library and committee room, and on the third a large hall with a permanent stage. In the club cottage will be eleven sleeping rooms.

AUXILIARY NAPHTHA CRUISERS.—Mr. A. Cary Smith is now at work on a design for a small auxiliary naphtha cruiser for the Gas Engine and Power Company, of Morris Dock, which is making a specialty of this class of boat. It is probable that the result will be a decided improvement on previous craft.

NEW HOMES FOR BOSTON BOATS.—Pappoose is now at Wintringham's yard, on her way to Buffalo; Shark has gone to her new home at Providence, having a hard trip around the Cape; Monaghan left Boston for New York on May 4 and Ventura sailed on the same day for Newport.

SULTANA, steam yacht, Mr. T. L. Park, arrived at Constantinople on April 29. From recent reports the yacht is greatly improved by the Belle view boiler, making 12 knots at sea. She is also reported as very handy under canvas.

ILDERIM.—This name has been chosen for the new 46-footer owned by Mr. Cornelius Vanderbilt. As Mr. Vanderbilt has decided to spend the summer abroad, the yacht may not be raced.

FORTY-SIX-FOOT RACING.—Vice-Com. Banks, Atlantic Y. C., of the schooner Waterwitch, has offered a cup for a special race on New York Bay for the 46ft. class.

MASSACHUSETTS Y. C.—Com. Soley has appointed Leigh Osborn Garrett as fleet captain, vice Arthur F. Shepard, resigned; and John A. Tanner as first surgeon.

WENONAH—ULIDIA.—Mr. Jas. Stillman, owner of the cutter Wenonah, has sold her to Mr. R. W. Weston, taking in part payment the latter's cutter Ulidia.

NAUTILUS.—The Boston Herald of May 3 contains a very careful and complimentary description of the new Wintringham cutter.

WHIM, schr., was at Beaufort, N. C., from Charleston, on April 27. On the same day Coronet, schr., sailed from Beaufort for New York.

KATHLEEN.—Mr. Whitlock's 30-footer will sail under a cruising rig, now being fitted at Port Jefferson, when not racing this season.

MONTECITO, yawl was sold by Mr. A. Cary Smith, her new owner being Mr. Alexander Maitland, of the New York Y. C.

GENOE, schr., is out at Lawley's for 10 tons more of lead on her keel.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nant," "Glean," "Dick Swiveller," "Syrillene" and other competent authorities to be the best treatise on the subject extant.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

A. E. E. Lodi, O.—Will you please state in your next issue of FOREST AND STREAM the open bass season for Lake Chautauqua, N. Y.? Ans. Season will open May 30.

C. T. G., South Boston.—May single-shot pistols be used in the FOREST AND STREAM revolver competition, or is it restricted to revolvers? Ans. It is confined to revolvers.

G. W. S., Meridian.—Is there any way to load a cylinder barrel to make it more effective at the trap than the usual loader for choke-bore. Ans. No; but the shot will cover a wider area.

M., Canada.—1. Are dew-claws any objection on a setter? 2. What is the best way to measure the height of a dog? Ans. 1. Yes. 2. You will find a very good plan described in our kennel columns this week.

A. O. N., Newburyport, Mass.—Will you be kind enough to inform me the register number of Jessie, owned by T. H. Welch, also her pedigree? It is in the 1700 somewhere. Ans. You do not state what breed the dog is.

J. H. B., Ponkapog.—Can you tell me how much a live Canada goose ought to be worth, and where I can get some at moderate prices? Ans. We cannot put a price on it. Write to Mr. Fred Mather, Cold Spring Harbor, N. Y.

F. H. T., Central Lake, Mich.—My spaniel puppy, ten weeks old, has a film forming over the right eye. Cause unknown. Can anything be done for his relief? Ans. Drop in the eye, morning and night, a pinch of very fine powdered sugar.

M. S. J., Poughkeepsie, N. Y.—Can you let me know through your columns where I can obtain live minnows, by hundreds, for bait? Ans. Try New's store, 337 Tenth avenue, New York, or A. H. Dirke, 405 West Fifth street, near Nine avenue. Your own fishing tackle stores ought to furnish the bait you require or information as to where it may be bought.

W. H.—I wish to know the pedigree of Victor II. (6,574) if he has one. He is owned by Judge Anson Pease, of Massillon, O. Vice. The mastiff Victor II. is by Leo IV. (A.K.R. 6,122) out of Ashmont Bertha (A.K.R. 3,368), by Hero II. out of Empress, by Grip (Jock—Dido) out of Britannia, by Bruno out of Empress; Hero II. by Salisbury out of Venus; Leo IV. by Lord Nelson out of Lioness.

G. H. B., Cleveland, O.—Can you inform me where I can get a photo of Scottish Prince, as I have a pup by him out of June? Also the address of Col. Ruppert, his recent purchaser? For picture write to Sydney W. Smith, York Road, Leeds, England. A good likeness, a fac-simile of the photo, was published in FOREST AND STREAM last week. Col. Ruppert's address is 1639 Third avenue, New York City.

A. Q. D., Toledo, O.—Will you kindly advise an appreciative reader how to "blue" or bronze brass rod mountings, which I prefer to nickel plating. Wells in "Fly-Rods and Fly-Tackle" tells how to coat them with black oxide, but I prefer the bluish color, similar to that of some furniture ornaments. Ans. An ad for bronzing ferrules and other brass mountings is sold by Malcolm Shipley, Commerce street, above Fifth, Philadelphia, Pa. Its composition is unknown to us.

C. P., Toledo, O.—I have an Irish setter which has had red mange for past two years, have had him cured as I thought twice, but he breaks out again. He is apparently healthy otherwise and eats well. Can you advise me as to treatment? 2. Is there any danger of a person taking it from a dog by rubbing him or otherwise handling him? Ans. 1. Use one of the mange cures advertised in our columns, also give him some blood purifier. Dr. Glover has a good mixture. 2. We have never known of such a case.

S. W. C., South Ballston, N. Y.—Kindly give me extended pedigree of pointer dog Ino II. (A.K.R. 6,023) through your valuable columns. Ans. Ino II. (A.K.R. 6,043), by Ino out of Megg, by Beausire out of Mag M., by Craft out of Temptation. Beausire by Tim out of Fannie Fisher. Tim by champion Faust out of champion Clytie, by champion Sensation out of Lily. Fanny Fisher by champion Beaufort out of Nymph, by Viscount out of Dolly. Ino by Joker, Jr. out of Lady Mac, by Faust out of Gertrude, by Snapshot. Joker, Jr. by Beaufort out of Nymph, as above.

W. A. R., E. Tawas, Mich.—Please inform me through your valuable paper what months trout spawn in, and if any difference in locality and how long they carry their eggs. Ans. Brook trout usually begin spawning in October and the season sometimes lasts until April. In exceptional cases the spawning season may begin much earlier in the fall, so that the limits of the spawning may include all of the year except the hot summer months. The temperature of the water has a great deal to do with the date of spawning as well as with the development of the eggs, and the spawning may be hastened by liberal feeding.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price \$2.50. For sale by FOREST AND STREAM.

New Style Tent

FOR CANOEISTS AND HUNTERS.

Patented Jan. 13, 1891.

The Expert's High Grade Trap Cartridge

Owing to the demand for a thoroughly reliable and strictly first class "Trap Cartridge," we have decided to put on the market a cartridge to be known as "The Expert's High Grade Trap Cartridge." These cartridges will be loaded with The Chamberlin Cartridge Co.'s "High Grade Trap Powder," which is made "exclusively and expressly" for these cartridges, and which we know to be the best trap powder made. The specifications and lists of these cartridges are as follows:

Load No. 30. 10-gauge Climax Shells, 3 1/4 drs. High Grade Trap Powder, 1 1/4 oz. No. 8 shot. List \$80.00 per M.

Wadded two 9 and one 10-gauge Black Edge Wads on powder and card on shot.

Load No. 32. 12-Gauge Climax Shells, 3 drs. High Grade Trap Powder, 1 1/4 oz. No. 8 shot. List \$27.50 per M.

Wadded two 11 and one 12-gauge Black Edge Wads on powder and card on shot.

Chilled shot \$1.00 per M. net extra.

We solicit a trial of these cartridges and know that they will not fail to give the very best of satisfaction. We are also prepared to load these or any of our regular trap or nitro-powder cartridges in the new U. M. C. Co.'s "Trap" shell for which an extra charge of \$10.00 per M. net will be made.

Send stamp for our list and discount.

MERWIN, HULBERT & CO., 26 West 23d Street, New York City.

The Celebrated Spangler Perfect Crimper

ENDORSED BY EVERYONE.

The only tool that will positively crimp every shell alike, no matter what the variation of load may be. The only tool having an automatic plunger which prevents end of shell spreading toward center of wad. The above not only insures uniformity, but entirely obviates the possibility of the load becoming loose. Dealers and sportsmen will at once recognize this as a very important feature. All wear the points in the Crimping Die are made of steel and case hardened, thus insuring durability and perfection of work. Size and weight about same as old style. Is invaluable to users of Schultz, E. C. and Co. wood powders. Send stamp for specimen shell. Manufactured only by

A. E. SPANGLER, Patentee, Fulton, N. Y.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if the angler chooses.
THIRD—No fish can ever get slack line with it.
FOURTH—It will save more fish than any other reel.
FIFTH—It will prevent tangles, lines and snells from being broken by large fish.
SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

This reel is manipulated entirely by the hand that holds the rod.

	ANSWERS TO CORRESPONDENTS.

THE FUR SEAL CRISIS.

THE season for beginning to kill seals at the Pribylov Islands opens usually about June 1, but as yet no one seems to know whether the Government has decided that the fur seals shall or shall not be exterminated this season. It is announced that Great Britain has proposed to the State Department that no seals whatever shall be killed this year, and that, during this close time, further investigations shall be made as to the numbers of these animals which visit the islands during the breeding season of 1891. It is difficult to understand why this proposition, made some time ago, was not at once accepted by our Government, for it is so manifestly in the interest of the protection of this valuable industry that it might have been supposed that we would not have hesitated to secure so good a chance to save the seals, and the dollars which these seals may confidently be expected to produce in the future.

It is claimed, however, that private interests—those of the Commercial Company which has leased the seal islands—are so strong at Washington that the Government hesitates to order the close season, which is demanded by the existing conditions of seal life at the Pribylov Islands; that this company wants to secure all the seals it can this season and cares nothing about the future; in other words, that it wishes for the sake of present gain to utterly destroy a piece of property which for 20 years and more has been bringing in to this Government an annual revenue of about \$300,000. We say nothing about the pity of the extermination of a most interesting mammal. The naturalist and the sentimentalist may grieve over that, but a consideration of that kind does not appeal to the average man so strongly as does the thought that a great sum of money may be taken out of the United States Treasury through the selfishness of an influential corporation.

No satisfactory reason has been advanced for failing to order entire protection to the seals this year, nor—with England's proposal before us—can we conceive why there should be any delay in establishing at least a temporary close season. That such a close season should endure for five years is believed by every one who is familiar with the subject.

But nothing is done at Washington; the days are slipping by, and before long the killing will begin, and the miserable remnant of the young male seals now at the islands will be wiped out of existence, and with them will disappear any present hope of the restoration of our fur seal fisheries.

THE HELEN KELLER FUND.

WE have received since our last issue the following additions to the Helen Keller Fund for the education of the little mute Tommy Stringer; the money has been received through Mr. Wm. Wade, of Hulton, Pa., who, it will be remembered, first brought the subject to the attention of FOREST AND STREAM readers. The English subscriptions came to Mr. Wade from Mr. Geo. R. Krehl, editor of the London *Stock-Keeper*:

Geo. R. Krehl, Esq., London, Eng.....	£5 05
J. G. Crawford, Esq., London, Eng.....	05
F. B. Craven, Esq., Thornbridge, Eng.....	1 01
A. J. Gosling, Esq., England.....	5 00

The above is equivalent to..... \$11 11

J. W. Paul, Esq., Oakmont, Pa..... \$56 25

Previously received..... 57 00

Total to date..... \$118 25

The amount has been sent direct to Helen Keller at the Perkins Institute for the Blind, in Boston. In this connection, the following paragraphs from the Boston *Globe's* report of a recent exhibition at the Kindergarten for the Blind in Jamaica Plain, Mass., will be of special interest to Helen's friends among our readers:

The first of these was "Little Helen Keller," as her friends still call her, though she is fast outgrowing the adjective in its literal meaning, for she has grown very rapidly indeed during the past year, and is now as tall as her devoted teacher, Miss Sullivan. Helen's mental progress has more than kept pace with her physical growth. Her wonderfully brilliant mind has developed in a manner nothing short of the marvellous, a fact which is shown in the beaming intelligence which shines from every feature of her expressive face.

During the past year, moreover, Helen has learned to talk and can now use her vocal organs in audible speech. She says everything she wishes to express, many things with such distinctness that one can see it is only a matter of time when she will have complete control of her organs of speech.

Helen was especially pleased to see Dr. Oliver Wendell Holmes, who had come on her own special invitation. This letter of Helen's to the beloved poet was very beautiful and touching from the quaintness of its manner and expression. She told Dr. Holmes that she should be very glad to have him come to this reception because she should read during the exercises his poem on "Spring Hath Come;" and she told him, moreover, how much she loved this, one of her favorite poems, because once she could not see the spring at all, but now she saw it through his eyes.

Little Tommy Stringer, the latest inmate of the kindergarten, was near Helen constantly. He is her little protege, for whose education she has herself undertaken to provide, and she was constantly caressing him. Tommy is 4 or 5 years of age, a happy, smiling, rat little lump of humanity, who has absolutely no means of communicating unto the outside world, as he has never yet been taught anything. He appeals to all hearts by his helplessness and by his affectionate nature, for he demands constant petting and tending to make him happy, attentions which he rewards with smiles and kisses.

Helen Keller was announced, and there was a little flutter of excitement as the tall, graceful girl advanced with her teacher to a little table, on which was placed a large book printed in raised letters. She found the page herself, and then said, through her teacher, on whose hand she spelled out the words: "I will read a few verses from Dr. Holmes' poem, 'Spring Hath Come.' It is one of my favorites."

Then she read, her teacher still acting as her interpreter, a portion of this beautiful poem, her face expressive of the utmost delight as she did so. He left hand traversed the page, spelling out the words with her finger tips, while with her right hand she made the characters she thus read. When some of the flowers were mentioned, such as the rose, the violet and the jonquill, she eagerly pointed them out from a bunch of flowers which she had, selecting the right blossom with the utmost quickness and ease.

But more was to come, for at the close of her silent reading Helen repeated in audible speech the last stanza of the poem, a feat which was greeted with the warmest applause by her delighted audience.

Then Dr. Phillips Brooks, at Helen's request, told the story of her newly adopted protege, little Tommy Stringer, for whose education she is anxious to raise the necessary funds, and in her name made an appeal for help in this task. It costs between \$600 and \$700 a year to care for such a helpless little waif as the blind, deaf and dumb boy, providing him with a special teacher, etc., and of this sum Helen has about one-half the necessary amount raised.

She is asking her friends to help her in this work, and surely the appeal of one such child on behalf of another cannot go unanswered.

THE ANGLING EXHIBIT AT THE WORLD'S FAIR.

ANGLERS throughout the country will learn with decided gratification that Dr. Jas. A. Henshall has been appointed on the staff of the Government Exhibit, and as a special agent of the U. S. Fish Commission in relation to the World's Columbian Exposition in 1893. Capt. J. W. Collins has entire charge of all matters connected with fish and fishing in both the Government and competitive displays for that event. It is Dr. Henshall's expressed purpose to get together the largest and most complete and comprehensive exhibit of everything pertaining to angling, and as "Angling Expert" he will have charge of this special feature.

The matter is one in which manufacturers and dealers should feel interested, and the great army of anglers should also contribute their aid and influence. The opportunity should not be lost to make this one of the greatest and most effective exhibits of all that pertains in any way to angling. We bespeak for Dr. Henshall the hearty co-operation of every one who can aid him in making the display a credit to the angling interests of the country. At an early date we hope to supply full information as to the character and scope of the exhibit; of one thing we may be sure, that the work has been intrusted to competent hands and will be conducted with intelligence and ability.

SNAP SHOTS.

NUMEROUS game and fish bills introduced at Albany this year shared the fate of the codification measure; the only bill which became a law was one providing for fishways in the Cattaraugus creek and tributaries. All the Adirondack Park bills were killed. The closing days of the Assembly were enlivened by a wrangle over the report of the Committee on Public Lands and Forestry, which investigated the Forest Commissioners. The majority report found that the Commissioners had neglected their duty, if indeed they were not criminally negligent, and a bill introduced by the committee legislated the Commissioners out of office and provided for a new board of three Forest Commissioners. The minority report, while it censured the Commissioners, did not call for their removal. The Commissioners had friends enough in the Assembly to defeat the majority report and to adopt the minority report. Of course, after that action, the majority bill, removing the Commissioners, was not able to go beyond the committee which introduced it. What a sweet condition of things it is to be sure.

Our angling columns record the notable exploit of Mrs. George F. Stagg, of Louisville, Ky., who captured with rod and reel, in the Caloosahatchie River, Florida, a tarpon weighing 205lbs. Mrs. Stagg now enjoys the proud and for a woman extraordinary distinction of being "high hook" among the tarpon anglers. The previous record for rod and reel was held by Mr. John G. Hecksher with a fish of 184lbs., and for hand-line fishing by Senator Quay with one of 187lbs. Next week we shall print some notes about other women anglers who have scored success with these big fish of Florida.

The note in our angling columns respecting the Mastigouche trout waters will be particularly welcome to many because of the explanation contained in it that the fishing in that district is free. In these days when so large a share of good fishing has been absorbed by clubs, he is doing a public service who points the way to lakes and streams which are still open.

AMERICAN FISHERIES SOCIETY.—The twentieth annual meeting of the American Fisheries Societies will be held in the lecture hall of the National Museum, in Washington, D. C., May 27. The following papers have been promised for the occasion: "The Rearing of Salmonidæ in Troughs and Tanks," by Mr. Charles G. Atkins; "Kennerly's Salmon" and "An Albino Brook Trout," by Dr. Tarleton H. Bean; "The Fish and Fisheries of Florida," by Dr. H. H. Cary, Fish Commissioner of Georgia; "The Fisheries at the World's Fair," by Capt. J. W. Collins; a paper by Dr. G. Brown Goode, its title not yet furnished; "On the Teeth of Fishes as a Guide to their Food Habits," by Dr. J. A. Henshall; "Breeding Habits of the Yellow Perch," by Mr. Fred Mather; "The Transportation of Living Fishes," by Mr. W. P. Seal.

The Sportsman Tourist.

OLD MR. BASS (INJEANNY).

DOWN in ther medder green grass er growin';
Leaves on er oak tree big ez squirrel-ear;
Perty soon the v'let flowers they'll be a-blowin';
Run er suckers in ther crick er clur a-past yere.
Medder lark er "pinky-pank-in" 'long ther bottom lane;
Woodpecker workin' on ther ole rotten rail;
Warter in ther crick er a-gittin' clean an' plain,
En ole Mr. Bass he 'ginter wiggle hes tall!
'Long on ther riffs ther minnies er a-swarmin',
Frog in ther ma'sh er-tunin' perty high,
Sky gittin' cl'arer an' days er a-warmin',
En ole Mr. Bass er a-cookin' up hes eye.
Climb ther ole shed an' git yer pole down, Sammy,
Reckon we 'ont need no coats in this sorter air,
Pack yer dinner pail an' bait, an' say good-bye to mammy,
Ole Mr. Bass he kaint give us no dare!

M. HUGH.

CHICAGO, ILL., April.

ON THE NORTH SHORE.—III.

[Continued from Page 303.]

WHEN the rain had ceased breakfast was prepared and partaken of, and then we started for another raid for the coveted fish. We each got a rise at the boulders after a few casts and unfortunately missed, and then Jupiter again opened the flood gates, which necessitated a retreat to the tents. The rain continued without intermission till 3 o'clock in the afternoon and then it ceased. Once more we take to the boat and on reaching the rocks about half a mile from camp we caught six, four falling to my rod, my first trophies, of which there was one double catch, and of the remainder one each to Ned and Joe. Rain coming on again another retreat was made. It had now been raining for two days and nights with but little cessation and it looked as if we were in for another night of it. Supper had to be prepared amid the shower and served in the tent. After the meal there was a slight discontinuance of the rain, and as the camp-fire looked exceedingly inviting we gathered around it, endeavoring to look serene and happy. To make the situation more cheerful Ned got off, in capital style, "The Arkansas Traveler," giving both music and dialogue, to the infinite delight of the half-breeds. Occasionally the rain would again commence and cause us to beat a retreat to shelter, there to remain till it had ceased. We kept thus marching to and from the tent to fire till 9 o'clock and then retired. No sooner were we wrapped in our blankets than the pitiless rain commenced beating a tattoo upon the tent and then by way of sarcasm I recited:

"Art hath naught of tone or cadence
That can work with such a spell
In the soul's mysterious fountains
Whence the tears of rapture well,
As that melody of nature,
That subdued, subduing strain,
Which is played upon the shingles
By the patter of the rain."

"Please omit the remainder of the stanza, as any reference to 'patter of rain' is just now sadly out of place and a terrible bore."

"I will cheerfully comply, but you know, Ned, that poetry is the music of the soul, and above all of great and feeling souls."

"Then give us 'The Beautiful Snow' and forever after hold your peace, as I desire to slumber, and brood no longer o'er this elemental strife of thunder, lightning and rain."

"Good night, then."

"Ta ta."

And then amid "the patter of the rain" we fell into an "inviting sleep and soft forgetfulness."

The morning opened cool and foggy, with a sky anything but flattering for clear weather. Cloud after cloud of a wintry mixture was scudding along in wild pursuit, while the waves were beating a solemn anthem on the ragged rocks. Ned discovered on arising that he had been badly bitten during the night by some insect he thought more ferocious than a sand fly or a mosquito. The afflicted part of his body which he exhibited was a pitiful sight, marvelously resembling a miniature ridge of purple mountains. He freely laved it with some Pond's Extract, which soon allayed the pain and the inflammation.

Immediately after breakfast Joe went to work and finished making the pair of oars, upon which he had been engaged during spare hours ever since we had been in camp. He was a good mechanic and had made an excellent job of them.

Ned proposed after the completion of the oars that we go to Maple Island and the main shore opposite for our morning's sport. It certainly did not seem prudent to go out in such threatening weather; but as we could soon sound a retreat in case of necessity, I acquiesced, and we all got in the boat and started with as cheerful hearts as if the elements were of a roscate character. We were soon on good grounds, and then the strife for the quarry commenced in earnest. Ned sent his pet creature into every choice spot that presented, and it was not long before he had a glorious rise, but unfortunately he missed it. It was but a moment or two before my end of the boat was opposite the spot where Ned woke up the freckled beauty, and then circling through the air went my silver-doctor and brown-hackle in search of the hungry trout. He or another of the haughty and handsome tribe rose to the delusive doctor and then repented of his rash action by trying to run away, but the tempered steel held him secure, while the reel was discoursing music most sweet and the rod bending in unison. He struggled like a gallant warrior for some time and then died like all his tribe with his defiant eye to his wily adversary. He was a three-pounder of exceeding grace and symmetry and a ravishing beauty in his cloak of spotted carmine. We whipped the waters after this capture for some time before getting another rise and that came to Ned, who was more fortunate this time, for he skillfully succeeded in bringing the daintily painted darling to net.

Being now at the north entrance of the bay we crossed over to lovely Maple Island, a noted rendezvous for the tribe of fontinalis. Here I caught two more of indiffer-

ent size, and Joe, who was now using Ned's rod, killed another, and then the elements showing such a bold front for a wild storm of rain, if not of wind, we up sail and beat a hasty retreat. A handsome breeze sent us racing o'er the ruffled waters, with the white foam spraying quite lively from the sharp prow of the graceful craft. To windward ragged clouds were looming up like blocks of blackness, such as a poet "might dream of in picturing the hellish walls and battlements of a beleaguered city of demons," upon which there was a play and crackle of lightning, but no moan of thunder yet.

As we struck the beach at our camping quarters, a slight sprinkle of rain commenced, which increased to such an extent that we had to take to our tents for comfort. The boatmen were already in theirs, enjoying themselves over a game of cards, leaving our trout in the boat uncared for. Ned, angered at this display of carelessness, roused them out of their snug quarters to give the attention the fish desired. They, however, went about quite pleasantly, much to my surprise, as an Indian dislikes to be told of his neglected duties. They had been feasting so royally and having so much idle time, owing to the rain, that they thought it best to obey instructions in a cheerful manner. John was naturally a well-behaved half-breed, but Joe had a streak of ugliness in him that I was sure would flash out ere the trip was over.

The remainder of the day, which continued rainy, we passed in playing cribbage and reading. Ned had started in with a perusal of that lovely creation of Mr. Blackmore's vivid imagination, "Lorna Doone," while I had fallen under the fascination of Balzac's "Two Brothers," a work of absorbing interest, holding one as spell-bound as the mariner held the wedding guest with his glittering eye.

On stepping from our tent the next morning we were greeted with a dense fog that covered both land and lake. By 9 o'clock the fog disappeared, and we again made battle on the radiant beauties just below the camp, catching ten by 11 o'clock. The largest of these was 4 lbs., while the remainder ran much smaller than usual, several of them not being even half a pound. They were the most diminutive trout we had ever caught on the North Shore, and we were much surprised at it. Rain threatening, we headed for camp, but before reaching it were caught in the down pour. Our rubber coats and "southwesters," however, gave us ample protection, but the half-breeds got a good soaking.

After dinner Ned's penchant for overhauling tackle possessed him, and in a twinkling the table was strewn with as varied an assortment of stock of angling goods as you would see in a sporting-goods store. Having lost in the morning, owing to an imperfection in the gut, his pet creation, mention of which I forgot to make in the proper place, he set about to construct a similar one, being satisfied that that model was the most tempting that could be made from fur, tinsel and feather, and that in it "Nature would live again in art," and "the speckled trout the curious snare approve."

Matters are looking dismal around camp, though the spirits of the campers are not the least bit overshadowed by the damp state of affairs, it now being the fifth day of rain, with no sign of clearing weather, and to make matters worse, Joe averred that morning he had seen it rain here every day for a month or more. About 4 o'clock, as if by magic, the rain ceased, the misty clouds sailed away and a bright sunshine appeared in the west, tingling with bands of gold the little clouds as they sprang into existence.

This cheerful change of the elements inspired us with new life, and word was at once given to again attempt a decimation of the proud princelings of the watery realm that in wait lie for floating prey. The pursuit was along a serrated and wood-crowned shore, that unfolded a grand panorama of lovely scenery, encircled with all the colors of the opal and amethyst from the now glowing sun. Dante Gabriel Rossetti, who had the gift of living out into the free and open universe, has caught the identity of such scenery and solitude in the poem entitled "The Sea Limits," where he connects both with the life of men:

Listen alone beside the sea,
Listen alone among the woods;
Those voices of twin solitudes
Shall have one sound alike to thee.
Hark where the murmurs of thronged men
Surge and sink back and surge again,
Still the one voice of wave and tree.
Gather a shell from the strown beach,
And listen at its lips; they sigh
The same desire and mystery,
The echo of the whole sea's speech.
And all mankind is thus at heart
Not anything but what thou art;
And earth, sea, man, are all in each.

After much artistic persuasion we finally succeeded in capturing two lovely specimens of the speckled brigade, one being a three-pounder and the other a pound less. This satisfying our craving for possession of the jeweled beauties, we returned to camp, with Ned making the woods and waters echo with his melodious notes. Having now more trout than would satisfy our wants for a few days, we concluded to slightly salt the surplus, which was to be held as a reserve when stormy weather prevented an indulgence in the sport.

The sun not sinking in a clear sky that evening satisfied us that we were to be kept in doubt as to settled weather. Ned, defining the evening as gray, said the mariner's rhyme, as to guide for weather, would, under such conditions, hold good:

"An evening red and morning gray,
Will set the traveler on his way;
But an evening gray and a morning red,
Will pour down rain on a traveler's head."

Not to be overshadowed in weather prognostication, I stated that the old rhyme informs us:

"If the cock crows going to bed,
He will rise with a watery head;
When the peacock loudly bawls,
We shall soon have rain and squalls."

"That's all O. K.," says Ned, "but a lamentable future is predicted for that crowing cock in the old couplet."

"A whistling girl and a crowing hen
Will never come to a good end."

"I don't exactly see the unison between a crowing hen and a crowing cock."

"Some persons can't."

Retreating under a sublime simile, I was perfectly willing to let Ned remain master of the cap and bells, and then the weather talk was settled, about the only elemental thing we could at that time settle.

The boys gave us a fine spread for our supper that evening, and though it was not

"Of syllabubs and jellies and mince pies,
And other such ladylike luxuries,"

it excelled that of the Hidalgo's meal, which was simply "very little meat and a great deal of table cloth." Neither walnuts nor wine had we, but a bountiful supply of broiled trout, ham and eggs, fried potatoes, hot cakes with maple syrup, raspberries, peaches, and the inevitable tea, to all of which we brought the hungry edge of appetite.

After the repast, Ned indulged in a luminous smoke, and I in Balzac's fiction, till darkness compelled me to relinquish the volume. Speculation as to prospective weather was again reopened, and then, the trip for the morning being laid out, we sought our tents now redolent with balsam, which was a foot deep throughout, and was as inviting a place for slumber as mansion grand. We were not long in our blankets before the balsamic air wooed us to gentle and healthful sleep.

There was some promise in the new morn of clearing weather, as the fog which then prevailed was fast retreating to the hills, where it hung in great clouds, remorselessly shutting out the sylvan scenes with which we were environed.

Immediately after breakfast we got ready for a trip along the shore on the opposite side of the bay, and as we were to go about six miles, and not expecting to return before night, we took lunch with us. Ned discovered that morning the first shad fly that we had seen since leaving the "Soo." It was an omen of good luck, for with their appearance the trout rise more freely to the fly. The first place we fished was the large reef in our immediate front, from which we took two fine trout, weighing respectively 3 and 4 lbs. After this we crossed to the coast, where we whipped the waters for over a mile or more without receiving a single rise, owing, doubtless, to the mirrored surface which prevailed. In a short time the sun came out in all its glory, changing the panorama of dismal dreariness, which had encompassed us for the past six days, to prospects more bright and beautiful. Being desirous of drying everything in camp we returned, and exposed mattresses, blankets, pillows, etc., to the bright, warm rays of the sun. This completed, we set the boys to gathering some fresh balsam boughs for the tent, and then Ned and I had a lively rubber of crib, in which I routed him "horse, foot and dragons."

After the game, the forest looked so inviting in golden hues and grateful shade, that we strolled through it some distance, picking here and there as we proceeded the luscious raspberries, which grow in great abundance on all sides. At every step, now that there was warmth in the bright rays of the sun, we came across moths and butterflies and delicate insects with gossamer-like wings, that rose from the green tangle under foot. Here we saw our first forest bird of the trip, a gold-crest. Soon after a blackcap, from the cool shadows of the underbrush, lit upon a cedar bough and fairly split his little throat in rounding the rich bars of an aria, the exquisite melody of which seemed just in keeping with the sylvan scene. The woods being yet a little damp from the late rains, we thought it prudent to bring our enjoyable ramble to an end, and so we reluctantly returned to camp.

For six hours the sun shone brightly, and then the damp and chilly fog appeared and again enveloped everything in its misty folds; while sullen clouds, chasing each other across the sky, interposed their gray masses as a bar to the rays of the sun. No light, no warmth, nothing but a cold, clammy feeling in the air, that makes you wish you might change places with some dweller in the tropics. It is unendurable and decidedly uncomfortable.

About 4 o'clock that evening, despite the fog and bleak air, we ventured to the reef again, where after an hour's earnest casting I rose a monster to the lure, which I hooked, but after his first dash, sad to relate, he kissed me a hurried farewell as he flopped his broad tail in my disappointed face. I was evidently vexed at the loss, but gave birth to no impiety over it. We fished on till 6 o'clock without exciting the inquisitiveness of another mottled darling and then returned to camp. This is the same place where Ned caught his six-pounder last season, of which exciting struggle he still has delightful remembrance. In the evening about 8 o'clock the tent in which our boatmen slept and where our provisions were kept took fire through the sheer carelessness of John, who had placed a lighted candle near the canvas and then went hurriedly away. At the first alarm we ran swiftly to the tent and worked in good earnest to quench the growing flames. Fortunately a bucket of water near by was quickly secured and thrown on the blazing tent, which somewhat checked the fire for a moment, and then the canvas was rapidly stripped from the ridge pole and smothered by rolling it together. The boys soon improvised another tent with the sails and remnants, and next morning Joe took the fire-despoiled tent to his home in Goalias Bay and had the damage repaired. We were soon again in good form in camp and all going well. These little incidents add to the exciting interest of the trip, at least the boys thought so, as they were quite merry over this one after the occurrence.

We started the next morning for Bachewananing Bay, with the air soft and balmy, the lake a quivering, sparkling sheet of silver, and the hills all purple and pink and faint crimson. It was a pure delight, this slipping o'er the plain of twinkling waters under bright skies, that charmingly mellowed all things in the landscapes so beautifully spread before us. Our troubadour, catching the inspiration of the radical change, tuned his lute-like voice and sang in notes melodious:

"The night was clear and mild,
And the breeze went softly by,
And the stars of heaven smiled
As they wandered up the sky."

In a few hours we rounded into the east side of Bachewananing Bay and then sailed into a little cove, landed, and made camp in a most lovely place. The half-breeds soon had the boat unloaded, the tents in position, and then fitting up a temporary kitchen, turned their attention to making a convenient landing for the boat. This was done by taking a long timber about 12 in. square, that they found stranded, and anchored it with heavy stones at right

angles with the shore. It was found to be a great accommodation, as we could always have the boat on the lee side, thus doing away with the pulling of the boat upon the shore when we landed. Joe was quite clever in these matters, and always had the camp in systematic order.

ALEX. STARBUCK.

ANTOINE BISSETTE'S LETTERS.—VIII.

M'sieu Beeg Sebattis Mitchell:

Ah 'll was glad for gat you lett' me, an' have it you called me "sah." Dese Yankee ant gat rispeck for mans dat was so hol for hees gran'pere an' was faght on de Pappineau war, an' was gat so gray as geeses on top hees head of it wid sprimble of gre' deal of snow in winter. Dey was call me "hol' Antwine," sometam "Onc Antwine," de polite of it do, but dat kan ant many of de Yankee, an' de young Frenchmans dat tink he was Yankee cause he was preffume hees hairs wid hen ile, an' part it of de middlin' of hees head and rode in taup buggy wid hol' hoss mos' can' draw it, he jist as wuss. He called me "hol man Bissette."

Ah 'll lak for be called "Sah," me, or Bonhomme Bissette. Thank you for you polite.

Wal, Ah do' know but Ah 'll was moch oblige for you information baout dat nem of bird, probly. Probly log-cock was de nem in Maines, probly hwoodcock was de nem in Vairmont. It ant gat no defference for de bird.

Ah 'll know some Frenchmans has gat hees nem in Canada Pierre La Roche, an' w'en he come here he was Peter Stone, but he was jes' de sem Frenchmans an' smell jis' lak his grandpere Jacques La Roche, of onion an' pea soup.

Ah 'll ant hear dat log everywhere ant mek of hwood, ant it? What Ah 'll said was dat it was better nem for bird dat paoun' hees head of a tree all de tam, be hwoodcock, as for bird dat all de tam steek hees nose in de mud an' you can' mek it lit of tree, hein?

An b'lieved Ah 'll mek sleep of mah pen w'en Ah 'll wrote pill-eatin' hwoodpeckit. M'sieu Mumsin say it was pill-he-eat-it hwoodpeckit.

He read me all Mees Hardy wrote it. Ah 'll lak it very moch all she 'll said for dis-crite her trav'lin' in de hwood.

It brought back of me grea' many t'ing Ah 'll see long of mah hol' frien' Sam Lovet w'en we be feeshin an' trap.

But Ah 'll ant lak so moch dat Airish fellers Stockin' Heels an' totter ones she 'll tol' of it.

Ah do' know 'f she won't bus' de Maine law. Bah gosh, Ah don't care 'f she was. It was pooty dry law, an' Ah b'lieve dat sportsmans tink all de feesh an' game was mek for heem an' de law for totter feller.

Ah 'll was very hones' man mahsef, an' ant broked law more as Ah 'll was oblige. Ah 'll ant never took not'ing Ah 'll ant want.

Give mah riggard of Mees Hardy an' yousef an' wrote some more. Your truly,

ANTOINE BISSETTE.
Scrippos.—Dereck Mr. Antoine Bissette, Danvit, Vairmont, care FORES STRIM

IN MEMORY OF "NESSMUK."

ON his grave but one winter's snows have fallen and melted, yet his voice and his presence are almost forgotten. Though the hemlocks that whispered to him of last spring's returning are as green in perpetual verdure as when last he heard them, and with voices unchanged are whispering the often-told story; though the birds and first blossoms that with his last breath he welcomed, with blooming and song, tell but the next spring's returning, he is almost forgotten.

In the clamor of voices, his voice has grown silent; out of the thronged hands that are uplifted for things which are unattainable, his strong hand has fallen forever. In the turbulent whirl of the world he is almost forgotten; his memory faded like the wake of his boat from the breast of the river, where it pulsed for a breath, then throbbed out in the swirl of the current.

Yet some will remember him, him who was never alone with nature, who caught and repeated her secrets to ears that she never vouchsafed them.

To them is his ghostly hand pointing the dimmer traced paths of the woodland; still they hear his quaint runes of the forest; his stories of camp and adventure; lessons of woodcraft and canoeing, and unseen he presides at their camp-fires.

While his hemlocks shall sigh in the springtime, repeating the sigh of the streams, reawakened, while the thrush's bell chimes in the aisles of the forest; the wood-drake preens his plumes in the pride of his wooing; the voice of the whippoorwill throbs through the twilight; while the paddle shall tread in the path of the rivers, and the camp-fire shall quicken the morris of shadows; while a nook of the world is untamed and wilding—for all he has told us of these, as never was told by another, the name of our "Nessmuk" shall not be forgotten.

AWAHSSOUE.

Natural History.

THE TRUTH IN NATURE.

LESS than a century ago, in the time when men had not penetrated so deeply into the study of nature, there was a great deal of poetry and romance connected with animal life that had been slowly but surely driven out as the study advanced.

Travelers, returning from unexplored regions, told strange and incredible stories about the wonderful wild animals they had encountered; but investigation has rent asunder these fanciful tales, and left only cold facts in their places.

I am the owner of a natural history written by one Riley and published about the year 1789. It is a quaint old book and its yellow leaves and odd type furnish the reader with a number of strange accounts. Among others may be found something like the following: "The digestive apparatus of the ostrich is said to be very strong indeed, that bird not only being able to digest such things as stones, bits of glass and iron; but it is even said that it makes a good meal of a bed of live coals."

We laugh at such a statement, but no doubt at the time of publication it was stated for a fact.

What right have we to laugh? It is not long since almost every one firmly believed the porcupine capable of shooting its quills like arrows, and regarded it an animal well able to defend itself against almost any foe, instead of the quiet inoffensive little creature that curls itself in a ball at the first approach of an enemy, trusting solely to its spine-covered skin for protection.

Men who lived only a short time before us did not question but what the pretty, graceful swallows that skimmed so lightly o'er the blue waters in summer, buried themselves in the mud at the bottoms of our rivers and ponds, when the season was over, to await the return of spring.

It has been but a short time since investigation has shown that the supposed happy family made up of the prairie dog, the burrowing owl and the rattlesnake is not only not a happy family; but does not exist at all. Our first idea was that these three animals of such different habits, lived in perfect harmony, liked the so-called happy families of the modern circus; but our faith in this belief is somewhat shaken by the following which may be found in Wood's Natural History: "According to popular belief, these three creatures live very harmoniously together; but observation has shown that the snake and owl are interlopers, living in the burrow because the poor owner cannot turn them out and finding an easy subsistence off the young prairie dogs." We were satisfied with this for a time but judge the astonishment created when Elliott Coues in one of his latest writings makes the following statement in speaking of the burrowing owl: "I have found colonies in Kansas and other States, in all cases occupying the deserted burrows of the quadrupeds, not living in common with them as usually supposed."

Naturalists are now telling us that the opossum does not play possum; but is merely paralyzed with fear for the time being; articles are published every day in our ornithological papers and magazines which go to prove that owls can see equally as well by day as by night. It is still an undecided question whether snakes "charm" their prey or not. In the western backwoods these old stories are still believed in, the ignorant classes cling with fondness to them and will not learn anything different, and down in our own hearts do we not all of us cling to them, more or less? Do we not hate to give them up, and is it not with a little regret that we are forced to acknowledge that the porcupine does not shoot his quills, that the bird of paradise really has feet and legs, and that our national bird, the white-headed eagle, is far from the noble bird we once thought him to be.

LOTOR.

THE DRUMMING OF THE GROUSE.

Editor Forest and Stream:

My experience as to why the grouse drums is not in full accord with that given by your correspondent "Dorp."

I find that the grouse drums for the same reason that birds sing. First to celebrate the mating season, second to teach the art to the young.

In Maine, my native State, the grouse usually drums from an old moss-grown log, but in Cape Ann there are no logs so the bird resorts to a boulder. There are two such boulders near my cabin. I can easily hear the drumming by day or night, particularly by night, as I sleep in a hammock, in the open air, from the middle of April to the middle of November.

Early in the season the male drums while the female is on the nest laying, and but seldom at other times until the female begins to sit. While she is sitting he drums through the day for the first week, after which he continues the drumming into the night, and often drums all night just before the chicks are out.

Late in the season the old bird drums at long intervals, as a lesson to the young. I often hear the feeble attempts of the young males to produce the sound and I have followed them through all the stages up to the time when they are become perfect.

HERMIT.

NEW AND LITTLE KNOWN MAMMALS.—We have received from the American Museum of Natural History three interesting papers extracted from Volume III. of the Bulletin of the Museum, and comprising pages 195 to 198 inclusive and 203 to 228 inclusive. These papers give the results of the studies of Dr. J. A. Allen on certain mammals collected in the Southwest and in Central America. One of the most interesting discoveries announced is that of the capture in southern California of a new species of big-eared bat of the South American genus *Histiotis*. It is not so very long ago that Dr. Merriam described, from the same region, an interesting new bat of the genus *Molossus*, allied to *M. perotis* of Brazil, and this capture of a second South American bat here is very interesting. It is only within a short time that naturalists have begun to learn anything about the fauna of southern California, and the unexpected forms of life which have already been discovered there lead us to look for still other remarkable finds as the region is more thoroughly explored. "Notes on a Collection of Mammals from Costa Rica" occupies 16 pages of the Bulletin and mentions 38 species, of which four are now first described, a *Blarina* and three mice of the genus *Hesperomys*. A collection of mammals gathered by Mr. George B. Sennett, the well-known ornithologist, and his collection in southern Texas and northern Mexico is the material described in the third paper under consideration. This represents 31 species, of which two, a mole and a jumping mouse (*Dipodops*), are new.

QUEER FREAK OF A RABBIT.—When I was a boy I took my brother's old shotgun and feeling myself to be a veritable nimrod went in quest of rabbits, which to the eye of a young novice seem as big in the bushes as a mule in the barnyard. I had not gone more than 300 yds. from the house when my keen eye caught sight of bunny just behind a few slender twigs. I was sure of him. Bang went the blunderbuss, the rabbit never stirred but sat perfectly still. I had taken but one load and I thought what should I do. Like the old farmer in the spelling book, I would see what virtue there was in stones. I drew near and "let drive." Away he went, and I watched him until he ran up a pile of rocks upon which he stopped and, strange to say, remained until I went home, reloaded, returned and shot him. I will add that the rocks upon which he sat were full of crevices in which he could have safely hid himself. Verily the actions of game are often puzzling as well as interesting to the hunter and naturalist.—N. D. E.

SNAKE BITTEN.—Greensburg, Pa.—*Editor Forest and Stream:* On last Wednesday night I went out on our large greenhouse to adjust the heating furnace, and while kneeling close to some loose bricks and other rubbish was bitten on the left knee by a snake which I take to be what we commonly term a house snake, but as it was quite dark I could not see it plainly, and it got

away. Several of these snakes have been seen by different members of the family this spring. I did not pay much attention to the matter until the next morning when the wound and part of the leg was badly swollen and discolored. Not having anything else handy I plastered it with a salve of zinc ointment and soda, bound on with prepared antiseptic corrosive sublimate gauze and painted around, the discolored unhealthy skin with tincture of iodine. Since then the wound has emitted considerable discolored matter, the swelling has decreased and it is now healing toward the center from the edges. At first I experienced both sharp and aching pains all over my body, but this has also decreased, and while I cannot use my limb I know that it is improving under this treatment. I use whisky when pained at the heart, and it seems to give relief. I write this because time hangs heavily on my hands and some one else may profit by using this treatment. Trout are fairly plentiful, and most local anglers are getting after them during this fine weather. No very large fish or big hauls have been made yet, so if the snakes just leave me alone I may get a few of them yet.—DEACON. [The rattlesnake and copperhead are the only venomous snakes known in your section. It is unfortunate that the reptile was not identified. You were fortunate to escape so easily as you seem to have done.]

AN ALBINO LOBSTER.—G. M. Long & Co., of New London, Conn., recently caught an albino lobster in Fisher's Island Sound. The entire shell is white, even to the ends of the claws. The eyes are pink. This is supposed to be the first lobster of the kind that has been taken. Blue lobsters are occasionally caught in Fisher's Island Sound, and more rarely in Maine.

Game Bag and Gun.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

BOB WHITE VS. PA'TRIDGE.

ROCKINGHAM, N. C.—I read the letter of your Kentucky correspondent, in which he enters his protest against the false nomenclature which is so persistently adopted in certain sections of the country, and by which our well-known gallinaceous bird is called a quail. You wrote to me, several years ago, that it was useless to combat the error, for it had become so firmly established that it could not be uprooted. I know that there is always great labor attending the removal of false impressions, and that falsehood, when deeply imbedded in the human mind, is a formidable opponent. But I have heard that truth was mighty and would at last prevail. Our little bird is allied to the quail of Europe in that it is gallinaceous. So are the partridge, the pheasant, the blackcock, and all the varieties of grouse. A duck is allied to a goose and a brant and a coot and a loon. But that does not make a duck a goose. The quail is a migratory bird, breeds in southern France or Spain, and in search of food flies over the kingdom or the republic or the empire of France, and when he reaches the British Channel he is able to cross it, whether from Calais to Dover, or where it is many miles wider. To do this he must have long wings, so as to maintain an extended flight. Did any one ever hear of Bob White flying so much as a mile? Does he migrate for hundreds of miles? As a general thing, does he not die within a half mile of where he was hatched? He does change his locality when food demands require it—but he does not leave the neighborhood.

I am sustained in my views by the best ornithological authorities. I shall content myself, at present, by quoting from "Webster's Unabridged Dictionary": "Quail—A gallinaceous bird closely allied to the partridge of Europe. In the United States this name is loosely applied to the *Ortyx virginianus*, or Bob White."

I do not claim that the Southern nomenclature is correct. Our bird is not the partridge, but more closely resembles it than it does the quail, both in plumage and habits. The ruffed grouse is not the pheasant, nor is it the partridge, as falsely called in Pennsylvania, Virginia and the Carolinas on the one side, and New York on the other. Our little field bird should, by common consent, be called Bob White, and thus put a stop to an unpardonable absurdity.

For the best of reasons, I did but little hunting during the past season, and I do not think I bagged over forty birds. During November, December and January, I was confined to my home and physically unable to enter the field. My dogs seem to be sorry for it, and when unblocked would go off on a hunt by themselves. I felt sorry for them, but nothing like so much as I did for myself. My friend Sully, of Richmond, Va., who gave me both of them, and I took several small jaunts. My powers of locomotion have been so poor that I let him do most of the walking, while I took "high cuts" or sat down on a stump or a stone and waited for him to come round. What little shooting I did satisfied me that my "right hand had not lost its cunning." But, alas! my hunting days are nearly over, and all my joys in that respect must be pleasant memories of the bygone.

We have a large stock of birds for breeding purposes—more than usual. If the nesting and rearing season is propitious, when the fall comes the fields will be full of them. Then I hope that our sportsmen will go in quest of them with small-bored light guns. For such game the 10-bore is a nuisance. It is "uplifting the club of Hercules, for what? To crush a butterfly or to brain a gnat."

What is the real value of bench shows? The form and muscle and hair constitute the standard of excellence. Would a sportsman prefer a dog with all the physical recommendations who had no keenness of smell, nor stanchness, nor energy, nor sense? Would a man choose a lawyer because he was a splendid specimen of physical manhood? Give me a good serviceable dog which will hunt, which knows how to hunt, which can stand hunting, which is stanch and has a good nose, and I care very little about the shape of his head, of his legs or his body. The reports of such meetings often amuse me—but I suppose the owners, especially those who come out ahead, find some fun in it.

NORTH CAROLINA.

WELLS.

DUCKING AT LONG POINT MARSH, VA.

It had long been a matter of contemplation on the part of myself and friend Walter Bass that we take together a trip after ducks. It made but little difference to either of us whether we should journey to the waters of Currituck Sound, the Chesapeake or Back Bay, Virginia. At each place we had friends who had extended to us cordial invitations to visit them. After due thought my friend Bass decided that we accept the invitation of some Jersey friends who owned a piece of marsh on Back Bay. The plan originally arranged was to leave New York in November and pass two weeks upon the ground selected. In November came the flurry in the stock market. Mr. Bass is a member. That semi-panic altered all our plans. Customers were in too nervous a state to be left; so my friend Bass had to remain to look after the interests of his firm. As I could not go without him, our trip was indefinitely postponed. "All things come to him who waits." So one Saturday evening in February found us at the Pennsylvania Railroad depot in this city. Taking that road to Cape Charles, we next morning arrived at Norfolk, Va. The evening we left New York the weather was the worst imaginable. There was a cold northeast storm in progress, accompanied by a deluge of rain, snow and sleet, and the streets were completely flooded. Leaving as we did on Saturday our Sunday was passed in Norfolk. Never was a greater change in weather conditions. That Sunday morning the sun shone brightly from unclouded skies and the air was as balmy as in September. Our stay in Norfolk will be long remembered for the many pleasant surprises we met while there. We were fortunate enough to fall in with two old friends of Bass's, Sewell Tappen and E. L. Lenthion, old members of the New York Stock Exchange, the former now largely interested in Norfolk real estate, the latter connected with the Dupont Powder Company. In addition to these old friends of Bass's, we became acquainted with Richard Corbin Byrd, Jr., and W. T. Campbell, members of the Virginia Club of Norfolk. Through the kind offices of the latter-named gentleman we were introduced to the club and had extended to us all privileges during our stay. We were most hospitably entertained at the club, and our great regret was that our stay in Norfolk was all too short, so hearty and lavish were the courtesies extended us.

Monday morning found us up at an early hour, for we had to leave Norfolk at 7 o'clock. We were bound for Long Point Marsh. The little side-wheel steamer Bonito was the mode, and Pungo Ferry, some thirty miles southward, our destination. Going through the South Elizabeth River, then the Albemarle and Chesapeake canal, and then the North River to our stopping place, which is at the head of Currituck Sound. Even then our journey was not at an end. At the ferry we were met by Haywood Bower, who had come down with two Virginia carts. Well, I won't attempt a description of them, one of them was for the baggage, the other for Bass and myself. Unfortunately for us our trunk had failed to connect with the Bonito at Norfolk, and so far as clothing was concerned we were, outside of the suit we had on, traveling on faith. To add to our discomfort it came on to rain, and no umbrellas at that. In spite of every discomfort the thing was all so new it was enjoyed thoroughly, especially by Bass, as he endeavored to dump me in the road at every opportunity. After the five-mile drive was over we reached Morse's Point. Here we were met by Will Pontin and Uncle Jake Borden, who conducted us to the landing on Back Bay, where their yawl was awaiting us. We were soon under way, and the two miles' sail to Long Point Marsh—our last stopping place—was quickly done, and springing ashore we were met by Capt. Will Borden, who gave us a hearty welcome. Here we found a new cabin, some 40x30ft. in dimensions. Its inside was one large room, the arrangements of the room being of the simplest character, but admirably suited for sportsmen. For sleeping accommodations we had the best of mattresses and the best of pillows—wild geese feathers filled each tick to the fullest. The marsh is one of the best and we find ourselves in the best of camps as far as ducking clubs are concerned.

To the southward in Currituck Sound are the Swan Island and Currituck clubs, north of us in Back Bay we find Cedar Island, the Ragged Island and Long Island clubs. Opposite, between us and the ocean, is Knotts Island. The marsh is one of the best shooting grounds in the bay. It comprises some 1,700 acres, is some three miles long, by possibly a third of a mile wide, the extreme southwestern point nearly touching the North Carolina line. The boys have cut a canal across the narrowest part so that the different points can be reached without making the long journey around the marsh.

Our other associates during our stay were Peter Corpory and George Carroway, who are employed as gunners. Peter Diggs was our chef, and for one I can vouch for the savory character of our marsh cuisine, whether it be duck, goose, quail, snipe, or bass or perch fresh from the waters of the bay. Peter always had a tempting meal ready, and I never once was found wanting in appetite.

So far as our shooting was concerned, our trip was not what it would have been had we been able to leave in November as we expected. The weather was quite warm and the season at the marsh about over. While it lasted, which was until the food had become scarce, the sport had been excellent. The boys had killed and shipped North hundreds of fowl. These were canvasbacks, redheads, black duck, mallards, widgeon and geese. A few swan had also been killed. My friend Bass's great desire was to kill a swan, but they were wild and wary, and his desire was not gratified. My partner during our stay was Uncle Jake Borden. Over 60 years of age, of medium height, with slightly stooping shoulders, he proved one of the best of shooting companions, and what he does not know about oars and boats isn't worth the learning. Captain Will, a tall fine-looking man physically, quiet and pleasant in manner, did his shooting single-handed. Will Pontin, our other host, a nephew to the brothers Borden, took charge of Bass. During the evening the usual swapping of stories was indulged in. They told of many of the tricks of the bay men, among them the following: When a canvasback is shot and found poor in flesh, it was an ordinary thing to cut off its head, and picking out a good fat redhead, decapitate that also. Then the head of the canvas was deftly sewn on the body of the redhead, and a merchantable high-priced bird was the result.

We remained nearly two weeks. We had any number of decoys, and our shooting was entirely point shooting.

The birds did not decoy well in the daytime, and so we had to get out before daybreak in the morning, and then locate ourselves again before sundown in the evening. By adopting this plan we got fairly good shooting. We were not out for slaughter and the result of each day's work was entirely satisfactory. The first Wednesday of our stay we sailed over to Morse's Point and had sport on quail. To our surprise we found on the low bottoms some English snipe, and between both we had rare sport. We hunted over Will Pontin's dog Frank, the product of a cross of setter and pointer bloods. In looks and color Frank showed only the blood of his pointer mother. As a worker the dog was as good as the best. Not alone was he good on snipe and quail, but he was a magnificent retriever both on land or water, or as the natives put it, he would both "tote and fetch." He would bring a duck or goose from the water in a style that could not be surpassed by the best of bay dogs. On Thursday our party went for snipe to Cason's Marsh, but found none. Not to be disappointed in our shooting we went further inland on the point and made a good bag on quail. Sunday, of course, no shooting was done, and church was out of the question. Thrown upon our own resources, we asked what we should do? Well, Pontin suggested a row to the beach and the yawl was gotten ready. Uncle Jake and Will Pontin did the rowing, while Bass and myself did the appreciative part of the work. A row of some six miles across Knott's Island brought us to the United States Life-Saving Station known as No. 6. Surfman Etheridge was in charge, and we passed a couple of very pleasant hours in his company. He insisted with true Southern hospitality upon our remaining to dinner with him. Naturally, the contents of the larder were not on an extensive scale, still I do not know but that the dinner of "salt horse," greens and sweet potato pie was as much enjoyed as was ever a dinner at Sam Robbins's.

The one great subject of conversation was the faulty game laws of Virginia regarding the shooting of ducks. Wednesdays and Thursdays are known as lay days and no shooting is allowed. It is claimed it would be far better to have Saturday a close day. On Wednesdays and Thursdays the fishermen keep the ducks fully as much on the move as is done by the gunners on open days. It is claimed, and very reasonably too, that Saturday being a day upon which no fish can be shipped North, consequently but little fishing is done. That the ducks would be far less disturbed on their feeding grounds than they now are under the present law. It is hoped that the change can be made during the present session of the Legislature of the State.

When the time came for us to return we seemed to be leaving old friends. Indeed, there was another bond between us, for the boys are old-time Jerseymen, having been watermen at Little Silver, New Jersey, the summer home of my friend Bass for many years. Another season we will endeavor to get away earlier, when we hope to be able to accept the kind invitation of our friends and pay another visit to Long Point Marsh, or, as Uncle Jake christened it, the Little Silver Club. TEE KAY.

CHICAGO AND THE WEST.

CHICAGO, May 6.—I saw some shooters at the depot yesterday, and they had 90 snipe, about half jacks and the balance sand snipe, with a few plover. They had been out with San Gibault, a French market-hunter and "guide" of Momenie. They got their birds north of Momenie and back in the country, away from the marshes. They said if they had had plover decoys they could have gotten 500 shots at plover. I doubt whether they could do that now. Early in the week the plover seemed to get up and move north very rapidly. Charlie Burton says he and Fred Donald were out there and got 31 birds before noon, near Gilman, and then the birds hit the trail for British Columbia.

At Mak-saw-ba a few days ago John Watson bagged 31 plover and Joe Kinney 42. These were mostly yellow-legs.

Jo. Card has also been down to Mak-saw-ba, the same time as his friend John Watson. Jo. got 35 snipe, which he tried to palm off as jacksnipe. When questioned closely he admitted that "their bills may be a little short, but they're blamed good snipe, ain't they, John?" Mr. Card also caught some bullheads, likewise 13 bass, as described by himself. Pressed also about their weight, he remarked, "They were just as big as rock bass ever get, wasn't they, John?" All this transpired up at Billy Mussey's, and Billy tells the story. By the way, Billy is putting in a set of cases of nicely-mounted game birds of all our sorts about here, the taxidermist work being done by Dick Turtle. These birds will go very well in a place so much headquarters for the sportsmen of this city and the West.

Mr. Fred Kimble, of the Peoria Target C., was in town yesterday, departing in the evening for Cleveland, where he is going to mingle with the Blue Rock and Standard Target people a while, I believe. Mr. Kimble says that when this cruel war is over he is going up to Duluth or somewhere and have a fishing trip.

May 7.—There will be a spring meeting of the Possum Club and a fish dinner at Werner's Stock Exchange restaurant, Thursday, May 21, two weeks from to-day. Some of the legislators who have worked in the sportsmen's interests at Springfield will be invited to attend. Among other important business there will be brought up the organization of the Kankakee Fish and Game Protective Society, of which matter mention was made in these columns in the issue of April 30. Plans are already laid for that to some extent by the leading men of the clubs interested and it is very probable that a successful organization will be made and kept up.

We need such work and plenty of it. I have direct, eye-witness proof that Jack Wilburn, at Summit station, on the Des Plaines River, has had a net stretched clear across the river through most of the entire run of the pickerel and bass, and has been taking as high as a hundred in a day, mostly of pickerel nearly ready to spawn. What is the fish warden at Riverside doing? Can't Wilburn be stopped? I know Wilburn and have stopped at his place. He ought to be ashamed of himself, for he picks up many a dollar from Chicago sportsmen. Will Commissioner Bartlett drop a line to his warden and have Wilburn's nets pulled?

Down at Crown Point three men now lie in jail, under a \$50 fine each for seining in Cedar Lake. A simple, innocent book agent came among them in that country, and won their confidence by his artless ways. He got

his evidence, and then appeared as a fish warden with the result above noted. He was a good book agent.

It seems our friend Rolla Heikes came out ahead in his race against time, he had to break 450 targets in 90 minutes, three known angles, or forfeit \$100 in the interest of sport. Rolla was trotting easy, and the harness didn't touch him from first to last. He broke his 450 birds, standard keystones, in 53 minutes and 58 seconds, shooting at 528 birds to do it. He used 3 drams of wood powder, 14oz. of No. 8, and shot two Lefevres, 12-gauge. Col. A. G. Courtney handled the guns, and is now complaining that he is sore all over, and had to work harder than Rolla did. There was much trouble from sticking shells, and Rolla's friends think he could lower the above record materially under favorable circumstances. He won his race and his \$100 easily, and again showed how hard a man to beat he is at his game of targets.

Replying for Mr. Geo. T. Farmer to the query of Mr. J. J. Meyrick, of England, as to the description of gun issued by the Hudson Bay Co. to their men, Mr. Farmer says these guns were 16-gauge, the barrels being from 36 to 40in. long.

A painful accident befell Ike Watson out at the Burnside Park this week. He had left his gun lying loaded upon a table, and on picking it up it was discharged, the top lever being driven by the recoil back into young Watson's hand between the thumb and fingers. It was very hard to detach the hand from the gun. Ike didn't think it was loaded, having a recollection of putting two shells in his pocket, which, however, proved to be empty shells.

Mr. J. A. Ruble, late of Beloit, Wis., is now living in Chicago, and will doubtless soon be a member of some one of our Chicago shooting clubs. E. HOUGH.

"FOREST AND STREAM" GUN TESTS.

SOME time ago a test was made of a Greener gun, and as yet no report has been made upon it. The weapon was the same Greener upon which report has already appeared in these pages. Mr. Such, the owner, was desirous of having a trial made with a different size of shot than the No. 8 and No. 1 shot used in the previous tests. The gun fully sustained its previous record of being one of the finest samples of that popular make of arm. With the black powder at 40yds. the selected circles show a shade under 70 per cent. of the shot accounted for, and at the same distance with the Schultz powder the right barrel climbed to over 80 per cent. The record is an interesting one in the variation between the two barrels at the two distances. The records show:

TEST MADE AT FOREST AND STREAM GUN-TESTING SCREEN.

Gun—Greener. Cost, \$350. No. of gun, 35,937. Weight, 9½lbs. Length of barrels, 32in. Gauge, 10. Right barrel, full choke. Left barrel, full choke. Weather—Clear. Charge, as given by holder of gun:

GUNS OF SMALL BORE.

MATOACA, Va.—In the issue of April 30, I read the article by J. J. Meyrick, an ably written piece. As I have told the FOREST AND STREAM in years gone by I have owned many guns, and used them too, of bores from 10 to 20, barrels from 26in. to 42in. I have tested all at target, but more on game, with the result of ending with a 20-bore, which I have used a good deal, and consider it for my use as good a shotgun as I wish. It is a double barrel and a breechloader, with all the improvements of nearly three years ago, straight grip stock, drop of stock $3\frac{1}{2}$ in., length of same $14\frac{1}{2}$. Length of barrels 35in., 20 bore cylinder, $7\frac{1}{2}$ lbs. weight, uses a shell $2\frac{1}{2}$ in. long, swivels and sling strap, with bullet mould for solid round ball to use with linen patch; barrels of finest quality stub twist, made to order, cost \$47. As to rifles I have adopted a single shot Winchester, 9lbs., .40-82 260.

I always reload my own shells, both shot and rifle. Only twice in two years did I use ball in the shotgun. The first time it brought down a bull moose; and eight months after a she-bear and cub, one ball each.

Taking all in all I believe a small bore will kill as far and as many times as a large one, and that long barrels for a shotgun are best for long ranges; of course I exclude wing-shooting at short range. Before me is a single barrel, muzzleloading, flint lock shotgun that I saw do good service in the hands of an Indian, (cook for our party), and which I bought as a relic. Has 39in. barrels. For shooting it holds its own with coarse shot. The first time I shot it, I missed, as it went off so slow, that at the flash in the pan I lowered the muzzle.

BRYAN THE STILL-HUNTER.

MARTIN'S POINT GUN CLUB.

THIS is one of the new clubs in Currituck Sound, having been formed by some of Norfolk's best citizens, with some of their friends in the North, about one year ago. The club house at present is not as large and comfortable as we would like, so the club has decided to increase its membership. A certain portion—\$3,000—from the sale of shares, which will be only \$5 each, goes to build a new club house. With our present outfit and privileges, we will then have the best club in Currituck Sound, which, considering the price of shares in the different clubs—\$25 to \$35 each—is very reasonable.

The club owns its shooting grounds, club house, boats, decoys, etc., and will be about two hours from Norfolk when the new railroad, now talked of, is completed. The steamer, running to the Sound three times each week, stops in two miles of our club house; or it is a pleasant drive of two and a half hours from the Princess Anne Hotel, Virginia Beach, Va.

I will give the names of some of its charter members, so that any gentlemen desiring to join a club of this sort may know who they are associating themselves with: Judge Theo. S. Garnett, Captain E. V. White, Mr. M. L. T. Davis, Mr. Luther Sheldon, Captain Geo. W. Taylor, Norfolk, Va.; Mr. T. J. Hayward, Mr. E. L. Bartlett, Baltimore, Md.; Mr. O. H. Wilbur, Philadelphia, Pa.; Dr. Edward Bradley, Mr. Arthur Sullivan, Captain H. G. H. Tarr, New York.

I also give some bags of birds made by members when I happened to be along, which I know have not been beaten in the United States for many years:

April 23, 1890—Captain Geo. W. Taylor, Wm. Camp, R. C. Byrd and J. B. White, all of Norfolk, shot 270 winter yellowlegs and graybacks (or dowitchers) in one day over decoys.

Aug. 4, 1890—Messrs. T. J. Hayward, E. L. Bartlett, H. P. Lucas of Baltimore; Wm. Pannill, J. B. White, Geo. W. Taylor, Norfolk, shot 840 yellowlegs, graybacks and plover in one day.

Mr. A. B. Simmons, 49 Wall street, New York, shot 1,500 of the same kind of birds in 13 days—Sept. 2 to 15, 1890.

Sept. 21, 1890—Messrs. T. J. Hayward, E. L. Bartlett and H. P. Lucas, Baltimore; T. S. Garnett, Worthy Smith

and J. B. White, Norfolk, shot 1,460 yellowlegs, graybacks, plover and English snipe in one and a half days' shooting.

Oct. 20, 1890—Lieut. W. T. Burwell, Dr. Rodgers, John R. Todd and J. B. White, of Norfolk, bagged 450 of the same kind of birds in less than a half-day's shooting.

March 2, 1891—The keeper, who was ordered to exercise our live decoys, killed 24 geese, 8 canvasbacks, 7 widigeon, 8 sprigtails and 1 swan.

March 16, 1891—Lieut. W. T. Burwell, Capt. Geo. W. Taylor and J. B. White bagged 21 swans, 12 geese, 18 ducks and 20 bay snipe.

We have good shooting at birds in season eleven months in the year. Any further information desired may be had by addressing Mr. Wm. Camp, secretary, Martin's Point Gun Club, Virginia Club, Norfolk, Va., or J. B. WHITE, Norfolk, Va.

A HAIL FROM THE FRONTIER.

Editor Forest and Stream:

The past winter has been the mildest known in this country for many years. Game of all kinds has wintered finely, and the customary butchery of the deer in mid-winter was rendered impossible during the past winter by the lack of snow. All this is very encouraging after the terrible slaughter of two years ago, which for a time bid fair to annihilate all the deer in our hills.

When the time comes for the true sportsmen of the East to visit our mountain region they will find a rich harvest awaiting them. Deer of two kinds, grouse of three kinds, while hares and the predatory "varmints," together with a small world of brook and lake trout, offer sport to those who truly love the wilderness, not to be despised.

The true sportsman is always welcome on the frontier. The game butcher and the would-be aristocrat we have no use for. For my own part, as age is creeping on, and I find myself less and less inclined or able to climb far above my cabin, I feel like sharing more liberally these splendid opportunities with true men from further east, to whom such sport would be a godsend. It is amusing to us people here to read of the continuous fight between the sportsmen in the Adirondacks and in Maine, and the mosquitoes and black flies. While we, of course, have some few mosquitoes in the mountains, black flies I have never seen, nor have I seen or heard of any preparation in the shape of ointment or salve to ward off the attacks of insects ever used in this country.

It is the very finest country for the summer and fall camper I have ever found. Cyclones and the terrible thunder storms common to the Eastern States are here unknown.

Together with all other true sportsmen, we here on the frontier rejoice over the practical extension of the great Yellowstone National Park, and feel like commending heartily, each and every one (the editor of our own loved FOREST AND STREAM not neglected in the list), who has labored for its preservation. May success the most complete attend their efforts to preserve it from vandal hands.

ORIN BELKNAP.

CHEWELAH, Washington.

IN THE FORTIES.

SACRAMENTO, Cal., May 1.—Reading an article which was copied from your paper, of one solitary goose in Illinois, carries my mind back to my boyhood days. I lived on a farm sixteen miles west of Chicago, in Du Page county, during the 40s. The wild ducks were so plentiful that they used to come and feed with our tame ducks in our barnyard, and many are the times that I killed them there.

Geese were very numerous in the fall of the year, so much so that we had to drive them out of the cornfields. The prairie chickens were so plentiful that I could take an old United States musket that had done service at New Orleans and go out any forenoon and kill all I could carry home. In two hours' time, by going up and down the creek, I could kill all the ducks that I could carry home. It was a perfect paradise for the hunter.

I left Illinois in 1850, and so, of course, have lost the run of hunting grounds; but our country is still a good country for sport. In fact, on our large wheat farms we have to hire men in the fall of the year to protect the wheat. The farmer furnishes the hunter with the latest repeating rifle, ammunition and horse, and pays him \$50 a month and his board, just to scare the geese away. Along the banks of rivers and the edges of our tule lands, in the fall and winter, the farmers hang out lanterns all over their fields to keep the ducks from destroying the grain.

California is still a hunter's paradise, but as the country is more thickly settled it naturally will drive the game out.

A FARMER BOY OF THE 40s.

OREGON ASSOCIATION.

PORTLAND, Oregon, May 3.—*Editor Forest and Stream:* There was lately organized in this city the Oregon Fish and Game Protective Association, the present officers of which are: Pres., S. H. Greene; Vice Pres., C. E. Hughes; Sec'y, J. R. Bowles; Treas., E. House; Game Warden, T. D. Honeyman; Council, Wm. T. Muir; Cor. Sec'y, T. G. Farrell. Although social intercourse among its members and the promotion of sportsmanship will be objects of the organization, the protection of our game fish, animals, and birds will be its chief aim. Correspondence will be maintained with sportsmen throughout the Northwest, and when cases of game law violation are reported to our secretary he will write to the offender informing him that his actions are known and requesting that he desist from such practices. Should he fail to heed the letter of warning, correspondence will be opened between the association and the prosecuting attorney, and sheriff of the county in which the offense was committed, with the object of securing the arrest and conviction of the guilty party. Trap-shooting will be a feature of the organization and we already have a good team of saucer smashers. We think that in many instances we will be able to put a stop to the open violation of our good game laws.

THOS. G. FARRELL.

KANSAS.—Ottawa, Kansas, May 7.—The hunting season in this part of the country is now over, and the sportsmen of this vicinity are putting in a good deal of their spare time in fishing for croppies. A considerable

number of these fish and some black bass have been caught in this river, but the streams have been kept high and muddy by the frequent storms, and this delays the season a great deal. Our last storm was the worst hailstorm we have had for a long time, and I am afraid it was disastrous to the quail. The hailstones were not extraordinarily large, but a great quantity of them fell, breaking window glass and killing young chickens, so I infer they would destroy birds' eggs and young. However, as the nesting season has not far advanced, we may have a good number of quail next fall after all. Plover are thick here now, and there are some ducks too, but I do not hear of any being killed. A great many were slaughtered at this time last year, but the weather has interfered in their favor this time.—F. B.

CURRITUCK BAY BIRDS.—Norfolk, Va., May 4.—We have not done as much bay bird shooting this spring as usual, and I hope we shall soon see the day when there will not be a gun fired at them on their way to the nesting ground. As we have written you before, our shooting in July, August, September, October and November is no doubt the very best in the United States. The birds are young, tender and very fat then, and feeding as they do in fresh-water ponds the flavor is delicious. In the spring they come from oyster beds in the South and are strong, and the large birds, such as curlew and willets, are fishy.—J. B. WHITE.

POSSESSION OF VENISON IN CLOSE SEASON.—Judge Desnoyers rendered his decision yesterday in the case of the Fish and Game Club vs. the Hon. George Drummond, for having had in his possession three deer carcasses during the prohibited season. Mr. D. T. Irish, of the Canadian Express Company, was also charged with having transported the game to Montreal. As it was proved that the deer had been killed during the open season both were discharged and the society was ordered to pay the costs.—*Montreal Gazette.*

SABBATH—DUCKS—DUCKERS.—To-day is the Sabbath. Without entering into the ethics of the Sunday question we may remark that there are probably two hunters afield along the Mississippi to-day to every duck.—*Davenport (Ia.) Sunday Democrat.*

Camp-Fire Flickerings.

"That reminds me."

CAPTAIN P. and Charlie C. have a valued friend, who, though passionately fond of outdoor life and sports, has not so many opportunities of indulging this passion as they; but good fellows that they are, they will occasionally plan a deer hunt, a duck shoot or a shoot of some kind for his particular pleasure and benefit. This time it was a partridge shoot in the vicinity of Pike Lake, but unfortunately the weather had turned hot and partridge (grouse if you will) would not be treed even by a dog; so that although both the "good fellows" had a little show of game the "valued friend" had to take his buggy for home with an empty bag. It happened, however, as they were jogging along homeward, that they treed a partridge, and that partridge-like it sat stock-still, dumbfounded no doubt at the good nature of the party under such humiliating circumstances. Now, all saw the bird except the "valued friend," and both the "good fellows" swore that he and he alone should shoot it. So they hustled him out of his buggy with his gun, and pointing to the tree, said: "There he is; there!" "Where?" said the friend, "I can't see him!" "There!" said Charlie C., "don't you see?" "No, I don't see," said the friend, and offering the gun to Charlie, "You shoot." "No I won't; you shall shoot him, there!" pointing again. "Well, Charlie," said the friend, after looking all around the bird without being able to spot him, "won't you take aim and let me pull the trigger?" BERLIN.

"Say, boys, did you ever hear the story they tell on W.?" "No. What is it?"

"Well, two years ago three gunners were after ducks at G. It was late in the season, and ducks were flying so high that it was almost impossible to get enough to keep the table supplied. One day W. proposed a bet that he would kill on the following day more ducks than M. and S. together. He was promptly taken up. Now, W. had procured a supply of buckshot cartridges, and after filling his belt with them he retired, trusting to luck and buckshot to win his bet. As soon as M. and S. were sure he was asleep they proceeded to remove the shot from all the aforesaid shells, fill them up with bread, wad them, and replace them in the belt.

"The next day W. took a stand in some tall grass a few yards from a big slough, on the opposite side of which M. and S. were already concealed. Soon a small flock of redheads came sailing along over W.'s head, away out of range, but that made no difference to him, he was out to win that bet, so he blazed away with both barrels at the specks in the sky, while M. and S. on the other side rolled around in the grass and moaned. But great was their surprise, when they sat up to shake hands over their bet-your-life-sure-wager, to see the whole flock dropping in the grass around W., and he thrashing around as if he had seen snakes. As it was too near dark for M. and S. to go around the slough to where W. was, to see what was the matter, they went to camp to await his return. Pretty soon along he came loaded down with ducks and easily won his bet."

"Yes, that is all right about the bet, but why don't you tell us how he got those ducks?"

"Oh, that is easily enough explained. When W. would fire a couple of shots at the ducks they would come down after the bread and he would knock them over with the butt of his gun."

G. W.

ST. LOUIS, Mo.

THE Quackenbush air gun, advertised in another column, is a valuable and handy little weapon. It is made in a half dozen different styles to shoot darts, slugs or shot. One style is a combination fire arm and air gun in one, shooting either a .22 cartridge or darts or slugs. Another style is a magazine shot air gun, holding twenty shot. These guns have been made for a number of years by H. M. Quackenbush at Herkimer, N. Y., from whom circulars with full information can be obtained.—*Adv.*

A NEAR-BY CLUB PROPERTY.—Thirty miles from New York. Good trout fishing; excellent quail, ruffed grouse and woodcock shooting. Club house built and furnished. A few vacancies only. Address C. E. Sargeant, Treasurer, 241 Broadway, N. Y.—*Adv.*

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

THE MASTIGOUCHE WATERS.

MONTREAL, May 5.—*Editor Forest and Stream:* The Mastigouche Fish and Game Club of this city at their annual meeting elected Henry W. Atwater, President; E. H. Botterell, Vice-Pres.; W. T. Costigan, Treasurer; Albert D. Nelson, Secretary; and Messrs. I. H. Stearns, George A. Greene, Wm. S. Paterson, James Slessor, and Benj. Tooke, Directors. The annual report showed the club to be in a prosperous condition, with a substantial balance in the bank, and no indebtedness. Several new members from the United States were admitted during the year, and the club house was patronized to a much larger extent than during any previous season. The club has been incorporated, under a charter from the Provincial Government of Quebec, slightly altering the name from "Fishing Club" to "Fish and Game Club."

A reference to the record, furnished annually to the Government of Quebec, of the number and weight of trout caught in the Mastigouche waters, as required by the lease, shows that the average weight of all the trout caught during the past five years, is slightly over one-third of a pound each. The fishing is fully as good to-day as when the club first obtained the property. The numerous lakes and streams running into, and connecting with each other, covering an area of from 25 to 50 miles square, forms such a vast breeding ground, that it will be impossible with ordinary legitimate fishing, to exhaust or appreciably diminish the supply of trout.

In speaking as I often do of our club waters and the fine fishing to be had in them, I find that the impression prevails to a considerable extent, that no one can enjoy the privilege of fishing in these waters without being a member of the club. I wish therefore to state that this is not the case. All the lakes and streams in the Mastigouche territory, with the exception of a very small portion reserved for the club members, and which is situated some three miles from the Mastigouche House, are open to the public, and any one can go there and fish, just as they can to Paul Smith's or any other resort. The number of sportsmen from the United States, who visit these waters, is increasing annually, as the place becomes better known, and some of them who know a good thing when they find one, now come from eight hundred to a thousand miles regularly twice a year to enjoy the sport.

I might say that any brother angler from your side of the line will be made heartily welcome and no question regarding the "Modus Vivendi" need trouble him, as that is a fishy subject that is totally ignored in our territory.

SALVE LINUS.

FISHING IN SULLIVAN COUNTY, N. Y.

WE had planned to go to Canada, Henry and I, but our plans did not materialize, so we decided to go to Bradley's at Eldred. Many of the readers of *FOREST AND STREAM* probably know the house. The nearest station to Eldred is Shohola, six miles distant. An excursion train leaves every Wednesday during the summer from the Erie depot at Jersey City direct for Shohola Glen.

On July 10, before 9 o'clock, I was seated in the northern train. I had the luck to find myself in a seat with a gentleman who had seen a good deal of shooting and fishing in the West. His stories of salmon fishing, bear shooting, etc., made the time fly as fast as one could wish, and I was sorry when we had to part as the train stopped at Shohola. I soon found Mr. Bradley and everything was ready after the rods had gone to the bottom of the wagon. We crossed the Delaware River soon after leaving the station, and then were in the Empire State and in the wilds of Sullivan county. The bass fishing is not very good at this point, though occasionally some are caught. The road was picturesque, and we passed several very pretty brooks before we reached the post office at Eldred. The tackle I had ordered was already awaiting me, and if the fish were only doing the same all would go well. I was introduced to Mr. N. when we reached the house, and he kindly offered to take me up Beaver Brook the next day. He has fished Beaver a great deal and knows it thoroughly. We were to have an early breakfast so as to get off in good time. The thoughts of fishing awakened me at an early hour.

I went down to breakfast and found Mr. N. ready. Breakfast never takes much time when you are going fishing, and we were off before the other boarders came down. Mr. N., though he now has a good many gray hairs, is as active as ever and makes many a young man shake himself to keep up with him.

After thirty minutes we reached the stream, which was quite different from the New Hampshire streams. The trees grew close to the water's edge and one had to keep the tip of the rod very near the water to avoid entanglement with the branches. As there is no room for casting and as there are long, deep runs, the line is put out by drawing off a foot or two from the reel, and then suddenly raising the rod, thus causing it to go through the guides. We found lots of fine places, but most of the trout had already been taken. We fished some distance before we had the least sign that trout were in the stream, when I landed a small one. As the stream was wide we fished side by side. The trout evidently were not plentiful, though we took a few when we got further down stream. I threw into a promising pool, the branches allowing it, and nothing followed. I repeated the cast, when it was taken after the hook had sunk below the surface. I fastened the fish, and found to my disgust on landing him that I had caught a pickerel, which got into the stream from a pond several miles above. We fished the best places with great care, but got small return for the trouble. Out of one deep pool near the roots of a tree where a plank had floated we each took two nice trout. The trout showed very little spirit and took the hook on most occasions more like a catfish than a member of the salmon family. We several times caught one by taking plenty of time at a promising place, leaving the line some time in the water. Of the few we took I only remember one of these coming to the hook in shape. He came full length out of the water when he took the bait. We lunched under some of the trees and rested near one of the pools where we had lost a good one.

As Mr. N. believes strongly in the qualities of the sneak-bend hook he induced me to try one, as I had been unfortunate in losing several fish. He keeps his hooks in a tin box, each being wrapped separately in a small piece of paper, the number of each hook being placed on the wrapper. Though I lost no more I am not convinced of the superiority of the sneak over the spout.

The baskets were not very heavy when we stopped fishing, Mr. N. having ten to my eight. The stream does better for the angler early in the season, and it is not worth while to fish it later. I decided to try Washington Lake and leave the few trout in Beaver Brook to the tender mercies of those who wished to fish for them. Washington Lake is about three-fourths of a mile from the house, accessible by a nice shady walk through the woods. The way the fishermen at our house secured their minnows, catching them in the lake, was one of the best cheap methods I have seen. They use a contrivance consisting of a rectangular block of wood with four auger holes through it. Into these are put four sticks, whose ends are attached to the corner of a mosquito netting. The square-sided block is of ash or oak and is 8 in. long and 2½ in. in thickness. Auger holes that you can put your index finger in are bored through the block at such an angle that when the sticks, which are cut from the woods, are put in, they will be in such a position that the ends of the poles will form a square if connected by straight lines. To these ends was fastened a net containing four square yards. A pole is fastened to the top of the block and the net bent down into an opening between the pickerel weeds. By baiting with bread, potato, cracked corn, etc., we took on the most successful occasion enough in two draws to fill a large pail.

The third morning, as the bass had not been taking the minnow and as there was a nice ripple for trolling, I put on a double-twisted leader and a light Hill spoon. This is a very nice spoon for rod trolling, being a good spinner and having strong hooks, and generally takes bass. But this morning, as I had no strike the first time around the lake with a 13oz. split bamboo rod between my legs and 60ft. out, I changed a hammered Spalding spoon of larger size for the Hill. As most anglers do, I use a hook swivel; so this can be done easily. The left side of the lake is the best, in my opinion, and when I had got half way up I was opposite a long stretch of lily pads. I had a splendid strike and almost immediately a fine bass came into the air 80ft. from the boat. He made two splendid leaps before he was landed, and was evidently feeling very lively, as he gave me all I wanted to do to get him in. He weighed on an English spring balance a little less than 4lbs. two hours after being taken, and proved to be the best bass taken out of the water this season.

We had poor success in Washington Lake the rest of the week, taking perch and a few pickerel, but no bass. So Dr. E. and I decided to go over to Sand Pond. We secured a good variety of bait, such as minnows, crawfish, frogs, grasshoppers, beetles, bugs, etc. We were anxious to get bass, and as Sand Pond by report was the best bass grounds within five miles, we went there.

The pond has a sandy bottom, as the name implies, and in many places rocky. This can be plainly seen through the clear water. Some trout were put in this lake, but of course were never heard of more, as the bass and pickerel would not or could not tell what had become of them.

We anchored in 9ft. of water, and caught several bass, but as they ran small we thought best to move. Before starting I put on a Hill double No. 1, and had a strike as we passed over the flats. The pickerel, for the fish proved to be such, came out of the water making a couple of leaps like a bass. The pickerel of this lake are gamy and of good flavor, due to the purity of the water. He doubled the rod, but did not succeed in getting any slack by coming toward the boat, as he tried to do. After a short time he was landed, and weighed on the spot 2½ lbs. We took several small bass trolling, but all under a pound. Coming down I had another good strike. The fish, though not leaping, showed himself at the surface, it took some time to get him near the boat, and then he made several strong runs that made it necessary to let him go on. I lifted him in with my hand, as we had no net; he weighed exactly 2lbs. These two were as gamy pickerel as I have taken. Sand and Long Ponds are the best in this section; the latter we visited only twice, as it is eight miles away.

WM. TOM.

NEW BRUNSWICK, N. J.

THE CASTALIA STREAM.—II.

THE "LOWER CLUB."

IT was a blustering day in early April when Mr. C. W. Sadler, of Sandusky, and the writer undertook to engineer a vehicle over the ugly road which at that season lay between that city and the grounds of the "Lower Club." We will call it by that name, for so it is commonly distinguished, though the real name of the incorporation is the Castalia Sporting Club. There had been a heavy snowstorm on the night before our visit and the ill-timed covering of white held its own fairly well with the bottomless muck of the fields and roads. Only a part of our way lay along the pike, for we were to go by way of Venice, a hamlet situated on the bay, directly at the mouth of the Castalia stream. This part of Ohio looks as if it had been shot with a load of small towns, and they are scattered all over, between Toledo and Cleveland, with a fairly good pattern. None of the towns is bigger than about 4x9, and they happen about every four miles, thus affording great facilities for grief, groceries and gossip. Venice goes over in the morning and asks Castalia for a cup of sugar and enough butter for breakfast, and if Castalia hasn't got it probably Huron has, or, at least, Berlin Heights, or maybe Ceylon: and in the afternoon Castalia may want to borrow a handsaw and a garden rake of Venice. It all even up, and leaves more room for lawns in front of the houses and more yellow paint for the go-cart of each local village magnate. I would like to be a burgomeister in one of these small cities. I should like to be great and to know it.

Mr. Sadler said we should take the Venice road, so that we could follow up the stream from that point, and thus see something of how it lay upon the ground. At Venice, about five miles from Sandusky, we crossed the stream, a wide and pretty water, just at the railway bridge which spans it as it enters the bay. A few rods to the left of the wagon bridge stands the Venice mill, and we paused a moment to look at the white water washing through the sluice and broadening out into a magnificent pool.

"This pool is really open water," said Mr. Sadler, "and the club can not well protect it. There have been a number of 3lbs. trout taken out of here on worms. You see, the trout drop down stream and get over this lower dam. The club doesn't dare put in a fishway, for that would let up pickerel, perch and all sorts of things. I don't doubt that thousands of pounds of trout have come down over this dam and gone out into the bay. The net fishermen often find trout in their pounds, well out in the bay, and they have been seen in the evenings jumping all over this part of the bay. It is impossible to tell what proportion of the escaped trout thrive in the warmer lake water, but they certainly live there for a while at least."

We now turned the corner of the mill and headed up stream. To our left we saw some great pools or ponds in a half marshy country. Before us we could see the winding way of the natural stream, and away off to the left my friend pointed out the course of the "old mill race," which flows by the ruins of the "old brick mill," long since burned down.

"This big water below here is called 'Dreer's Pond' or 'Dreer's'," said Mr. Sadler, "and here is unquestionably the lurking grounds of the largest trout. Most of the heavy baskets have been made along here this spring. Mr. Fayette Brown made his fine catch here last week. M. Julian Yale always gets some of his heaviest fish here. Just now the big fish are probably lying in this water, or a great many of them. These pools are very deep, and as you see hard to get at and quite too wide to fish across. The trout can certainly protect themselves here."

I had had no idea that there was such a volume of water in the stream until I saw these lower reaches. It is almost a young river.

Before us now lay the Castalia Valley, not wide, not long, apparently only an open farming land, pleasant and pretty. The sharp pitch which gives the stream its remarkable swiftness is impossible of discernment through an open eye's glance over the landscape. The little valley seems quite flat. Houses, hedges, scattered groves, a wood to the right, the bay at back and along at the left this once mysterious, now imperious stream. A wonderful pleasing, quiet nook of the world, and perhaps hard to surpass in the totality of its charm. I have never seen the Long Island streams, or indeed any of the Eastern trout preserves, but I doubt if they are pleasanter than this rural, simple, quiet, dreamy little valley by the bay.

"The stream is full of trout," said Mr. Sadler, "and they grow very rapidly, because the conditions are simply perfect. The feed in the stream is much superior to that in the Caledonia stream of New York. This peculiar moss is scattered along the stream from one end to the other, and it is simply full of feed. If you will take out a rakeful you can see dozens and hundreds of crawfish, fresh-water shrimp, miller's thumbs, minnows and the like. The entire stream is full of feed, and I do not believe the like exists anywhere in the country. This is not in the least artificial. Nature did it all, and just made this stream a natural heaven for trout. The moss not only feeds but protects the fish. They are lying down in there, covered up out of sight, thousands and thousands of them. 2 and 3-pounders. It is simply a sight to see the spawning beds, further up the stream, in season. You will see a perfect mass of large trout, such trout as you wouldn't dream were in the stream. Then they disappear, and where they go nobody knows, even in a stream studied as thoroughly as this. The biggest trout are not seen at all in the fishing season. They lie deep in the moss, under the banks, or in these deep pools. All the fish you will catch are broad, lusty fellows, and very brilliant. Their shellfish diet gives them their flaming colors, I suppose."

We were working slowly toward the club house as we talked. Pulling laboriously along a terribly muddy cross lane, we passed through a bit of sparse timber, where the natural stream ran close by and spilled out into some wide pools. All this was elegant fishing water, my informant said, and so it seemed. In spite of the snow and mud all about, the stream was bright and clear. It has no surface water, the banks being so arranged that the drainage flows back in ditches. The banks of the old mill race are like levees.

Miller's farmhouse was presently reached, a comfortable structure, well surrounded with barns and buildings. This is in effect the club hotel. The club house proper lies across the way, directly upon the bank of the rapid, sparkling stream. A few sturdy willows and cottonwoods stand about. If you look closely in the meadow below, you can see the traces of the old creek bed. The club house is situated on the last curve of the old natural stream. Just below the straight line of the race leads out, over a mile as straight as a die. Half way, say, to the ruined brick mill where the race ends, there is a gate which lets out a boiling torrent of natural champagne into the natural bed, and here the stream wanders between the bush-clad banks for over two miles at its own sweet will, coming by the road where we saw it in the morning. At the old brick mill there is a tremendous dam and a great drop in the water. Three miles or more of water below this shute, and a union in the big pools above Venice. Above the club house the stream winds in its own natural channel through a pretty meadow, open and lovely for casting, a regular English, Isaak Walton trout stream, till it reaches the big trees and the fence which marks the division line between the two clubs. From this line to the bay is six miles. Add to this the two miles of the old stream below, and the total is eight miles of water, every inch of which has trout in it. It is a magnificent property.

At first the Castalia Sporting Club had eighteen members. Then the limit was placed at twenty-five, and is now full. It would be very difficult to secure a membership there now. The stock is not transferred to any extent; \$1500 would not touch a single share, and I imagine there isn't money enough to buy out the stock of some of those men. No wonder, I am sure, for so far as my travels have informed me, I would not trade a share of this stock for one in any club in the country. This is trout fishing convenient, accessible, infallible, with all the comforts of home, after wild fish, big fish and plenty of them. The men of this club cannot better themselves very much, certainly. They do not remember their \$40,000 or \$50,000 investment, or think of their annual assessment of \$75 or \$100 a year.

I have at one time or another met a number of the men who belong to this club, and I don't believe there is a

dude in the lot, and they average mighty high-grade as successful trout fishers. Among so hearty a lot of men, therefore, you would expect in the club house about what you would find, a roomy, comfortable pleasant sporting domicile, with no dudery visible. The building is two stories, with ample room for everybody. The main room below has a mammoth fireplace which is useful as well as cheerful, for the club opens its season March 15. The walls of this assembly room are decorated with trout designs in colors and black and white. Some artist, in playful allusion to Mr. Harvey Brown's partiality to a big Parmachene belle, has presented the club with a painting of that fly in colossal proportions. There are life-size drawings of numbers of the notable trout, including one showing a trout with the tail of a mouse sticking out of its mouth, just as it was when the fish was caught. It is a very comfortable place. The locality is so quiet and peaceful, too, I should think one could stay a month there, or may be a year, and not get tired at all.

Explaining to Miller's family our mission from Mr. McBride, Mr. Sadler and I started out in the afternoon to explore the stream. We found the fish not rising well and only brought in half a dozen; all, of course, were the club standard of 8in. The rules of the club are very simple. No fish less than 8in. must be kept, and not over 15lbs. a day. No lure but the artificial fly can be used.

recent accession to the club ranks, having taken a share left vacant by the death of a member. Mr. Van Vleck I found very comfortable and pleasant, and something of a fly-fisher withal. Between him and Miller I learned that evening some of the facts which have been presented.

We hauled out the club records that night, and looked for big fish. One thing was at once apparent. The fisher for count abides not here. The main thing sought is to have the greatest weight in the least number of fish. The heaviest fish ever taken on Castalia Stream, it seems, was found in the fishway at the old brick mill, when the water was shut off on the first trial of the shute. This fish was a brook trout, and weighed 5½lbs. We prowled along the pages in search of big fish taken on the rod, and found something like this, only a few instances being given, picked up half at random: Julian Yale, one trout, 3½lbs.; Fayette Brown, 1, 3lbs. 3oz.; Julian Yale, March 30, 1885, 26 trout, 15lbs. 2oz.; Fayette Brown, March 28, 24 trout, 18lbs., largest 1lb. 2oz.; Julian Yale, 1888, 1 trout, 2lbs. 2oz., and twice a catch of 4 trout, 4lbs. 4oz.; Julian Yale, May 29, 1887, 1 trout 19in. long., weight 3lbs. 3oz., and 8 trout, total 5lbs. 7oz. It seems that Mr. Yale and Mr. Sheffield in 1887 caught trout on the fly when the thermometer stood 6° below zero, and the lines froze stiff. The stream never freezes. Mr. Yale's

great quantities. It would seem that the experimental stage had gone about far enough along the Castalia Stream. If they will leave nature and the brook trout alone there, they can have any quantity of sport assured for the future, and beyond that nothing better lies or can be gained by experiment. The basis of all this is the wonderful stream itself. It falls 27ft. in 2½ miles, including one dam, 45ft. in 5½ to 6 miles, dams and all. Its current would appear at least six miles an hour. Artificial barriers, floats, bridges, etc., have been provided in abundance, and all in all, the little river is simply lovely.

I must have a little more to say about the "Upper Club" next time, and about the great springs which make the head of Castalia Stream. Much more could easily be written here about the pleasant stay at the Lower Club. The gentlemen comprising these 25 immortals are as follows:

Mr. Fayette Brown, president, Cleveland, O.; Mr. Lee McBride, secretary and treasurer, also of Cleveland. Messrs. J. H. McBride, E. T. Scovill, James Pickards, H. H. Brown, Prescott Ely, Amos Townsend, S. W. Sessions, C. J. Sheffield, R. W. Hickox, H. C. Gaylord, E. P. Williams, H. A. Sherwin, Hon. Wm. Bingham and Judge S. E. Williamson, all of Cleveland. Messrs. George H. Van Vleck and W. T. Carrington, of Toledo. Messrs. A. C. Ely, Robert Forsythe, W. L. Brown, Jay C. Morse and

THE LOWER CASTALIA CLUB HOUSE.

Any man using bait would be promptly expelled from the club. But I ought not to put it that way. No man of this club would think of using bait, and I should say rather that the club would not admit any candidate whom they had not known to be above any sort of crookedness in any walk of life. It is a club of friends and gentlemen and no abuse of privileges was ever heard of. For instance, there was once a rule regulating the number of guests a member might bring during a season, but this rule is now obsolete, and no restriction is asked, because no one ever abuses his position or his privileges. There are trout enough for the purposes of this club, which are simply pure sport and some fun a-fishing. I don't know where there is a nicer little club.

But a nice club, a pretty stream and pleasant surroundings may be one thing, and really good trout fishing quite another. How about the actual supply of trout? There is no question about that. The stream is simply full of trout. We saw them by hundreds, all active, strong, brilliant fish, not staid fed, but endowed with all the vigor, shyness and cunning of the wild trout, untamed and incomparable. We saw any number of great fellows, over 1½lbs. or probably over 2lbs. The fish were very shy, and I soon learned that curiosity and fishing didn't go well together, for when I stopped casting from a distance and stepped up to the bank to count the trout they scampered off, and not only refused to be counted but declined to rise. The water of this stream is something to rave over. It is very swift and pure as pearl. It has a sort of bluish cast, a steel color, taken from the reflection of the sand in places, but it is as transparent as air. Needless to say, it takes fine tackle and fine fishing to take trout here. The best flies for early spring are dark, black-gnat, brown-hen and the like being much used. You will see fine gear used by the Castalia anglers.

Miller, the club keeper, was not at home when we arrived, and did not return that day. During the afternoon I had the misfortune to step on a sharp nail, which pierced the rubber boot and inflicted an ugly hurt, so Mr. Sadler was returning to the city I went with him. On the following day I returned, in order to have some talk with Miller, and then I met one of the members, Mr. George H. Van Vleck, of Toledo, who had come on alone for a little fishing. Mr. Van Vleck is the most

total catch for 1887 was 45 trout, total weight 32lbs. 14oz. In 1887 Fayette Brown caught 142 trout, 61lbs. 1oz.; Harvey Brown, 1887, 133 trout, 51lbs. 10oz. In July, 1890, Mr. J. H. McBride took 26 trout, 12lbs. 2oz.; Mr. Fayette Brown, April 5, 20 trout, 13lbs.; Mr. McBride again, 35 trout, 18lbs.; Mr. Prescott Ely, April 14, 1890, made the remarkable catch of 31 trout, weighing 15lbs., and 33 jacksnipe! Mr. Fayette Brown, June 13, 1889, caught 25 fish, 12lbs., and on May 9, 29 fish, 13lbs. On some days, said Miller, a man could catch 75lbs.; he could catch a bushel basket full. I have caught 10lbs. in two hours in a heavy snowstorm, said Mr. Van Vleck. Mr. Sadler said he had often caught his basket full before breakfast and gone back to Sandusky. Mr. Jay C. Morse, May 25, 1888, caught 14 trout, 10lbs., one fish 16½in. long and weighing 2lbs. On May 23, 1888, Julian Yale, 18 fish, 10lbs., and Mr. Fayette Brown, 18 fish, 9½lbs. Mr. Yale in 1880 caught 6 trout that weighed 6lbs., coming to the club at 6:30 one evening and going back in the morning at 8 o'clock. Mr. Lee McBride, June 1, 1880, took 18 fish, 7½lbs. In 1890, Mr. W. T. Carrington caught a fish that weighed 2lbs. 3oz. The same year Mr. J. H. McBride took at one fishing 26 trout, 9lbs., and Mr. Prescott Ely 22 trout, 8lbs. March 15 and the day after, 1890, Messrs. A. C. Ely and W. H. Comstock, of Chicago, took 50 fish, 21lbs., during a heavy snow. Mr. Lee McBride, 35 fish, 18lbs.

I could fill the paper with records like the above, but enough have been given to show the quality alike of the fish and the fishermen. The Castalia is above all things a fishing stream. It is stocked, full stocked, and has no fear whatever of diminution. There are some European brown trout in the stream, and also some rainbow trout. They are not often met. Miller, the keeper, bemoans the fact that anything but brook trout was ever put in the stream. He believes in letting well enough alone, and he is just exactly right about it, too. There were some grayling planted six years ago, but since then Miller has only caught two of them, and I heard of no others. Not long ago some one in the upper club planted a lot of water-cress, and this beastly and tenacious plant has spread all through the stream, to the great detriment of the fish and fishing. The lower club has spent about a thousand dollars in trying to get rid of this cress. It is raked out in

Julian Yale, all of Chicago. Mr. J. Merrill, Jr., of Newark, N. J.; Mr. Chas. H. Hubbard, of Hartford City, Ind. 175 MONROE ST., Chicago, Ill. E. HOUGH.

[Since writing the above I have met Mr. A. C. Ely, of this city, just returned from a successful visit to Castalia. He informed me that a few days previous the artesian well which was being sunk by the Lower Club, some distance above the club house, struck a great subterranean stream, which could not be controlled in any way, and which when Mr. Ely left was flowing a volume apparently half as large at least as the old natural stream below the club house, or pretty near half the volume of the whole stream. This was being led off through the meadow below the club house, into the old channel. The first night of the flow, the big "Blue Hole" spring of the Upper Club sunk a foot or more, but in the morning it rose again to the old level. The Lower Club was afraid that the late artificial meandering of the stream by the Upper Club would make the water too warm in the lower stream, and so it sunk for water. It got it, just as cold and of the same quality, as that of the main stream. There is unquestionably a strong subterranean stream flowing to the Bay beneath this valley. I suppose one more point of mystery and of interest may thus be added to the history of this peculiar little river. As I understand it, the artesian well is about a mile and a half or two miles below the "Blue Hole" whose waters temporarily sunk. I hope to hear more about this new "spring" later.—E. H.]

ST. LOUIS, May 5.—I note that our neighboring city of Hannibal has a new club, that was organized last week under the name of the Sny Carte Hunting and Fishing Club. The club has been incorporated, and has for its object the propagation of fish and game and the enforcement of the fish and game laws of the State of Illinois. Leases have been secured for the waters of the Sny Slough for a distance of nearly 3 miles. A club house will be erected at once for the accommodation of the 150 members. The officers of the club are as follows: Pres., Dr. D. H. Shields; Vice-Pres., Mr. Geo. A. Mahan; Sec'y, John J. Brown. The recent heavy rains have made the water so high in the fishing resorts near this city that there is but little angling being done, and there will not be any until after the waters are clear again.—ABERDEEN.

THE SEASON IN CANADA.

THE icy fetters that for five or six months past have bound the waters of Canada's northern lakes and rivers have at length been shaken off, and native anglers are busy assorting their fishing tackle, going through their carelessly laid-away fly books and making notes of the missing favorites, or of those damaged during the course of last season's campaign. It will be a few days yet before these will be called into requisition, but this by no means indicates that the finny inhabitants of Canadian waters are remaining free from allurements of the fisherman. All varieties of deep-water bait known to early spring anglers are eagerly seized by Canadian trout as soon as the spring floods partially subside in the rivers and the ice disappears from the surface of the lakes. Good catches of trout have already been made this month in Lake Beauport, and also in Lake St. Joseph, on the line of the Lake St. John Railway. The fish in the former average between 4oz. and 1½ lbs., and in the latter run frequently up to 3 and 4 lbs. each. Messrs. Brewer, Coates, and other members of the Springfield Fishing Club, had excellent sport upon the lakes that form part of their Metabetchouan preserve as early as the month of March. They spent ten to fifteen days in the woods, took through the ice a large quantity of very fine red trout, and saw several caribou.

Lake Edward, or Lac des Grandes Isles, has already yielded a few fine fish this spring, but will reach the full height of its season about the 15th inst. Thereafter we may look for reports of ample takes of very large fish, some of the handsomest trout taken along the line of the Quebec & Lake St. John Railway having come from this lake, which, it will be remembered, is also the headquarters of Kit Clarke's Paradise Fin and Feather Club, of which Judge Gildersleeve, of New York, is president, and Grover Cleveland an honorary member.

The ice left Lake St. John, the home of the far-famed ouananiche, early in April. The landlocked salmon of this inland sea will not leave it for the Grande Discharge for two or three weeks to come. During the month of May they are principally taken in the lake itself, and especially along the Roberval shore, opposite the Roberval Hotel and the present terminus of the Quebec & Lake St. John Railway. The large influx of American anglers last year into the country of the ouananiche, and the consequent crowding in the height of the season of the local hotels, have induced the proprietors of the Roberval Hotel to so enlarge their house during the past winter that its size is now quadrupled and accommodation provided for three hundred guests, while upon an island in the Grande Discharge another house has been erected, capable of accommodating a hundred guests.

Lake St. John is thirty miles across from Roberval to the Grande Discharge, and the crossing will be made by two boats daily during the present summer, one of which is a powerful new steamer with accommodations for 400 passengers. These steamers also make occasional trips up the Peribonca, the Mistassini and other huge rivers flowing into Lake St. John, of which some are over a mile wide at their mouths. But few white men have sailed up these mighty streams, which are navigable for steamboats in the spring time for twenty to thirty miles, and in whose waters are to be taken at any time during the season large catches of both pike and ouananiche. Prof. Julian C. Jones, of Hartford, was the first American to ascend the Mistassini to the Falls, a wondrous cataract, 21 miles from the mouth of the stream. Here, in 1888, he made a marvelous catch of ouananiche. The month of June will be found the most favorable period for the ascent of these rivers before the fall of their waters.

I will endeavor to keep you posted from time to time as to the names and doings of American anglers who may be visitors to Canada's great fish preserve, which stretches away northward from Quebec for a distance of 200 miles.

E. T. D. CHAMBERS.

QUEBEC, May 6.

THE MAINE ICE IS OUT.

THE fever is on. Green trees and apple blossoms have intensified it. Running brooks may cool its ardor, but they must do it by direct contact only. The broad lake, with the boat and the fly-rod for an accompaniment, may bring a panacea, but it will come only after a season of days on the surface and nights in camp. The gamy trout must be brought to the creel, or at least the endeavor must be made, before the fishing-fevered patient is well again. It comes once a year, and the spring of 1891 has witnessed one of the strongest attacks about here on the records of angling. The ice has been tardy about leaving the great trout waters, and the waiting has only intensified the peculiar mania. But the sellers of fishing tackle have reaped a harvest from the waiting. Guides and hotel people have desired the ice to leave early, but the more astute of the tackle people have been ready to bet that the lakes would be slow about clearing. The bet was inspired by the wish, and they have had their reward. Days about fitting out and waiting for the ice have sold thousands of dollars worth of tackle that would have waited in the stores, possibly till another year, had the ice departed by the first of May. And by the departing of the ice I mean that in the great trout lakes of Maine and New Hampshire; for where else does the angler go? After all, even the guides and hotel people and camp keepers will be the better off for the tardy movement of the season. Before these lines are read by the anxious sportsman the ice will doubtless have departed and larger parties will be the result of the waiting, the talking, the getting ready; the excitement is too much for the would-be stay-at-homes and they are off.

But the anglers have been impatient to intensity, as well as the guides and camp-keepers. In several instances their impatience has got the better of their judgment, or at least their impatience has formed a judgment for them, in some cases very misleading. They have reasoned: "The ice must be out by Wednesday, or by Thursday. We will start to-day and get there just in time." Such reasoning has been the cause of nearly a week's waiting at the dismal little hotel at the border town, with the ice still in the lake as firm as January. Mr. C. P. Stevens, one of the Camp Vive Vale party, has been one of the impatient waiters. But in his impatience there was a method after all. His friend, Mr. Hayes, superintendent of the Boston Rubber Shoe Co.'s works at Malden, has only a couple of weeks at his disposal, and that time was so mapped out that he must be away by the 5th of May,

and they started. They met ice in the lakes, with snow-drifts in the Lake road, and freezing nights, with very few fish. These were taken after a good deal of trouble in the swollen brooks.

The Clough party of Lynn was also among the impatient, and Thursday a week ago carried them off. They met snow and ice, with a little poor fishing in the borders of the lake, with frost and rather poor success. Warmer weather and the ice out will bring them better results.

Mr. B. P. Kelley, the well-known builder of Catholic churches, with his friend, C. J. Bateman, a celebrated architect, will go to his old haunt, the Upper Dam, about the first of June. Mr. Kelley is one of the greatest lovers of angling in the whole list. He was a fast friend of the lamented Fr. O'Brien, of Cambridge. They were anglers together for many years. They annually visited the Upper Dam in company, and two more genial and wholesouled anglers were seldom met there. To hear Mr. Kelley tell how he "gave that trout the butt of the rod" would amuse a gathering of anglers around the camp-fire for a whole evening. Mr. Kelley is a lover of fly-casting, and his account of his tactics, his maneuvers, is as unique as it is interesting. He earnestly desires a rod and reel association in Boston, and will give the support that a gentleman of his wealth can afford to do. Where are the other members? In life Fr. O'Brien once expressed the wish that when he came to die, he might be buried near the trout lake he so much loved. But the incident affords a striking illustration of the great affection even the learned, the professional, the religious have for the woods and the waters, the reel and the rod.

LATER.

A dispatch from Andover, Me., on the 10th announced that the ice was out of Richardson Lake. This was something of a surprise to the sportsmen, since that lake is usually the last of the Androscoggin chain to clear. But the sportsmen are off. They are all the more enthusiastic for the long waiting.

Mr. Bayard Thayer, with Mr. H. C. Leeds, will go at once to Mr. Thayer's Birch Lodge, at the head of Richardson Lake. Messrs. N. S. Simpkins, John Simpkins and J. Otis Wetherbee, will follow to the same camp a little later. Mr. Henry Hobart, of Bridgewater, Mass., will early make a trip to the Rangeleys. Mr. N. N. Thayer and wife are to go to the same lakes. Mrs. Thayer is an angler not excelled by her masculine friends, neither in point of enthusiasm nor of expertness. Mr. E. E. Ryder is an angler only 80 years of age, and yet he will make the angling season at the Rangeleys. It will be his 19th season there. He claims that he will not be done fishing till he is 90 years of age. May he be right in that score, as he always is in his trouting record.

J. W. Rogers and wife are annual visitors to the Rangeleys, and they will doubtless again catch their big trout there. L. Coes, the famous wrench manufacturer, of Worcester, Mass., will make his annual visit to the Rangeley waters. B. D. Sweet, of Boston, will also go there. Fletcher Abbot, a son of Judge Abbot, is getting ready. Mr. Frank Potter, junior member of the boot and shoe manufacturing house of Potter, White & Bayley, is getting his flies ready. He will go later for fly-fishing.

C. D. Sias, of the coffee firm of Chase & Sanborn, with Mrs. Sias, will make a pilgrimage to Grand Lake Stream for landlocked salmon. Right here it may be mentioned that Mr. L. Dana Chapman, of Dame, Stoddard & Kendall, got away to the Sebago at the last moment, with some of his friends, though his party was a little broken up. He had a very fine show of landlocked salmon in the store window of the firm he is with on Tuesday morning. Mr. H. C. Litchfield, also in the tackle trade, reports a remarkably good trade this spring. He has no window for showing trout, for his store is in the second story, but he has had several offered already by his friends.

Salmon fishing is a little better at Bangor since warmer weather, but no big catches are yet reported. SPECIAL.

VERMONT TROUT.

RUTLAND, Vt., May 4.—The opening of the trout season in Vermont May 1 was very auspicious. The day was a perfect one, and the catches so far as reported were good. Since the enforcement of the 6in. law larger trout are taken. The trout have more opportunity to grow and the sportsmen confine themselves to the larger streams. I inclose a copy of an advertisement which the Vermont Fish and Game League have inserted in the weekly papers in various parts of the State.

A St. Albans fisherman brought in a string of 60 trout on the first. Rutland anglers were as a rule well rewarded. T. H. Clifford came home from the Chittenden Meadows with a handsome lot, the largest measuring 14½ in. and weighing 1½ lbs. This fish had been hooked by a companion, escaped with hook and leader and was taken again, with the first hook still in his mouth.

Chief of Police Woodward coaxed a fine basketful from the Castleton. Rev. G. W. Phillips showed twenty from Whipple's Hollow and George Tower was elated over a fine lot of trophies from East Creek. Timothy Wheeler, E. Northrup, E. W. Liddell, Dr. E. H. Armstrong, T. S. Sherman and others were out for the first day and all had something nice to show for their skill.

VERMONT.

FRANKLIN FALLS, N. H., May 8.—The weather has been cold, rough and raw, so the fish have not been biting well, only a few trout and salmon having been taken. The largest salmon that I hear of is one caught by Frank Sanborn, of this place, that weighed 10½ lbs. Trout (*namaycush*) have been taken larger than that. Many fish are seen rising and whirling at the top of the water, but evidently they are not feeding. Col. Hodge is going up to-morrow to see about distributing fry from the Newfound Lake hatchery. He is likely to have a busy summer of it, as he has to build several new hatching houses in different parts of the State. The lumbermen have destroyed my old camp in the Adirondack Woods; they will soon make us all say, "Good-bye, Adirondacks."—W. A.

A FISHING DOG.—The Klamath (Cal.) *Star* has an account of a dog belonging to D. W. Anderson, of Lost River Gap, that catches suckers. The dog seizes the sucker with his teeth "and with a rapid flirt of the head flings the wriggling victim high and dry on the beach." An oil of some value is expressed from these suckers, and each fish yields nearly a pint. This may seem a large quantity, but California suckers grow to an enormous size.

KELLUP'S TROUT.

"Oh, Caleb, why don't you stop wishing and worrying, but just take a day and go fishing. It would do you good," said Susan.

So Kellup got out the map and picked out a nice, lonesome spot in South county, and opened negotiations with a young man down there. Jake wrote back: "Will meet you 8:30 train Thursday morning."

He did. They shook hands.

"Well, how'd you know me, Jake?"

"Oh, I knew ye by the rig. Them rubber boots ain't high enough. Where's your creel?"

"Well, I forgot it. Tell the truth though, Jake, I think my pockets 'll be big enough. Vest pockets maybe."

They struck across the lots by a path toward the house. "There's a brook over yonder but it's pretty well fished. We'll go back a few miles. You go and set on the piazza with the Old Man while I hitch up."

The Old Man, small, spare, amiable, was getting faded, getting bent—a man to stay near the house now and do the bidding of the women. Glad of the company beside him on the edge of the piazza, he pointed with his pipe: "See that bird there, down on the lawn? Down by the bushes!"

"Where, where?" said Kellup. "Oh yes, a bluejay."

"No it ain't no bluejay. It's a pigeon woodpecker. Purtiest bird they is."

"Well, well, well. Well how many a one I've shot, how many a one I've shot at and always thought it was a woodpecker, a bluejay I would say. How do you tell?"

"How? By the white. There 'e goes. See 'im fly! See the white? See the white?"

By and by Kellup says, "I see you had the ice storm here last winter," pointing to a great oak tree down by the gate.

"Yes, had to saw them two big limbs. Hed a good mind to chawp'er all down, but they's a good many men, good many old men, some on 'em that—well, they used to be a schoolhouse 'cross the road 'n' they played round under that oak when they was boys, 'n' now they're all growed up they 'low that oak better not be cut down. Never played there myself."

"Jake digging bait?"

"No. All dug. Soap box full in the cellar; dug last fall. There he comes," and he got up to pluck a straw from the chestnut's foretop.

The rods were in, the lunch was in, the old coats and things were in, and Jake was in, so Kellup clambered up something loath.

There was a good wholesome aroma about the old man. He seemed to know things, too. It seemed to Kellup at that moment a good thing to know the difference between a woodpecker and a bluejay; better than all the short tables in interest. And then the fact that bait would live all winter in a box of earth with a little meal on top.

After supper that night when Susan had got done twitting him about the color of his nose, but never thinking to mention fish, Kellup went to the inside pocket of his game coat hanging up and produced first a handful of damp moss and then laid tenderly on a platter a 10in. trout. It couldn't have been more beautiful. And every night for a week after that he would run on to Susan about that country road that wound through woods desolate but delightful with undergrowth of rhododendron and beds of arbutus, and rocks with fantastic designs of lichen, and bars you took down and put back, and old sheep and young lambs and a deserted farmhouse. And then he took bread and went on about the many delightful pools in Sunderland Brook, where he dropped a bait with the conviction that here of all places would he reside if he were a trout, and the trees that caught his hooks high up, and the log that he played up from the depths and the waterfall made by the brook running into his boots "And, Susan, the trout I caught!"

JEFFERSON SCRIBB.

MRS. STAGG'S 205LB. TARPON.

PORT MYERS, Fla., May 7.—Mr. and Mrs. Geo. T. Stagg, of Frankfort, Kentucky, reports the *Press*, are here in their naphtha launch fishing for tarpon. On Saturday forenoon, May 2, Mrs. Stagg hooked a tarpon and after a hard and gallant fight of one hour and twenty-five minutes, brought to gaff and secured a 205-pound tarpon, the largest silver king ever caught with rod and reel, or in any other manner for that matter. When the news was first known our citizens hardly believed it, and in this town, among our citizens where tarpon have ceased to be a novelty, crowds were going and coming all day to view the king. Its length was 7ft. 3in., and it girthed 4ft. 3in. Mrs. Stagg is justly proud of her achievement, and declares she will try and break her own record. She may, from the fact that at this time of year the tarpon are in better flesh than earlier in the season. This monster tarpon has been mounted in fine style by our local taxidermists, Messrs. Wm. Jeffcott and Geo. S. Boyd.

The largest tarpon caught with rod and reel heretofore known weighed 184lbs. and was caught in 1888 by John G. Hecksher, at St. James City.

The Fort Myers tarpon record from April 26 is as follows, making note only of those caught with rod and reel. The score is kept by the *Press*:

		Pt. In.	Lbs.
April 26, J. V. Fitzgerald.....	5	3	101
24, Mrs. G. T. Stagg.....	7	1½	175½
29, Geo. T. Stagg.....	5	10	86
30, H. J. H. Platt.....	6	0	171½
May 1, Mrs. G. T. Stagg.....	7	2½	116
2, Mrs. G. T. Stagg.....	7	3	205
2, Geo. T. Stagg.....	5	3	56
2, Geo. T. Stagg.....	6	3	124
2, J. V. Fitzgerald.....	6	3	106
3, H. J. H. Platt.....	6	0	175½
5, Mrs. G. T. Stagg.....	6	7	126
5, A. B. Curtis.....	6	6	140
5, H. J. H. Platt, seven tarpon, averaging			105

Previously reported, 113; total, 133 to date.

Angel and jew fish are getting plentiful in our water. Many have been seen at the head of the wharves.

ONE MOMENT, PLEASE.—Do you contemplate visiting Dubuque, St. Paul, Minneapolis, Marshalltown, Des Moines, St. Joseph, Leavenworth, Kansas City, or any point in the Northwest, the Puget Sound region, the halcyon South or Southwest, or the busy East? The Chicago, St. Paul & Kansas City Railway will furnish you transportation enabling you to safely, quickly and comfortably reach your destination. Its splendid equipment and excellent management have made it a popular favorite. F. B. LORP, General Passenger and Ticket Agent, Chicago, Ill.—Adv.

THE PIKE FAMILY.—III.

[Concluded from Page 333.]

THE series of brief sketches of the pikes will be closed with a statement of an easy way of distinguishing between the important groups of the family and a short account of the muscalonge (*Esox nobilior*). I am aware that some of my ichthyological associates are now writing the name *Esox masquinongy*, but as Mitchell's description of the masquinongy or maskinonge, is inaccessible to me, and there is good reason to doubt its pertinence to the muscalonge, I prefer not to change a name so well identified with the species as Thompson's name *Esox nobilior*. This paper does not include a discussion of the common name of the fish for the very good reason that I am not satisfied as to its original orthography and would rather take up the subject when my information is more nearly complete. While on this topic I will say that Mr. H. W. Henshaw, ethnologist of the Bureau of Ethnology, Washington, D. C., has written me the following note: "The word maskinonge appears to be an Ojibwa or Cree word, both of them being Algonkian tribes. It is derived from the word *mask*, meaning ugly or disfigured, and *ningé*, meaning fish." FOREST AND STREAM has held to the name muscalonge, which, I am inclined to believe, will eventually be considered a corruption of the original Indian name of the species; but until we know the correct spelling of the Algonkian term we will gain nothing by substituting one doubtful appellation for another.

A matter of probably greater importance to him who goes a fishing is some clue to the way of distinguishing the various species of the pike family at sight, and herewith follows a short description of the muscalonge and a concise key to the main groups of the *Esoxidae*, of which it is a conspicuous and famous member. The muscalonge (Fig. 1) is a stout-bodied fish with a large head, the head equalling more than one-quarter of the length without the tail, and the depth about one sixth. It is stated to reach a length of 8ft.

FIG. 2. HEAD OF MUSCALONGE.
(Lower half of cheeks and opercles naked.)

The dorsal has 17 rays, the anal 15, and there are about 150 scales in the lateral line. The scales on the cheeks and opercles are large—much larger in proportion than in any other member of the pike family. By reference to the illustration (Fig. 2), it will be seen that the lower

FIG. 3. HEAD OF PIKE.
(Cheeks scaly. Lower half of opercles naked.)

parts of the cheeks and opercles have no scales. This is one of the best distinguishing marks between the muscalonge and all other fishes of its family.

The color of the muscalonge is usually dark gray, sometimes without spots, as in the variety *immaculatus* de-

FIG. 4. HEAD OF PICKEREL.
(Cheeks and opercles completely scaled.)

scribed by General Garrard, but generally with roundish, distinct or confluent dark spots about the size of buckshot. The color of the sides is often bluish gray, as in the variety above mentioned. The fins are black-spotted, the lower parts of the body pale. The eye of the muscalonge is comparatively small, only one-fourth to one-fifth as long as the snout.

The pike (Fig. 3) has the cheeks fully scaled and the lower half of the opercles naked. It may be still further

distinguished from the muscalonge by its coloration, the spots being paler than the ground color of the body. The sides are gray or dusky and with numerous oblong or roundish white spots. The dorsal, anal and caudal fins are black-spotted. In the young the white spots are more or less confluent, forming oblique streaks or bars.

The pickerel (Fig. 4) has both the cheeks and the opercles fully scaled. In the largest of the species, *reticulatus*, the sides are usually greenish and covered with a network of narrow dark lines. Sometimes the reticulations are wanting in this pickerel, giving the fish a unique appearance. The two smaller species mentioned in the preceding papers (*vermiculatus* and *americanus*) are different in coloration from the *reticulatus*, or common pickerel, but agree with this in having the cheeks and opercles entirely scaled.

THE MUSCALONGE (Fig. 1).

Distribution.—The muscalonge inhabits the Great Lake region and northwest, its northern limit not being definitely fixed. It occurs occasionally in the Ohio Valley, and Professor Cope records a specimen taken in Con-

FIG. 1. THE MUSCALONGE (*Esox nobilior*).
(All the figures are from "Fishery Industries, U. S.")

neaut Lake, Crawford county, Pa., measuring 17in. in circumference behind the eyes. In Lake Erie among the favorable localities for muscalonge are Dunkirk and Barcelona, New York, Erie, Pa., and Mill's Grove, Ohio. In Sandusky Bay and at Kelly's Island some large examples have been taken. The species is comparatively scarce in this lake. In Lake Ontario Cape Vincent is one of the noted places for this fish. Clayton, N. Y., furnished good fishing last summer, and Theresa, on Indian River, was a good locality. At the southern end of Green Bay the muscalonge was reported common by Mr. Kumlien nearly ten years ago. In winter the species is found in Lake Michigan in the vicinity of Racine, Wis. Coolidge, Wis., has furnished excellent fishing in July. In the southeastern part of Lake Michigan only large individuals are reported to occur. It is said to be rare throughout the Straits of Mackinaw, but common at Les Cheneaux Islands. The Missisquoi River, at Highgate, Vt., has yielded some fine muscalonge. From the evidence before us the muscalonge is not remarkably abundant in any part of the Great Lake region. It seems to be not gregarious, but occurs for the most part in pairs. It has the reputation of being the largest game fish in the fresh waters of the United States. This statement, however, takes no account of several anadromous species which spend a considerable portion of their time in the fresh waters. Among the large examples recorded are the following: In 1864 Mr. Fred Alvord announced his capture of a specimen in Maumee Bay which weighed 85lbs., and in 1865 Mr. Schultz claimed to have seized a muscalonge in the old harbor at Milwaukee weighing 100lbs. The species reaches a length of 8ft., and individuals weighing 50lbs. are moderately common. Mitchell described a specimen 47in. long, which weighed 80lbs. The average length of the species is about 3ft.

Habits.—Like the other members of the pike family the muscalonge preys upon smaller fishes, and its surpassing size and strength, as well as its voracious disposition, combine to make it one of the tyrants of the fresh waters. We have already alluded to its occurrence commonly in pairs. Richardson states that in the spawning season in small rivers falling into Lake Simcoe it feeds upon small fishes and upon small gelatinous green balls which grow on the sides of banks under the water. He was informed that spawning takes place in the spring. In Chautauqua Lake, New York, Mr. Monroe Green, superintendent of the Caledonia hatchery, obtained the eggs of this species in April and May. On the 19th of April, 1890, a large female furnished 60,000 eggs. At this time the temperature of the water ranged from 40 to 46°, and very few of the eggs were hatched. In May of the same year 44 females were taken in the same lake and 103,000 eggs were secured, from which 75,000 fry were deposited May 27. The temperature of the water ranged from 46 to 60°. On account of the large size and great strength of the fish the collecting of the eggs was attended with great difficulty. In hatching the eggs of the muscalonge Mr. Jonathan Mason, who was in charge of the work, placed them in a box about 4ft. from the bottom of the lake, in a place where the water was 18ft. deep, and in this way he succeeded better than by his former experiment of hatching them in jars or trays.

Parker Gillmore, in a recent issue of *Land and Water*, gives a description of muscalonge fishing in which he mentions his success with spoon bait and with a unique lure consisting of the tail of a young brown calf. The shank of the hook was passed up through the center of the tail and secured to a swivel, to which a foot of strong gimp was attached. He mentions the use of the musk from the muskrat by one of his Indian guides to increase the attractiveness of this singular fish lure.

In the Missisquoi River, at Highgate, Vt., a correspondent of FOREST AND STREAM killed several fine muscalonge on a light salmon rod. One of them, weighing 19lbs., broke water like a salmon and cost a half hour's work to bring him to boat. For a full and graphic account of fishing for muscalonge the readers of FOREST AND STREAM will refer to E. Hough's interesting articles, published July 3, 10 and 17, 1890. T. H. BEAN.

GAMÉ PROTECTOR BRADLEY, of the Eighth District, was reinstated by the New York Fish Commissioners at their meeting last Tuesday.

ANGLING NOTES.

LAST Friday and Saturday several parties started for the Adirondacks, having received word from their guide that the ice was out. This is remarkably early, and as there has been but little rain, the chances are in favor of their having excellent fishing. One of the greatest drawbacks to the early fishing generally is the high water, but it looks as if everything was favorable this spring.

Mr. Harry Green reports the fishing on the Bushkill very good this season. He says he saw five deer cross the stream while he was fishing one day last week. So there are still a few deer left in Pike county. Last season it was reported that they had been pretty well exterminated in that section.

There are a good many members now visiting Blooming Grove Park, and they are having great sport with the big speckled trout that were turned into Lake Giles last winter. The executive committee very wisely passed a rule prohibiting any member from killing more than five in any one day, so as to give every one a chance at them. The club has purchased two miles more of the Shehola, thus securing an excellent stretch of fly-fishing water.

There were quite a number of small striped bass taken last week in Coney Island Creek and one of over 18lbs. was shown that was caught near the mouth of Shrewsbury River. One fisherman, I believe it was the same gentleman that caught the 20lb. striped bass at Tarrytown, had his line, etc., carried off by a large

bass; as they have taken them in nets this spring upward of 40lbs. in weight it shows that they are there, but, of course, people who fish in the Hudson are not rigged for bass of that size.

Large weakfish have appeared on the stands in market, they were, of course, netted—probably near Fire Island. Bluefish are plenty off the Delaware coast.

Frozen fish have had their day. The best restaurants and hotels have about made up their minds not to purchase them, as their guests do not like them. I wonder that people eat them at all, for of all tasteless trash frozen fish is the worst, except perhaps frozen game, which is not tasteless by any means; it would be better if it were.

C. Fuller sends word that good-sized blackfish are plentiful in Broad Channel.

The reports from the Beaverkill and Neversink rivers are very conflicting. The majority of anglers complain that they had practically no fishing, while two or three others report excellent sport. There is no question if anglers would only wait until settled warm weather, they would enjoy better fishing. May 15th to the 20th is early enough for the mountain streams, and those who go before that are disappointed nine times out of ten.

SCARLET-IBIS.

DIDN'T WANT THE TROUT.

BEFORE the close of the trout season last year one of our enthusiastic anglers went out on Beaver Creek to make a few farewell casts. He gathered in a few specimens, and in his wanderings ran across a shallow pool of a spring brook that made into the creek—he doesn't reveal the exact locality of the spot—in which could be seen a large number of big trout, that would run from 1lb. to 1½lbs. On accidentally making this breath-taking discovery he dropped down out of sight and held a council of war with himself preparatory to a regular siege. He first went into action with an angletworm which wriggled temptingly on the treacherous hook. He cast repeatedly across the pool, and let the worm float down the rift into the pool, all to no purpose. Then the fly-book came out and a tempting cast was put on. These fluttered down upon the surface of the water, but there was no responsive tug or splash. These lords of the crystal element would come up and give the bait a playful cuff with their tails, as much as to say, "Do you take me for a sucker?" Angletworms, flies, grasshoppers, every available lure, was spurned by these aristocrats. Then it was that our exasperated sportsman pulled off his coat and shoes and prepared for a hand-to-hand encounter; but the pool, though it seemed of insignificant proportions, was just large enough to prevent his cornering them. "Thou art so near and yet so far." So thought our fisherman as he desperately splashed around in the water over the slippery stones. After a siege of three hours he started for home philosophizing that it would be decidedly unsportsmanlike to take a lot of trout off their spawning beds.

BROOKFIELD, N. Y.

A HANDSOME CATALOGUE.—We have received from Mr. W. J. Cummins, Bishop Auckland, England, a copy of the tenth edition of his catalogue entitled "Fishing and Fishing Tackle," with which is a supplementary price list, dated April, 1891. This catalogue is a very handsome publication, and while the greater part of the 113 pages which it contains is devoted to descriptions of various angling appliances, it contains also a considerable amount of information on angling, especially in England and Norway. One scarcely realizes without looking over a catalogue of this kind all the various articles that are included in a complete outfit of an angler of the present day. Rods, reels, lines, hooks and flies are, of course, understood, but, besides these, there are half a hundred articles and utensils, each one of which must appear an absolute necessity to the enthusiastic fisherman. Mr. Cummins is an old advertiser of FOREST AND STREAM and it gives us pleasure to call attention to his handsome catalogue.

STRIPED BASS IN ALABAMA.—*Editor Forest and Stream:* The fishermen are taking hundreds of fish in nets in Alabama River at this point. I wish to know the species of same. They are called by the fishermen "rock fish." They weigh from 10 to 30 lbs., striped and of a silvery hue, large mouth; they run up river every spring, but none were every taken here with rod. Can you tell me what bait to use or do you think they will take the fly? Please describe the striped bass.—E. R. [The occurrence of the striped bass in Alabama River has been known for some years. A very fine specimen was sent to the Smithsonian Institution on April 7, 1883, by the late Thomas S. Doran, of Montgomery. It was described in the Proceedings of the U. S. National Museum, Aug. 20, 1884. In the same paper a specimen of this fish from the Tangipahoa River, Mississippi, is also described. A full account of the striped bass and of the methods of fishing for it will be found in our special Florida Number of FOREST AND STREAM, Jan. 9, 1890. A figure of the species accompanies this paper. You can readily recognize the species by the dark stripes along its sides. There is no other fish of equal size in the Alabama River which has the same markings. The yellow bass of the Mississippi Valley is a much smaller species and its body is thinner and much deeper comparatively than in the striped bass. The yellow bass seldom exceeds a weight of 4 lbs. Salted eel tail is a favorite bait for this bass in fresh water and a spoon or spinner is often successfully used. Live minnows, however, are preferable to all other baits. It is practically useless to fish for striped bass with hook and line in your river except when the water is clear. Sometimes this fish will rise to a gaudy fly.]

CASTING THE FLY BY ELECTRIC LIGHT.—A few years ago while on the U. S. Fish Commission steamer Albacross at the station at Wood's Holl, Mass., we had the submarine electric light over evenings for the purpose of collecting free swimming worms, or other things curious, which might be attracted. Noticing numerous fish striking where the water was illuminated, I selected a small fly with red body and black wings, rather resembling the worm in looks, and almost every cast was rewarded by a strike, often two or three fish making a rush at the same time. Unfortunately they were not trout or salmon, but only big-eyed scad, of which quite a number were taken, together with several yellow mackerel. The novelty of the thing, however, more than made up for the lack of game in the fish.—WILLARD NYE, JR. (New Bedford, Mass.) [It may not be generally known that the big-eyed scad (*Trachurus crumenophthalmus*) is a delicious fish for the table. A figure of the species will be found on plate 100, "Fishery Industries," where it is called the goggler or goggle-eye. There are few fishes along our coast that are superior to this one in flavor, and it is a pity we have it only as an occasional summer visitor from tropical seas.]

A HAUL FROM CLITHERALL.—The Battle Lake (Mich.) Review gives a picture of a cart load of fish with this report: "George W. Powell, of St. Louis, Mo., and T. B. Trezevant, of Memphis, Tenn., were in this village last summer, and on Thursday, June 12, in company with Capt. John Corser, carman, they drove out to Clitherall Lake, two miles southeast of here, intent on having a few hours sport with rod and reel. They arrived at the lake at 10 o'clock, and were soon ready for business. The fish, black bass and pike, were on the war path that day, and the gentlemen were kept busy from the start, and at 2 o'clock they rowed ashore and ordered their team, having made up their minds it was time to quit. When the party arrived in the village they stopped in front of Chester Retailer's gallery, the fish were taken from the boat and hung along the side of the hay rack, and a photograph was then taken. There were 201 fish, weight 469 lbs."

SPAWNING OF STRIPED BASS.—The Commissioner of Fisheries, Hon. Marshall McDonald, has received a note from Dr. W. R. Capehart, stating that a striped bass weighing 53 lbs., and in full spawning condition, was caught by him at Avoca, N. C., April 22. In North Carolina waters the fish usually spawns early in May. The eggs are smaller than those of the shad and, after fertilization, they increase greatly in size and become light green in color. They hatch in from one to five days, according to the temperature of the water.

VIRGINIA BLUEFISH.—Norfolk, Va., May 4.—Catching large bluefish from the beach has been good sport for the past three weeks. Thousands have been caught with rod and reel from our beach, the fisherman standing on the shore; and tens of thousands have been taken in boats just outside the breakers. Of course we have all other kinds of salt-water fish, but the bluefish make the best sport. Our black bass fishing has not been thought of on account of the abundance of blue.—J. B. WHITE.

KEPT STANDING.—The following item will be kept standing in this office during the trout season: "—brought home last night the finest lot of speckled beauties ever caught in — Creek. He started to whip the stream at 7 A. M., and by 9:30 had landed —, the smallest measuring fully — inches."—*Wilkes-Barre Record.*

CHICAGO.—May 8.—Reports come of good bass fishing about La Porte, Ind. I don't know anything about that country, but hear it is lake fishing. A nice lot of trout were brought down this week by a gentleman fishing on the Iron River, Michigan, some over 2 lbs.—E. HOUGH.

FISHING EXHIBIT AT CHICAGO.—As noted on our editorial page, Dr. Jas. A. Henshall has been appointed special agent for the Government in charge of the Fishery exhibit at the World's Columbian Exposition.

WEST SHORE RAILROAD.—The superbly built, magnificently equipped, double track, steel trunk line to and from the West. Three fast express trains made in each direction. Wagner palace sleeping cars and buffet sleeping cars attached. The only all-rail route to the Catskill mountains; with dining room and buffet smoking cars run through without change between Philadelphia and Jersey City, New York and Catskill Mountains. Saratoga limited express trains during the summer season. Special trains for the accommodation of travel to and from Lakes Mohonk and Minerva. Shawangunk Mountains and all points in the Catskill Valley. Connection in Jersey City station with Pennsylvania R. R., thus avoiding the long transfers through New York. Ticket, via West Shore at all ticket offices of all competing lines. For time tables and full information address C. E. LAMBERT, General Passenger Agent, 5 Vanderbilt Avenue, N. Y. City.—Advt.

Fishculture.

COD AND LOBSTER HATCHING IN CANADA.—Encouraged by the successful experiments in the hatching of cod and lobsters by the Government of Newfoundland, the Canadian Government now propose to begin similar work on a very large scale. The Superintendent of Canadian Fishculture, Mr. Samuel Wilmot, visited Newfoundland to see the practical workings and results of Superintendent Nielsen's methods. The Dominion Government intends to protect these fisheries as well as to improve them by artificial cultivation. Injurious methods of fishing will be prevented and the rig of fishing apparatus established by law. At the Newfoundland hatching establishment in Placentia Bay 17,000,000 young cod were planted in the waters of the bay, representing more than 50 per cent. of the whole number of eggs taken. Over 400,000,000 of young lobsters were planted in Newfoundland waters, of which all but 15,000,000 were credited to the floating incubators invented by Mr. Adolph Nielsen.

SHAD WORK ON THE DELAWARE.—We learn from Col. John Gay, of the U. S. Fish Commission, that the first shad eggs were taken on the evening of April 30, the same date as the first take of last year. The station is in good running order. So far the run of shad is very good, both as to number and size of fish, and the prospects are that a great many will be caught in the Delaware this year.

CALIFORNIA COMMISSION.—San Francisco, May 5.—We beg to advise you of the present status of the Board of Fish Commissioners of the State of California. It is as follows: J. D. Redding, President, San Francisco; Ramon E. Wilson, Secretary, San Francisco; Joseph Morizio, Treasurer, San Francisco.—RAMON E. WILSON, Secretary (No. 419 California street, San Francisco).

The Kennel.

All communications must reach us by Tuesday of the week they are to be published; and should be sent as much earlier as may be convenient.

FIXTURES.

DOG SHOWS.

Sept. 1 to 4.—Dog Show of the Youngtown Kennel Club, at Youngstown, O.
Sept. 9 to 11.—First Annual Dog Show of the Hamilton Kennel Club, at Hamilton, Ont.
Sept. 14 to 18.—Toronto Industrial Exhibition Association Third International Dog Show, at Toronto. C. A. St. de, Sec'y and Subst.
Sept. 22 to 25.—Inaugural Dog Show of the Montreal Exposition Company, at Montreal, Canada.

FIELD TRIALS.

Nov. 2.—Inaugural Trials of the United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Secretary.
Nov. 16.—Eastern Field Trials Club's Thirteenth Annual Trials, at High Point, N. C. Members' Stake Nov. 12. W. A. Coster, Secretary.
Nov. 30.—Central Field Trial Club's Third Annual Trials, at Lexington, N. C. O. H. Odell, Sec'y, 44 and 46 Wall street, New York city.
Dec. 14.—Philadelphia Kennel Club's Field Trials. Charles E. Connell, Secretary.

THE ENGLISH KENNEL CLUB TRIALS.

THESE field trials came off on April 28 and 29. Owing to the limited number of entries the trials were run through in less time than expected, on the estate of Mr. S. E. Shirley, president of the Kennel Club, at Elington Park. The judges appointed were Mr. J. H. Salter, Rev. W. Serjeantou and Mr. W. Arkwright, but the latter was unable to officiate. From *Stock-keeper's* excellent report we learn that the greater part of the country round is a strong and fertile arable soil, and the corn especially afforded much better cover than could be expected from the late backward spring; game at first was far from plentiful, and some of the earlier trials were prolonged in consequence, but after the first two hours matters in this respect greatly improved, and try were able to run off a succession of good working trials, though fur was never plentiful, in fact did not trouble the dogs more than two or three times, though even then it made sad havoc with one of them.

In the Pointer Derby there were only five entries, Mr. D. Moriarty's Glenbeigh sustaining the reputation he made at the National trials the week before by winning again; Mr. Nicholson's Bertha second and Mr. Beck's Busy Ben third. The stake was run through by 12:30.

In the Setter Derby there were eight entries. Among them the Rev. O'Callaghan had two entries of his famous "reds," Coleraine and Pinlass. The former showed once more that she is a good one by disposing of all her opponents and winning this stake also. Mr. Barr's Young Minnie, second, and Mr. Lander's Sweep the Delight, third. The heat for absolute winner between Glenbeigh and Coleraine resulted the same as the similar heat last week, the pointer being declared absolute winner. This is a description of the running: "Mr. Moriarty's pointer Glenbeigh and the Rev. R. O'Callaghan's setter Coleraine, worked by Lanan, were put down on the same moré amid considerable excitement. Both ranged freely; Glenbeigh stood well to birds which Coleraine rushed into and flushed, after chasing a hare, and lost as decidedly as she did at Aqualate. The day's work finished at 4:55 P. M. the quickest first day's finish in the record of the club, and the judges' awards throughout were universally indorsed."

The All-Aged Stakes for pointers and setters created no little excitement, there being fifteen entries, as follows:

The All-Aged Stakes for pointers and setters, a sweepstake of £6 10s. each—*bona fide* the property of the person entering.

Mr. Lowe's pointer bitch Belle des Bordes (Young Bang-Polly), and Mr. Elias Bishop's setter bitch Devonshire Daisy (Prince Rupert II.—Devonshire Pan).

Mr. Moriarty's pointer dog puppy Glenbeigh (Grouse-Rita), and Mr. Wade's setter dog Tutsham Trip (Baron-Nora).

Mr. Alexander's setter dog Sir Wallace (sire unknown—Brampton Maud), and Mr. Lowe's pointer dog Ben of Kippen (Rocket R.—Laura of Kippen).

Mr. Norris's pointer dog Sandford Lark, and Dr. Wood's setter dog Fred (Prince—Moll IV.).

Mr. Cooper's Irish setter dog Wrestler (Musskerry—Glass), and Mr. Ellis's Irish setter dog Dartrey (Rossmore—Mac's Little Nell).

Mr. James Bishop's setter dog Earl of Moira (Jock—Little Bess), and Rev. W. Shield's pointer dog Beau of the Border (Saddleback—Molton Broom).

Mr. Thorp Hink's setter bitch Dove Rose (Cobalt—Dove Doll), and Rev. O'Callaghan's Irish setter bitch Coleraine (Erigate III.—Aveline).

Mr. James Bishop's setter Sweep the Green (Monk of Furness—Kate Auburn), a bye.

The running may be summed up in the following extract: These included a marvelous array of clever dogs, and when after the first round the number had been reduced to nine, scarcely one was included but what had been a winner at field trials at one place or other. These, again, were reduced

to six, and when the awards were given in, their quality is evidenced by no less than five out of the six receiving substantial acknowledgment of their approbation.

There was some little sensation when the pointer Glenbeigh, the double champion at Aqualate and Stratford, went down in the first round; but there is this to be said for him, that at the time it was blowing a little gale of wind, and free-ranging dogs might readily make a mistake. The Irish setter puppy Coleraine, well deserves a word of mention, for it is no little thing for an Irish setter at two meetings, both of which labored under unfavorable climatic conditions, as relates to scent, to hold her own in a third all-aged stake, and at last to run into a winning place. The setter Fred, a red-ticked dog, suggesting a dash of Irish blood co-mingled with the Laverack, ran consistent and reliable throughout, and bar one mistake could have no fault found with him, while Mr. Lowe's dogs, notably Ben of Kippen, who ran a greatly improved succession of trials, and Mr. James Bishop's brace evidenced the careful training and the working powers, we should expect to find in the hand of such experienced breeders.

The second draw resulted in these dogs being left in: Rev. Shield's Beau of the Border and Rev. O'Callaghan's Coleraine.

Mr. G. Bishop's Devonshire Lady and Mr. J. Bishop's Sweep the Green.

Dr. Wood's Fred and Mr. J. Bishop's Earl Moira.

Mr. Lowe's Belle des Bordes and Mr. Wade's Tutsham Trip.

Mr. Lowe's Ben of Kippen a bye.

At 4:35 P. M. on Wednesday, the second day, Dr. Wood's Fred was declared the winner, Mr. J. Bishop's Earl Moira second, Rev. O'Callaghan's Coleraine third and Mr. Lowe's Belle des Bordes and Ben of Kippen equal fourth. After a vote of thanks to the judges and to Mr. Shirley for the use of the grounds, and for his efforts to further the objects of the meet, this pleasant meeting ended with three cheers for Mrs. Shirley, who was an interested spectator of the running.

SAN FRANCISCO SHOW.

THIS show came to a successful conclusion with a parade of the prize winners. Duke of Vernon won the medal for the best dog in show of any breed. Our critical report has not yet made its appearance, and must now lay over till next week. The following are the awards:

PRIZE LIST.

MASTIFFS.—Dogs: 1st, G. McNoble's Ingleside Crown Prince; 2d, J. D. Dal's Keuro; 3d, Charles N. Norris's Harold. Bitches: J. B. Martin's Bess.

GREAT DANES.—Dogs: 1st, J. Livingstone's Malock; 2d, Joseph Calcaris's Noble; 3d, Albert Johnson's Hector. Bitches: 1st, John H. Addicks's Minka; 2d, E. W. Jaeger's Dado; 3d, Johnson and Creyer's Nora.

ST. BERNARDS.—ROUGH-COATED—Dogs: 1st, Nanquott Kennels' Ropphann; 2d, E. She's Judge; 3d, Frank H. Allen's Duke of Wellington. Bitches: 1st, Dr. A. T. Reensburger's Gertie. Puppies: 1st, George B. Sperry's William Tell; 2d, John Bourdett's Napoleon; 3d, T. H. Allen's Tomah.—SMOOTH-COATED—1st, Charles Friedschod's Lion; no second awarded. Bitches: 1st, T. H. Stevenson's Joan.

NEWFOUNDLANDS.—1st withheld; 2d, G. W. Simpson's Jack.

GREYHOUNDS.—Dogs: 1st, Charles S. Wieland's Freestone; 2d, S. A. Cummings' D-xter; 3d, T. J. Cronin's Depend-on-me. Bitches: 1st, E. D. Nolan's Valley Queen; 2d, H. McCracken's Bessie; 3d, C. S. Wilder's Emma.

DEERHOUNDS.—Bitches: 1st, Chris Kemple's Cerous; 2d, Dr. R. A. Ferguson's Lulu.

AMERICAN FOXHOUNDS.—Dogs: 1st, Mrs. W. H. Staniels' Ston; 2d, Mrs. F. M. Doyle's Fox; 3d, John W. B. urdett's Ike. Bitches: 1st, W. H. Staniels' Judy; 2d, John W. Bourdett's Princess. Puppies: 1st, W. H. Staniels' Julie.

ENGLISH FOXHOUNDS.—1st, J. L. Sanderson's Paddy. Puppies: 1st and 2d, A. B. Anderson's Yorks and Sweep.

POINTERS.—CHALLENGE—1st, Henry Huber's Duke of Vernon. OPEN—55 lbs. and over: 1st, J. Martin Barnes's Tom Punch; 2d, H. A. Bassford's Bismarck; 3d, James E. Higgins' Major H. Some of the other competitors received commended cards. Bitches (55 lbs. and over): 1st, Harry Golder's Vera; 2d, P. Pergan's Rose; 3d, J. Martin Barnes's Lady Punch. CHALLENGE. Bitches (under 55 lbs.): 1st, A. B. Truman's Patric Coxeter; 2d, P. O'Connell's Opax; 3d, E. K. Benchley's Kato. Puppies: 1st and 2d, A. B. Truman's Donald T. Bitches (under 55 lbs.): 1st, J. B. Lewis' Gipsy; 2d, W. F. Gunn's Meg Merriliss; 3d, E. K. Benchley's Kato. Puppies: 1st and 2d, A. B. Truman's Donald T. and Croxeth T.; 3d, Mrs. L. Olney's Rap. Bitches: 1st, Horace Y. Evans' Tippet; 2d, Howard Vernon's Sappho; 3d, H. L. Miller's Romp M.

ENGLISH SETTERS.—Dogs: 1st, James B. Barber's Pilot; 2d, Thomas Higgs' Rover H.; 3d, Geo. Muller's Oriole. Bitches: 1st, John Kerrigan's Bessy; 2d, Geo. Muller's Oriole; 3d, John F. Bourdett's Dido. PUPPIES—Dogs: 1st, Felix Delean's Sho; 2d, E. W. Spencer's Adonis; 3d, J. W. Bourdett's Pedro. Bitches: 1st, W. F. Shuck's Hazel.

GORDON SETTERS.—Dogs: 1st, G. B. Sperry's Eric; 2d, W. Reay's Jack. Bitches: 1st, John McNeill's Nunt; 2d, Robert Liddle's Fannie; 3d, J. W. Edwards's Lady Clara Jane.

IRISH SETTERS.—CHALLENGE—Dogs: 1st, A. B. Truman's Mike T. Bitches: 1st, A. B. Truman's Lady Elcho T.—PUPPIES—Dogs: 1st, M. W. Stackpole's Lord Clare; 2d, Chas. J. Althorpe's Brace; 3d, Geo. Martin's Dash T. Bitches: 1st, J. W. England's Nora Mayvouran; 2d, C. F. A. Talbot's Kate T.; 3d, Mrs. L. L. Campbell's Lady Josie. PUPPIES—Dogs: 1st, Capt. Banning's Mac B.; 2d, E. J. Roy's Red Rapparee; 3d, H. E. Mann's Flash. Bitches: 1st, A. B. Anderson's Lightning; 2d, E. J. Roy's Red Colleen.

FIELD SPANIELS.—1st, W. Hendrickson's Pansy.

COCKER SPANIELS.—CHALLENGE—Mrs. H. P. Rennie's Woodstock Belle.—OPEN—Dogs: 1st, A. C. Davenport's Benta. Bitches: 1st, J. H. Varley's Jessie V. Puppies: 1st and 2d, California Spaniel Kennel's Master Spot, Master Shinar; 3d, A. C. Davenport's Reo. Bitches: 1st, J. B. McVay's Mellicie Mo.

RETRIEVERS.—1st, E. C. Klein's Dnde.

CHESAPEAKE BAY DOGS.—1st, R. L. McKnight's Laddie. Puppies: 1st, Thomas Higgs's Bess.

COLLIES.—Dogs: 1st, A. B. Anderson's Laddie; 2d, Mrs. S. W. Dennis's Scotty; 3d, Adolph Sutor's Ian. Bitches: 1st, O. J. Albee's Laughing Girl. Puppies: 1st, O. J. Albee's Rosl n, Jr.

DACHSHUNDE.—1st, E. D. Boylard's Dameo; 2d, Boylard's Joricks.

BLOODHOUNDS.—1st, Premier Kennels' Premier IV.

BULLDOGS.—1st, Charles A. Huggs' Boxer.

BULL-TERRIERS.—CHALLENGE—1st, Clarence A. Barnes's Little Nell.—Dogs: 1st, J. B. Dutton's Jack Napoleon; 2d, Charles A. Huggs' Polo; 3d, H. Lewis's Little Nick. Bitches: 1st, John Sparrow's Olivette; 2d, James J. Tooby's Peggy. Puppies: 1st, J. A. McNamara's Jennie II.

FOX-TERRIERS.—SMOOTH—Dogs: 1st, J. B. Martin's Belmont Shiner; 2d, John A. Logan's Le Logos; 3d, A. L. Langerman's Tramp. Very high com. A. C. Sumner's Bleunt Vevuvian and J. E. Hax's Dixie. Bitches: 1st, Mrs. Clara Liddle's Nellie; 2d, A. E. Anderson's Golden Patch; 3d, George Pattis's Jess; others were given commended cards. Puppies: 1st, G. W. Debenham's Tidy; 2d, Thos. S. Casey's Frisky Viola; 3d, Mrs. George Debenham's Nailer.

BLACK AND TAN TERRIERS.—Dogs: 1st, David Elsemann's Dixie. Bitches: 1st, Mrs. A. B. Truman's Bessie. Puppies: 1st, A. J. Martin's Rosy.

SKYE TERRIERS.—1st, Robert Bruce's Beauty.

YORKSHIRE TERRIERS.—Dogs: 1st, F. W. Sierp's Mash; 2d, D. H. Everatt's Mash; 3d, J. A. Martin's Jessie.

TOY TERRIERS.—UNDER 7 LBS.—1st, Mrs. Berlie Tuttle's Bessie Tuttle.

TOY SPANIELS.—1st, Miss Isabel Woodward's Fanny.

JAPANESE SPANIELS.—1st, William B. Wiltshire's Yum Yum; 2d, Mrs. Eden's Chest; 3d, Miss H. B. Tay's Komo. PUPS.—1st, Mrs. H. L. Miller's Ben Butler; 2d, J. P. Jackson's Butts; 3d, Frederick Fowler's Tob; and others highly commended. Puppies: 1st, Mrs. D. L. Miller's Puss-in-Boots; 2d and 3d, Mrs. Miller's Ben Butler and Jim Dandy.

POODLES—**WHITE**—*Bitches*: 1st, Miss N. Gerichten's Belle. *BLACK*—*Dogs*: 1st, W. H. Coleman's Faro; 2d and 3d, Mrs. E. A. Fish's Nox and Leo. *Bitches*: 1st, Mrs. C. Gerichten's Gipsy.

POMERANIANS.—1st, J. M. Horne's Snowflake; 2d, Mrs. Horne's Fanny.

The miscellaneous classes did not appear for inspection.

EGYPTIAN MUMMY OF A DOG.

FOR the following interesting account we are indebted to the *Stock-Keeper*, which in turn translated it from an article by Ludwig Beckmann in the *Illustrirte Zeitung*: "In December, 1890, the author of these lines received from a friend at Cairo the mummy of an animal which had been found near Thebes, and was described as the 'mummy of a cat'; when, however, closely examined it turned out to be the mummy of a dog, which must have been the size of a small greyhound. Dog mummies are much scarcer than those of cats, which are often found in large quantities, and as they differ from the latter in many material points, a description of the before mentioned specimen will be of interest. No. 1 is an illustration of the front view of the mummy in the

state in which it was found. The colors as they appear are a dingy yellowish white and a deep asphalt brown, but probably the lips and eyes were formerly painted a different color. The outer cover consists of a fine but dense material, something between silk and linen. Besides this the front of the body is covered with a fine network, made of strips of the same delicate material in the shape of a bib. The head with the prick ears is formed artificially of some material by pasting it on the real head, and where the head joins the body a piece of linen is wound around like a shawl. It is curious that on the whole cover no seam or any trace of having been tied with string can be detected. The edges of the different pieces of cloth are carefully turned in, and apparently pressed down with a heavy object, probably a flat iron. The bib in front, and the bordering round the eyes and lips, is formed in the same way. Besides the asphalt some colorless glue seems to have been used for the white cloth to stick it together.

Fig. 2 shows a side view of the mummy, and Fig. 3 represents the same without its outer covers, the rump is wound

round and round with a long reed-band, consisting of many single reeds, which are tied together by peculiar knots. After unwinding this band, the whole front side of the body was found to be covered with layers of straight reeds, cut off in different lengths to fill up the cavities of the body.

Fig. 4 shows the mummy in its last, or rather first covering. This consists of several crossed bands of a coarse material, and under these is a still coarser stuff (like sackcloth), which has been so impregnated with asphalt, that it forms with the skin and the hair one thick black indissoluble crust. The dog's real ears, which were pressed forward against the head, have also partially amalgamated with this mass.

Fig. 5 represents the body freed from all its coverings, the fleshy parts have become in time a fine powderlike dust which is heaped up in the cavities of the chest and abdomen. The skeleton is mainly kept together by the dried and shrivelled skin; all sinews and nerves have disappeared. The bones, however, are very well preserved; the skull, Fig. 6, can hardly be distinguished from one lately prepared, but many teeth show a tendency to split lengthways. To judge from the appearance of the teeth the dog was about one year and a half old. One fore-leg is somewhat crippled in consequence of a badly-healed fracture.

The proportions of the skeleton and the shape of the skull, as well as the long and fine tail, lead to the conclusion that it is the mummy of a small greyhound or a large black and tan terrier. The illustration of the skull is reduced to six-tenths of the natural size."

DEATH OF MOLLY GLENDYNE.—Bristol, R. I.—*Editor Forest and Stream*: Another good dog gone to the happy hunting grounds. My Irish setter bitch Molly Glendyne died May 8 of inflammation of the bowels. Molly was an excellent bitch, grand color and very typical, having won on the bench both in the States and in Canada. She won second at Lynn this spring, when heavy in whelp, as she whelped nine dogs after. She was my favorite dog in the field, and no bird ever got away from Molly; when he dropped, he was in thicket or stone wall, Molly would locate him and fetch him out. She was all that a man could desire for a shooting dog, and I shall miss her very much. First my shooting companion was laid at rest, and now it is my favorite dog.—M. FLYNN, JR.

THE ENGLISH NATIONAL FIELD TRIALS.

FROM the *Canine World* we learn that these trials were run on the Aqualate Estate of Sir Thomas Boughey, near Newport, Salop, when Captain the Hon. H. Molyneux, Rev. W. Sergeantson, and Mr. Elias Bishop judged. On Tuesday morning, April 21, a start was made at the Coley Farm, and a very fine meet it was, although many had stayed away, thinking there would be but little sport, because of the scarcity of cover, the spring being backward. This proved to be true, for the wheat afforded no shelter for game, and an adjournment was made to the low-lying meadows. Sir Thomas Boughey, who acted as guide, philosopher and friend to the party, soon showed some game, and the pointer puppies were put down. They went at it with a will, and on a glaring fault being made the brace was at once called up; and so much game did they find in these heavily grassed moors that the card had been run through before noon. Whatever the "ground game act" has done to lessen the number of hares in other parts of this country, it seemingly has not affected the lands owned by Sir Thomas. Hares positively swarm here, and it was nothing to see half a score in one small field, which is exceptional in the present day.

Birds were also plentiful, and a good many pheasants and a couple of ducks were seen. Sir Thomas's estate is, indeed, stocked with everything, from deer to pike, and it must be a glorious spot when the sporting season is on, albeit an eyesore on his broadlands is the quantity of barbed wire fencing. It seems that contrary to expectation Mr. Heywood Lonsdale had some dogs ready after all, though Mr. Brailsford had, unfortunately, met with an accident and was unable to handle his dogs. He had a fall recently in getting out of his dogcart, and has kept to his bed ever since. Cameron, however, was on the spot, and gave a very good show.

Mr. Fred Lowe, without whom no field trial company is complete, got off very easily so far as work is concerned, and his first trials in both the Pointer and Setter Puppies' stakes were over in a few minutes. It will be seen he got into the money in the setter division with Di of Kippen, who is spoken of as a nailing little bitch. Glenbeigh, handled by Nicholson, made a very good show, and carried away the pointer prize to Ireland, besides winning the special for best of either breed. The dog worked splendidly, and Mr. Moriarty's brother was greatly congratulated in getting their dog through to the top of a very good lot of dogs. Sir Thomas Boughey's handler showed some good work with Comrade and Carmine, but it must be said that he had exceptional opportunities to break his dogs. After the card had been finished on Tuesday a match was run off. The competitors were Glenbeigh, who won, and Comrade, who was placed third by the judges in the Pointer Puppy Stake. They had a long trial, and it was generally conceded that Comrade had the better of it.

In the Pointer Puppy Stakes there were 20 entries, ranging from Mr. Lonsdale's entry at 10 to others at 15 months old. The heats were of short duration, as game was so plentiful, some of them not being more than four minutes duration, a sort of running that with the memory of the long tramps over the hills round Lexington one can hardly realize. The winners in this stake were: First—D. M. Moriarty's liver and white dog Glenbeigh, by Grouse V.—Rita, 15 months old. Second—C. H. Beck's liver and white Busy Ben, by Rapid Ben—Busy, 12 months old. Third and fourth—Sir Thomas Boughey's liver and white Comrade, by Carlo—Bess, 14 months, and liver and white Carmine, by Carlisle—Blush, 13 months old.

The Setter Puppy Stakes had 14 entries and was run off the second day, and was especially notable for the fact that the only Irish setter in the stakes won the prize, doing some excellent work. This must be very gratifying to Irish setter men and will certainly do a great deal toward encouraging our "Irishmen" to persevere. The winners were: First—Rev. R. O'Callaghan's Irish setter Coleraine, by Fingal III.—Aveline, 12 months old. Second—Col. C. T. Cotes's liver and white English setter Dodger, by Dexter—Kate, 13 months old. Third—Fred C. Lowe's blue belton Di of Kippen, by Rhoderick of Kippen—Dido, 14 months old.

On the third day, Thursday, the trial to decide the absolute winner of the above stakes was run off between.

GLENBEIGH (Pointer) AND COLERAINE (Irish Setter).

These puppies were put down in a large grass meadow close to the road. Both ranged freely, Coleraine quartering her ground the more closely. Coleraine made a false point and Glenbeigh backed. Then they kept pointing and drawing on to where both partridge and pheasants had risen from. In another grass field, with lots of cover, they worked nicely, and Glenbeigh pointed close to the hedge, but nothing came of it. He afterward drew on a hare which moved. Another hare passed in front of them, to which Coleraine dropped, and then she seemed to tire. Glenbeigh pointed a bird, and Coleraine, refusing to back, took the point from her. They were immediately called up, the pointer, of course, winning.

The Acton Reynauld Stakes were then run off, for all-aged pointers and setters. Each breed separate. In the Pointer Stake there were four braces, drawn as follows:

C. H. Beck's liver and white Yum Yum, by Pordix—Quits' Baby, 5yrs.,

Sir Humphrey de Trafford's liver and white Barton Pearl, by Telga—Dagmar, 2ys. 10mos.

A. P. Heywood-Lonsdale's liver and white Ightfield Deuce, by Wynstay—Dainty, 5yrs.,

R. J. Lloyd-Price's liver and white Welsh Crab, by Crab-Joy, 2yrs.

J. L. Bulled's liver and white Devonshire Lady, by Molton Baron—The Village Star, 3yrs. 3mos.,

J. H. Stock's liver and white Vixen, by Let—Minx, 5yrs.

F. C. Lowe's liver and white Belle des Bordes, by Young Bang—Polly, 7yrs. 1mo.

Col. C. J. Cote's lemon and white Polly Jones, by Carlo—Jenny Jones, 2ys.

In this stake Ightfield Deuce, who it will be remembered won the Pointer All-Aged Stake at the Central Trials last fall, was in the final heat running against Belle des Bordes, and after a four-minute heat the latter won, with Vixen reserve. In the Setter Stake, the dogs were drawn as follows: J. F. Hatfield Harter's black and white Marrow Bones, by Master Sam—Blue Maud of Cranfield, 2yrs. 2mos.,

J. Bishop's black, white and tan Earl of Moira, by Jock—Little Bess, 2yrs. 2mos.

R. Ll. Purcell Llewellyn's lemon, white and tan Jewel, by Ben—Minna, 1yr. 8mos.,

F. Warde's liver and white Tutsham Trip, by Baron Doveridge—Nora, 5yrs.

Dr. Wood's lemon belton Fred, by Prince—Moll IV., 4yrs.,

W. H. Cooper's Wrestler, by Muskerry—Floss, 4yrs.

The result of the running was in favor of Fred, with Wrestler declared second best of either breed. Belle des Bordes and Fred then ran off to decide the absolute winner. After 16 minutes' work, neither having much advantage, Fred was declared the winner.

The Cloverley Stakes were then run. This was for braces. Mr. Heywood Lonsdale's Ightfield's Rosa and Ian, the latter winner of the Setter Derby at Lexington, N. C., last year, were entered in this stake, as also were his Ightfield Deuce and Eaton. In their work in the first heat they evidently pursued the same tactics that they were guilty of when over here, as *Stock-Keeper* says:

"Dr. Heywood Lonsdale's setters Ightfield Rosa and Ightfield Ian put down on the Coley Moors, where we started on Tuesday. Both running close together, ran into birds and then got several false points, Rosa being most at fault; another flush and more false pointing, and then Rosa stood birds, Ian backing. Rosa false pointed again, and the next brace were called for.

"Mr. Heywood Lonsdale's Ightfield Deuce and Ightfield Eaton, liver ticked pointers, worked by Hallam, were put down in the adjoining grass. Deuce pointed and then false pointed, and Eaton refused to back, but found a hare, which stood looking him in the face for almost a minute. Deuce moved on and stood the birds she was first drawing on. Both ranged freely. Eaton going rather wide, Deuce again pointed and Eaton backed, but nothing came of it. Then Deuce flushed badly, and a pair got up which both had passed. Deuce pointed again, and Eaton deliberately passed close by without backing, the latter seeming to have a great preference for the hedgerows. Another bird got up which both had passed. A move was then made to the moors, on which we had such good trials on the Tuesday and Thursday. Birds could be seen from the road running about in all directions. Eaton false pointed, and Deuce backed, then both false pointed. In the next moor Deuce found another false point, and Eaton backed, Deuce found birds, and Eaton, who was evidently out of sorts, backed, and the next brace was called for."

As we have not space to spare, and our readers being naturally only interested in the dogs they know of, we can not give the account of the other heats. Mr. Llewellyn Price's brace, Coquet B., by Dashing Bondhu—Duchess Primrose, and Bell Bondhu, by Dashing Bondhu—Duchess Placid, eventually won the stake and were said to have been very skillfully handled by their owner. Mr. Heywood Lonsdale's brace, Ightfield Deuce and Eaton, securing second prize, and Mr. Lowe's brace, Belle des Bordes and Ben of Kippen, third.

The breaker's prize was awarded to Hallam, Mr. Lonsdale's breaker, though the judges said that had the prize been open to all Mr. Llewellyn Price would have been entitled to it for the magnificent manner in which he worked the winning brace.

DOG CHAT.

THE large number of grand field dogs which are this season being added to the California kennel interests, says the *Breeder and Sportsman*, is arousing new interest and life in sporting circles. Mr. Henry Huber, the owner of that grand acquisition, Duke of Vernon, has commissioned Dr. Buzzard [no doubt this is intended for Dr. Glover, who negotiated the sale of Duke] to purchase the grandest pointer bitch that money can procure. Such action is commendable in the highest degree, and his example will no doubt lead other sportsmen to look for the best. Californians have one pointer, at least, of which they may well be proud, for there are many frequenters of bench shows here in the East who think Duke of Vernon the best all-round pointer in America to-day.

We do not, of course, know who "Alain" is who writes for the *Breeder and Sportsman*, but he evidently cannot speak from personal experience. He says "there is one grievous fault to find at most shows, and that is the careless, slipshod way most of the veterinarians have of attending to their duties. Dogs showing strong and conclusive symptoms of contagious and infectious diseases are allowed to be benched to the great detriment of the show and the needless loss of valuable dogs. When will this be stopped?" This may have and has been the case in past seasons, but we are quite sure that during this spring circuit of shows a cleaner or healthier lot of dogs could not have been shown. The agitation in the kennel press a year or two since did good work, and with very few, if any, exceptions the "vets" this year have been lynx-eyed enough for all practical purposes. Unwarranted assertions of this sort are apt to do a great deal of harm in giving the outside public an idea that dog shows are hotbeds of disease.

The new dog law for Pittsburgh, Pa., should have gone into effect on April 29, and this provides that \$1 be levied on all dogs and \$2 on each bitch; but as there was not enough money in the treasury for the purpose of buying license tags and blank forms, the time was extended till May 15, when the municipal law will go into force. Every dog found without a license will entail a fine of \$5 on the owner of said wanderer. A dog pound has been arranged with fifty kennels in a stable, and in addition to this 100 dry goods boxes have been purchased to accommodate the transients. Dogs not claimed in two days will be killed. This plan is a great improvement on the one in vogue in that city some time since, when the police were empowered to shoot unlicensed dogs on sight, and several uncalled for and cruel deeds were committed by the men in blue.

The idea of holding a grand specialist show is agitating the minds of English exhibitors just now. As there are some forty clubs devoted to different breeds, it will be easily seen that if the clubs can be brought together and all jealousy eliminated, a show on a gigantic scale never before attempted could be the result. Some such idea was mooted over here last summer, and we still think that in the fall,

If our specialty clubs would combine, a good show could be held with the venue in Brooklyn, which city ought to be able to support a high-class exhibition. Since writing the above we hear that a movement is on foot to have a show at Madison Square Garden, Thanksgiving week.

The New Jersey Kennel Club held their adjourned annual meeting at Taylor's Hotel, Jersey City, at 7:30 P. M., March 12. The meeting was a full one, only two members of the club being absent, and the occasion an exciting one, as the officers for the ensuing year had to be elected. The result of the voting is as follows: President, C. J. Peshall; Vice-President, Dr. W. Arrowsmith; Secretary, Geo. L. Wilms; Treasurer, J. A. Thomas; Board of Governors: Max Wenzel, Rowland P. Keasby, John Hetherington, Wm. Hepstey, E. M. Oldham, Geo. McNeil, J. D. Shotwell, A. Clinton Wilmerding, Louis Livesey, John Lewis, Dr. G. J. Hornung, and the officers of the club. Delegate to the A. K. C.—Chas. J. Peshall, who secured a large majority of the votes. This is a very significant election, and the result will be watched with great interest by those who are interested in kennel matters. After the meeting all the above members, together with K. E. Hopf and your representative, made a move for the dining room, and the social part of the evening began. This was a dinner in honor of Mr. Hopf, the retiring vice-president, who leaves for California this week. The affair was a very pleasant one, and what with speeches, songs and the excellent repast served by host Revere, the parting came all too soon. President Peshall made a happy speech in proposing the guest's health and future success, remarking that whether he went to the wilds of California or even the Fiji Islands, they would still count him a member of the New Jersey Kennel Club. Parting time came, and the company rose and forming a ring round the retiring guest, they joined hands, and with "Auld Lang Syne" made the rafters ring again, to show Mr. Hopf the estimation in which he was held.

We find it impossible to find space for the Los Angeles show report, but as it is so long since the show was held, and as the same report appeared in *Breeder and Sportsman*, there is no use in reprinting it.

Mr. Leslie Bruce has also brought suit against Mr. A. P. Vredenburg for libel in writing to the papers that he "aided and abetted" Mr. Peshall in something he was afterwards found not guilty of.

One of the most important sales in colliedom has just been completed. The Seminole Kennels, of Chestnut Hill, Pa., have purchased from Mr. Harrison about the cream of his grand kennel of this breed. Among them are the noted dogs champion The Squire, champion Roslyn Wilkes, who has a monopoly on the "best American-bred" specials, and the promising young dog Roslyn Conway, together with the bitches Metchley Surprise, with three of her puppies by The Squire; the well-known Cora II., in whelp to Wellesbourne Charlie; Jakyr Deane, who has also done a lot of winning, and also Trusty, in whelp to the late champion Scottilla. These, together with their Roslyn Dandy, Sir Kelpie, and some good brood bitches put them just about at the top of the tree, and we trust that their enterprise may go hand in hand with good judgment in mating, so that they may themselves breed a Dolly or a Roslyn Wilkes. Referring to our advertising columns we find that the above dogs, together with the pug champion Treasure and the Irish setters Seminole and Eleo, are placed in the stud, making a choice of stud dogs that few kennels can boast of.

Mr. C. A. Stone writes us that at the coming bench show of the Industrial Exhibition Association, to be held at Toronto Sept. 14-18, the judges that have so far accepted are Miss A. H. Whitney, of Lancaster; Mr. C. H. Mason, of New York; Mr. John Davidson, of Monroe, Mich., who will judge the sporting classes, and Mr. A. Clinton Wilmerding, of New York, who has very kindly consented to judge the spaniel classes. We know that it was only after earnest communion with himself that the latter accepted the position, and then only on a guarantee that he would be fully protected during his stay.

We have not had the space to spare to publish all of Mr. Peshall's summing up speech, but this strikes us as being a masterly effort: "There is not one line in all my writings that will show a word said against the American Kennel Club, not one line. I have insisted again and again that it is a necessity in this country if you want to encourage and improve the breeding of dogs, and that is what the club was organized for, and not for the purpose to which it has descended at this day. It was organized by those who loved the dog, not for the dollar they could get out of the dog, but for the dog himself. It was organized by men who recognized the dog, the animal, gentlemen, above others; and if a man will study him he will find this state of affairs to exist: That when a man has descended from the highest pedestal that he could occupy, when he has gone down, down, until he is found lying in the gutter in filth and in slime, when every action, when every good motive has left the body, and he is lying there; the old father comes and looks upon him from the sidewalk down into the gutter, the old father with his hair silvered over with years; he sees his son there; he looks upon him, and while the breast beats and the eyes are filled with tears, he turns his back and walks away. Again, another may come, the sister, who played with him in their childhood days, when they weaved garlands together; she comes and from that sidewalk looks in the gutter and sees her brother. She weeps, her heart weeps; but she will turn her back and walk away. And then again, another comes, the brother that has played with him, that has roamed the hills and the mountains and the country, and fished the stream, and will look over and see this party there in his filth, descended almost as low in my estimation as the Rodomanti of this club; he will turn his back and leave him. And then another comes, perhaps the sweetheart, the one that he had plighted his troth to, the one whose breath smelt sweeter than any other, the one who gave him joy; she comes and looks at him, and she will turn her back and leave him. And then another comes; it is one who comes, tottering with her age, and broken down, thinking of her troubles, and throwing herself upon this prostrate form, will come perchance to smooth his locks; it is the mother. Again, and then another loving being will come, the canine one, the one who has chosen his master for his god, no matter how low he may be, he will come, scenting the air for fragrance of something that is sweeter to him than the Rose of Sharon, and the moment he gets it he will throw himself upon that body without for one moment seeing that his master, the one that he has chosen for his god, is degraded. When every man has left the man, when all are gone, there will be found two beings sticking to man, the mother that bore him and the dog that chose him for his god."

We are not at present at liberty to give particulars, but an Irish setter will shortly be imported by a well-known breeder from the kennel of another well-known breeder that is as good, if not better, than any "red" yet imported to this country.

On the evening of May 4 the Mascotah Kennel Club held its annual meeting. Messrs. S. C. Payson, N. G. Gunn, N. F. Fox, H. G. Nichols, R. Foot, W. Borden, R. Fay, and Drs. Lewis and Chamberlin were elected as directors in place of those whose term of office had expired on the old board. For the ensuing year the following officers were

elected by the directors: President, G. H. Goodrich; 1st Vice-President, N. J. Bryson; 2d Vice-President, N. F. Fox; Treasurer, William Borden; Secretary, John L. Lincoln, Jr. Mr. G. H. Goodrich was appointed the delegate to the A. K. C., and will attend the meeting on the 21st. Their next show will be held Feb. 9 to 12, and this will make it come the week before New York. During the meeting a resolution was passed in favor of a grand dog show to be held during the World's Fair in 1893; and a committee was appointed to confer with the other clubs in this country and Canada with a view to co-operation. The club will this summer put up a club house on its grounds. Messrs. John Munson, J. A. Long and Charles M. Nelles were tendered a vote of thanks for their gratuitous services as judges at the late show. The club is in an excellent financial condition, and a satisfactory profit was realized from the last show.

Mr. Chas. J. Peshall has commenced his threatened civil suits against different members of the A. K. C. for libel in the publishing of his disqualification, etc., in the *Kennel Gazette*. A Supreme Court summons, dated May 11, has been served on Messrs. August Belmont, A. P. Vredenburg, J. L. Anthony, T. H. Terry, A. Clinton Wilmerding, J. D. Shotwell and William C. Rogers. Answer to be given in twenty days. The trial is desired in the county of New York. Messrs. J. D. Shotwell and James L. Anthony will have a separate little affair with Mr. Peshall in New Jersey, he suing them for \$10,000 each for some unguarded utterances they have made in relation to the latter. Other members of the A. K. C. are in process of being sued for sundry amounts in different cities where the *Kennel Gazette* has been distributed. We are not quite clear as to the separate amounts, but, anyhow, the sum total which Mr. Peshall is suing for is \$920,000. With the interest attached to the several suits and the interest on the money there will be little difficulty in making up a cool million, depending on the verdict of the juries. The dog days are evidently coming with a rush. An advisory committee meeting of the A. K. C. was held on Monday, but we were unable to learn the particulars from Mr. Vredenburg, as they are to be reserved for the consideration of the executive meeting which is to be held May 21.

"Do you know why a logical inference is like a dog's tail?" "No, unless it may be a natural conclusion."—*Philadelphia Times*.

Mr. Sears called on Mr. Angell, of the M. S. P. C. A., the other day, and told him that he would in the near future put Sir Bedivere on exhibition at a small fee, the proceeds to be given to the Massachusetts Society for the Prevention of Cruelty to Animals. From this it would seem that the crack is getting into his normal condition again, and we are glad to hear it.

Mr. James Mortimer has sold his fox-terrier Suffolk Coronet to Mr. J. W. Morden, of Hamilton, Ont. This dog is by champion Result and out of Diadem, and ought to be a valuable acquisition to Canadian breeders on account of his excellent breeding.

The Toronto Kennel Club will hold their initial members' show this evening. The judges are Messrs. T. G. Davey and J. F. Kirk. There will be about twenty classes provided, including the principal breeds. Ladies are specially invited, and the affair is sure to be an interesting event and likely to help the good cause along.

We have heard very favorable accounts of the disinfectant "Cynolina," both as a kennel purifier and as a wash for mange and other cutaneous diseases. We therefore have confidence in calling the attention of our readers, especially those who have large kennels, to the offer in our advertising columns this week. Kennel men may rest assured there is no uncombed where the manufacturers are willing to take such risks.

It is said in *Canine World* that Mr. "Leeds" Smith has given \$5,000 for Young Bute to Mr. Shillocock, owner of his sire Lord Bute. The latter gentleman straightaway purchased Young Bute's brother, Sir Hereward, who has been spoken of before in these columns, having won five firsts and cups, only times shown. If the above price is not a misprint—and we hope it is, for the sake of some poor future American buyer, for the price will, of course, be doubled by the time he is ready to point his head "Yankeeward"—it would seem as if Sir Bedivere's \$6,500 has set a pace that even the Englishmen find they must keep up with.

Mr. Megson, the English collie breeder, purchased recently the promising young collie Lagan Oscar. Mr. W. E. Mason then purchased him from Mr. Megson as soon as he arrived at the latter's kennels at a very long figure. Speaking of collies it would seem as if Mr. Stretch's troubles do not come singly, for news comes now of the death of his noted brood bitch Sweet Model. Coming so soon after the death of his Black Diamond, this is enough to try the stoutest fancier's nerve. He gave \$500 for her in 1887 and she has, no doubt, paid for herself many times over.

If Ireland cannot secure Home Rule she can certainly take some consolation from the fact that her dogs have beaten the English ones on their own ground in the late field trials held in England. The pointer Glensburgh is owned by an Irishman, Mr. D. Moriarty, and trained by him in Ireland, and is a younger brother of Chetwynd, who won at the Irish Field Trials in 1890. Coleraine, the bitch that has upheld the honor of her race so well and consistently, is Irish all through, an Irish reed, and owned by the Rev. O'Callaghan. To be able to run a heat in four minutes and decide on the merits of the dogs under judgment, seems like rushing matters a little too quickly, unless game was extremely abundant, and many of the heats were of less than ten minutes' duration at these trials.

Three hundred and twenty collies benched at once is a sight worth seeing for those who are fond of this handsome and useful breed. This is the entry secured by the Northern and Midland Sheepdog Club show, held May 5, at Manchester, England.

Speaking of the sale of Scottish Prince, the St. Bernard, *Canine World* says, "His skull is phenomenal in its massiveness, and he has remarkable depth and squareness of muzzle. His color, markings and shadings are of the best, and altogether he is a dog that English breeders can ill spare, although they fortunately have his sire."

Mr. Heddy Chapman, who sold Hepsey to Mr. Diefenderfer, is to follow her shortly, having arranged for a long vacation, part of which will be spent in this country, so we may see Princess Florence in New York after all.

The noted pug, Lord Salisbury, was found dead in his box on arrival at the Ayr show. Too many dogs in one box was the cause, and this led to a fracas during the journey, when of course the pick of the basket paid the penalty of the owner's economy and want of foresight.

We gave exclusively, some time since, the news of Mr. F. E. Lamb, of Baltimore purchasing the St. Bernard bitch Marguerite. She has been bred to the Scotch dog Polypheus, the one-eyed dog, and sailed for this country on the Queensmore, April 29. She must be a good brood bitch, as

she is the dam of Marquis and Marchioness of Bute; the latter has already won two firsts and medal at Kilmarnock and recently four firsts and two gold medals at the Ayr show, Marquis winning first and special in his class.

Sir Richard Sutton, who was an enthusiastic field sportsman as well as a noted yachtsman, died recently, and now his setters are on the market. Mr. Purcell Llewellyn has purchased several of them.

The Canadian Pointer Kennels have purchased from Mr. John Bull the pointer dog Devonshire Nero. This dog is quite a good one, having earned winning brackets at the field trials and also on the bench, winning at Birmingham and at Cruft's great show a month or two since.

Five hundred dollars was recently paid to Mr. Fred Lowe by a lady in London, for the Barzoi Roussalka, winner in the bitch class at the Kennel Club show.

All the bulldog men on the other side are now enjoying themselves at the club show held this week. Extraordinary efforts have been made to make it the specialty show of the year. A grand dinner will be given during the show to which our friends Frank Dole and Walter J. Comstock have been specially invited. By the way, these two gentlemen seem to have jumped right into popular favor, as they seem to be made much of and are having a fine time generally. They will take in the Brussels show on the 16th, so we may expect to see some choice Schipperkes soon at the Park Kennels. Frank has purchased the bulldog H. M. Stanley, from Mr. H. Layton. He is by German Monarch out of Princess Brindle, and is said to be a capital blood dog, but faulty in head properties. He will be shown for the Ellis-Woodiwiss £10 cup at the Bulldog show.

Another and more important bulldog importation is that of Cardinal Wolsey, which has by this time reached New York, and is the property of Mr. E. D. Morgan who it will be remembered owned and showed some of the best bull-terriers a year or two since. His advent into the bulldog ranks will be a welcome one. Cardinal Wolsey was purchased from Mr. Alfred George.

"They Say," in *Canine World* has it this week "That dear little Willie Wade, of Hulton, is laid up with the gripe." "That he will have hatched a fine old egg for some one by the time he gets out."

Mr. L. Upcott Gill has published the "Collie Stud Book and Show Record," containing the full pedigrees and bench show winnings of dogs exhibited in 1889 and 1890 up to February. This will be a reference book of great value to collie breeders.

The English Collie Club will hold their show at Birmingham, May 23. Mr. Wheeler will judge. A veteran class is made for dogs over five years old, that have not been exhibited since Dec. 31, 1888, and this is sure to prove an interesting exhibit and an opportunity to view some of the old cracks not often vouchsafed. We understand that Roslyn Dolly, the crack young bitch that the Chestnut Hill Kennels has shown this spring, sailed for England last Saturday and, no doubt, she will appear at the above show, when it will be interesting to know what our English cousins think of her.

Mrs. Smythe's St. Bernard bitch Castlereagh, mention of whose purchase by Mr. Watson was made some time since in these columns, has sailed on the Mississippi for Philadelphia. She is by Puritan out of Ravine and has been bred to Lord Bute. She comes from Mr. Shillocock's kennels.

Irish terriers are bringing big prices in England, two of them having been sold to the Earl of Shannon for \$600. They were winners both at Birmingham and Cruft's show.

A special meeting of the St. Bernard Club was held at the Hoffman House, New York city last Monday evening. Those present were W. H. Joeckel, Jr., President, in the chair; J. O. Thurston, B. P. Johnson, Col. Rupert, W. A. Wells, Daniel Mann and K. E. Hopf. During the meeting the secretary in behalf of the board of governors and for the club, presented the retiring president, Mr. Hopf, with a magnificent gold watch and chain as a testimonial of their appreciation of his untiring efforts in behalf of the club. The watch is a very handsome hunter. On the inside is engraved: "Presented to K. E. Hopf by the St. Bernard Club of America, May 11th, 1891." On the back is handsomely chased the monogram K. E. H. Mr. Hopf appropriately thanked his friends and the meeting adjourned.

We draw the attention of our readers to the list of our new kennel advertisements this week. They include Dr. H. T. Foote's black and tan terriers for sale, Irish setters by Max Wenzel and George Talcott; Illinois St. Bernard Kennels; the Anglo-American Terrier Kennels; Irish terriers by Mr. P. Sterling; St. Bernards by P. J. Langer; Pointers by Geo. H. Giblin and G. W. Amory; and cockers by the Brunswick Kennels. In the stud, Seminole Kennels' collies, Irish setters and pugs, and A. M. Murray's St. Bernard.

It would seem as if the St. Bernards themselves were determined to keep up the price at all risks. Now it is, we regret to say, Mr. E. B. Sears's turn to taste some of the bitter of a breeder's experience. We hear that his grand St. Bernard dog, champion Hesper, died Tuesday morning last. This is a loss both to St. Bernard breeders and to Mr. Sears, that will be hard to replace, as Hesper's services were in great demand and he proved himself an excellent stock dog. Hesper was whelped May 3, 1885 and was by Sailor out of Bolla. A dog of large size and excellent coloring, he was always a great attraction at the shows, at which he has won over thirty prizes and specials. He was imported by Mr. Sears in December, 1889, and can claim an unbeaten record in this country. Mr. Sears has our sincere sympathy in his loss.

Mr. Alfred Sewell, in an article shortly to be published in "The Fanciers' Year Book," entitled "How Distemper is Contracted," says: "No doubt the greatest source of all for spreading the disease are dog shows, and I am sure that so long as there are shows, so will distemper rage to a more or less extent. This, in most cases, is put down to the benching, feeding utensils, etc., used at shows, as being the medium of spreading the infection; but it is my opinion, as well as experience, that they play but a small part in spreading the disorder compared with the dogs themselves, some of which may have come from kennels where distemper is present; others may, and often are, suffering from the disease in its early stages, when it is impossible for anyone to detect it, and which often during a show develops, when, of course, it is the duty of the acting veterinary surgeon to order the animal's removal. With respect to the benching, feeding utensils, etc., it is my opinion, and this I have come to after many experiments, that the germs of distemper will live but a very short time on painted wood, iron work, and enameled troughs that are used at shows for feeding purposes, and for supplying dogs with water; and I believe that the germs of distemper may be removed from these articles by carefully and thoroughly washing them. Another point to show that the benches have not so much to do with the spreading of the disease, is the fact that a large number of puppies have suffered from distemper after being exhibited at shows where the benching, etc., has been entirely new, as at Ayr and Southport."

DOGS TO TREE PHEASANTS.

Editor Forest and Stream:

Our principal sport here in the early game season is pheasant shooting. These birds are found in great numbers in the river bottoms, where the timber and brush is so dense you can scarcely see five feet ahead of you at any time. We only find the birds after we hear them fly, and marking the direction in which they go by the sound, locate them on the trees on which they light, and shoot them with a .22 rifle generally. Now, what we need is an active, bright dog, sufficiently long in leg and strong enough to enable him to get over logs and through the dense salal brush and fern (which grows all over the ground as thick as the hair on the back of a dog to the height of from 3 to 4 ft. under the trees) rapidly. He must have a good nose, and be easily taught to follow the birds up when they fly to tree or trees in which they light, and then bark till the gunner comes up. One can only locate the dog by sound. Now, if you can inform us what kind of a thoroughbred or crossbred dog would be best and most easily broken for this kind of work, and where we can get them, you will confer a favor on many readers here of the most excellent FOREST AND STREAM.

SEATTLE, Wash., May 1.

F. P. ROBERTS.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Blucher. By H. P. Loy, Meriden, Conn., for black, white and tan, blue mottled, beagle dog, whelped July 19, 1890, by Chubb (imported Blue Boy—Mystic) out of Mystic II. (Ross—Spot).

Spot N. B. By Jas. A. Harding, St. John, N. B., for black, white and tan beagle dog, whelped July 19, 1890, by Chubb (imported Blue Boy—Mystic) out of Mystic II. (Ross—Spot).

General Custer. By Willard Hardy, North Andover, Mass., for black, white and tan beagle dog, whelped July 19, 1890, by Chubb (imported Blue Boy—Mystic) out of Mystic II. (Ross—Spot).

Dandy. By B. S. Miller, Andes, N. Y., for black, white and tan beagle dog, whelped July 19, 1890, by Chubb (imported Blue Boy—Mystic) out of Mystic II. (Ross—Spot).

Manie E. By Eberhart Pug Kennels, Cincinnati, O., for apricot tawn pug bitch, whelped Feb. 7, 1891, by Spokane (champion Kash—Lady Thora) out of Lady Verne.

BRED.

Prepared Blanks sent free on application.

Jess—Red River Glencho. J. H. Wilson's (Ottawa, Ill.) Irish setter bitch Jess (Fred Glencho—Nellie Brush) to R. H. Burr's Red River Glencho (champion Glencho—Lyda Belle), May 4.

Lady Mack—Red River Glencho. J. H. Wilson's (Ottawa, Ill.) Irish setter bitch Lady Mack (Blaze—Gladys B.) to R. H. Burr's Red River Glencho (champion Glencho—Lyda Belle), May 9.

Viola—Bradford Ruby II. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Viola (champion Treasure—Topsy) to their Bradford Ruby II. (champion Bradford Ruby—Puss B.), May 5.

Nellie—Obo, Jr. P. J. Keating's (Toronto, Ont.) cocker spaniel bitch Nellie to Rideau Kennels' Obo, Jr. (champion Obo—Nellie), April 8.

Dot Smirle—Obo, Jr. C. E. Living's (Ottawa, Ont.) cocker spaniel bitch Dot Smirle (Bob Obo—Tough) to their Bradford Ruby II. (champion Bradford Ruby—Puss B.), March 18.

Floss Obo—Obo, Jr. C. E. Living's (Ottawa, Ont.) cocker spaniel bitch Floss Obo (champion Obo—Bessie Obo) to Rideau Kennels' Bob Obo (champion Obo—Nellie), Feb. 21.

WHELPS.

Prepared Blanks sent free on application.

Luna T. G. T. Corman's (Ochutuate, Mass.) pointer bitch Luna T. (Wm. Tell—Ross Croxteth), April 28, eight (four dogs), by L. Gardner's Duke of Verona (Glendale—Spotless).

East Lake Virgie. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch East Lake Virgie (champion Bradford Ruby—Puss B.), May 9, four (three dogs), by their Bradford Ruby II. (champion Bradford Ruby—Puss B.), May 5.

Molly Glendyne. Glendyne Kennels' (Bristol, R. I.) Irish setter bitch Molly Glendyne (Glennmore—Nell), April 10, six (four dogs), by their Glen Jarvis (Elcho, Jr.—Maid).

Silma. Andrew Smith's (Maud, Pa.) St. Bernard bitch Silma (Lysander—Fanchon), March 27, five (three dogs), by Tracy Gould's Ben Hur (Cato—Belle Valentine).

SALES.

Prepared Blanks sent free on application.

General Custer. Black, white and tan beagle dog, whelped July 19, 1890, by Chubb out of Mystic II., by E. H. Bragg, North Sidney, Me., to Willard Hardy, North Andover, Mass.

Spot N. B. Black, white and tan beagle dog, whelped July 19, 1890, by Chubb out of Mystic II., by E. H. Bragg, North Sidney, Me., to Jas. A. Hardy, St. John, N. B.

Blucher. Black, white and tan beagle dog, whelped July 19, 1890, by Chubb out of Mystic II., by E. H. Bragg, North Sidney, Me., to L. P. Loy, Meriden, Conn.

Dandy. Black, white and tan beagle dog, whelped July 19, 1890, by Chubb out of Mystic II., by E. H. Bragg, North Sidney, Me., to B. S. Miller, Andes, N. Y.

Manie E. Orange and white rough St. Bernard dog, whelped March 27, 1891, by Ben Hur, out of Silma, by Andrew Smith, Maud, Pa., to Mrs. Judge Gould, Oakland, Troy, N. Y.

Little Wonder. Pug dog, by champion Kash out of Nun Nicer, by Seminole Kennels, Chestnut Hill, Pa., to Loring Brown, Bolingbroke, Ga.

Sandy. Red Irish setter dog, pedigree unknown, by Seminole Kennels, Chestnut Hill, Pa., to Loring Brown, Bolingbroke, Ga.

Stretch Laddie. Cocker dog, by Stretch out of Flossie, by Seminole Kennels, Chestnut Hill, Pa., to Jas. C. Stockton, Radnor, Pa.

Wellesbourne Hero. Collie dog, by champion The Squire out of Wanda, by Seminole Kennels, Chestnut Hill, Pa., to Jas. C. Stockton, Radnor, Pa.

Shylah Daisy. Daisy Dean whelp. Collie bitch, by Seminole Kennels, Chestnut Hill, Pa., to J. W. Ingham, Philadelphia, N. J.

Belle. Red Irish setter bitch, by champion Gerald out of Cushla, by Seminole Kennels, Chestnut Hill, Pa., to N. L. Washington, Pittsburgh, Pa.

King Lear. Pug dog, by champion Kash out of Ruby N., by Seminole Kennels, Chestnut Hill, Pa., to W. H. Van Tine, Jr., Cleveland, O.

Belle Wase. Dark red Irish setter bitch, whelped Sept. 11, 1890, by Blaze out of Nellie, by Glendyne Kennels, Bristol, R. I., to F. E. Wase, Duncannon, Pa.

Prince. Sable and white spaniel dog, pedigree unknown, to Chas. Kritzenberger, Cincinnati, O.

Belle. King Charles spaniel bitch, by Forder's champion Jumbo I. out of Gay Beauty, by Regal American Terrier Kennels, Salem, Mass., to Richard Killeber, Brookline, Mass.

KENNEL MANAGEMENT.

There is no charge for answering questions under this head; we are always glad to give advice on the care and management of dogs; and we shall make this a special feature.

P. D. Marion.—1. What is the safest and surest manner to physic a puppy of 10 mos.? 2. Which are the best hunters, English, Irish setters or pointers? 3. Do you know of any one in this State who boards dogs and fields them? 4. What age should a puppy be to commence field breaking? Ans. 1. Give him a dessertspoonful of syrup of buckthorn every other day for a week. 2. All depends on the country; for thick, rough cover, use a setter; for open work you will find the pointer a good worker. It is to a good extent a matter of fancy and proper training. 3. Write to Liberty Kennels, Hyattville, O. 4. About eight months, not younger.

S. L. W., Pullman, Ill.—Some two or three weeks ago some evil-minded person poisoned several dogs in Windsor, Vt., and my water spaniel got a dose which nearly killed him. Nobody knows what the poison was. The dog was first taken with violent con-

vulsions (he had three), and between these convulsions he vomited freely. After the last spasm a man gave him a mixture of olive oil and white of egg, which relieved him, and he gradually recovered in a measure. Ever since he has seemed weak, and drooping at intervals, with occasional hot nose. Appetite variable. The dog is four years old this summer, and has never been sick except with distemper, for which I treated him according to directions in your columns, and he had a light attack. Ans. The dog no doubt needs toning up. A dessertspoonful of cod liver oil every day in his food would perhaps put him all right. Though not knowing the nature of the poison it is difficult for us to prescribe. Feed on good nutritious foods.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE REVOLVER CHAMPIONSHIP.

THE Winans' Trophy, which is to be the emblem of the American Amateur Revolver Championship, is now on American territory. It came through Uncle Sam's Custom House a few days ago and is now in the office of FOREST AND STREAM. It is a spirited bit of work in silver bronze, and gives a cowboy in all his trappings and regalia, with revolver "bead on" to some unseen victim while the title "Hands up!" tells the whole story. When a cut has been made, all our readers will be enabled to judge of the artistic beauty of the very appropriate gift which Mr. Winans has so generously placed at the disposal of his American brothers of the trigger.

In using the targets fire one shot each in order at the targets from 1 to 6. This will make just one round, and by keeping each shot separate there will be no possible dispute as to the cutting out of one shot hole by a subsequent shot. In this way, too, it will be possible to do more accurate scoring than by a confused mass of shots on one paper.

These target sheets have been prepared in quantity, and may be had on application either personally or by mail to this office. A good drill for any one intending to make a record in this match, or for any revolver shooter for that matter, would be to use old postal cards or bits of card board clipped to that size. When shot after shot can be placed at 20 yds. on the card, then the man and his arm are in good condition for fine scoring. Until that degree of proficiency is reached there is need of improvement, either in holding or perhaps the arm is not capable of meeting the demands made upon it. In either case it is well to know just where the trouble lies, in order to correct the evil.

From the demand already made for targets and the inquiries made about the conditions of the match there is every prospect that the competition will be sharp and severe, with a fine record as the winning score. We are convinced that the arms now on the market, the regular output from several factories, are fully capable of giving a record of 3 in. in 6 shots, string measure. So it merely remains for the marksman to make his skill meet the accuracy of the arm, and that is merely a matter of intelligent practice and study of the minor points of loading, sighting, etc. Does any one want a proper weapon for the purpose, just consult the advertising columns of FOREST AND STREAM and you will see the very best makes duly heralded.

REVOLVER SHOOTING IN ENGLAND.

LONDON, England.—*Editor Forest and Stream:* Before the year 1885 there was no revolver shooting of any account done in England. There were no clubs for that purpose and the English National Rifle Association not giving any prizes for that arm, so there was no inducement for men to practice.

In the year 1885 the English National Rifle Association gave a series of prizes for revolvers at their annual meeting at Wimbledon, but they were so afraid of accidents that it was confined to officers of the army. The scores made were very poor, the top one being 34 out of a possible 36, on a 3 in. bullseye (counting 6), at 20 yds.

The next year, 1886, the scores were still very poor, 35 points winning the first prize. An American, Mr. Walter Winans, was allowed, as a favor, to shoot a few shots, but not for competition, as the prizes were still confined to English officers. In this year several revolver clubs were started in London, the principal one being a wood board, with a bullseye 4 1/2 in. marked in the center with club Mr. Walter Winans won the championship for the year with a score of 64 out of a possible 72, at a 3 in. bullseye, at 25 yds. (which still stands as the English revolver record at this distance), and took the gold level of the club (using a Colt's revolver). Both he and Mr. O. F. Lowe beat the scores (at 20 yds.) made at Wimbledon by the officers, so they would most likely have won first and second prizes there if they had been allowed to compete.

In 1887 for the first time the revolver competition at Wimbledon was thrown open to others than officers, as members of the English National Rifle Association were allowed to compete. As Mr. Walter Winans is a member he was allowed to shoot.

The target and rules were different this year. The targets consisted of the head and shoulders of a miniature man cut out of a wood board, with a bullseye 4 1/2 in. marked in the center in outline. The prizes were divided into two series, one at targets moving across the line of fire (very slowly), and the second at a target rising and disappearing at intervals of five seconds. Distance as usual 20 yds.

As may be imagined there was no difficulty in making high possibilities at these for any one who could shoot worth a cent (especially as after few shots at the disappearing target the partition behind it got marked with the bullet holes so that competitors could aim at a spot on it and fire when the target appeared between them and it). Mr. Walter Winans made a highest possible score at both targets, dividing the prizes with several others who also made highest possibilities (the rules not permitting shooting off hand).

There was also a prize given by Kynoch, the maker of a patent revolver, for the best score made by a pistol of his make at the sliding target. Mr. Walter Winans won it with a score of 23 out of a possible 24 (the next competitor being two points behind), which is the best on-record score to this date with this make of revolver. In 1888, at Wimbledon, in the two revolver series the bullseye was reduced to 3 in. (counting 6 points) on a circular target divided into rings, and the disappearing target came up at intervals of three seconds (which is its speed to the present date). Mr. Walter Winans' possible scores, using a .38 cal. Smith and Wesson, gallery ammunition (the rules said "any ammunition") and Mr. Winans submitted his cartridges and had them passed before competing. He also won every competition he shot for at the South London Rifle Club that year (two shots a week all the summer), and the championship and gold medal of the club with the same revolver.

In 1889 the Wimbledon target was altered by having a 2 in. ring made in the 3 in. bullseye (counting 7), and revolvers had to be not less than .45 cal. and to take the English service ammunition. Mr. Walter Winans won both prizes again, the disappearing one with a Smith & Wesson altered to take the English ammunition (making a score within one point of the highest possible), which is the record score up to date; and winning the other with a Colt (which he used to show that he would shoot with any good make of revolver, a competitor having declared that it was the revolver and not the shooter that won). This score was 40 out of a possible 42, and the record for that style of shooting.

He also won the revolver championship of the South London Rifle Club and all its competitions (some dozen) he shot in, using a Colt revolver.

In 1889 the English National Rifle Association removed to their present shooting ground at Bisley. The revolver prizes were the same conditions as the year before. Mr. C. Haig, a very fine English shot, won both with a Colt revolver, making 39 points in both (Mr. Walter Winans, though present, was not permitted by his doctor to shoot, having only just recovered from a severe attack of typhoid fever). Mr. Haig is the gentleman who came next to Mr. Winans in 1887 and 1888.

LONDON.

BOSTON, May 9.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day, and a large number of riflemen were present to shoot in the prize and practice matches. L. Brackett won the silver membership medal. Following are the scores made, to-day, distance 200 yds., Standard American target, re-entries allowed:

All-Comers' Off-hand Match.			
O M Jewell	87	F Daniels	71
F O Bridge	86	A S Hunt	75
M T Day	80	D Martin	74
J B Hobbs	78	A G Horn	74
		S D Hart	65

All-Comers' Rest Match.			
S Wilder	111	John French	102
A H Ballard	108	M T Day	102
W P Thompson	106	J W French	99
M R Barter	105	A S Hunt	98
		D N Winn	85

Military Match, Creedmoor Target.			
Robert S Chase	44	J S Mills	39
Lieut J A Frye	42	S Langley	39
A S Field	41	H G King	36
J B Hobbs	40	D N Winn	35
		C W Eaton	23

Pistol Match, 60 Yds.			
S O Sydney	78	M R Barter	77
		G M Stevens	69

MERIDEN, Conn.—The third annual shoot, open to all comers and any rifle, of the Citizens' Rifle Club will be held Friday and Saturday next. If sunny on Saturday the shoot will be continued to Monday. \$303 in cash prizes. German ring targets at 200 yds. Tickets, 50 cents 3 shots. Three best scores to count. Point target tickets will be sold at the rate of 10 for \$1. Sixty per cent. of money received on this target will be divided equally according to the number of points shot. Premiums—Most bullseyes on this target, \$3; second, \$2; third, \$1. Lost bullseye each day, \$2. Address J. N. Lane, Sec.

KEYHOLING BULLET.—New York, April 21.—In your issue of April 16 "G. D." of Philadelphia asks for an explanation why a bullet should make a long cut in a target instead of round ragged hole. I should say that that fault is either in the moulding of the bullet or lead in the barrel of the gun. I have had the same trouble and from the same cause, and then I have had it from not having the regular amount of powder in the shell.—WILD CHARGE.

GARDEN CITY RIFLE TEAM.—The Garden City Rifle team met for their weekly contest Tuesday evening, May 5, at George McCune's shooting gallery, 146 South Halsted street, Chicago. Conditions were 25 yds., 25 shots each, open sights, free off-hand position. Massachusetts paper target, possible 300 points: W. J. Gibbs 268, A. Sorensen 262, M. Braun 261, C. R. Grant 258, T. Ford 255, Geo. McCune 244, W. J. Myers 241, Joe Hosie 240.

EMPIRE RIFLE CLUB.—New York, May 5.—The following scores were made by members of the Empire Rifle Club at their regular weekly shoot: W. Rosenbaum 97, Ch. Zettler 97, J. Zettler 84, G. Hillmeyer 64, G. Muth 50.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

May 11-16.—Fourteenth Annual Tournament of the Texas State Sportsmen's Association, at San Antonio. W. L. Simpson, Sec'y.

May 12-14.—Grand Tournament of the South Side Gun Club, at Watertown, N. Y. Open to all. L. H. Prentice, Sec'y.

May 13-15.—Meridian (Miss.) Gun Club Tournament. Open to all. J. R. Alexander, Sec'y.

May 13-16.—Harrisburg, Pa., Shooting Association Tournament, assisted by the Inter-State Manufacturers' and Dealers' Association. Three days targets. One day live birds. H. M. F. Worden, Sec'y.

May 19-21.—Washington (D. C.) Capital City Gun Club, assisted by Inter-State Manufacturers' and Dealers' Association. Association guarantees \$1,000.

May 26-28.—Wm. H. Wolstencroft's Second Annual Tournament, at Facony Driving Park, Philadelphia, Pa. Address Wm. H. Wolstencroft, Frankford, Philadelphia, Pa.

May 28-30.—Newark (N. J.) Tournament. Three days targets, two days live birds. Target shooting events under management of Mr. H. A. Penrose; live bird contests under control of Mr. Jacob Pentz.

May 30.—Canajoharie (N. Y.) Gun Club Tournament. T. C. Pegnum, Sec'y.

May 31.—Spring Tournament Maplewood (N. J.) Gun Club. Open to all. Programmes sent by C. W. Brown, Pres. Maplewood, N. J.

June 2-5.—Saratoga Gun Club Shoot, assisted by the Inter-State Manufacturers' and Dealers' Association. Association guarantees \$1,000, club adds \$2,000, total \$3,000.

June 2-5.—Rocky Mountain Sportsmen's Association Tournament, at Denver, Col. C. M. Hampson, Sec'y.

June 8-10.—Annual Tournament of the Illinois State Sportsmen's Association. W. L. Shupard, Sec'y, Chicago, Ill.

June 15-19.—Thirty-third Annual Tournament of the New York State Association for the Protection of Fish and Game, at Rome, N. Y. Mr. R. Bingham, Sec'y.

July, first week.—Boston; Wellington Gun Club, three days' tournament, under auspices of Manufacturers' and Dealers' Association.

July 2-4.—Third Annual Tournament of Canastota (N. Y.) Gun Club. E. B. Roberts, Sec'y.

BROOKLYN TRAPS.

BROOKLYN, May 5.—The Acome Gun Club, of Brooklyn, held its regular monthly bluecock shoot at Dexter Park this afternoon. J. Lindstedt won the club badge with 16 out of 20. Four sweepstakes at inanimate targets followed the regular event. The results:

Club shoot, at 20 bluecocks each man, right and left angles, 18 yds. rise: W. Vorbach 13, H. Menkel 11, P. Kunsweiler 14, C. Munk 7, M. Schottler 15, J. Lindstedt 16, J. Howe 12, C. Stutzle 7, N. Gentzinger 6, F. Greiner 4, F. Sauter 6, J. Link 9, H. Lenaire 12, F. Rausch 9, C. Dethloff 11, J. Rausch 1, R. Lambert 5, T. Schor 14, P. Mal 10.

In the first sweepstakes P. Kuntzweiler took first money on 5 out of 6; M. Schottler outshot Lindstedt, Lenaire, Dethloff and Schor for second prize; Menkel, Munk and Lambert div. third prize on three each.

Second sweepstakes, same conditions: Schor, Dethloff and Rausch were straight. In the shoot-off Schor had to drop out, the other two divided. W. Vorbach, P. Kuntzweiler and Lindstedt divided second prize; J. W. Schottler took third money on 4.

In the third sweepstakes F. Rausch and T. Schor, 5 each, took first money; O. Dethloff and H. Menkel div. the second part of the purse.

The First German Gun Club, of New York, had its regular shoot at Dexter Park, Long Island, to-day. The club did not have its usual large following, but those who were there enjoyed themselves at dinner afterward. Fourteen members shot, under the usual club conditions, at 10 birds each. The only straight score was made by J. Schwack and he took first prize. T. Pfander and A. Goetz killed 9 each; in the shoot-off Pfander won by a bird.

One of the most successful shoots of the Fountain Gun Club took place at Woolman Park, Long Island, to-day. The new silver trophy was in competition for the first time and the scores made for it were extremely good. Two invited guests shot with the members who faced the traps. They were J. Parker, of Detroit, and Mrs. Lindsey, who had accompanied her husband, a member of the club, to see the shoot. The club now shoot at 10 birds each, modified Hurlingham rules, instead of 7 as heretofore.

The following were the scores: W. Lindsey 7, W. Adams 7, E. H. Garrison 13, L. T. Davenport 9, W. Lindsey 7, W. Adams 7, J. B. Voorhes 7, C. Williams 8, A. C. Hunt 7, Dr. Van Ors 7, W. Frede 6, R. Pfister 8, J. Parker 10, H. W. Blattmacher 6, Mrs. Lindsey 9, J. E. Lake 8, W. Levers 7, J. Seddons 5.

WELLINGTON, Mass., May 9.—The regular weekly shoot of the Wellington Gun Club was held to-day with a fair attendance. A number of sweepstakes matches were shot, and a "walk-up" match for a wind-up, the gunners standing back 25 yds. and walking up until the bird was sprung, the use of both barrels being allowed. Perry won first money by breaking three out of five.

PORT RICHMOND, N. Y., May 9.—North Shore Gun Club's regular monthly shoot. The day was perfect for trap-shooting and some fair scores were made, 25 bluecocks for 3 traps. Zimmerman 12, Schabert 15, Scofield 20, G. Seawood 19, H. Seawood 15, Murry 19, and Medora 18.

ALGONA EVENTS.

ALGONA, Iowa, May 5.—The tournament of the Algona Gun Club opened this morning with a fair attendance. The weather was all that could be wished for and the management first class. The targets were shot from 3 traps, rapid-firing system, and about 6,000 were thrown. But one live-bird event was shot, owing to scarcity of birds. Among the shooters present were J. H. Block, St. Peters, L. J. Wayman, R. Woods, Price, G. Carlton, Eagle Grove, Wilson, of Emmetsburg; G. E. Hughes, Fondra; Chas. Grion, Clear Lake; and Budd, of De Moines. All went home feeling they had enjoyed themselves in the best possible manner, and will all be ready to attend the next tournament given by the Algona Gun Club. A number of the shooters leave to-night to attend the Ackley, Iowa, tournament, May 7 and 8. All ties div. unless noted.

A GOOD TIME AT ACKLEY.

ACKLEY, May 8.—Editor Forest and Stream: The tournament of the Ackley Gun Club was fairly attended. Everything passed off pleasantly, and the management did all that could be expected to make it pleasant for the shooters. The last day a citizens' purse of \$50 was raised in a few minutes and given to the management to put in one contest of 25 single targets, which was highly appreciated by visiting sportsmen. Inclosed please find scores. Ties div. unless noted.

May 7.—No. 1, 10 single targets, entrance \$2:
 Grion.....11111111-10 Wilhelm.....11111111-10
 H. Trotter.....11111111-10 Nix.....00010110-4
 Budd.....10111110-7

No. 2, 7 live birds, entrance \$4:

GENEVA, N. Y., May 8.—The following match at live birds was shot here yesterday. Conditions 8 single birds, 25yds. rise, 30yds. boundary, 12-gauge gun, 1/4oz. No. 8 shot, use of both barrels, ground trap.

Geo Stacy (Lefever).....2 1 2 1 1 1 1-8
 C S Burrall (Ithaca).....2 1 2 1 1 1 1-8
 J Geo Stacy, Jr (Parker).....2 1 0 1 0 2 1-6

The birds were a good lot, and started at once from the trap, one only delayed and had to have a stick or two thrown to start him.

J. G. S.

HACKETTSTOWN SCORES.

HACKETTSTOWN, N. J., May 5.—Among those present were Mr. and Mrs. Milt F. Lindsey, genial John Parker of Detroit, Mich., Mr. J. Pentz of Fairview, N. J., Messrs. J. Warford, T. Warford, W. C. Appar of Frenchtown, N. J., M. H. Ruple of Milford, N. J., Mr. Moore, also Mr. "Jim" Garner of Doylestown, with all his drollery and shouting, and a host of others less known to fame but sportsmen withal. A goodly company but a miserable day, with a cold nor'wester blowing. We hope to welcome you all and many others at our annual tourney in September, which will be duly announced in these columns.

Matches at live birds; ties divided:
 Lindsey.....2322-4 Lindsey.....2023-3
 Vliet.....0011-2 Ruple.....1110-3
 Parker.....1212-4 Ruple.....0012-2
 "Wanda".....2102-2 "Wanda".....0001-1
 Smith.....2221-4 Smith.....1222-4
 Moore.....1010-2 Vliet.....2120-3
 Ruple.....0222-3 Appar.....2302-3
 Bercaugh.....0000-0 Seales.....1222-4
 Appar.....2201-2 Garner.....0110-3
 Garner.....0012-2 Mitchell.....0120-2

All ties divided, except for 2d in second match, Vliet withdrew; rest shot out, Parker won. The other matches were at bluebirds, ties divided unless noted.

No. 1, entrance 50 cents:

MASSACHUSETTS Y. C.—The Massachusetts Y. C. has closed its winter quarters in Boston, and the club houses on Rowe's wharf and at Dorchester are now open.

BODY PLAN CUTTER "MARJORIE."

MARJORIE.

THE accompanying drawings show the cutter Marjorie, originally Marguerite, designed by J. Borden, of the Boston Yacht Agency, for C. A. Taylor, Jr., and now owned by F. L. St. John, Atlantic Y. C. Her sail plan and details will appear next week.

CORINTHIAN MOSQUITO FLEET.—A special meeting of the Corinthian Mosquito Fleet was held on May 11, at which the following important changes in the rules were made. The classes were changed to boats measuring 21ft. to 25ft. l.w.l., 18ft. and under 21ft. l.w.l., 15ft. and under 18ft. l.w.l., under 15ft. l.w.l. Boats exceeding 25ft. l.w.l. but not exceeding 25ft. corrected length shall be admitted to the 21-25ft. class in any regatta of this association. The latter proviso is intended to meet the case of several of the new class which exceed 25ft. l.w.l. but are under 25ft. corrected length. For the two larger classes the Seawanhaka rule with the Larchmont allowance tables was adopted, the measurement remaining unchanged in boats under 18ft. The following rule was also adopted: Boats over 18ft. long entered for a regatta shall carry not more than 3 persons, and 2 persons for boats under 18ft. In all regattas each yacht must be steered by the owner or other amateur. The fleet will give a special prize for a race of the 25-footers, the first race sailed by this new class, on May 30, at Larchmont. Races will also be given for all classes on June 20, July 25 and Aug. 22.

BOUNCER.—Mr. Thos. Clapham has lately shipped two open racing boats of the Bouncer type to members of the Minnetonka Y. C. of Minneapolis, Minn. One is 23ft. over all, 15ft. l.w.l., and 7ft. beam, the other is 26ft. over all, 19ft. 6in l.w.l., and 8ft. beam. Mr. Clapham has received a number of orders for these boats, and in order to meet them he will enlarge his shop, putting in water power and new machinery. One now building for a member of the Ohio Y. C. is 25ft. over all, 20ft. l.w.l. and 10ft. beam; while another, the largest yet, is 33ft. over all, 25ft. l.w.l. and 11ft. beam, with a cabin house. She is for a member of the Corinthian Navy, and will race in the new 25ft. c.l. class.

BAY OF QUINTE Y. C.—The Bay of Quinte Y. C., after having been in a moribund condition for two years, was revived at a meeting held on April 16 with a good list of members of the right class. The following officers were elected: Com., W. H. Biggar; Vice-Com., Alex. Forbes; Capt., R. J. Bell; Sec'y-Treas., Geo. N. Leavens. It was decided to send three delegates to the Lake Y. R. A meeting, at Oswego. The delegates appointed were: Messrs. W. H. Biggar, A. Forbes and J. V. Jenkins. The old club has my best wishes for its success.—PORT TACK.

ROYAL CANADIAN Y. C.—At the annual meeting on April 25 the following officers were elected: Com., A. R. Roswell; Vice-Com., T. G. Blackstock; Rear-Com., C. A. B. Brown; Hon.-Sec'y, S. Bruce Harman. Committee—E. Jarvis, N. B. Dick, J. E. Robertson, R. F. Supart, W. H. Parsons, J. W. Morse, J. Mitchinson, G. E. Evans, G. D. Boulton, A. A. Gooderham. Lord Stanley has recently notified the club that the Queen will offer a challenge cup of the value of £100 to be raced for by Canadian yachts on the lakes. It will be raced for this year at Toronto.

MONTGOMERY SAILING C.—Second regatta, May 3, Morris-town to Indian Creek and return, 5m. Weather cool and cloudy, wind very strong northwesterly:

	Length.	Start.	Finish.	Corrected.
Playford, Grisdale Bros.....	15.00	1 40 00	2 51 22	1 11 22
Gracie, E. A. Leopold.....	12.00	1 30 00	3 20 20	1 40 20
Pennsylvania, J. Adamson.....	16.00	1 40 00	3 20 21	1 40 21
Lever, J. S. Lever.....	15.00	1 40 00	Withdraw.	
Sadie, Geo. W. Ritter.....	16.00	1 30 00	Capsized.	

It was a beat to Indian Creek and a run home.

DETROIT Y. C.—Officers, 1891: Com., C. J. Lichtenberg; Vice-Com., W. B. Morley; Rear-Com., R. Z. Rousseau; Sec., Charles Frazer; Treas., R. J. Reeves; Meas., W. H. Morley; Harbor Master, E. F. Bates; Auditing Committee—Nicholas Woods, J. K. Moore; Regatta Committee—M. A. Kramer, Ed. Bidigare, Geo. Newberry, Dr. Geo. E. Clark, Louis Hilsendegen; Directors—C. P. Collins, F. J. Dingeman; Fleet Surgeon, Dr. Geo. E. Clark. Three pennant races will be held this year, instead of five.

CAPT. PITTUCK.—We hear from *Land and Water* that Capt. George Pittuck, who has commanded Bedouin since she was launched in 1852, has sailed from England to take command of an American yacht. At the same time the *Field* states that Capt. Joseph Angier, formerly of Melita, schr., has been engaged for Bedouin, and will bring a crew of Brightlings—a men with him.

NEW YORK Y. C. DINNER.—On May 7 the members and guests of the New York Y. C. to the number of 100, sat down to dinner in the model room of the club house. The house and dining-room were handsomely decorated by Supt. Olsen, a very fine display of plate, consisting of many old prizes, being a feature of the occasion. Com. Gerry presided. Lieut. Henn was present, responding to the toast to the America's Cup.

SPHINX, steam yacht, built by John Roach for Henry Taylor in 1831, has lately been sold to Honduras parties, being cut in two for shipment to Ampala.

REPOSO, steam yacht, Mr. McGregor, was at Beaufort, S. C., from Southport on May 8, sailing for New York on the same day.

A. P. E., the fast Cape cat, has been purchased by Mr. Simmons, of the Atlantic Y. C.

CRUSADER, schr., has been sold by J. D. Cheever to J. R. Roosevelt.

HULL Y. C.—The new house of the Hull Y. C. was opened on May 9.

GENESTA, cutter, has been recently altered to a yawl.

It is an old saying "that what everybody says must be true," and on that principle the Miller specialties are second to none of the day, for every horseman, stable keeper or hostler who has used them pronounce in their favor. For many years Frank Miller's harness dressing has been the favorite in our stables, because it is not only a preservative but a beautifier of the leather. This dressing gives the harness an excellent finish that does not peel, crack, snut or harden the leather, and so assert all who have used it.—*Adp.*

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1890-91.
COMMODORE: WALTER U. LAWSON, Boston, Mass.
SECRETARY-TREASURER: RALPH F. BRAZER, 47 Central street, Lowell, Mass.
REGATTA COMMITTEE: J. A. Gage, Lowell, Mass.; W. G. MacKendrick, Toronto; L. B. Palmer, Newark, N. J.
CENTRAL DIVISION. NORTHERN DIVISION.
Officers: Officers:
VICE-COM: C. V. Winne, Albany, N. Y. VICE-COM: W. H. Cotton, Kingston.
REAR-COM: T. P. Gaddis, Dayton, O. REAR-COM: J. C. Edwards, Lindsay.
PURSER: Howard Brown, Albany, N. Y. PURSER: C. E. L. Porteous, Kingston.
EX-COM: J. K. Bakewell and H. M. Stewart. EX-COM: Colin Fraser and F. H. Gisborne.
EASTERN DIVISION. ATLANTIC DIVISION.
Officers: Officers:
VICE-COM: J. W. Cartwright, Jr. VICE-COM: L. V. Dorland, Arlington.
REAR-COM: T. P. Gaddis, Hartford. REAR-COM: J. E. D. Anderson, Trenton.
PURSER: R. Apollonio, Winchester. PURSER: Rich'd Hobart, Newark N. J.
EX-COM: Paul Butler, E. S. Towne and Sidney Bishop. EX-COM: H. L. Quick and H. M. Kreamer.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for the year. Every member attaining the general A. C. A. camp shall pay \$1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A. will be furnished with printed forms of application by address to the Purser.

WESTERN CANOE ASSOCIATION.

COMMODORE—D. H. Crane, Chicago, Ill.
VICE-COMMODORE—N. B. Cook, Chicago, Ill.
REAR-COMMODORE—O. A. Woodruff, Dayton, O.
SECRETARY-TREASURER—J. H. Ware, 130 Kialto Building, Chicago, Ill.
Applications for membership should be made to the Sec'y-Treas., on blanks which may be obtained from him, and should be accompanied by \$2 as initiation fee and dues for the current year.

FIXTURES.

SEPTEMBER. 5. Orange, Ann., Passaic River. 10. Rochester, Fall Regatta, Irondequoit Bay. 7. Ianthe, Annual, Woodside.

AMERICAN AND ENGLISH SAILS.

THE Field comments on the great sail question as follows: but while the balance lug has been the main corrector of the fact that the balance lug has merely gone out of fashion. This sail was very thoroughly tested by several good sailors before they abandoned it for other forms of hoisting rigs, nor were their conclusions in the least altered by the very handsome suit of sails on Nautilus in 1886, or those of Pearl and Charm in that year and '88. We believe that the most desirable rig for a canoe, no matter what the shape of the sails may be, is the former in use, a mainsail and mizzen, the latter from a third to a half the size of the former; but it is very doubtful whether this rig is quite as fast as the new fashion, with a very large mizzen, and no doubt at all that the English rig as on Charm, a large mainsail and a mere rag of a mizzen, cannot compete with either of the others.

The Field says: Those who are posted up to date in all that takes place in canoeing, not only in England, but also in America, are at present inquiring for enlightenment in regard to the peculiar difference of opinion manifested in America and England as to "rig." In America, where the canoes number hundreds to our units, the balance lug has disappeared from the racing course, and almost so from the cruising fleet, whereas in England, in both racing and cruising, there is hardly a rig other than the balance lug to be found. Of course, mere numbers, such as the hundreds of American canoes, may mean nothing particular as to merit or demerit of a rig or model, for the reason that where one expert racer carries and is successful with a particular form of sail or model, away run the hundred novices and a few beaten experts in his wake and copy him as nearly as possible. The balance lug has never had a really good show in America, so far as we know. In 1886—the date when the rig came out—a large number of American canoes appeared at the A. C. A. meet rigged with more or less balance lugs, but none of these, nor of those since, are of the perfect cut, sit and rig which is now becoming general among the English racing canoeists. The reason probably is that the standing sail, all about the mast, and permanently laced thereto and spread out by leads in the leech, having won the prize, the leaders of fashion, that is to say the expert racers, ran off in that direction to obtain what they term "fast sails," and dropped the balance lug before they had really tried it. The result is, that all the American racers sail with abaft-the-mast sails; some laced standing, others lowerable, and some reefable.

In England, on the other hand, things have been done in John Bull style, and slowly each kind of rig has been tried and varied and retired. Nautilus, since 1886, when she returned from her American race-

ing, has—that is to say, her yearly replacing sisters have—tried sails, and three suits differently fitted and cut balance lugs.

Atlanta and Birdie, Severn (now the Stella) and several others have been fitted with "batters" of various cuts and fittings. Others, such as Charm, Vanessa, Whiz and Stella (all prize winners), meantime sticking to balance lugs.

Rightly or wrongly, the verdict in England, thus far, is decidedly in favor of balance lug mainsails.

Another curious point about American sail plans is the steady growth of size of mizzen. From the old type of some 15ft. area they have grown to equal size with mainsail, and the latest development is that the mizen has ousted the mainsail and usurped its name, and changed the forward sail into "fore sail." In more than one canoe last year the larger sail was the after one, and apparently with such good result that new canoes are being built to be thus rigged, and old ones altered. For many a good reason it is safe to say that such a sail plan would, as far as our experience goes, be dangerous, unhandy, and unsuccessful in English winds and English racing. This plan was exhaustively tried on the Nautilus in 1879, that canoe having a peculiar deep lift aft. This rig was discarded in 1879, but was again tried in improved form in 1883. In this Nautilus, which had bilge drop keels rigid at mid-length, and therefore needed a lot of after sail, the mainmast was stepped about 1ft. forward of mid-length, whereon a balance lug of 84ft. was set. Right forward at the stem a small mast carried a "latteen" of 25ft. area, setting and looking very much as a jib would look, but more effective and easier to manage. Speed under this rig no doubt was improved, but it is inherent difficulty to handle and danger in puffing strong breezes was such that, though it remained for some time more testing and refitting, it was condemned for English canoe sailing.

One word more, however, re "batters," as we now call abaft-the-mast rigs, compared with balance lugs; there is no doubt the latter rig is very handy, and makes an excellent cruising rig, has less gear, and gives less rigging and stowing work than balance lugs, and is a safer rig in squally weather.

WHO ARE THEY?—"Rumor is again about that three American racing men intend to visit England with their canoes this season. We have heard this before, but sincerely hope it may at last be true, and that we may this season see racing between the American type and the English—the former to be sailed by Americans. The American type of canoe we have, and have had, but possibly not sailed in American 'get-there' style. The new Atlanta is decidedly American in type, but owing to club restrictions forbidding sliding-out deck seats and unlimited sail, she cannot be sailed at present in the cup match in such fashion. Nevertheless there are good judges who believe that in our English weather the American flyer would not 'get there' first nor even second."—Field. We have heard of no American canoeists who are likely to visit England; in fact, all of the crack sailors are preparing for a specially lively season at home.

NORTHERN DIVISION MEET.—The meet of the Northern Division will be held on Jacob's Island, Pigeon Lake, county of Peterboro, from July 15 to 27. The proposed cruising meet on Georgian Bay has been abandoned.

RED DRAGON C. C.—The Red Dragon C. C., after being twice turned out at Camden, is now building a club house at Bridesburg, on the Philadelphia side of the Delaware, half a dozen miles above the city.

A. C. A. MEMBERSHIP.—Eastern Division: Frank Hempstead, Norwich, Conn. Northern Division: J. D. Holbrook, Ottawa, W. A. Davis, Bobcaygeon. Atlantic Division: John J. Boeck, New York.

Answers to Correspondents.

No Notice Taken of Anonymous Correspondents.

H. B.—For the desired revolver ammunition write to the manufacturers direct.

E. C., Quebec.—An advertisement in our columns would not doubt bring you the required answer. We do not know of one.

F. H. F., Boston.—The conditions for the revolver preliminary competition are set forth on the targets, which we send to all applicants free. The .22cal. revolver will be allowed.

H. O. R., Lynn.—The .32-100-20 will not do the execution of the .38-180-40; and for bear hunting you should choose the latter. If most of your shooting is to be on smaller game, the .32 will do equally as well.

D. M. H., New York City.—Can you tell me a good trainer for a Chesapeake Bay dog or water spaniel? I want him to have a good education in that kind of shooting. Ans. We do not know of one, but perhaps Mr. Harry Malcolm, of Baltimore, Md., could tell you.

P. D., Long Branch, N. J.—Kindly give through your columns the breeding and registry number of Bronze, English setter dog, imported by Pierre Corillard. Ans. We can find no record of such a dog. He was not registered. Write to Percy C. Ohl, 60 Broadway, New York city.

S. J. L., Bessmer, Mich.—Please inform me whether a person will be allowed to shoot with a Stevens gallery pistol in the revolver contest. What is the most popular rifle for 200yds. target shooting? What caliber revolver would you recommend for 20yds. target shooting? Ans. 1. No, the competition is limited to revolvers. 2. Caliber .44 or .45. 3. The .44 is much used by experts.

O. R. W., Louisiana.—Will it result in an injury to a heavily choked shotgun to shoot buckshot that chamber in the shell but are badly battered in coming from the muzzle? Ans. Yes, the buckshot should be chambered for the choke. This is done by inserting a wad at the point of constriction and laying the shot on it to determine the proper number for each layer.

L. W., New York.—Would you tell me through your answers to correspondents or otherwise: 1. What size line and how much of it should be used for black bass bait fishing; also, 2. What size and make of hooks should be used for same. 3. Which is the best rod, a six or an eight-strip split-bamboo, made as directed by Dr. Henshall? Ans. 1. Size E, double tapered, waterproof braided silk line, 40 or 50yds. 2. 0-4 splot. 3. The six-strip.

C. S. McC., Bottineau, N. D.—Would you kindly publish in your paper something about the rapidity of flight of some of our game birds, such as geese, brant, the different varieties of ducks, etc.? Ans. Nothing is definitely known on this subject, though many estimates have been made. These are to the effect that the swiftest ducks fly from 90 to 100 miles an hour, and the conversation is said to be about the fastest of the ducks. As we say, however, nothing is definitely known about it.

B. A. B., New York City.—I have in my possession an Irish setter dog, out of a bitch of unknown pedigree, by Shot, said to be registered in the American Kennel Club Stud Book, and owned by J. Scannell, New York city. Would you kindly inform me if such dog is registered in that book? Also, if I can register my dog Bush Boy when the pedigree of the dam is unknown, and the particulars for registering in the A. K. C. Stud Book? Ans. Write to Mr. A. P. Vredenburg, 44 Broadway, New York city.

W. R. H., Calvert, Tex.—1. Will you please tell me which is the best book on bait and fly-casting for bass that you know of, not to cost over \$1.50? I want an illustrated book. 2. Also, who makes the best bait-casting rod? Ans. 1. Dr. Henshall's "Book of the Black Bass" is the best work on the subject; the price is \$2, which is beyond your limit, but we know of nothing so good cheaper. 2. That is something nobody knows. Any one of the makers who advertise in the FOREST AND STREAM will fit you out with a rod so good that you will believe it to be "the best;" and it is a matter of opinion after all.

SUBSCRIBER.—1. I want a new gun, about 7 1/2 lbs., 12-gauge, for field shooting. I want the right barrel to shoot pretty open and the left to shoot close. About what target should I order for same, No. 8 shot 14oz., 30 to 40yds.? 2. I want to get a good practical book on bird dog training; should like if I could have it a book that has also a good treatise of sick dogs—caring and general management of a breeding kennel, etc. Ans. 1. For right barrel about 55 or 60 per cent. of shot and for the left 70 per cent. of shot. Count a charge of the shot you use and get the exact figures. 2. Hammond's "Training vs. Breaking" and Ashmont's "Dog in Health and Disease" are the two books for you. We can supply them.

R. R. M., New York city.—I would like to learn the pedigree of a pointer dog Rex, said to have been sold by the Westminster Kennel Club or at their show in 1882, '83 or '84, to a Mr. Lynch. I understand there are three Rexs in the stud book, Nos. 1254, 2637 and 4099. Should judge this dog to have been a New England dog, as bitches were bred to him in the neighborhood of Bridgeport and New London, Conn. If you can aid me in locating this dog and giving his number and pedigree, you will confer a favor on one of your regular readers. Ans. The only Rex that we can find that is likely to answer your description is Rex (1254, Vol. I), registered as owned by F. Howes, Jr., Princeton, N. J. Breder, Dr. W. S. Webb, of the Westminster Kennel Club, Whipped November, 1875, black and white, by Jim out of Whiskey; Jim by Grouse out of Die; Whiskey by Flash out of Juno. He won first in puppy class at Springfield, Conn., in 1876.

OLD SUBSCRIBER, Providence, R. I.—The following question has been a great subject of discussion among lawyers in Providence. Will you kindly give your opinion and state on what authority you quote from legally? If a quail are killed in Wisconsin or out of the State of Rhode Island, and shipped to this State, can they be sold legally in this State out of season? Ans. Your law provides that "every person who shall take or kill, sell, buy or offer for sale or have in his possession . . . any quail from the first day of January to the first day of October . . . shall be fined twenty dollars for each of said birds," etc. There being no specific exception as to game killed out of the State, our opinion is that the law forbids possession or sale of quail in Rhode Island, without regard to where the game was killed. Let your legal friends look up the cases of Phelps vs. Racey, decided in this State in 1874, and People vs. Wagner in Illinois, in 1880 or 1881. These and numerous other decisions affirm that game laws like your own control game killed outside of the State limits.

J. F. N., Steelton, Pa.—Will you kindly give us through the columns of your valuable paper a description in full of the helgramite, or dobsen bait, from its origin to its end. Ans. A full account was given in our Black Bass Number, July 24, 1890: "The helgramite fly (*Corydalis cornutus*) is the largest of our nerve-winged insects. The eggs are deposited in early summer on leaves of various trees and vines overhanging running streams. They are covered with a white, albuminous secretion in a mass nearly an inch in length and containing from 2,000 to 3,000 eggs. The egg is about one-nineteenth of an inch long and one-third as wide. The young crawl from under the mass and leave the envelope intact; they hatch simultaneously in the night. The young larvae crawl readily upon dry surfaces and live for a day or more out of the water. The species is supposed to live three years in the larval condition. Most aquatic larvae transform to the pupa state within the water; but this larva quits the water when full fed and crawls about for days seeking a place wherein to transform. It has two rows of nine breathing holes placed along the sides of the body, which enable it to breathe out of water, and two sets of gills for breathing in water. It feeds on other aquatic in-

sects, such as the larvae of May flies and shad flies. It abounds in rapid flowing streams with rocky bottom, upon which it moves slowly about. After leaving the water, about the beginning of June, it travels in the night, sometimes to distances of 100ft. from its former habitat. At this season, also, it is used as fish bait. In preparing for the pupa state the larva burrows into the earth, where it forms a oval cell, or hides under a stone, piece of wood or other substance. Here, in about two weeks, it casts its tough larval integument and assumes a curved form and position in its cell, with the head, wing-pads and legs flexed on the breast. The color is yellow with traces of brown mottling of the larva. The breathing holes are more conspicuous and the upper jaws stronger and olive green. The pupa state lasts for days and the perfect insect issues during the month of July. It is nocturnal in habit and hides for the most part in obscure places during the day. At this time it is sluggish and if approached will drop sooner than fly, or raise its head and abdomen, and open its jaws threateningly.

INFORMATION WANTED.

G. H. E. asks: Will some brother sportsman inform me through the columns of the FOREST AND STREAM where I will find the best deer and moose shooting in Maine?

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is produced by "Nanit," "Gloan," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

H. M. QUACKENBUSH'S SAFETY CARTRIDGE RIFLE.

The Best Accurate Rifle Yet Offered for the Money

Whole length, 33in., weight 4 1/2 lbs., caliber, .22, .300, for regular "BB" or long and short cartridges. We guarantee these rifles to shoot as strong and as accurate as any .22, .300 Caliber Rifle made; besides, they are perfectly safe to handle, quick to operate, reliable in every respect, and will bear incessant use without impairing their efficiency in the least degree. The rear sights are adjustable, and the barrel can be instantly removed from the frame, making a handy arm to carry in trunk, valise or package. Each Rifle is tested before leaving our works, and is knocked down as above stated, and neatly packed in a neat, strong box. We also manufacture a full assortment of Air Guns, suited to meet the tastes and wants of every one. The quality of our goods has established them in all the principal markets of the world, and their superiority has induced the U. S. Navy to place them, with success, on their school ships. Illustrated Price List sent on application. Address H. M. QUACKENBUSH, Manufacturer, Herkimer, N. Y., U. S. A. Note—We stamp our name on each Gun we make. Send for Catalogue No. 32. Mention FOREST AND STREAM.

The reputation we gained in the manufacture of the Fox Shot-gun is fully sustained in the New Whitmore Hammerless, of which we are the sole manufacturers. We also manufacture the American Arms Co.'s New Safety Hammerless Revolver.

AMERICAN ARMS CO., 36 New Street, East Boston, Mass.

The Celebrated Spangler Perfect Crimper

ENDORSED BY EVERYONE.

The only tool that will positively crimp every shell alike, no matter what the variation of load may be. The only tool having an automatic plunger which prevents end of shell spreading toward center of wad. The above not only insures uniformity, but entirely obviates the possibility of the load becoming loose. Dealers and sportsmen will at once recognize this as a very important feature. All wear and points in the Crimper Die are made of steel and case hardened, thus insuring durability and perfection of work. Size and weight about same as old style. Is invaluable to users of Schutzen, E. C. and

wood powders. Send stamp for specimen shell. Manufactured only by

A. E. SPANGLER, Patentee, Fulton, N. Y.

Hotels and Routes for Sportsmen.

When planning your annual tour remember that this company controls over 4100 miles of railway equipped with the most approved modern style, passing through a magnificent country noted for its unsurpassed facilities for sport.

A FEW OF THE PRINCIPAL RESORTS.

PORTLAND, Me.—For deep sea fishing.
ANDROSCOGGIN LAKES (via Bryant's Pond or Bethel).—Excellent trout fishing and game, large and small, of every description.
THE WHITE MOUNTAINS (via Gorham, N. H.).—For trout and varieties of game.
THE SALMON RESORTS OF Quebec, New Brunswick and Nova Scotia (reached via Quebec).
LAKE ST. JOHN REGION (via Quebec).—For Ouananiche, trout, caribou, bear, moose, beaver, otter, etc.
THE RIVER ST. LAWRENCE (in the neighborhood of the line for 400 miles).—For masalonge, pike, bass, whitefish, pickerel, perch.
THE THOUSAND ISLANDS (via Gananoque or Kingston).—For pickerel, black bass, masalonge, pike.
MUSKOKA LAKES.—The best place on the continent for fishing, shooting and camping. All varieties of fish and game.
PARRY SOUND AND GEORGIAN BAY (reached via Penetang, Midland, Collingwood, etc.) for black bass, pickerel, deer, partridge, bear, otter, etc.
LAKES ONTARIO, ERIE, HURON AND MICHIGAN (via stations at all principal ports).
LAKE SUPERIOR (via Collingwood, Wiarton, Sarnia in connection with steamship lines).
The charges for hotels, guides and camping at many of the fishing waters named above are extremely low. Full particulars of same, with many valuable hints as to best months and general facilities, are published in a pamphlet entitled "Fishing and Hunting Resorts of the Grand Trunk Railway," which will be furnished gratuitously on application to the Company's principal agents, or to the General Passenger Agent at Montreal, P. Q.

WM. EDGAR, L. I. SEARGEANT,
Gen. Pass. Agent. Gen. Manager.

ONLY rail route to the delightful summer resorts north of Quebec, through the CANADIAN ADIRONDACKS. Monarch Parlor and Sleeping Cars. Magnificent scenery. Beautiful climate.
Hotel Roberval, Lake St. John, recently enlarged, has first-class accommodations for 300 guests, and is run in connection with the "Island House," a new hotel built on an island of the Grand Discharge of Lake St. John, in the center of the "Ouananiche" fishing grounds. Daily communication by the new fast steamer across the lake. The fishing rights of Lake St. John and tributaries, an area of 20,000 square miles, are free to guests of the hotels.
For information as to hotels, apply to hotel managers. For folders and guide books to Thos. Cook & Son, 261 Broadway, New York; to Raymond & Whitcomb, 296 Washington St., Boston, and to ticket agents of all principal cities.

NEW YORK, 241-243 Broadway. CHICAGO, 108 Madison St.
PHILADELPHIA, 1032 Chestnut St.

FISHERMAN'S AUTOMATIC REEL.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR The Automatic Reel.

FIRST—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND—It will wind up the line slowly if the angler chooses.
THIRD—No fish can ever get slack line with it.
FOURTH—It will save more fish than any other reel.
FIFTH—It will prevent tips, lines and snells from being broken by large fish.
SIXTH—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

This reel is manipulated entirely by the hand that holds the rod.

SEND FOR CATALOGUE.

YAWMAN & ERBE, Rochester, N.Y.

SYRACUSE BAMBOO FURNITURE CO.

Successors to SYRACUSE FISH ROD CO.

MANUFACTURERS OF

Fine Split Bamboo Fishing Rods,
WITH CORK AND CELLULOID HAND GRASP. (Patent applied for.)

It is light, fits and will not blister the hands. Recommended by the most experienced anglers in the U. S. Order one through your dealer for inspection, and if not satisfactory can be returned. The U. S. Net and Twine Co. are agents for New York City.

The glittering gang trolling baits which we are manufacturing are the coming bait. It takes the place of the phantom minnow, and is warranted to take two fish to one on any other bait. For sale by all principal dealers in New York.

We are also manufacturing all the popular spoons, such as fluted, kidney and hammered. For sale by all dealers. Send for catalogue.

ANSWERS TO CORRESPONDENTS.

THE AMATEUR REVOLVER CHAMPIONSHIP.

WITH the general distribution of the targets prepared for the preliminary trials and practice shoots, the interest in the match for the amateur revolver championship of this country is on a sharp increase. There is a good deal of powder burning already under way on account of it, and the prospect is that the record will be set at a very high notch of expertness.

Just what degree of skill may be required can be judged by looking over a series of English targets, where the distance shot over is similar to that set for the championship match here.

Take for instance the targets made by Mr. Walter Winans, the donor of the trophy. A rough estimate made by him, when asked what he thought the winning score would be in string measurement, was fourteen inches for the eighteen shots and three inches for the best string of six shots. A review of some of the targets made by Mr. Winans shows that he was liberal in his figures, judged by his own efforts. In the fall of 1889, at the South London Rifles contest in competition at twenty yards, with a Colt .45-caliber, 4½ pounds trigger pull and using English Government ammunition, shooting in the open air, altogether a combination not calculated for the finest work, the record stood 4 inches, 4 inches, and 3½ inches respectively for three strings of six shots each making a total of 11½ inches for the eighteen shots. This target was published in FOREST AND STREAM of Nov. 14, 1889, and with such a guide as this for his judgment it is safe to say that Mr. Winans would amend his estimate to 9 inches for the eighteen shots and possibly 2 inches for a string of six.

Take again a silver dollar. It is 1½ in. across or ¾ in.

from center to edge. Now 18 shots, measured by circumferential distance from the absolute center of target to the breaking edge of the shot, and each one clipping a dollar, would make a total string of 13½ in. Now, just put up a disk struck from a dollar, stand 60ft. off, and when you clip that disk every time you are making a score of not worse than 13½ in.

THE HELEN KELLER FUND.

AS recorded last week, the money which had been sent to the FOREST AND STREAM for this purpose was sent to Helen Keller; and with it went a list of the names of contributors. In return we have received the following touching acknowledgment written by Helen herself:

PERKINS INSTITUTE AND
MASSACHUSETTS SCHOOL FOR THE BLIND,
South Boston, May 19, 1891.

To the Editor of Forest and Stream:

Will you please thank the kind gentlemen who sent me the money for little Tommy, and tell them that they have helped make two children very happy? It seems beautiful to me to think that the death of my brave, loving Lioness should be the means of bringing so much happiness into the life of our dear little Tommy. I feel very grateful to the friends, far over the seas, who are taking an interest in baby Tom's education. Some day I hope I shall see each one of the dear friends whose names you sent me, and then I shall thank them myself. Thanking you, dear editor, for your kindness, I am your loving little friend,

HELEN KELLER.

SNAP SHOTS.

IF you cannot go away five hundred miles on a big fishing trip, take a day off and fish the brook in the hollow. Make the most of what you have. This is a solid chunk of what the Hon. Horace Chilton, of Georgia, would call "good old cornfield common sense."

Our esteemed contemporary, the New York Mail and Express, is taking up a collection to buy reindeer for the starving Esquimaux of Northern Alaska, in response to Dr. Sheldon Jackson's recent proposal that these deer should be introduced and the natives taught to herd them. The Mail and Express says that every \$10 will supply one reindeer; and the subscription now foots up more than \$400.

We have been told of summer visitors who kill Maine's big game and leave it to rot, and of residents who slaughter it in winter snows; and now comes a story that the Passamaquoddy Indians have found in the State Papers at Boston evidence sustaining their claim that treaties between their tribe and Massachusetts (to which Maine belonged) in the last century gave them a perpetual privilege to hunt and fish regardless of any game and fish laws.

There are so many fish in the Central Park reservoirs in this city, that they would afford capital fun, if only a fly-fisherman could get at them. Gunners are employed to kill vagrant dogs and cats and to reduce the squirrel supply in the park; why should not the authorities let out the contract of taking some of the big fish to give the little ones a chance? There is a lawyer around in Nassau street who would do the fishing gratuitously and for pure public spirit.

What has become of all the State associations for the protection of fish and game which used to meet in annual convention in all parts of the country? There is left today not one of them whose assembling means anything for the cause. The target shooters are stronger than ever before, but the game and fish protective efforts have died out. In some States, to be sure, the authorities have taken up the work and voluntary effort has been supplanted by regularly organized official systems; but in most cases there is still abundant need of concerted action.

Tarpon fishing has taken a firm hold, and every indication is that the sport will prove to be not an ephemeral fad but a branch of angling whose participants will find in the sport increased fascination and satisfaction in proportion to their experience and skill. An enthusiastic correspondent writes: "My interest in tarpon fishing has not varied; in fact, although I thought I knew it all, I learned something new the present spring and I believe that I have not yet reached complete knowledge of the fish. I have spent six years with him and have not found that custom states his infinite variety. In fact, I found that I felt no interest this year in 'small fish,' as

the guides call all other than tarpon; and did not drop a line for them at all, leaving to others, or to chance, the supply of the table."

Mr. Charles Hallock read before the Cosmos Club the other evening a paper on the "Distribution of Fishes by Underground Watercourses." The essay will appear in the June number of Goldthwaite's Geographical Magazine.

We wish to communicate with those readers of FOREST AND STREAM who were specially interested in "Nessmuk's" contributions to the paper, and who would like to share in a projected memorial of him. Will such persons kindly send us their names?

Apropos of Marshal MacMahon's proposed introduction of American jack rabbits into France, our esteemed contemporary La Chasse Illustrée suggests, "We shall shortly have an opportunity in France to determine if in their stories of the incredible speed of this creature the Americans have not for once stretched the truth."

Since his appointment to the command of the U. S. receiving ship Vermont, at the Brooklyn Navy Yard, our contributor "Piseco," Capt. L. A. Beardslee, of the Navy, has had little opportunity for whipping the trout brooks; but that he is acquiring honors is attested by his election as Senior Vice-Commander of the New York State Commandery of the Loyal Legion.

It is all very well to talk of communing with nature and studying the ways of the gentle wood-folk; but there is such a thing as starting in on it at too tender and susceptible an age. Two girls and a boy, in the backwoods of Sullivan county, N. Y., not long ago communed with a wildcat, and the interview drove them stark mad, and they have just emerged from an insane asylum.

Trap-shooting is having its boom. There has never been anything like it. The target companies are turning out millions of "inanimates" and the cartridge manufacturers are keeping pace with loaded shells, for each target means the burning of powder. The new Inter-State Association under the direction of Manager Penrose is proving to have been planned on lines of efficiency; and all the meetings have been successful.

A small boy and a poodle dog on a raft in the middle of the Atlantic Ocean might appear to be in a worse strait than a best man at a New Jersey wedding; but recent events have demonstrated that the chances are in favor of the boy and the dog and against the best man. It has actually happened that the shipwrecked waifs were picked up and brought into port, while the best man was shot and instantly killed by a festive idiot among the guests who pulled out his revolver and blazed away with it purely as an expression of joy at the nuptials.

Mr. Alex. Starbuck's happy relation of trouting days on the North Shore has been winning commendatory notices by the editors of the West, who have been or want to go fishing themselves. Mr. Starbuck, by the way, dips his pen in iridescent ink, and his narrative glows with color. Note some of his sparkling appellations: Golden fin—rainbow beauties—darling of the spotted jacket—freckled beauty—the haughty and handsome tribe—the tribe of fontinalis—radiant beauties—proud princelings of the watery realm—two lovely specimens of the speckled brigade—the jeweled beauties—a monster—mottled darling—a brook beauty—the autocrat of the lake—sparkling beauty.

It is reported that at a meeting of the Cabinet, held on Tuesday last, the question of protecting the fur seals of Bering Sea from extinction was under discussion for some time, but that no decision was reached in the matter. It is singular that with the inevitable extermination of this valuable mammal before them there should be this delay. The season for killing is near at hand, and unless Great Britain's proposition is accepted and a close season ordered, the close of the season of 1891 will see such hopeless injury done to our interests in Alaska that they can never hope to recover from it. It is a mortifying and humiliating fact that this important interest is receiving its deadliest attack in the very Cabinet of our Government.

The Sportsman Tourist.

CAMPING AND DE-CAMPING.

VACATION fever is a dangerous disorder. All authorities agree that there is but one remedy—a vacation. My friend George Ellis had infected me by mail. His glowing accounts of experience in Muskoka, Can., and finally an invitation to join him there made the case so desperate that gun and rod in old school doses became my only hope.

In the midst of preparation, as visions of pine woods, lakes and mountains flitted through my brain, I thought of the benefit these things would do a malarious, sickly nephew. "Just the thing for Harvey Graham and not a bad lad to carry a string of trout," I reflected.

The New York Central to Lewiston, on the lower Niagara, the steamer to Toronto and the Canadian Northern toward the great lumber region of the upper Ottawa was our route. Into the wilderness we sped and late in the afternoon found ourselves at Gravenhurst, the terminus of the road and of civilization in that direction. Muskoka, a region twice as large as the Adirondacks, stretching from the French River and Lake Nipissing on the northeast to Georgian Bay, Lake Huron and the Severn River on the west and south, sprinkled with rivers and lakes in almost infinite profusion, a section many parts of which are yet unsurveyed; the waters teeming with fish and the woods alive with large game, lay before us, inviting exploration.

Our destination was Baysville, on Trading Lake, sixteen miles through the forest in a northeasterly direction. Our progress thither was by stage. Road apparently there was none, its substitute being what resembled the dry bed of a mountain torrent. Over rocks, across gullies and down washouts the vehicle swayed and lurched, keeping us in momentary expectation of a capsize or the loss of a wheel.

We passed through miles of burned land, where hardly a trace of green could be discerned. Charred, blackened stumps and trunks, sable monuments of former vegetable life and beauty, littered the ground or pointed mutely to the sky, that now smiled upon them unavailingly.

Baysville, when at last reached, did not add to the slightness of the landscape. A hamlet consisting of an equal number of log and frame buildings, it forlornly squatted in the middle of a tract from which every tree and shrub had been carefully removed. Evidently these people proposed to secure their homes against forest fires.

We immediately inquired for Ellis, only to be informed that he had been called home a few days previous by news of dangerous illness in his family. Though in quest of adventure, here at the very outset was more than we desired. Ellis had spent months, at various times, in this section, and was the veteran on whom we relied. To add to my anxiety Harvey became sick.

To get out of the stuffy attic room into which we had been thrust and to leave Baysville to its heat and dust were our only desires. A guide with a canoe large enough to contain three was secured only after extreme difficulty.

Salmon was our man's name. In physical make up a magnificent, broad-shouldered specimen, he had a furtive, uneasy expression, at first so markedly avoiding a direct glance as to lead one to suppose that he was either laboring under painful embarrassment or that he had some dark chapters in his life. Never were we more deceived. Once under way, he thawed out completely, surprising us not only by his fluency and elegance of speech, but freely telling us his history.

Born in India, the son of a colonel in the British army, he had been carefully educated in England, graduating at Christ College, Oxford. Naturally of a roving disposition, he took passage in a vessel of a relative and circumnavigated the globe. What led him finally to locate in the wilds of the Georgian Bay region can best be told in his own language:

"My father had many friends among business men in London, and through his influence I might readily have obtained a situation in a mercantile house. But I could not be weaned from the adventurous life I had been leading. When I saw white-faced, puny clerks, robbed of sunlight and air, painfully bending in cramped positions over big ledgers, I contrasted such a fate with an active, manly existence under the blue sky, and chose the latter. Thirteen years ago I buried myself, as most people would call it, in these woods. I have never for a day regretted the step. With the slight income that I receive from home, together with what I make in winter as superintendent of a lumber camp, and in the summer as guide, I am accounted rich in this frugal section. I do not lack good society. Many of our Scotch and English settlers are well educated. I married a girl of this class about a year ago, and am not less happy than if my lot were cast among brick walls."

While conversing we had been moving out on to the broad lake, and the scenery now burst upon us in all its wild beauty. Headlands and islands, hills near and remote, were all alike hidden in untorn draperies of leafy green. The shores were not mountainous; and the close-crowded giant trees, untouched by the axe, concealed the rocky soil, presenting to the eye soft folds of rustling foliage that apparently ended never.

Each bay and landmark elicited its story from our guide. Here we were told a deer had been overtaken in the water, while at this or that point a bear had been shot. Later in the afternoon, the water becoming rough, we ran in behind a long promontory, making a portage at its base, to get into a more protected arm of the lake. It was here we learned that much of Muskoka game could be killed by a slap of the hand—that is when it lit on the accessible parts of one's anatomy.

On account of the mosquitoes a spot exposed to the wind was selected for our camp. Salmon's practiced hands soon had our bed made up in backwoods fashion. This was done by lavishly piling balsam boughs on the floor of the tent, forming a soft, health-exhaling couch which no true sportsman would exchange for hair mattresses and artificial appointments.

Though the canvas walls shook in the chill night breeze, the guide dropped off with the most business-like precision, and, as Harvey seemed to be cosily composing himself for his first night in the woods, I, too, was soon slumbering. A rough hand shook my shoulder, and I awoke with a start. A bright light shone through the open flap

and illuminated the tent. Sleep-befogged I groped my way out toward the camp-fire. There shivering before it, while Salmon stirred the embers and piled on more wood, was our young comrade. With chattering teeth and bent, muffled form, he was enjoying a regular "Jersey shake" 2,000ft. above sea level.

The remainder of the night was spent around the fire attending to the invalid. Salmon attempted consolation with some personal incidents of outdoor life. "Early last May," he said, "a Boston gentleman came up here for trout fishing. We traveled way back into the woods; and it rained so that while one of us paddled the other had to bail constantly. The thickest rubber coats were of no account; and night after night, with all our clothes completely soaked and no chance of building a fire, we lay down just as we were. The weather was cold then, too," he added.

"Well," responded the plucky lad, "I'm not making this excitement for fun. If I wasn't chock full of malaria, you would not hear from me this way."

As we talked, toasting ourselves before the blazing logs, the faint, gray suspicion of early dawn ripened into the rosy certainty of approaching morning, till finally the sun, thus announced, bespoke the presence of another day. Breakfast eaten, we held a council. The sense of the meeting was that we must risk no more with our hospital annex. The Ox Tongue River entered the lake near by. It was decided that we should ascend this a number of miles, and thence take a short portage to a vacant lumber camp known to the guide, from which, as headquarters, we could make excursions with rifle and rod.

To stem the swift current in our heavily laden craft cost vigorous effort. The careful selection of each eddy, a quick upward swing when we pushed out past the projecting point, the rapid, united dip of our paddles as we breasted the down-pouring flood, or the steady shove as we prodded the bottom of the stream in availing ourselves of favoring shallows, this arduous programme, oft repeated, made our arrival at the carry welcome. But here our work was no easier, though of a different nature. We stood at the bottom of a steep bank, thickly timbered and without a visible path. Strapping together two meal sacks containing goods weighing not less than a hundred pounds, Salmon placed one over either shoulder with the band across his chest. Not satisfied with this, he picked up the eighty pound canoe, and, balancing it on his neck, scrambled lightly upward through the underbrush. We, almost empty-handed, laboriously followed, guided by occasional gleams of the wet surface of the upturned canoe as it rapidly disappeared among the impeding branches. Our party pantingly emerged into the small clearing that surrounded the long, low, shed-like lumberman's cabin. The mosquitoes, blackflies and other sanguinary insects too numerous to classify had all this time not been idle. Now, realizing that they had plenty of room in which to operate, they burst upon us from the encircling woods with a wild shriek and claimed us for their own. We hastily beat a retreat to the baronial hall before us. The interior walls supported a double row of bunks extending around the entire shanty. These were stuffed full of rubbish. A horse left in the woods to die had appropriated the place for a stable, and the stove, upon examination, proved to be the fragrant sepulcher of a colony of rats. The guide had seen such places before, and despite the hovering insects, proceeded to arrange our effects as if for a permanent location. Our united protests finally led him to consent to an exodus.

He pertinently inquired: "Where are you going now?" Being unable to decide he informed us that he lived on Trading Lake, only ten miles from where we then were. "It's a little better house than this," he said, "and has the advantage of being clean. If you have a mind to camp out in my shanty we will go there now."

We at once took up our march. To shorten the carry we put in at the head of the rapid, at the foot of which we had landed. We were too much weighted down to steer easily. Our guide had not made the run since high water of the previous spring. Plunging down the incline, rising from one foam-crested wave to dive into another, narrowly missing numerous rocks that jutted above the surface, as we turned a sharp bend, there directly in the channel lay a huge tree which the freshets had toppled across the stream. No escape presented—to tangle back up the river was out of the question. Slowing our progress as much as possible we luckily, just in the nick of time, discovered a small partially concealed opening between the limbs of the prostrate tree and the further bank. After this was passed we had no more trouble.

In our descent we were constantly on the alert for game. We dropped down stream silently. The tall palm-like pines, the density of the forest, the dancing on-flowing river and the consciousness of our utter isolation, a feeling which dominated all others, made the journey impressive. But this was not all which made the afternoon memorable. As we were about to emerge into the lake I caught sight of some furry animal on the bank. Without ado I "pulled loose" with my revolver. The terrible creature at once acknowledged the attention with a manifestation much more to be dreaded than my bullets. A shot from Salmon's rifle put an end to the animal, which was not a bear, but for several days our nostrils reminded us of the success of our hunt. Strong, very strong reasons prevented taking our game home.

At sundown, as the boat danced out on to a landlocked bay of the lake, Salmon's house and well-cultivated garden, surrounded by a compact wall of virgin forest, was suddenly revealed. A comely, pleasant-faced, intelligent young woman, whom the guide introduced as his wife, stood on the shore to bid us welcome. The situation was explained to her; and we were ushered up to the curious, nondescript, two-story frame dwelling and made comfortable.

Salmon had prepared this place for his bride, the daughter of his nearest neighbor, living some five miles distant. He felled the trees for the clearing, and laboriously, after many successive journeys, towed from Baysville, over twelve miles away, all the sawed timber that entered into his house. The only help he had received was in erecting the framework. The product was essentially a home-made home. The second story was reached by a ladder from without, and was entered through a hole in the side of the house, an opening which was neither door nor window. Up this ladder, frequently in pouring rains, Harvey and I climbed to the narrow single bed which had to do for us both. But how we did sleep!

Twelve hours at night, and a long nap in the afternoon in the woods or on some island, was not uncommon.

Our week's stay here was all too short. The canoe was put at our disposal, and we could paddle off across the water or wander through the forest at our own sweet will. Many were the efforts on the part of our entertainers to contribute to our enjoyment. Salmon led us to the best trout streams, showing us where and how to spear fish by the jacklight, and ran the dogs after deer for our benefit. But the time came for our return. We bid farewell to our hostess one morning, and a few hours afterward were landed by Salmon at Baysville from his canoe.

Reaching Toronto we learned that the regular daily boat for the Thousand Islands, our objective point, was laid up for repairs. However, an excursion steamer for the Hanlan-Ross race at Ogdensburg was just ready to start. Our baggage was a gun and two pairs of heavy blankets done up in a meal sack. As we hurried on to the wharf with these the gang plank was being drawn aboard. The mob afloat immediately set up a wild howl for the "gun and the bag." Amid their acclamations we half jumped and were half pulled to where they stood enjoying the situation.

We now looked around to see where and with whom we were. The large steamer was filled with a company of "shooting gentlemen." A more precious collection of "toughs" I never encountered before nor since. All lower Canada seemed to have assembled the worst representatives of its worst element here where they would be under no restraint. Truly, for us, it was a pleasant prospect. But we were not molested. No sooner had the boat left the harbor than assorted fluids absorbed and were absorbed to the exclusion of less important matters. In addition to the inevitable bottle of "tonic" every other man had some arrangement, either cards, wheel of fortune, dice or what not, to facilitate the exchange of commodities. When at about 6 o'clock in the evening we stopped at Port Hope, several professionals, who fully corresponded to the ante-bellum Mississippi River steamboat sharper so often described, got aboard. One in particular, evidently well known to the fraternity already afloat, was conspicuous by his clerical garb and his clean cut, impassive features.

The fun soon became intensely interesting, not only to the participants alone but to us as spectators. Both decks were crowded with tables stocked with generous piles of coin and bills. Hard, cold faces, void of emotion; flushed, eager ones, inflamed with excitement; the gambler of years and the rapid youth transferred their rolls of greenbacks to each other with business-like celerity. Not the slightest notice was taken of us as we wandered about. All was preoccupation. If toward midnight a storm had not arisen few would have slept that night. At first no one paid attention to the roaring of the wind. Soon the seas increased; the vessel rose and fell heavily; and occasionally, as the play progressed, a gamester here and there would grow white, lose his interest, and at last fall out overcome by sickness. The strong breeze now became a gale; the decks assumed abrupt angles; and the timbers of the boat, which was really a sorry enough old craft, creaked ominously. Those of the crowd that were neither intoxicated nor equally helpless from nausea began to realize, after a few heavy seas had washed clear across the lower deck, that the situation was serious.

One by one the men lay down on the floor of the cabin, hoping for the storm to abate or trying to sleep. We brought out our now useful blankets and made ourselves comfortable in a corner as far removed as possible from the drunken revelers who were still celebrating. Mingled with the blasts of the tempest were blasts of profanity. Amid such surroundings we uneasily awaited the morning.

The wind continued to blow in gusts, but as we had run to windward of Prince Edward's Island all danger of foundering was now past. At daybreak we entered the St. Lawrence. We rose to view the fairland of the beautiful cottage-adorned Thousand Islands. Contrasting with this attractive panorama were the besotted creatures that littered the benches and chairs and strewn the decks in every imaginable attitude of drunken stupor.

Ogdensburg reached and the custom house passed we repaired to the nearest restaurant. Here I discovered that my pocketbook had passed into the possession of some one whose fingers were as light as his conscience. I was unlucky enough to furnish myself with this bit of news before breakfast. As I carried the funds for the party, we walked to the telegraph office on the recollection of our yesterday's dinner. After six hours of rigid application of the mind cure for hunger, the Western Union and a good credit came to our relief, just as I was calculating the probable cash value of my watch. The next morning was inaugurated a telegraph strike which extended all over the country and lasted for weeks, thus scoring us another narrow escape. Harvey often refers to our trip. He is of the opinion, that if our camping was not a success our de-camping had all the elements of victory.

RALPH K. WING.

TEN DAYS AT RUSHMORE.

AS George was in the country all summer, I agreed to take my wife and the rest of the family up to the camp for a vacation. Said rest consisted of Mabel, aged ten; Belle, eight; Sam, two and a half; and Jr., eight months old. The Mrs. had her doubts about taking the baby, and our family doctor was in the same state of mind; but I agreed to assume the responsibility, knowing we could always keep warm and dry in the little house, and thinking that the pure resinous air and woody smell would benefit him. And I think it did! It was quite a trip to make with the youngsters, but by stopping off over night on our way up we eased it some and arrived at a nice hour, 11 A. M.

They were all pleased to find such a comfortable house, for Rushmore, with only its one room, has nice bunks and mattresses, folding chairs, extension table, glassware and crockery, a good cook stove, and a liberal supply of granite-ware cooking utensils.

Sam, however, took us all down by saying, "Well, this is a nice little barn, where's the house?" Then he proceeded to investigate the stove, and succeeded in blacking himself up in great style; but what fun he had there digging in the gravel or trying to throw all the loose rock on Long Point into the lake. I have him started right, and expect in a few years he will be a genuine sportsman. At the age of one year he would hug a gun and smile with delight whenever it came out of the case; at two he

could aim it: and now with the slight encouragement I give him he promises to be one of us.

I promised to do most of the work that my wife might rest some, but the care of a baby did not give me any great chance for that; still in a few days she was carrying wood like a native. What little fishing I did was in the morning before the rest were up, and consisted mostly of getting a mess of bullheads for breakfast, or trolling for pickerel. I tried some for bass but had no luck—could not seem to find them. I do not think bass fishing as good here as it is from Burlington north. After a few days Mabel would get up and join me on my early trips, and she caught most of the fish while I took them off and baited the hooks.

One morning I got a 5-lb. bowfin on my light rod, and he made plenty of fun before I could get him into the landing net. It is not a particularly quick fish, but very strong and hard to tire. The little girl scapped him like a veteran, but after he got into the boat, both girls being with me, became badly demoralized until I ran my hunting knife down through his spine. The next day Mabel caught one weighing 5½ lbs., but as he was on a short stiff pole I soon got him into the boat, though for a few minutes he pulled her little arms pretty hard.

They kept me rather busy between the cooking and clearing away; then there was wood and ice to get and milk once a day; even these tasks had their pleasures. How often would I look across Lake Champlain at the Adirondacks, then up and down the lake and admire the blue line of the mountains, at times covered with clouds, so that only the base and peaks of the higher ones would be visible. Then the many points jutting out into the lake, edged with cedars, and an occasional green meadow showing through an opening in the trees.

One day while after ice I spied a mink in the rocks and tried to hit him with a stone, but the minute my hand went up his head went down, and if I tried to finesse by crawling around to get behind him when he came up, keeping him down in the meantime by throwing stones, he always bobbed up serenely with his face to the enemy. Had George been there he would have devoted a week to trapping him, as he likes that about as well as trout fishing.

We began to get tired of fish and pork and hints were thrown out that chicken would be agreeable, but as the first of September was at hand I promised ducks for a change. It was a change, that is, the ducks changed position when I fired and went up to Hinesburg pond. I had often heard of the opening of the duck season, and now at last was to engage in the fray. A party was tenting across the road from us and we agreed to get up at three and be up in the marsh before daylight; the Mrs. said we had better stay up all night.

Ding, ding, ding, went the alarm, and hastily getting up and dressing I found my friend down on the shore pushing off his boat. Getting into mine we rowed away up the creek, followed at a short distance by another party the swash of whose oars sounded plainly in the still morning air. Before we had got half way up the marsh we passed two figures standing grim and silent in their boat, and a little further up two more; finally we secured a position and waited patiently for daylight. Soon it came and boom! boom! went two shots down at Big Otter marsh; then boom! boom! boom! went three more shots in Goose Creek, and straining my eyes in that direction I saw three woodducks coming like a streak. Waiting until they were opposite I blazed away and never touched a feather; as they passed along the marsh one could hear a regular fusillade. After a time, no more coming my way, I moved down near to Goose Creek and saw one party there drop a black duck and a woodduck, and then miss three blacks which came my way, but flew right in the face of the sun. I fired, and how the feathers did fly! in fact, they were still flying the last I saw of them, headed direct for Hinesburg pond.

By noon the firing had been so continuous that all the ducks were driven inland, but toward evening we saw some come back, to feed on the wild oats. Never in my life have I heard such shooting and do not believe over one shot in ten brought a duck; many were knocked down and would get away in the grass and oats, as the water was very high, which made it impossible to walk on any part of the marsh, and wounded birds could escape by diving.

The next morning we tried again, but no birds coming along, rowed down stream and fished for bullheads. While thus engaged I saw a black duck come in and go to feeding. After getting enough fish for breakfast I rowed over and put her up. She quivered when I shot, but flew a short distance and then dropped down in the grass, only to get away, as I searched for her in vain. When I returned again without any ducks they told me I was a great hunter never to kill anything. Nothing succeeds like success, and perhaps I can make a good bag of lakies before long and then I will be in favor again. But for lots of excitement with little bloodshed give me opening day on Otter marshes.

Well, we stayed our ten days out, and such fun as those youngsters had! They carried wood, gathered birch bark, swung in the hammock, ate, slept, rowed, fished, hauled bait, paddled in their bare feet, and had such a good time generally that when the time came for me to leave they decided to stay longer, the farmer's two daughters coming down by them nights, and I managed to run back a couple of times to stay over night. When I came to survey the wood they gathered and was told Mama carried those big sticks it was proof that some one was being benefitted by the trip. Outdoor air and no stairs to climb was what did it.

Never have I gone on a trip and done so little fishing or hunting, still I enjoyed this best of all. It did me good to see them eat my muffins and slapjacks, and to hear Sam cry "more fish" until he had eaten four and once five bullheads or perch.

One day we had a cooking bee and the Mrs. baked a cake and fried crullers. We all stood there and ate them as fast as done until we had eaten three or four, and myself six of them. Dyspepsia? Not a bit of it; one could digest anything there that didn't require a gizzard.

I saw a nice bunch of bluebills and a few coots fly by Sunday noon, so at night went down to the camp, taking enough bread, pork and eggs for my breakfast, got up Monday morning and put out my decoys; but no birds flew in. so I pulled up, closed the house, and thus end my days at Rushmore for 1890; but I hope to take my whole family next year, and with George along to help we expect great times.

MARINE RESERVATIONS.

Editor Forest and Stream:

I have read with deep interest your account of the proposed reservations for the walrus and sea lions, as well as the hearty indorsement of the plan by yourself, Doctors Allen and Dall and Mr. Elliott. The importance of the movement can scarcely be overestimated. The destruction of many of our large land and water animals either for profit or from mere wanton love of killing, has long been a source of regret to lovers of nature. It has been accomplished in some cases through want of legislation and sometimes in defiance of law. The question of jurisdiction has occasionally complicated the problem, and many noble animals have been practically exterminated before our eyes before protective legislation took shape. It will probably be impossible to prevent the killing of walrus at sea, and it is not desirable to restrict the right of the Esquimaux to capture as many as they need to supply them with food and clothing. The whalers have already nearly exterminated the walrus in the Arctic, and it is believed that the species is now more numerous in Bristol Bay than further north. The reservation of Amak Island as a refuge for this species will in all probability result in its slow but certain increase. The walrus is heavy and unwieldy, harmless except when its young is attacked or its life threatened. It brings forth usually one young, and never more than two. The period of gestation is long. The species is valuable and has many enemies besides man; its chances of survival, therefore, unless aided and sheltered, are extremely small. To the Esquimaux the value of the walrus is so great that we cannot leave it out of the consideration. He is largely dependent upon it for food, light, clothing, materials for tents and boats and for trading purposes. A sad illustration of this dependence upon the walrus was furnished on St. Lawrence Island some years ago, when ice prevented the animal from hauling out as usual and caused the death from starvation of nearly 300 men, women and children. The extermination of the walrus and the salmon will involve the extermination of the Esquimaux. At the present time citizens of the United States are engaged on Government reservations in Alaska taking salmon and other animals upon which the natives depend mainly for their subsistence. There is no restriction by Government—there is even no regulation, for the existing laws are not enforced. The result of this want of policy will be swift and disastrous, and the responsibility of the Government cannot be evaded.

T. H. BEAN.

WASHINGTON, D. C.

DOWNY WOODPECKER OR SAPSUCKER

THE sapsucker, which I aver is properly so named, is a woodpecker (*Picus pubescens*), but it does not follow that all woodpeckers are sapsuckers. It is as reasonable to call this bird a sapsucker as a woodpecker, for in sucking the sweet sap and eating the sweet cambium layer of various trees in the spring it acts as a woodpecker, and its habit of doing both these nefarious acts and so injuring the trees cannot be truly denied. Farmers are improperly charged very often with having crude and ignorant beliefs upon some points of natural history. But I have lived and moved among farmers enough to know that sometimes they are right when scientific men are all wrong. They have had various beliefs which have been denied by scientists, but on investigation some of these have been quite frequently accepted and others are in abeyance. I remember well when Darwin, in the preparation of his last work, wrote to a friend of mine, the late Dr. Geo. Thurber, one of the first botanists in the world, and then editor of the *American Agriculturist*, to make inquiries among farmers as to the habits of snakes to swallow their young when threatened with danger. A great many letters were received in response, and the evidence so gathered was considered wholly satisfactory by that excellent naturalist, and he so stated in his great work. This was regarded as the farmers' foolishness. So in regard to the carnivorous habits of the mole, as considered especially by the French naturalists, and so firmly as to ridicule any contrary belief as absurd. But farmers do nevertheless believe that moles devour the seeds of sweet corn and peas and the roots in their gardens, and I have good reason to know they are correct in their beliefs. For I have examined the stomachs of a good many moles under a microscope and have found some of them to contain nothing but sweet corn, of which the starch grains and cellular tissue were plainly to be recognized. Now, if a mole's stomach contains starch it must have been eating vegetable matter. Only last fall I caught a mole in my garden in a bed of carrots; the carrots were being eaten by something, and I captured a mole. On examining the stomach the yellow substance of the carrots was easily recognized, and nothing else was found contained in the stomach but this when the contents were put under the microscope.

For six years past I have been annoyed with the sapsuckers. They have girdled and killed outright some young apple trees, and made a special prey of a young white pine which is growing within twenty feet of the window where I have my desk. It is the downy woodpecker only, a cunning fellow who dodges around the tree, showing only his head, and so evades the gun. I have shot several, and on examining the stomachs have found no insects at the sap-flowing season, but only sap and the soft pulp of the inner bark and cambium of the tree. The cells of this pulpy matter can be easily recognized, and in two birds I have shot and examined within two weeks past these cells formed the only solid matter in the stomachs.

At this season the sap and cambium layer of the pine and other trees are quite sweet, and doubtless the sapsucker has discovered this and taken a fancy to the food.

In the woods, the hickories are frequently girdled all around by this bird, and less frequently the white oaks. The result upon the hickories is destructive, a thick callus grows above and below the ring of holes and a deep groove is formed. The constriction gradually kills the tree, which breaks off at the injured part in high winds. It is common to find hickories thus girdled in several places a few feet apart, but touched nowhere else. I have tied paper around my small trees as a protection and find it acts perfectly.

Now, is this business of this bird followed for food or as a means of killing the trees that they may become attacked by borers and so furnish future feeding grounds, or both? That the birds fill their stomachs with the sap and cambium layers is as certain as that I am writing these lines. But is it that the birds desire a change of food or in pursuit of insects have found out the sweetness of the sap and have thus become instinctively fond of the newly discovered food as an acquired taste?

Col. Goss evidently has never tasted the inner bark of the white pine and discovered its sweetness nor the sweetness of the sap at this season, or he would not have referred to its resinous character nor have said that it is not pretended that this bird feeds upon these pines. On the contrary, the rascals seem to choose my favorite pine before any other tree, and have returned to it with their saucy note which is indescribable within a few minutes of their disturbance and while I have been waiting to watch their operations. It is never safe to take anything for granted in regard to the habits of animals, and it is always safe to investigate thoroughly before determining any matter, even if it is believed by the farmers.

HENRY STEWART.

NORTH CAROLINA.

CAN TURKEYS COUNT?

Editor Forest and Stream:

An event which occurred this week in my poultry yard was considered by me so odd that I told the story to quite a number, all of whom expressed considerable surprise, and one last evening said: "Why don't you write it to FOREST AND STREAM? I hope that some one of a gathering-up-statistics frame of mind will, accepting this mite and one or two others which have been contributed by 'Piseco,' collate from your columns the many anecdotes therein enshrined, going to show that in many beasts, birds and fishes there appears at times evidence of mental faculties beyond those of simple instinct."

I have two turkeys, one of which at least (perhaps both) seems able to count up to ten. A few days ago I discovered among weeds a nest containing thirteen turkey eggs. My turkeys are from South Carolina, and were sold to me as the result of wild turkey eggs, put under a domestic turkey; and I was warned that they would "steal their nests." The next day there were fifteen eggs, then on subsequent days seventeen and nineteen, showing that both hens were laying. On the evening of the 9th there were just twenty eggs, all in one nest. The next morning I visited the spot and found the two hens setting within about a foot of each other, one with her head to the northwest, the other to the southeast, so they could thus watch in all directions. As I approached they left the nests, and I found that the twenty eggs had been exactly divided by them, the two nests with ten eggs each being about 10 in. apart. Of course this may have been an accidental exact division, but if it were not, I own a pair of arithmetical turkeys, and natural history is enriched by this item.

Perhaps I should have premised how it is that popularly supposed to be a sailor alone "Piseco" is raising turkeys. About two years ago two things happened to me. I was ordered to the command of this rendezvous; and a friend in St. Domingo presented me with some very choice game fowl. As they began to increase and multiply my wife developed a strong desire for fresh eggs. Brooklyn's market having failed to satisfy this demand, she looked with longing eyes on my increasing basket of "choice eggs for setting."

So to save a possible complication I procured a few choice Plymouth Rocks that cost quite a sum. Our venture was a success, and there have been few days during the two years that we have been entirely minus fresh eggs, to say nothing of choice broilers and patriarchs well adapted and devoted to chicken potpie and gumbo soup.

My games have become in a small way famous, and all surplus stags are easily disposed of, their only fault being that as I make pets of them and punish them for fighting (in which, while they are young, the parent cock—now three years old—lends me a hand, rushing into every tussle and giving each combatant a sharp rebuke), they are most of them too tame and peaceable until trained; then I hear (for I never fight them myself or allow it) they do good work.

So many have given items to show the gain or loss in amateur farming of all kinds that I will give you a bit of my results: Starting with a dozen common and three games two years ago, to which I have added by exchange of eggs Pekin ducks, Muscovy ducks and various fancy breeds of fowl, such as Hamburg, Dorking and Cochins, I have now nearly a hundred grown fowl of all the above descriptions; have tabled about two dozen Pekin ducks, and have over a hundred young ducks and chickens; and during the 150 days from Dec. 1 to April 30 my egg book shows receipt of over 2,300 hens' eggs, nearly 300 ducks' eggs and the two settings of turkey eggs which have started this yarn. I have not kept exact account, but am sure that my stock on hand are worth much more than my expenses have been.

BROOKLYN NAVY YARD.

PISECO.

RUDDY DUCK.—Memphis, Tenn.—About March 10 last Mr. Seth Martin and I killed two redback ducks about size of blue-winged teal out of a flock of about forty, using near some 200 canvasbacks, on Wapanocka Lake, Arkansas, near Memphis, Tenn. Another one of same redback ducks was winged by Mr. Geo. Mitchell, and proved they were the greatest divers we ever saw, and they are deep-water ducks and will not go in cover. From above remarks and following please tell me what duck this is: Back is a dark red, tail is small, stiff, black, six feathers; upper part of back of neck and back of head nearly black; feet and legs very dark and large webs; eyes small, rather high, deep set and dark; bill is rather broad and a bright pale blue; breast mottled gray and red, under part of neck dark red; cheeks white; shape of bird's body and much of its color is greatly like a cock quail; breast very glossy. What is it?—W. A. WHEATLEY. [This is the ruddy duck (*Eristamatra rubida*), and the plumage you describe is that of the male bird. This is a duck of many names, of which the following are a few: bluebill, hard-headed broadbill, dipper, dopper, dapper, booby, creek coot, batter scoot, sleepy head, fool duck, deaf duck, bull neck, tough head, hard head, and many more, for which and a picture of the bird see Mr. Trumbull's excellent work "Names and Portraits of Birds Interesting to Gunners," p. 1078.]

Game Bag and Gun.

NEW HAMPSHIRE FORESTRY COMMISSION.—The New Hampshire Forestry Commission wishes to obtain information and suggestions relating to subjects: 1. Fires in forests and woodlands. 2. New roads needed in mountain regions. 3. New foot and bridle paths. 4. New places or objects of interest not yet accessible, lakes, mountain passes, ravines, cascades, or any views of remarkable beauty or attractiveness. 5. Information respecting the effects of denudation upon the volume of water in the streams of the State, thus far observed. 6. Information and opinions from all sources regarding the value of timber lands as investments. 7. Information of all new or special manufactures or uses of timber and forest products, such as canes, umbrella sticks, wooden plates for decoration or use, handles and small wares of every kind. 8. Opinions and suggestions as to what should be done by the State through legislation, by owners of timber lands, hotel proprietors and other citizens through individual or associated action, and by the Forestry Commission for the care and preservation of our mountain forests, water sources and scenery. 9. The Commission invites the co-operation of the journalists of the State, of lumbermen, owners of timber lands, farmers and hotel proprietors, of our educational institutions, teachers, clergymen and public spirited citizens in general, in promoting and extending the discussion of these subjects. I shall be glad to answer all inquiries so far as it is in my power to do so. All information and correspondence should be addressed to the Secretary of the Commission, J. B. HARRISON, Franklin Falls, N. H.

LAND MAMMALS OF CALIFORNIA.—In a recent number of *Zoe* Mr. Walter E. Bryant, of San Francisco, publishes a Provisional List of the Land Mammals of California, in which 109 species are represented. Among these are one marsupial, an opossum, the occurrence of which in California has not been authenticated, three species of deer, the antelope and mountain sheep (*Ovis*), twenty-one species of squirrels, one each of beaver and haplodon, sixteen of mice, three of gophers, twelve of pouched rats, one each of the jumping mice and pikas, seven hares, fifteen different bats, two or three shrews and moles, two bears, one raccoon and ring-tailed cat, nine of the weasel family, five wolves and foxes and three cats. We are somewhat surprised to find the white goat (*Mazama montana*) omitted from this list, which we fancy should also include another species of deer.

A CONNECTICUT RATTLESNAKE.—*Editor Forest and Stream:* Having had occasion to go up into the north-eastern part of Connecticut during the early part of last April, I learned while there that last fall a rattlesnake was killed near a ledge of rocks about 200yds. from my old home, which at the time created no little local excitement, since a reptile of that species was never seen or heard of nearer the place than in a broken section of country about twelve miles distant. The specimen alluded to was some 2ft. in length, yellow and brown mottled, with two well developed fangs, and a button, but no rattles, thus denoting it to be a young one and probably bred near the place where it was killed. Now are rattlers apt to go far from the place where they are bred, and if so, would they probably stray off at so long a distance?—A. L. L.

NEW HARE FROM MEXICO.—At a recent meeting of the California Academy of Sciences Mr. Walter E. Bryant gave a preliminary description of a new hare collected by him at Espirito Santo Island, in the Gulf of California, in November, 1890. The species is described as black on the upper surfaces and pale purplish cinnamon below. The ears are gray, black-tipped, the chin and orbital region grayish white and the cheeks gray. It is about the size of *Lepus californicus*. A more detailed description, with measurements, cranial characteristics, etc., will follow.

A WHITE MUSKRAT.—A singular freak of nature is on exhibition at Jones's gun store, Sing Sing. It is nothing less than a perfectly white muskrat (*Fiber zibethicus*). This curious animal was caught by R. K. Fox, of Hammond Station, N. Y. & N. R.R. The writer of this note has seen a good many muskrats, first and last, in his life, but never recollects of seeing a perfectly white one before. Have the readers of *FOREST AND STREAM*?—A. H. G.

A SPARROW-KILLING CROW.—Sandusky, O.—Mr. Chas. Neilson, of this city, has a pet crow which is proving himself a terror to English sparrows. His mode of attack is to get on some eminence, a house or barn, and then jump on them bodily. He has killed as many as 13 in a day.—W. H.

"ALMOST A TRAGEDY."

IN the heart of the swamp lies a deep, still pool,
Hemmed in by thickets of briar and vine,
And nodding alders whose berries shine,
When nipped by the frost, like ruby wine!
'Tis a charming spot, and the frogs at night hold carnival there.

But oh! the sport when the moon sails high, flooding the pool
with silver light,
Then the air fairly rings with bacchanal glee
As they splash, croak, whistle in wild orgie,
Till a big brown owl, in a neighboring tree,
Hears the din, leaves his perch, and on silent wing flies direct to the swamp.

On reaching the scene of the carnival games, he hovers a moment,
And with big bright eyes endeavors to pierce the shadows that rest
'Mid the chill, damp coverts, whilst the frogs with zest
Continue their sports, unaware that a pest,
In the shape of an owl, has stolen nigh in search of a victim.

Squatting close on the crest of a sodden stump sits a sentinel frog;
He catches a glimpse of hovering wings. With a warning croak he sounds alarm!
And a sudden silence spreads its calm
O'er pool and thicket, where secure from harm,
The frogs have hidden! * * * Thro' the moon's bright rays the disgusted owl
Sails back to his tree, a supperless fowl.

WILMOT.

MALLARD SHOOTING AT SHOALWATER

PORTLAND, Oregon.—The pinnated grouse or prairie hen is not found west of the Cascade Range to my knowledge. But in eastern Oregon and Washington they are plentiful, reminding one of the old prairie chicken days of Iowa and Nebraska. Eastern and western Oregon are no more alike than Minnesota and Florida. Eastern Oregon is a bleak, level, prairie country, hot in summer and cold in winter, while western Oregon is a mountainous, heavily-timbered country with a remarkably equable climate.

However, the pheasant, the quail and the blue grouse are plentiful all through western Oregon, but grouse hunting in this country differs so little from the same sport in other parts of the United States, and has been written about so much that I will not tax your valuable space to enter into particulars. For me there is more real pleasure and downright enjoyment in hunting the wild goose and the duck than in any other sport except fishing with the fly. What sport is more fascinating than shooting wild waterfowl, unless it be seeking speckled beauties in the mountain streams?

A personal experience of ten years added to information gathered from men that have lived here forty years, more or less, convinces me that this country has been and is second to none other on earth for waterfowl. We have nearly every variety of nearly every species, from the Canada goose to the teal, from the sandhill crane to the sand snipe, and as I have heretofore tried to inform you of the exquisite preparation nature has made for their accommodation and the long season for hunting them, with which we sportsmen are blessed, I will now confine myself to personal experiences and observations in the practical hunting of them. Now, one of the privileges universally accorded to all hunters and anglers is to tell the truth. So the writer's reputation for truth and veracity must not be allowed to suffer by reason of any statements herein contained, and as to matters of hearsay:

I cannot tell how the truth may be,
I say the tale as 'twas said to me.

I would like to read a book made up of the experience that might be gathered up by taking notes around H. T. Hudson's and Capt. Riley's gun stores, as related by such old reliables as Jack Knott, "Boss" Schenck, Joe Paquet, Jim Caraher, Judge Whalley, Harry Beal, George Dehardy, George Van Derbeck, Bob Jennings, and others equally talented Oregon duck hunters. Compared with such a book "The Arabian Nights" and "Baron Munchausen" would be dry and insipid reading. I have sometimes thought that in years to come these experiences will, by slight variations and continued repetition, resolve themselves into blood-curdling, hair raising traditions similar to the Icelandic sagas and the mythical legends of the dark ages.

Two years ago a friend and myself went to Shoalwater Bay for ducks. We took our tent and camp equipage for a two weeks' stay. Arriving at Astoria we took the tug Gen. Canby across Baker's Bay to Ilwaco. An oyster wagon hauled our luggage across the seven-mile isthmus and we found ourselves at the bay, which seemed to be a mass of feathered life. We had no way of getting our game out, and so took it easy. There is a large, heavily-timbered island out in the bay, which is peopled with bear, wildcat and coon. It is bluff on the east side, but at one place a cove or recess sets back into the islands for perhaps a hundred rods, inclosing with high precipitous walls a perfect garden of Eden for mallards. It was full of springs and salt marshes. The mallard does not dive deep for food, but delights to paddle around in shallow, secluded places, half swimming, half wading and feeding upon almost any thing, animal or vegetable, that he can get without much effort.

Well, this particular spot was just the kind of place a mallard would spend his life in if left unmolested, and all the mallards in the country seemed to have heard of it. But there was only one avenue of ingress and egress. The ducks must come out where they went in. All we had to do was to station ourselves at the entrance of this *cul-de-sac* and fire a shot. This was the signal for the whole army of mallards (a thousand or more) to pass a hasty and hot review. My companion had a Winchester repeating shotgun which had theretofore been the subject of many a jest, but at this particular time and place it seemed to be the only satisfactory shotgun made, for rapid firing was the essence of the transaction. For about fifteen seconds of each morning and evening during our stay these mallards subjected themselves to this ordeal. One would think that they would soon get educated. They did get to expecting us, but in their greater hurry to get out only bunched a little better. Then one of us would generally remain an hour or so to catch stragglers. Hunting at this spot was hardly sportsmanlike, as the birds had no show.

An incident occurred one evening that impressed me with an idea of the loneliness of the place. I am now impressed with a definite idea of the grotesque figure I must have cut standing there alone on a little bog surrounded by high tide, trying to look brave and hold my ground. To tell the truth I had to "hold my ground," for a step either way would land me in salt mud up to my ears. My companion had left me there and gone away to a distant part of the island, and human beings were decidedly scarce around Shoalwater. The sun was sinking behind the island; I had lit my pipe and was mentally congratulating myself upon the advantages I possessed over the boys at home when a grunt or some slight noise caused me to look hastily over my shoulder. There came an old bear, floundering along through the mud, not a hundred yards away, hunting for dog salmon.

Now, I don't believe that I am a natural born coward, but manifesting the bear was more at home than I was, and although there was probably no imminent danger for either of us, I insist that I felt lonely, or rather weary and fatigued, for retirement was what I desired, and I didn't care which retired. But time went on and so did the bear. He was coming straight at me, but entirely unconscious of my presence, and I had a good opportunity of estimating his size and probable strength.

To the best of my recollection he looked somewhat larger than Barnum's late lamented Jumbo, and very wild and woolly at that. As I said before, I remained

unmoved (for obvious reasons), but with the bear only 75yds. away.

I knew that sooner or later, unless the bear changed his course, I must break the news of my presence to his sensitive nature, and yet I hesitated with the bear only 50yds. away.

It is true that I was armed with the best Parker and plenty of shells loaded with duckshot, but some way I found myself wishing that he knew that I was only just a plain duck hunter and neither looking nor loaded for "bar." My location was well ventilated, and yet things seemed close and oppressive.

While I was deliberating whether the bear would regard it as a breach of etiquette for me to inquire if his wife knew he was out, or whether his youngest had cut any teeth, or some other pertinent friendly inquiry, he discovered me. Probably the bear felt about as silly as I looked simple, and was about as anxious to cut acquaintance as I was for him to go; but he was so close to me that he hated to let on for fear I would know he was a coward and jump him. He didn't know me. There we stood "both bored to death and both afraid to go," making faces at each other and testing each other's staying qualities. Force of circumstances gave me the advantage of him, for he could get away and I couldn't, and I even stayed a while after he left. Notwithstanding this fact Jeff accused me of cowardice for not shooting, and I have had occasion since then to regret that I ever told anybody about that bear.

At low tide the ducks gather on the sandbars and mud flats out of danger; but as the tide returns they resort to such places as the one above mentioned. A friend of mine informs me that at low tide once upon a time, he buried himself in the mud of one of these flats at Shoalwater, and after patiently awaiting the return of the tide, which drove the ducks within easy range, potted fifty-seven at one shot.

I must tell you of a good, or rather lucky, shot that I made last fall. I was shooting on Smith's Lake, near Columbia Slough, about seven miles from Portland. I had out a good stool of decoys, but the ducks, for some reason, all pitched into the other end of the lake. At last I thought I would try an experiment. My old setter Mike had observed the exasperating conduct of the ducks and willingly lent himself to the scheme. I sent him to the upper end of the lake, probably half a mile away, and coming in behind the ducks like a mad alligator, he started them. They got up, but settled again. Mike kept up his racket until finally the ducks became alarmed and struck out for my end of the lake. Just as they got opposite my blind they espied the decoys and quartered in nicely, affording me as fine an opportunity as heart could wish, and I gave them both barrels. The old dog got back in time for the funeral and quickly retrieved the winged birds. I bagged seventeen ducks at that shot, and it wasn't a very good day for ducks either; but how was that for a wing-shot?

Snow geese are not very plentiful, but a neat little incident transpired the same day in which they played a conspicuous part. A flock of nine of them were feeding on the prairie about 500yds. from my blind, off toward the slough. Billy Taylor happened along, and being full of expedients, as usual, suggested that he would send them in to me. Billy got behind them and gave them a start, but instead of coming to me they went straight to Bob Hutchinson, half a mile below me. Bob got a double, and the other geese got rattled, and turning in their flight came straight at me, and I made a double. That day's shoot netted us about 75 trash ducks, 4 snow geese and 5 "honkers." In this country all ducks are "trash" except canvas.

The most pleasant little shoot of my life was on the 23d day of last December. At noon of Saturday the 22d, glancing out of my office window, I observed that the weather was inclined to be spiteful, and the general tone of the sky indicated storm. The little steamer Alarm would leave Portland at 2 P. M., bound down the river, and I suggested to Van Derbeck that we strike out for the Greene Lake. But Van is disposed to procrastinate when the weather is bad. So I jumped into my boots and made for the boat alone. There I met another hunting chum, Mr. Harbaugh, and so the time passed merrily. We arrived at the lake about 4 o'clock and spent the remainder of the short afternoon overhauling boats and decoys. Then we went up to Mr. Knapp's house, had a good supper, a good smoke, a little chat and off to bed. The morning dawn found us in our respective blinds with about forty decoys dancing around each of us. The weather was boisterous and we saw that we had struck a good "canvas day." The wings began to whistle and the bold birds wanted their breakfasts. Only those of your readers that have shot canvas over decoys can appreciate our feelings and sensations that morning. Oh how the kingly birds did sweep the lake and dash at the decoys.

Monday morning one of Knapp's men took the ducks to the landing on a sled. It is true that there was no snow, the ox team was not fast and the sled was not particularly a thing of beauty; but in all my life I never saw a sled load that looked so pretty as that of 101 canvasbacks. I will add that Van spent Monday afternoon kicking himself around the office.

S. H. GREENE.

MICHIGAN, New Lothrop.—Quail, rabbits and partridges are quite plentiful, the two former especially. The winter was mild and game wintered well. Within eighty rods of my yards are more than a dozen nests occupied by the gamy little birds, and the merry whistle of Bob White is to be heard from the time the rosy flush of dawn illuminates the eastern sky till darkness compels him to retire. Last season I know of six coveys left on less than a half section, and these six coveys contained from twelve to twenty-five birds each. The weather has been the best that could be desired for hatching, and if the present dry weather continues for a fortnight most of the young ones will be beyond much harm.—SHIA WASSEE.

MICHIGAN'S SPRING FLIGHT.—Holland, Mich., May 15. We have had more snipe here this spring than for a number of years past. My spaniel has frequently flushed from 40 to 50 in a couple of hours' tramp. One man bagged 13 in a short time one morning near the last of the season. Plover are plentiful too, and even now I can hear the notes of the kilder as he passes over the city. Ducks, mostly bluebills, have been with us in large numbers this spring, and several good bags have been made. Chas. Bertsch got 14 out of a sudden flight after 3 o'clock one rainy day.—A. G. B.

SIX YEARS UNDER MAINE GAME LAWS.

VI.—POISONING.

WE have a law regulating the sale and distribution of poisons. It has remained on the statute since 1857 without substantial change and without repeal at any time. The latter part reads: "If any person for the purpose of killing wolves, foxes, dogs or other animals, and not for the destruction of insects or vermin, in a building, leaves or deposits any such poisons within two hundred rods of a highway, pasture, field or other improved land, he shall be punished by a fine not less than twenty nor more than fifty dollars; or by imprisonment not less than thirty nor more than sixty days."

It is my object to show that this law has been recklessly violated; that this violation has been charged to wardens; that the breaking of this law and the suspicion that wardens did it have caused much of the feeling that exists in the eastern part of the State against the game laws and their administration—these three things only; but I shall probably show that the feeling and the suspicion are not altogether unreasonable. If I dwell more on the belief of people here than on an elaborate setting forth of the facts involved, it is because the collective loss which these facts represent is small relatively to the effect it had upon public opinion, because also this is purposely left as a matter of circumstantial evidence; and because my object is not to do more than to explain and account for the state of feeling which should not longer be disregarded. So far as the testimony here given needs any guarantee it may be said that it comes from men believed to be truthful, who do not live near each other, who belong to different classes and occupations, who cannot have had any means of knowing what has been told me by any one but themselves. I have received nothing contradictory to what is given here, and I do not publish all that would confirm these statements.

I. Poison has been laid out contrary to law and domestic animals have been killed by it.

Previous to the Graves murder, in 1886, I heard of a number of cases in which animals were killed by strychnine, and among them some which are quoted below. This shows that these claims are not of recent manufacture. Although I then had no reason for remembering or noting the incidents given, I recollect that the reports came from a number of different towns, and that Passadumkeag was one of the principal places which suffered. This winter I asked a man whom I remembered as having spoken of the matter, whether he knew definitely what happened there. His reply was substantially as follows:

"Know? Yes, I was there at the time it was done. There was poison left in doughnuts and biscuits—strychnine enough to kill anything, and they left it close to the railroad station and all around town. Yes, it did do damage. I know of some cases. A man at Gould's Ridge had a dog killed, and found a piece of poisoned biscuit in his yard. A Passadumkeag man lost two horses; one was a farm horse and one was a colt worth \$200. The horses had been in the door yard all night, and in the morning they were dead, with a piece of poisoned bread near them. But there was worse than that. — had a child die that same day, and they thought it was poisoned. It was a little child, out playing with the dog, and they found a piece of doughnut somewhere. The child brought it into the house and very soon the dog died. The child died that same day. They thought it was poisoned. No, we did not know who did it, but it was laid to the wardens; it is all guess work who did it."

This is almost a literal transcript of notes taken during the narration. Names were given which I have omitted for obvious reasons, and it is possible that there may be some minor errors in taking down the facts; but the veracity of my informant is beyond question and all that is claimed by me is that he believed poison had been laid out in more than one instance. However, a letter subsequent to this shows more. "You wanted to know about Passadumkeag," he writes. "I was in town when the child was sick but went home before it died that night, and all I know is what they told me; and for the horses I saw them."

This proves conclusively that two horses were poisoned and that the same day this was done a rumor of a more serious nature was started. I wish, however, to disclaim any belief in the latter. I have spent some time in trying to investigate it and have been unable to disprove it, but also unable and certainly not desirous to prove it. It is an odd matter and those who might have denied it have not chosen to do so; had they done so it would not have been mentioned here although it had its influence. It should be said that I have found no proof that any warden laid out poison in Passadumkeag, but a strong and somewhat pointed suspicion to the effect that it was done either by a warden or some one in his employ.

So far we have proof of two horses killed by poison. From another source the poisoning of dogs at Gould's Ridge and in the town is confirmed, with a repetition of the rumor that it was done by wardens. Still another, repeating substantially the same story told by the first about the child, makes the more definite, but perhaps not more correct statement that it was "the same night that — [a warden] poisoned all the dogs and cats in town." Another from a town near by writes that he never has heard the child's death ascribed to this cause, but knows "that strychnine has been left in our highways by being put into doughnuts, etc., and that one cow was poisoned that was hitched near the house in the field (—'s of Olamton). Some four years ago — [the warden mentioned by the last correspondent] went through this section and immediately after he passed dogs and other animals dropped dead." A man from still another town tells of poisoned biscuit being brought into the house by children, but gives no particulars. He also speaks of a house dog and turkey being poisoned in the dooryard. Another says that his daughter's pet cats died with evident signs of strychnine poisoning, and that he supposed poison had been laid out by a warden—whom he named—for dogs. These are a few instances out of many, but they are definite, not general, statements, and illustrate the variety of the casualties that have occurred here. It is certain that the law prohibiting laying out poison within 200 rods—five-eighths of a mile—has been grossly violated.

As it may explain other matters, I wish to state why I do not undertake to prove more here. I could not well do it without the use of names. Matter of importance has been put into my hands with the understanding that it was to be published if desired, but without any limita-

tion or caution as to its use or the use of names. I have therefore preferred to err on the side of caution and have adhered to my plan to give names only when the point was one of public record or notoriety, or else supposed to be a matter of personal indifference.

II.—This poisoning of domestic animals has been generally charged to wardens.

People living in four different towns on Penobscot waters have given me accounts of what has been done in their own towns, and these and others have told of cases in towns where they were not resident. All seem agreed that persons unknown were guilty, and most are of the opinion that these men were wardens. The names of two wardens are frequently mentioned, but no third except a man, sometimes called a warden and sometimes not, who was known to accompany one of them on a trip and a man believed to be employed by a warden. There is also an agreement as to the methods used west of the Narraguagus, and as to the odd fact that bread and other cooked food was frequently the bait employed.

Is there a possibility that any number of the animals that died were killed in some other way? Not the slightest. The signs of strychnine poisoning are unmistakable, besides, the poison was found in a number of places.

Could they not have been killed by malicious people who wished to cast reproach on the wardens? To a very limited degree this might have been done, but not to this extent. The work was carried on for three falls, '84, '85, and '86, and in parts of three different counties, Penobscot, Hancock and Washington. I have reports from Penobscot, Union River, Machias and St. Croix waters, showing that it was done on all these within three years. It was not done to kill foxes or wild animals. The season of the year was too early, the places and bait both unsuitable. None but domestic animals or men would be likely to find the bait, and few other creatures would be attracted by it. The reports that bread, biscuit and doughnuts were frequently used show that it was done by the wholesale by some person or persons who wished to carry bait in bulk and must have a kind easy to procure and convey. Whoever did this work made a business of it.

There were men who were suspected of doing this, as I have said. They were watched and followed, unknown to themselves. One of them was seen repeatedly, and wherever he went poison or dead animals were found. He made two trips with different companions, and both times the same results attended him. There certainly was some reason for suspicion of this man, if not of his companions.

There is a printed statement also, which never having been denied may be taken, in connection with some other matters as authoritative, "Special" made in the FOREST AND STREAM for Jan. 8, 1885. It shows that elsewhere at this time wardens were engaged in poisoning. He says:

"The deer hounders, or rather their poor dogs, have fared hard this year. The Maine game law not only forbids hounding, but provides for the destruction of the dogs. By the game wardens a war to the death has been waged. A great number of poor dogs—or perhaps good dogs with unworthy masters—have been destroyed. If one apothecary would tell his story, pounds of poison would be accounted for. Repeating rifles have also been employed by the wardens."

In support of this statement, I am at liberty to say that about the time this was published Mr. Stilwell asked my father to listen to a letter which he had received from some one residing on Machias territory. He did not read either signature or superscription, but the writer gave a detailed account of a trip taken by some warden, the amount of poison which he had distributed, and the report that he had killed every dog on the route except one belonging to Shaw Brothers, which was kept at a camp where the warden could not get at him. A Bangor man who was on Machias about this time reported finding five pieces of poison laid out in the road between Fourth Lake Machias and Lower Dobsy, a distance of about one and a quarter miles. While it is possible that none of this was put within five-eighths of a mile of Shaw's house at the end of the carry, and that none of the rest which was laid out elsewhere on Machias was distributed within the legal limit, the practice could do no good to the cause. In this district the law about poisoning was not scrupulously regarded, as has been shown; and I have deposited in the editor's hand proof that would justify popular suspicions as to who did the mischief. This, however, I consider too confidential to be published. There is an incident which is strong circumstantial evidence of the same that I am at liberty to give.

A year ago last fall the man who went as guide for us told us of a narrow escape his cousin, his uncle and four other men had from being poisoned by wardens a few years ago. They left camp for a short time, and in their absence wardens put poisoned bread on the table. Returning, they made a bean soup, and were on the point of thickening it with the bread from the table when one of them said that it was too dry and gave it to the dog, which died immediately.

This winter I asked one of the men who was of the party—a very well known and much respected guide—for the facts. He gave them in great detail, every point that was essential, and I wrote down the more important. I understood him to give permission to use his name also, but as there is the possibility of an error here and as I cannot now send manuscript for his correction, if any is needed, I will not make him responsible. My notes say that on Jan. 27, 1891, he told me that a party of six, including himself, his uncle, another guide and three sportsmen from New Haven, Conn., all of whose names he gave, were camping in a lumber camp at Brandy Pond on the West Branch of Union River. They had with them two dogs—one three-fourths foxhound, which belonged to him; the other, as I understood, not a hound. They were hunting deer, but I do not know whether these dogs were or could be used to run deer.

While they were there the warden whose name has been left blank several times, with a companion, who is variously reported as a warden and as not being one, came to the camp and tried to induce them to put the dogs out after deer. They left the camp for two or three days while this warden and his companion were still in the country on, as every one reported, a poisoning tour. On their return they made a bean soup and were about to thicken it with a piece of bread which one of them saw lying on the table, when it was said by some one that the bread was too dry. Instead of using it for themselves it was given to the dog owned by the narrator, and the dog died on the spot. They could prove only the fact of the poisoning, not who did it. When they left the place

the warden and his companion had been near; when they returned both were gone. Whoever may have been the guilty man, some one was narrowly delivered from the crime of killing six men who had done him no injury, against whom he could plead neither injustice, personal danger, nor a violent and overmastering provocation.

Comparatively few of the wardens in this State were engaged in this wretched poisoning, but the few were diligent. For their misdeeds some who were innocent were suspected, and under the cover of them men who were not wardens at all may have used their opportunity to do evil. It was a practice which could do no good, which might do, and did do, much harm, which would disparage the cause in whose service it was carried on, and alienate rather than attract the support of those without whose hearty co-operation game laws must be a failure. Nothing can more certainly react against an object to render it unpopular than the attempt to push its claims by overriding greater ones. In the eyes of the people it was more important that their property should be safe than that deer should not be dogged. Both were desirable, but the former was the greater. The latter could not be enforced at the expense of the former. If there was reason to suspect that officers of the law in enforcing one statute broke a law much more important, they lost the support which was needed to make their cause good. It does not matter if they did not all engage in it, or if they did not do all of which they were accused. One murder grew out of this, and there is danger yet.

Of the warden who has been principally accused so far, it may be said that the charge does not greatly injure his reputation. He has been guilty of about all the petty sins on the catalogue; he attempted blackmail, illegal seizure, breaking and entering a locked storehouse, is an habitual drunkard—of which the editor holds proof—but he is still a warden.

FANNIE PEARSON HARDY.

DUCK HUNTING IN PENNSYLVANIA.

THE stormy winds of March had spent their wrath and the driving snow had changed to rain. Warm, balmy winds from the south murmured among leafless branches, and kissed the last vestiges of icy winter from the barren fields. The early birds of spring flitted here and there, in search of food, and the wild geese and ducks still journeyed toward the lakes of Canada, as if eager to reach that chilly clime before the first breath of spring.

From the railroad men who passed through the valley every day, I learned that hundreds of wild ducks frequented the sequestered parts of the river. This was news to me indeed. I could scarce wait till morning to go after these ducks. I remained up late that night loading shells. After getting my hunting clothes ready I went to bed. I may have slept one or two hours, but after that could not rest. It seemed a year till the first faint signs of approaching day appeared at my east window. Then I arose, prepared a warm breakfast, unloosed Dick, my black setter, from his chain, and after eating, started on foot for the "big bottoms."

The sky was overcast with heavy clouds, and daylight brought a light drizzling rain. I kept the railroad for the first three miles and then struck off through a muddy lane that led to the river and the ponds.

Just as I reached the edge of the first thicket there was a whirring of wings and a flock of fine mallards rose and were out of range before I could cover any of them. This incident induced me to be more careful and I approached the next thicket with great caution. All of these thickets concealed sloughs or ponds, which afforded a secure resting place for wildfowl. There was one pond of large size shaped like a crescent and concealed by a heavy fringe of black alder, where I felt sure I would find ducks. On the north side of this pond the overflow from the river had piled up an immense amount of driftwood, and by keeping behind this it was possible to advance to the very edge of the pond without being at any time exposed to the watchful eyes of any wildfowl which might be on the water. I approached this pond with great care, keeping behind the pile of drift. Dick was aware of the necessity of caution and a cat could not have followed me more noiselessly than he did. Reaching the barricade of drift I slowly raised my head and peered over a large rotten tree trunk. I was rewarded for the care I had used by a sight such as but few men, I think, ever beheld in that valley before. The pond was literally covered with ducks of all colors and kinds, from the big mallard with his gorgeous plumage to the white-headed and white-winged fish duck and the black and blue-winged teal. I was not more than 30 yds. from a bunch of fine mallards but was so shaky that I remained fully half a minute behind the log trying to compose myself. Then I grasped my heavy Parker which contained two shells loaded with No. 4 shot and 5 drams of powder. Rising suddenly to my feet I covered the mallards and gave them the right. They were somewhat scattered and I killed only two, but my left barrel brought down another from above the lower branches of the trees. I sent two more loads after a cloud of teal but failed to stop any of them.

I can never forget the tremendous confusion my first shot caused in that pond. There must have been at least two hundred ducks in a space not over 60 by 90 yds., and they got up with a rush and whirling roar of wings such as I never heard before.

Dick retrieved the three big mallards, the finest I have ever bagged. Placing them in the pockets of my coat I continued my hunt, but found not another duck on the river or ponds.

I noticed many flocks of wild geese and ducks flying up stream, but all far out of range. Knowing that they would see me long before they got over me, and rise out of reach of shot, I resolved to hide and wait for a flock, low enough to shoot at with some chance of success. I found a patch of high timber, mostly composed of sycamore and maple trees, growing close to the river bank, and ending in a wide open wheatfield to the north. I selected a spot on the edge of the timber, where I was concealed by a pile of drift, and could see the ducks and geese as they came over the tops of the trees, without being seen by them.

I had several shells loaded with No. 1 shot and 5 drs. of powder, and resolved to try them at any flock within reasonable distance. After waiting about an hour I grew restless, and was about to leave when I was suddenly startled by the well-known cry of wild geese coming from no great distance.

Instantly I was on the alert. *Honk! honk! honk!* They were just above the tops of the trees a little to the right, and coming on a line that would bring them directly over me.

Just as they left the last line of trees and got over the wheatfield I aimed at the center of the flock and let go both barrels. Although full 60yds. high the heavy shot took effect and two fine birds came tumbling down. One of them had only got a shot through the wing, and it led me a lively chase through the field and into the wood till I stopped him with a charge of No. 4 shot.

I waited about two hours longer in that place for more geese or ducks, but none came near enough for a shot. As the rain had increased and I felt chilly, I gathered up my game, started for the railroad and reached the station in time to take the train for home. That was the most successful day's shooting at ducks and geese I have ever had east of the Mississippi.

T. E. M.

THE WISCONSIN FLIGHT.

MILWAUKEE, May 11.—There has been a tremendous flight of migratory ducks this spring—the heaviest in fact for many years. The mild weather of the past two weeks, however, has thinned them out so that but few are left, even the “third issue,” as Dr. Yorke in his articles on duck shooting would say, has taken its way northward. An observant shooter upon any of our principal lakes this spring would have noted a wonderful display of firearms and blinds. From the city sportsman clad in corduroys and armed with a Diamond Daly Ejector down to the gaunt denim-covered rustic with his old rusty queensarm all were there.

Two weeks ago one morning at sunrise I was on board of a swift speeding vestibuled St. Paul train, and as the road wound along close to the shores of one of our most popular duck shooting resorts it was quite a sight to see the blinds scattered broadcast through every bay on each individual point, and even some little distance back in the marshes. One hunter's idea was evidently to construct a blind which the callow bluebill would mistake for a small island and to this end he had carried out oak boughs with the leaves clinging to them in sufficient quantities to have concealed a good-sized schooner. A little further on and we passed a flock of decoys in position, close to which in his blind sat a shooter clad in shooting coat, but wearing upon his head a black derby. Why will people never learn to use common sense when they go out to shoot ducks?

Jacksnipe and plover have not paid us their respects this spring as yet, and we can hardly look for them now, as the water has fallen away, leaving the marshes nearly dry.

Doves are very abundant, and yesterday I was very agreeably surprised to run against a wild pigeon. The bird was so tame, and moreover being a male, I conjectured a second bird might be found in the vicinity; but although I looked carefully through the thick grove of poplars I was unable to find any nest.

GREENHEAD.

A MAINE GAME REGION.—*Editor Forest and Stream:* “G. H. E.” in the current issue inquires for best moose and deer shooting in Maine. I recommend headwaters of the Aroostook. A party from Boston was there one month last summer and saw 27 moose and over 70 deer. Of course one cannot expect game so plentiful in open season, but it is a pointer. Wm. Atkins has lately built camps at Third Munsungan Lake for entertainment of sportsmen. I do not know his address, but presume it is Ox Bow Plantation, as that is the nearest post office. This region has always been the slaughter pen of skin-hunters, lumbermen and settlers, and the amount of game still there proves it is a natural moose preserve.—HUNTER.

THE MARTIN'S POINT CLUB SHARES.—Norfolk, Va., May 16.—*Editor Forest and Stream:* I thank you for the mention of the Martin's Point Club in your valuable paper, but I see your people failed to correct the mistake made in the copy of the circular as to price of shares. I shall thank you very much to say in your next issue that the shares of the club are \$500, instead of \$5.—J. B. WHITE.

INDIANS AND UTAH GAME.—Panguitch, Utah, May 5.—I have carefully looked up the matter of the destruction of deer by Indians and find that matters are just as bad as I stated in my communication to *FOREST AND STREAM*, and in some cases worse. I have the testimony of all the settlers for miles about this point.—SHOSHONE.

Sea and River Fishing.

THE FULL TEXTS of the game fish laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

SOME MORE TARPON RECORDS.

LAST week we recorded the capture of a 205lb. tarpon by Mrs. Geo. T. Stagg, of Frankfort, Ky. Another fair angler who has coped successfully with this big game is Mrs. Chas. G. Cox, of Milwaukee, Wis. In a recent issue of the *Sentinel* of that city we find a report by Mr. Cox of his very successful fishing trip to Florida. Tarpon fishing, he says, “is a somewhat monotonous business, for it may take months before you ever have a rise or a bite, as we call it here, and much less a fish. The mullet is used for bait, which is cast as in bass fishing, and then allowed to drop to the ground and rest there. The lower jaw of the tarpon projects, and he is therefore compelled to stand on his head if he wants to take the bait. The cold winter this year accounts for the small number of tarpons which were taken out of the water. Even in April we had cold ‘norther’s’ which so chilled the water that the fish would not come into Charlotte Harbor. All this we knew while we were at St. James, Of Wisconsin people there we met Senator Vilas, and Col. Knight, of Ashland. No indeed, we didn't talk politics, but we managed to swap fish lies. Col. Knight is just as good in this line as Bert Smith, for instance, or Louis Auer. We stopped at the St. James Hotel, which is conducted by Northern people. It is well conducted and reasonable prices are charged for very good accommodations. While there we heard that at Fort Myers they were taking

some tarpon and we went there. The fort is on the Caloosahatchee River, and is the only remnant of the Seminole war, during which it was built. We arrived there April 13, and started fishing at once. That date I shall always consider a red-letter day in my fishing experience.

“The river is nearly two miles wide, and affords plenty of room to play the fish, and being a landlocked bay, it is the safest fishing ground, there being no danger from sudden squalls. There were about ten boats there, all anchored safely. In some of them were ladies, accompanied by their friends and guides. Shortly after our arrival a school of tarpon came in and the music began in earnest. Mrs. Cox was at first very nervous and excited, but before long she proved herself a fisherman of no small proportions. When we began the chumming—the throwing out of small pieces of bait around the boat so as to attract the attention of the fish—quantities of catfish and sharks made their appearance. One of the latter species took the bait at her hook and then her nervousness began to assert itself. The shark weighed about sixty pounds and fought hard, but she landed him safely. From that moment her nervousness was gone, and I may tell you, confidentially, of course, that I was very proud of my by far better half.

“These preliminaries over, we had a ‘go’ at the fish for whose sake we had traveled all the way to Florida. Inside of twenty minutes we had three rises in our boat. My line was spun out, when I suddenly felt the fish at it. The rod we held between our knees, the right thumb on the line on the reel, and with the left we supported the rod above the reel. The line slackened up again, but suddenly a huge fish jumped out of the water, shook his head, whipped the water with his tail, and then coolly spit my bait out. A moment later I saw my wife steady herself for a fight with a fish on her line, but the same thing occurred. The tarpon jumped out of the water and dropped the mullet. Nothing daunted we tried again, and I soon felt another bite. This time the monster was so exasperated that when he came to the surface he leaped so high that my line parted at the first jerk, although my tackle was exceedingly strong. When my line was run out again I immediately hooked another tarpon, and this time he stayed. Then the battle began. Capt. Randall, our guide, pulled up the anchor and grasped the oars, so as to be ready for any emergency. The fight lasted nearly an hour. Every now and anon the fish would jump out of the water, or rush at our boat and then fly away again. We had to use the oars repeatedly to keep up with him, and he towed us around for more than three miles. The performance was watched with greedy eyes by those in the other boats, none of whom were so lucky as to have a rise. Most of them used very strong poles which would hardly bend, while ours were the usual ones which we have here for bass fishing. We were fishing for pleasure only, and the other gentlemen more for the sake of a record. Thus I gave my fish all the time and space he wanted. When we finally landed him he lay flat on his side and never moved. Other tarpon have been caught in far shorter time, but they were killed by means of the big poles to which they were hooked. My fish weighed 108lbs. and measured 6ft. There was a Mr. Hempstead near us who hooked one which towed his boat for several miles, and, as near as we could time him, he was about two hours at it. T. A. Snider, of catsup fame, and G. A. Cormack hooked a fish, and it was a glorious sight to observe the magnificent fish as they leaped out of the water darting hither and thither with lightning-like speed and fighting for their lives.

“The tarpon is called the silver king and he richly merits the name, for when he shoots out of his native element trying to escape from his merciless enemies he looks as though his coat was of burnished silver whenever the rays of the sun fall on it. There were nine of them caught on that day.

“The day following my wife had a strike early in the day, and after fifty-two minutes of hard work she managed to land her game unassisted. She finally pulled him alongside the boat and the guide gaffed him. He weighed 100lbs. even and measured 5ft. 6in. There was considerable interest displayed by the people in the other boats, for this was the first time this year that a lady had hooked a tarpon and handled him herself, which Mrs. Cox did in sight of the other boats. He took our boat about a mile away from the other boats before she conquered him. I was exceedingly anxious she should take him, and being afraid she would lose her strength, I offered to assist her. But you should have heard her. “If you do not leave me alone, Charles, I shall get a divorce from you.” I had to let her have her own way. She never once faltered, but remained cool throughout, behaving better than many a man would have done.

“Our fishing tackle became the admiration of all the people down there. I caught my fish opposite the country residence of inventor Edison. The scenery around there is magnificent. Is there any danger connected with tarpon fishing? I think there is, at least a man must be very careful. The tarpon is wonderfully strong, and often makes straightway for the boat in which he knows his captors are. There are many instances on record where one has jumped right into a boat. I heard of an instance where one of them came to the surface right under the boat with such force as to break the bottom. Its two occupants were thrown into the water, but were rescued.

“We caught many varieties of fish. The prettiest—the fish with the most light in him—is the Spanish mackerel. Next comes the jackfish. They furnish genuine sport. Then there is the grouper, and the mangrove snapper, which resembles our small-mouthed bass. The redfish, or channel fish, is also a beautiful creature. The most peculiar one, however, is the stringray, of which species we were fortunate enough to hook a number.”

The following is a record of the tarpon caught with rod and reel at Fort Myers during one week:

ANGLING NOTES.

MR. DEAN SAGE, the well-known salmon fisherman of Albany, has tried the salmon with the fly in the upper Hudson, but so far without success. He thinks that under the present law respecting the pools, that is, forbidding fishing within 80 rods of the fishway, there is little chance of taking salmon on the fly, as the waters that are thus protected are about the only ones where fly-fishing is likely to prove successful. Last season a local angler got two rises to the fly but caught none. Many salmon have been taken in nets and sold in towns along the river contrary to law. At Bangor the salmon fishing has been almost a total failure. Many blame the pulp mills above Bangor, but probably the true cause is the weirs and nets which stretch from bank to bank, practically closing the river against the salmon. It seems absurd that all the efforts of the Fish Commission, and all the expenditure of money should go for naught, just because a few netters might vote the wrong way, if offended.

The announcement in the papers of the new railroad to cut through the Adirondacks seems to have brought out no comments, but to have been taken as a matter of course, no one appears to oppose it and probably it would make no difference if they did. It will bring money to the hotel keepers as well as the owners of the road, and the destruction of the woods is of no account. Great is the power of money.

The man in charge of the South Side Club Hatchery, on Long Island, caught a small eel the other night that had 42 trout fry inside of it. This proves how small a chance trout fry have in unprotected waters. A fine specimen of the rainbow salmon was taken at the club a few days ago weighing 3lbs. 4oz.

Reports from the various trout streams are now much more encouraging and some fine baskets of fish have been taken lately. A little rain will help matters very much and those fortunate anglers who can get away during the next two weeks will be well repaid, particularly if they reach the ground after a little wet weather.

The first weakfish of the season so far as we have heard, were taken on May 10 and 11 by Mr. Ned Sheldon.

The New York Association have given Murello and the Hotel Brunswick until May 20 to settle the suits brought against them by the Association, after which the matter will be taken into court. The offer to compromise was refused. The State warden, Dr. Kidd, has commenced a suit also against the first named restaurant for serving quail out of season.

Is not the dobson a new bait for trout to take? A gentleman reported that on cleaning some trout recently he found two dobsons in the stomach of one of them.

SCARLET-IBIS.

OFF TO MAINE.

STILL the fishermen are on the wing. One of the nicest parties of the season left the Hub Saturday morning for the Rangeleys. It was really two parties. The Clapp party was one, and composed of Messrs. Eugene H. Clapp, Geo. W. Wadsworth, C. E. Haskins and Mr. Paine. With this party was united another of Boston merchants. The two parties were united for the sake of chartering a special directors' car to take them from Boston to Farmington, Me. The latter party was made up of F. H. Bowles, L. E. Pierce, Stearns R. Ellis, M. J. Conant, E. D. Shumway, James C. Davis, a Mr. Smith and two others. This party is to be quartered with Billy Soule, in Camp Johnson, on Lake Cupsuptic. Last year they went to Moosehead, but concluded to try the Rangeleys this year. The Clapp party will be quartered at the Mooselucmagentic House, at Haines's Landing, on the Mooselucmagentic.

Other parties are moving, as well as single individuals. The number going a-fishing is very large. The Walton party—unfortunately I have not the names—has already started for Richardson Lake. This party goes every year. If they get any big trout, as they are almost sure to, the *FOREST AND STREAM* shall know about it.

The camp Stewart party will leave Boston on Friday, the 22d. Six will probably make up the number this spring. Three ladies will be in the party, with Charles and Willie Cutting, of Andover, as guides. The ladies names are Mrs. F. H. Mudge, Mrs. E. B. Cramme and Mrs. W. K. Moody. The three gentlemen of the party are Geo. T. Freeman, his friend Mr. Dodge and W. K. Moody. Oscar W. Cutting will again officiate in the capacity of cook. Oscar has a reputation for biscuit. The ladies go into camp only on condition that he is cook.

Senator W. P. Frye was to go into camp on the Mooselucmagentic on the 15th but was delayed a few days. He has quite a party with him. He visits his camps every season and is an enthusiastic angling expert.

Up to the present writing the water in the Maine lakes has been very cold and trout have not been caught. It is just as it always is. The trout do not bite, even at bait and minnows, till the water begins to get warmer than ice water. Such is the temperature of the water in those lakes, so long as the woods are full of snow and the streams are running high. Indeed, the Rangeleys were not clear of ice till the 14th, and the same day the ice entirely went out of Moosehead. Still the ice was out of Richardson Lake on the 11th, so that the steamers went up the lake, and the ice had begun to break up in Moosehead three days before it finally went out. The spring is a late one, and the early fishermen are disappointed. Mr. Clough, of Lynn, of the Clough party, already noted in the *FOREST AND STREAM*, has been obliged to return on account of sickness in his family. This party was one of the first to be off. Up to the day Mr. Clough came out scarcely a trout had been taken, though one of the party had secured a 6-lb. landlocked salmon. The fact is slowly being demonstrated that the landlocked salmon take the bait sooner in the Rangeleys than the trout. Several have already been caught this year.

Mr. C. P. Stevens, of Camp Vive Vale, already mentioned as one of the first to be off, writes his nephew in Boston that up to Friday, the 15th, not a trout had been taken. The weather was cold and the woods full of snow. All of the brooks were then engaged in running little rivers of snow-water down into the lakes. Mr.

Hayes, of Malden, the friend of Mr. Stevens, was obliged to come out of camp on Friday, his time being up. He got no trout of any consequence. Mr. E. J. Shattuck, also of the same camp, did not get away till Saturday, the 16th, and, under the conditions found by the rest of the party, he was glad of it. Mr. Smart, of the same party, cannot get away to go a-fishing this spring.

At Weld Pond the landlocked salmon fishermen are having good luck. Judge Wm. Wirt Virgin, of the Maine Supreme Bench, is doing that lake with a good deal of success. He has devoted some seven hours a day to the sport. He has taken a salmon weighing 10lbs., so report says. On the 14th, inst. Albert Rawlins caught a salmon from that lake weighing 7½lbs., Samuel Vose, of Madison, one weighing 5lbs., and John Schofield one weighing 5lbs. Several business men of Livermore Falls have been to the same lake, and have taken a good many trout and salmon, the largest weighing 6½lbs. The party got six salmon in all.

A landlocked salmon weighing 11lbs. has been taken from Green Lake, Hancock county, Me. F. W. Ayer, of Bangor, has taken the largest salmon of the season thus far from the celebrated pool there. It weighed 29½lbs. The fishing has not yet been good. A few salmon are taken daily, when the weather is suitable. It is hoped that the recent rain will bring better fishing there. Landlocked salmon fishing in the Sebago has been fairly good this season, but the weather was unusually cold. One needed a winter overcoat every day for the first week of the fishing. There is a report of another salmon being taken from Green Lake, Hancock county, with a fly, the Mitchell. This is almost the first instance of a landlocked salmon rising to a fly in that lake so early in the season, if indeed they rise at all.

Later comes the true sport of fly-fishing. Then the trees will be green. Snow and ice will have done, and overcoats will not be needed. It is not surprising that the sportsmen who spend most of the summer at their camps on the Maine waters should "up and away" as soon as the telegraph announces that the ice has gone, but how one who has but a few days for fishing at his command can wish to start so early is past finding out.

The Hall Brothers have just got back from their Nova Scotia trout excursion. They left Boston on Tuesday, the 11th, via steamer, for Yarmouth, and then went inland a number of miles by team, to their trout river. They found the water down to about the right pitch, and the trout rose to the fly in splendid style for so early in the season. They found the people very hospitable—they desired to take the fishermen home to tea. The party was made up of J. E. Hall, with Rice, Kendall & Co.; James E. Hall, of Milford, and Irving G. Hall, of Boston. They took 15 trout weighing an average of 1½lbs. and one of 2lbs. They had about all the trout they desired of a smaller size. Mr. Waldron Bates, of Boston, was fishing the river just below them for salmon, and has succeeded in landing one of 11lbs. They also came so near to getting one themselves that they came along the stream just after a guide not employed by them had taken a fine one out of a pool.

SPECIAL.

Another correspondent writes: The first trout caught at Middle Dam this season were taken by Mr. Corson of Andover, Me. One weighed 5lbs., another 2½lbs. The Anglers' Retreat was open for business Monday, May 11. Several guests are now stopping there. A party of twelve fishermen leave Lowell for Middle Dam on Wednesday, May 20, for a two weeks' stay. The ice is now out of all the Androscoggin Lakes, and the different steamers and stages throughout the region are running on regular time. Excursion tickets have been placed on sale in Boston, and may be obtained at the usual places.

NEW HAMPSHIRE TROUT SEASON.

NASHUA, N. H., May 8.—*Editor Forest and Stream:* My usual Friday pleasure has just ended (that of reading FOREST AND STREAM from cover to cover, "ads." and all), and while the contents are fresh in my mind I beg leave to make a few comments on the article on "The New Hampshire Trout Season," signed by "Angler," in the number just read. The streams of our State are visited by a constantly increasing army of anglers each season, and any changes, however slight, in our existing laws are sure to excite wide interest.

For the purposes of this article I may be allowed to divide this army of anglers into two classes: (1) Those who come among us each season from other States to spend their vacations with us, and in whose coming all residents are more or less interested; (2) a much larger class of our own citizens who are finding out each year that the grand resources of our own State can afford them health and sport at their own doors. Speaking as a member of the second class, as an angler of some twenty years experience, and as one who has made the habits of trout something of a study, I desire to take exception to some of the sweeping statements in the communication by "Angler" before referred to.

He says "the change was uncalled for, unwarrantable, and unjustifiable." Let us see. "Uncalled for." In the southern half of our State especially there has been a strong feeling for some years that the trout season opening on May 1 was too late; and in conversation with sportsmen from various portions of the southern half of the State, I have yet to find a single man who opposed an earlier opening. Most anglers suggested April 1. That date being thought too early, the 15th was adopted as a compromise measure. Our older anglers as a rule prefer to wait for the better fishing later in the season; but all that I have seen are heartily in favor of the change, and these are a few of the reasons: Trout being well past the spawning season are in good condition (comparatively) and the supply of breeding fish can be in no way affected by an earlier opening date. Then the month of April is sometimes quite warm; in this case one of two things happens (and both bear hard on law-abiding sportsmen), either some worthless fellows will begin fishing a few days before May 1, or else (still worse in my opinion) the month being warm, the trout run well and the first day of May finds a brook filled with trout which is literally skinned out the first few days of open season, leaving but poor reward for later anglers. From the standpoint of stricter protection it seems to me that the months of August and September might be made close months, but as those months are necessary to the fly-fishing interests of the northern part of the State, I would not advocate this change. The effect of opening

April 15 will, it seems to me, be beneficial in more ways than one. If the month of April is cold no fishing is done; but if the month is warm a few anglers venture out from time to time, meeting generally with poor success. By the time the good fishing arrives quite a large percentage of the early anglers are over the "fever" and sometimes disgusted with the results, and I firmly believe that if there is any difference in number of trout caught during a season, fewer will be caught with an opening day April 15 than when the season opens on May 1.

I have not seen the text of the new law, but if I am correctly informed it contains one glaring defect; it does not prohibit taking brook trout through the ice. In view of the fact that ponds in the northern part of the State are covered with ice to April 15 this seems to be a serious mistake; and yet I am informed by members of the Legislature that the Fish Commissioners are in a large measure responsible for the omission in this way: By their bitter opposition to the change in time they aroused the ire of members who were naturally in favor of the change, and these members in their eagerness to change the time rushed the bill through without amendment. In short, the Commissioners by attempting to kill the whole change (which fairly represented public opinion in the southern portion of the State) missed the most vital part of the bill—an amendment prohibiting taking trout through the ice at any time. This omission is to be regretted by all sportsmen.

With this amendment I believe the change to be a good one—doing away with much illegal fishing and at the same time protecting the trout.

Do not let me be understood as saying there is a clash of interests between the northern and southern portions of our State. We of the southern portion—cheerfully—although against our better judgment, as far as our own interests are concerned—allow the months of August and September to be made open months and in favor of the fly-fishing interests of the north, all that we ask is that we be granted an open season that in its opening will violate neither a rule of nature nor an honest effort to preserve our trout.

In my opinion the "youngsters" of Manchester have done well, and with the amendment before suggested their efforts will meet the approval of the majority of the sportsmen of the State. Certain it is that May 1 will never be adopted again as an opening day with the help of

B.

Editor Forest and Stream:

As to the trout season, of which I wrote you, luckily the clerk of the weather has taken a hand in the game, and frost and ice have prevented any fishing for a week; but it is moderating to-day, and should we have a warm pleasant Sunday the brooks will be pretty well skinned. That's where the hoodlums get the advantage of quiet, law-abiding citizens, and the Lord seems to favor Sunday fishermen in weather.

ANGLER.

THE LEMON SOLE.

THE lemon sole is apparently destined to become an important and well-known member of the flounder family. Its existence in our waters has been known since its discovery by the U. S. Fish Commission. The late Professor Baird called attention to this valuable food fish in 1877, and some of the renowned caterers of New York and Boston placed it before a discriminating public in very attractive style. The serious difficulty, however, to the rapid introduction of this fish was found in its extremely small mouth, which made its capture by means of hook and line next to impossible. It was not until March of the present year that Capt. Alfred Bradford, of Gloucester, Mass., demonstrated at once the practicability of taking this sole by means of the beam trawl, and the suitability of the bottom from latitude 41° 45' N. to the Cape of Virginia for the operation of this new apparatus. Capt. Bradford towed his trawl over 140 miles of fishing ground without a single accident, except once fouling an anchor, in that long distance. The lemon sole was found

to be extremely abundant and easy of capture. In three hauls it was estimated that fully 200 tons of fish were surrounded, but their weight was too great to be lifted, and fully 10 tons of these fish were liberated after a single haul.

This species has been previously described in these columns under the name of craig flounder or pole flounder. In shape it is not unlike the common sole of Europe, but it grows much larger and is not a very near relative of the sole. The eyed side of the body is light brown in color. The fins are sometimes lemon colored, and one of the common names is said to be derived from this circumstance. The head is small and the mouth diminutive. It is a deep-water species and occurs on both sides of the north Atlantic. It was always one of the characteristic and most abundant species taken in the explorations by the vessels of the U. S. Fish Commission. First discovered in the deepest part of Massachusetts Bay, it has since been obtained as far south as the entrance to Delaware Bay and as far north as Halifax. Its range extends nearly to Greenland, and on the coast of Norway it reaches latitude 65°.

This flounder is particularly adapted to deep sea life, having been trawled in depths as great as several hundred fathoms. It breeds in the summer, and the young have been taken by the Fish Commission from July to October.

The lemon sole, or pole flounder, grows to a length of 2ft., and has proved to be one of the best food fishes of its family, bearing a strong resemblance in flavor to the celebrated English sole. Its general introduction cannot fail to give the greatest satisfaction.

ON THE NORTH SHORE.—IV.

[Continued from Page 337.]

EVERY thing being in ship-shape in our new quarters, dinner was prepared and served, and then we took boat and started for the home of the radiant trout. The shore southeast from the camp disclosed splendid haunts for this fish, there being a rocky bottom generously creviced and fissured part of the way, and then gravel and innumerable boulders; just the place for a brook beauty to poise and lie in wait for prey, or fall a victim to the seductive fly.

We commenced casting the minute we left the shore, and had not proceeded more than a hundred yards before Ned had a magnificent rise, and then an infuriated trout rapidly taking the braided thread from his silver spool. Away, away, he speeds like a gleaming arrow, until the skillful angler puts a slight pressure on the reel, and then with desperate frenzy he reaches the surface and makes a tarpon-like plunge from the water, showing the lovely glitter of the rainbow dye and shaking the crystal drops from his quivering fins. Again in his realm he starts with lightning speed, and with frenzied energy born of despair bravely tries to shake in his rapid flight the tempered steel from his trembling jaws. Another strain on the line, and then to the top he flashes, and with another desperate dash indulges in graceful curvature, and as quick as thought turns and makes for the boat, with evident intent of a trick.

Bravo, I called, brave fellow,
Neat trick that in its way,
Perhaps ere long you'll find, though,
We trick for trick can play.

The little spool rapidly gathers the slack as he frantically races, and thus discomfited, he starts wildly on another run, with rod bending and reel singing; and now bewildered and much weakened, he makes a desperate effort in plunging downward with savage shake, in hopes of escape from the tiresome line. It was his last rush for freedom, and well nigh successful. A dash or two more, and the gallant fighter shows signs of surrender, and then inch by inch the reel recovers line, and soon the angler has him within the confines of the net. The scales register him as a five-pounder, and we record him as handsome a *fontinalis* as ever wore the colors of a rainbow on a spangled jacket.

I was delighted to see the skillful angler successful, and praised him highly for the masterly manner in which he handled the autocrat of the lake. It was an artistic piece of work, of which any knight of the rod would have been proud.

We are in good grounds, and carefully cover every inch as we proceed. A foolish trout, that could not tell the counterfeit, sprang upon my fly as it daintily lit upon the water, and admirably succeeded in impaling himself upon the cruel hook, and in a few moments thereafter was in the bottom of the boat repenting of his hasty actions. He was a poor companion for Ned's beauty, as he was only about half the size. Again on the move, we approach some large rocks, over which the water is gently breaking, and where I am confident a trout or two lurks. Ned is the first, being in the bow, to send his line near the ragged edge of the rock. It met with a response, but the angler met with a miss.

"You strike too quick," says Joe.

"Too slow, you mean," came the reply.

I took issue with Joe as to the time, satisfied that one can never strike too quickly when a trout rises. Joe never responded instantly, and the season's fishing exemplified that he lost infinitely more strikes than Ned or I. He said he never gave a twitch, simply keeping his line taut by trailing over the water. If the theory holds good that seven out of every ten trout hook themselves on a taut line, then it is evident that all the trout we caught hung themselves. I always gave a twitch of the wrist the moment I observed a rise, and when I was a little slow about it, I generally missed. Ned operated on the same basis.

Having an opportunity to send my flies where Ned's failed, I was lucky enough to hook and boat a 2-pounder.

This being all we could capture here, we glide along, sending our lures into every tempting place, particularly the dark streaks over fissured rocks. Ned was the next to capture a beauty, and then I came in for a prize. After this we moved nearly half a mile before we got a rise, and then I roused a tiger-like trout from his watery lair, which I hung and killed in a short time. He was a good 3-pounder and a game fighter. A moment later I picked up "a pounder," and elevated my nose when I saw him fairly in the boat. I was after larger fish.

But a rod or two ahead was a splendid fall, so Joe stated, and I now recollected the spot as the place where we had made some fine catches last season. Word was given to push ahead for the promised land, and as we proceeded a kingfisher, just ahead, was noted in the bright sunshine sitting complacently on the top limb of a dead tree, in all the splendor of brilliant green and blue, and shining with metallic lustre. "It's the same place," says Joe, "where we saw one last year," and without doubt this was the same bird that then watched us as we robbed his preserve. This keen-eyed bird is evidently a dainty epicure, and is always to be found on trout streams, or wherever the sparkling beauty thrives.

Reaching the desired locality we commenced sending as airily as possible the feathered lures in search of the golden fins, and infinitely successful were we in our endeavors, for in the course of an hour we had added six more lovely trophies to our previous captures. It was an hour of unalloyed sport, ever pleasant to dwell upon. Having now more trout than we needed for immediate use we headed our prow for the camp with a rapidly declining sun confronting us and a sky luxuriant in pearly clouds. We soon reached camp and sat down to a good supper.

We were surprised when we awoke next morning and found it raining, as the indications before retiring were for pleasant weather, as the sky was clear and bright in twinkling stars. The best of weather prophecies and all the time-honored predictions frequently fail here. Joe was as good a barometer as we needed, for he always complained of aching limbs before a rain, being rheumatically inclined.

"Rain soon," would come from him at times when the sun was shining brightly, and generally he was correct. An authority on the subject says when gnats fly in compact bodies in the beams of the sun it indicates fine weather, but if they retire under the shadow of the boughs at evening rain may be expected. Snails and

slugs appear in greater numbers during damp weather, and frogs are more lively and clamorous in the ponds and marshes. Swallows fly low before rain, because the insects which they chase and capture on the wing approach nearer the earth at that time. If bats fly long and late in the twilight it may be taken as indicative of a fine day on the morrow; and they do so because in calm and settled weather the insects on which they feed remain long on the wing in the evening. Fish are eager in biting at flies on the surface of the water before a coming spell of rain, the lowness of flight of insects giving the fish an opportunity of which they are not slow to avail themselves. All these are good weather signs, but cannot always be relied upon around this great reservoir of icy water.

The clouds persistently retained their leaden hues, and the rain pattered and pattered, until we almost lost heart. I sighed for a rub on the lamp of Aladdin, that a transformation might ensue, which would lift us out of this abyss of despair, but it was in vain, for the hooded clouds continued to

Tell their beads in drops of rain,
And patter their doleful prayers.

At last there was a cessation, and like an unfortunate catching at straws, we entered the boat and crossed to the opposite side, and commenced casting for the "finny heroes;" but no sooner were our flies dancing on the water than rain came pouring down. Shelter was immediately sought under a cluster of trees, which soon began to drip the moistened beads upon us. Once more the clouds lighted up and the rain ceased, and again we took to the boat. And so it continued to rain and clear about every twenty minutes, giving us an opportunity, between the showers, to catch three trout, with which we departed for camp, satisfied that it was no use to trifle further with the showering Jupiter.

On our return Ned made a raid on his little bags of tackle, and busied himself improving, as he thought, some of his fine flies. He would take the most cunningly devised lure and so cover it with deep red feathers, as to entirely destroy its original shape. As soon as he had completed one he handed it to me for inspection, if not laudation, but I was a cruel critic, and always ridiculed his changes. He was evidently an iconoclast, and took exceptional pleasure in originality. I advised him to use the tail of a red squirrel, as that was about akin to some of his bushy lures. He stuck to his feathery idols and I to my perfect flies, and the result was that I discounted him as to the number of rises received. When I was in fine luck one day he said:

"That fly of yours brings 'em."

"And that fly of yours frightens them," I replied.

He was chagrined at the answer and kept quietly sending his carmined feathers on all sides, with no response whatever. I could see that he was somewhat disappointed at his want of success, particularly when I was bringing in trout after trout. Desiring to make the generous-hearted sportsman happy, I tendered him one of my best silver-doctors and requested him to try it. He cheerfully acquiesced and the very first cast he made resulted in a capture.

"Why that's a capital fly," says he, after he had landed the exhausted trout.

"None better, and don't you forget it."

On another occasion I changed my silver-doctor for a dun-colored fly, which as it skimmed o'er the water looked as much like a grasshopper as it possibly could. It was an eminent success and Ned was high in its praise. Wishing to place him on an equality and cure him of his cranky ideas I insisted on his trying one. He did so and caught trout for trout with me. His red-headed and red-tailed originals were now fast departing to that bourne in the far distant.

There are, of course, times and conditions of water that almost anything in the shape of a fly will succeed, but in the long run it's the artistic fly, artistically handled, that captures the largest number of trophies, not in trout fishing alone but every other. I could give hundreds of instances of this if time and space would only permit.

About 3 o'clock in the afternoon the rain ceased, the dark draperies of the sky floated away, the sun shone forth in splendid radiance, while the waters rippled with a gentle cadence. It was to boat again, and along the now sapphire shore to tempt the rainbow beauties to the feast of flies. We only succeeded in coaxing three of them to abide with us, owing to the lake's tendency to a mirrored surface. We however had a pleasant outing, and Ned, as usual, charmed with his minstrelsy as we homeward moved by the walls of woodland and granite cliffs, tinged with the violet of departing day. This was the time to enjoy the sunset pictures, so brilliantly spread before us in their fanciful shadows of rock and tree, and in their flashing hues upon the breathing waters. It renewed our poetic fervor and made us enjoy more thoroughly the description of such an hour and such a view, with which Percival has enriched the pages of American literature:

Far to the south

Those slumbering waters floated, one long sheet
Of burnished gold, between thy nearer shores
Softly embraced, and melting distantly
Into a yellow haze, embosomed low
'Mid shadowy hills and misty mountains, all
Covered with showery light, as with a veil
Of airy gauze. Beautiful were thy shores
And manifold their outlines, here up-swelling
In bossy green—there hung in slaty cliffs,
Black as if hewn from jet, and overtopped
With the dark cedar's tufts, or new-leaved birch,
Bright as the wave below. How glassy clear
The far expanse! Beneath it all the sky
Swelled downward, and its fleecy clouds were gay
With all their rainbow fringes, and the trees
And cliffs and grassy knolls were all repeated
Along the uncertain shores, so clearly seen
Beneath the invisible transparency
That land and water mingled, and the one
Seemed melting in the other. O, how soft
Yon mountain's heavenly blue, and all o'erlaid
With a pale tint of rose! Deep between
The ever-narrowing lake, just faintly marked
By its reflected light, and further on,
Buried in vapory foam, as if a surf
Heaved on its utmost shore. How deep the silence!
Only the rustling boughs, the broken ripple,
The cricket and the tree frog, with the tinkle
Of bells in fold and pasture, or a voice

Heard from a distant farm, or hollow bay
Of home-returning hound—a virgin land
Just rescued from the wilderness, still showing
Wrecks of the giant forest. * * * *

We were in hopes that the morrow's dawn would realize the now cheering prospects of settled weather. The sun had gone down in a bank of snowy clouds, but gave us a peep at her fair face just before she dipped into the lake.

Our desires were not realized, for long before we arose in the morning we heard the steady patter of rain on the tent. Ned at once began to calculate on another deluge, and after having completed the elemental problem, turned over in his blanket and was soon in deep sleep, and I hoped, pleasant dreams. The rain continued at intervals all day, and to brighten matters, Ned and I had a number of games of "crib," tiring of that he sought the fascinating pages of "Lorna Doone," and I wandered into Balzac's absorbing story—"The Two Brothers." John, the helper, was somewhat musically inclined, and having brought a "fiddle" with him, went persistently to work and saved out a number of thread-bare dance tunes, much to Ned's disgust.

"Great heavens!" said he, "are we to be hereafter bored with those discordant notes?"

And then he began to study up some plan to put an end to the unmusical scraping. I advised him to purchase the "fiddle" and make a bonfire of it. This was not all, for Joe, who had picked up an air or two on the catgut, succeeded John in the musical olio, and seemed to never grow weary of his performance. It was a sort of a picnic to me, as my ears had been somewhat accustomed to such discordance by taking in the various opera companies organized in the East the past season. I was confident some accident would happen to that "fiddle" if Ned ever got a chance to step on it. They took good care of it, I assure you, for Ned's hoof never got within striking distance of it.

We were kept the entire day in camp, and consequently were growing quite restless. The weather the next morning had not improved a bit, for we were again greeted with the moan of thunder and the rain drops' showery dance and rhythmic beat. We intended to have crossed the bay that morning, but the unpropitious weather prevented. The boatmen again took turns scraping the "fiddle," which came near paralyzing poor Ned, and we took to cribbage and our books.

This is our tenth day in camp, and notwithstanding the damp state of affairs we manifest no discontent nor desire to return to the civilized world. We were eager for an outing that morning, as the cloudy condition which prevailed was very favorable for fly-fishing; but that persistent rain, which vexed sailors' curse, and for which poor shepherds pray, would not let up long enough to permit. About every half hour observations were taken, but not a ray of hope could we obtain from them. It was decidedly a wet sky, with not an inch of blue in it.

There is nothing consoling in camp on a rainy day. You take to cards and soon they tire; then the book is brought out and after a few pages is put away; a cigar or two solaces you for a while; then you run out to the fire by way of change and run back again; then you overhaul your stock of tackle and the sight of an artistic fly makes you think of the scarlet-robed beauties down in their watery lair, and you are then more discontented than ever. Your tent has sprung a leak and that necessitates the care of bedding, etc. All this time a chilly dampness is making you very uncomfortable, and just when you think the rain is diminishing it takes a fresh start and begins to fall with a steady determination—a sort of soak, soak, soak. To add to this aggregation, the wind begins to rise and moan and then you are compelled to close the tent, and there you are "cabined, cribbed and confined." Your misery is now complete, and by way of making yourself believe you are happy under such a condition of depressing weather, you indulge in sarcastic laughter at the absurdity of the situation and endeavor to warble some free-hearted song as if you were under Italian skies. This free life in the forest is glorious indeed, provided always that it don't rain more than six consecutive days.

The rain, with heavy thunder and vivid lightning, continued the entire day, much to our disgust, and we only hoped, when we sought our beds that night, that the morn would be ushered in with bright skies and gentle breezes.

ALEX. STARBUCK.

ST. LOUIS, May 16.—Dealers in fishing tackle in this city report a largely increased sale of fine tackle. In this regard, however, St. Louis is far in the rear. If the manufacturers of fine tackle would send out a few thousands of such a paper as FOREST AND STREAM it would immensely increase the sale of their goods. Any angler who is a regular reader of a sporting paper would soon discard his old reed pole and cotton line and procure for himself some modern tackle. I note that a stock company is being formed by sportsmen in Springfield, Ill., and neighboring towns to purchase the title to some 15,000 acres of hunting and fishing grounds near Pekin, on the Illinois River. A meeting will be held on May 21 to definitely determine what shall be done. Fishing is good at Murdock Lake. Charles Smith, secretary of the Murdock Lake Club, has just returned from the lake and reports a catch of 65 bass and croppie in a day and a half. The new club house of the Gilead Slough Hunting and Fishing Association will soon be completed and the opening will be made a grand success. A steamer will be chartered to carry up the members and their families.—ABERDEEN.

SUNAPEE FISH.—New London, N. H., May 16.—I am just in from Lake Sunapee and find that the native trout are being taken in large numbers, and landlocked salmon are rising to the fly. Fish Commissioner Hodge was at the lake visiting the hatchery and pronounced the spring hatch at Sunapee prime. I captured six elegant spotted trout to-day, pencilings of the two best I inclose. Wish I could hand you the original and tempt your palate. The six weighed 11lbs. 6½oz.—BYRON.

A CATSKILL CATCH.—Catskill, N. Y., May 7.—E. F. Tibbals, in a fishing stream in the town of Jewett, this county, yesterday afternoon caught twelve trout that weighed nine pounds eight ounces. The largest one was nineteen inches long and weighed plump three pounds. He used flies and a four-ounce rod.

ROCKY MOUNTAIN GRAYLING.—Salt Lake City, Utah, April 21.—Since my first letter some friends of mine sent me two "grayling," so called. They were caught near Melrose, on the Union Pacific R. R. system, in the Big Hole River, Montana, with bait—a white grub worm found in decayed railroad ties. These were caught April 13. Later in the season they are said to bite readily at the fly, and are quite plentiful. The fish were about 10 or 11 in. long and weighed about 10oz. each. The sides were said to have been spotted, but the high wine 188° proof seems to have been too strong and the spots are not present. The spots on the back fin and the shape seem to be as in the grayling, except that they seem larger. I intend to fish these waters in June and will be able to procure perfect specimens. I shall take pleasure in forwarding you one later on. I had located the fish in Idaho in my former letter, but my recent ones came from Montana. The Beaver Head, Blackfoot and Jefferson rivers in Montana are said to abound with these "grayling." I would like to know how to preserve specimens of fish.—T. J. A. [There is no better fish preservative than pure alcohol diluted with about one-third its volume of water. Take two quarts of alcohol and one quart of water; mix them and the mixture will keep fish long enough to ship them almost any distance. Take the precaution to make a few small incisions into the belly, so that the liquid may go freely into the abdominal cavity, which is the most difficult part to preserve. The loss of color may be prevented to some extent by adding glycerine to the alcohol and water. Some persons use equal parts of alcohol, glycerine and water. Always be sure the preservative enters the abdomen. If the fish is not to be kept permanently it can be shipped safely in salt by removing the insides and filling the cavity with salt and then packing the specimen completely in the same preservative. The first method is preferred.]

TROUT FISHING "JUST OVER THERE."—You all know him, or at least have heard of—this talkative, confiding fellow, who we hear is everlastingly having big catches of trout of amazing size and beauty. Well, last summer two of us, while in the mountains of New Mexico and near Cimarron, a small town, were told by a near relative of this fellow, whom we will call Jake, who had such phenomenal luck trout fishing "just over there," that there was fine trout fishing up on the American Creek, some twenty miles from here. He said this stream contained some of the most beautifully mottled trout of amazing size and ravishing beauty, "just over there." Not thinking he was a relative of Jake, we hastened over to the American Creek. After fishing for several miles up and down the creek we had the good luck to catch 25 little trout the size of American sardines. Good fishing, most beautifully mottled, of amazing size, etc. We finally came to the conclusion he had caught them all. After this, when any of this kind of anglers told us of a certain stream being full of trout, we always remembered the ones "just over there." At one place where we stopped fishing was prime and in all is glory. We fished along this stream three days. In some places we found the trout a little wild and hard to catch; they were mostly of a size, averaging about 1½lbs., and for once we got all the fish we could eat. The scenery along this mountain stream was simply grand and filled the angler's eyes with delight. This stream is very narrow, so that one could step across almost anywhere. As we spent several weeks last summer in the mountains of New Mexico, you may hear from this neck of woods again as to fishing and hunting.—G. B. L.

ANOTHER FISHING DOG.—I have reason to believe the account of a dog catching suckers in California, mention of which is made in the FOREST AND STREAM of May 14. I distinctly remember a similar instance which frequently came under my observation in my boyhood on the coast of Maine. A neighbor had a very intelligent large dog that quite regularly visited "the bar," which uncovered at low tide, for the purpose of killing catfish (*Anarrhichus lupus*). I do not know whether the dog had been trained to this or did it instinctively. However, he seemed to have a decided antipathy against the catfish, which, as is well known, is one of the most pugnacious fishes of northern seas. It often happened that one or more catfish would be left by the ebbing tide in some shallow depression where there was hardly room for him to move about. The dog seemed to take especial delight in watching for fish placed in such a predicament, and would immediately attack them. His method of attack was to catch them by the head, or just back of it, and drag them out of the water, where, of course, they soon became helpless. Occasionally he would attack one where the water was a little deeper than common and where the fish could fight with less disadvantage. In some instances of this kind which I recall the battle was a very vigorous one. The fish would make vicious snaps at his enemy and lash the water into foam, but, with rare exceptions, would be overcome by the superior skill and intelligence of the dog. As these contests occurred frequently and almost directly in front of my house, I had an opportunity to note their varying phases.—J. W. COLLINS.

THOSE AT HOME.—The fact that this class of nature's true lovers have not had, and will probably not have, an outing in this glorious springtime, does not in the least abate their ador nor cool their enthusiasm. On the contrary, the deprivation, though truly hard, sharpens their anticipations for a time when fate may be less hard, and when they, too, may share in the joys of forest and stream with their luckier brothers. Should "hope long deferred" ever begin to despair, the perusal of FOREST AND STREAM's pages would easily cheer her again to her wonted condition. This is one of the great pleasures we stay-at-homes enjoy; and I doubt not but that we appreciate the many sketches of life in field and forest, on lake and stream, with a keener zest than those who are privileged to taste the reality. Brothers, you who toil steadily in storeroom or warehouse, counting room or shop, do not despair; for if, in your whole life, it is not given you to secure even one outing nor one chance for communion with the nature you love, your life will still be the richer and better for cherishing that passion.—ONYJTUTA.

THE BIGGEST CONNECTICUT TROUT.—A trout 17 in. long, 13 in. in girth and weighing 4lbs. 1oz. is reported to have been caught by Fred Messenger in Cranberry Pond, North Granby, Conn., about the middle of May.

GONE—THE ROMANTIC AGE OF TROUTING.

THE romance of it has all gone from trouting in these latter days of the angler's art. The fascination of the woods in summer, the sweet influence of the scented fields, the varied music of the brook, the song of birds, the hum of insect life, the fantastic play of fleecy clouds in the sky above and their imagery in flitting shadows on the earth below—to none of these do you hear your regulation angler of to-day make tender reference when, with fine livery scarcely soiled, he returns from his day upon the stream. The work he did with his black-gnat, the killing qualities of his grizzly-king, the wonder of his casts, the skill with which he handled this, that and the other trout, the feeling of abhorrence that overcame him to find a rustic on the stream with chestnut switch, horse hair line and wriggling worm—these will be the burden of the now accepted angler's reminiscences of his outing among the trout. He certainly can have no memories of that rare and golden time—the romantic age of trouting. Then we went a-fishing! The season opened when the weather and the water were right for it. They were never ready before the trout were, and they never will be, no matter what day the law may select for that consummation. We gauged our opening day by nature's condition, not by the law's opportunity. If the snow lingered along the streams while it was yet April, as it often did, does yet, and always will, we knew that neither trout nor water could be right for pleasurable fishing, and we kept on with our work and waited. When the time was ripe we went a-fishing.

But, nowadays, to be an angler of the reigning school—a "genuine sportsman"—one must seek the brook on the very first day the law gives him the privilege, although the snow may be a foot deep, and ice still fringes the water. He shakes and shivers and freezes to the marrow. To wade the stream would be pneumonia. Everything is bare and chill and desolate. If any trout are caught they will be lank and half-starved, unless they are the liver-fed darlings of the Long Island brooks and ponds, and they will show nearly as much gaminess as the suckers the more sensible boy is catching at the mouth of the brook, where the river eddies. But they will be trout. And it is opening day. And the angler feels that he is doing his duty as a genuine split-bamboo-twenty-four-dollar-reel-knickerbocker-breeches sportsman, able to make a cast of 90ft. He may not succeed in catching fish, but he can put his fly 90ft., and that's the main thing.

I remember some old time mornings in June. The sun gets up early in June, but we were up before him, when we went a-fishing—yes, were a long way toward our destination by the time he peeked above the hills and washed his face in the dew. A four-mile walk to some favorite stream was nothing in those days—not that we had to go as far as that, even, from our little town—a quaint and pretty village among the Pennsylvania hills, full of the romance of trouting once, but spoiled now through contact with the new order of things, and consequently famous—for we could have fished for half a mile in either of two rare trout streams without leaving the confines of the village. But we sought communion with the woods and cataracts and isolated meadow stretches, where the ripples tossed and glinted, far from the haunts of men, when we went fishing, and so put the town creeks behind us on those June mornings. June mornings are just the same now as they were then, and if you should resurrect the flexible old chestnut pole—not rod, but pole—the reliable horse-hair line, fill the old tin box with fresh-dug worms and take once more an old-time jaunt toward that favorite stream, the same road will lead you to it. As you pass along, the brown thrush will greet you with his flood of matin melody from his covert by the roadside, just as he used to; the fussy catbird will scatter the dew from the bushes in silvery showers, as she flutters and fumes from bough to bough; the red squirrel will chatter and scold from his perch in the crotch of the old chestnut tree; the crow from the top of the tall dead pine will caw his contempt for you, knowing you have no gun; tree and shrub and flower bathed in dew and moisture, fresh, unsoiled and full fed, will partake of the early morning joy and health you feel, and every flying, running, creeping thing be refreshed and satisfied, just as it used to be. And you will come in sight of the same farmer, letting down the bars for his sweet-breathed cows to pass into the roadside pasture, just as he used to be doing as you passed that way. Instantly you remember the hearty greeting he always gave you.

"Good mornin' to ye!" he used to say. "Goin' fishin', hay? 'Feard y' won't hev much luck to-day; the wind's a le-e-tle too easterly. If I was you, though, I'd cut right across my medder yender, 'n strike in at the ol' alder-hole. My boy John ketched a powerful nice mess right along there yisterdy. It's good fishin' all along through my medders. If y' hain't got yer worms dug John'll go 'n dig y' some. I'm 'feared the wind's a le-e-tle too easterly fer y' to-day, though. But good luck to y'!"

You remember well that cheery greeting, and you are glad to see the farmer. He will give you some of the old time tips of course. Yes, he waits for you.

"Goin' fishin', fum the looks o' ye!" says he, and his look is anything but amiable. "Well, I want to tell y' fore y' go any furdher th't y'd better keep offen my premises, if y' hain't got two dollars 'long with y'! It'll cost y' jist two dollars to fish on me, 'n if y' don't want to pay that, keep offen my premises!"

That isn't the same as it used to be. And you will find as you proceed that nothing about your trouting is as it used to be except the early morning walk in June. That would be changed, too, but the angler of the new school cares nothing for it, and it has escaped his touch.

And if you have the heart to cling to the stream you will meet frequent brothers of the new-time angle. They will affect horror at your homely tackle. They will jeer at your chestnut pole, your horse-hair line and your tin bait box. Yet with the going out of the chestnut pole, the horse-hair line and the bait box went the romantic age of trouting, and the age of the warning signboard and the toll on streams came in with the school of anglers who mock at everything that is not split bamboo and feathers fashioned to counterfeit nothing that ever lived in air, on earth or in water. It is this school of anglers that has made of the farmers of the trout regions a race of greedy, grasping landowners; first, by preempting sections of streams for their own selfish ends, and then sug-

gesting and fostering the system of tolls all along the line, simply to prevent the native fisherman from enjoying the waters that had been as free as the air to him from the remotest generations. Even deep in the forests, where the only life you might expect to see would be some bounding buck or slouching bear, you find yourself face to face with policemen who may haul you before the nearest magistrate to be punished for your obstruction on the forest solitude, which has also been mortgaged to some clique of "genuine sportsmen."—Ed. Mott in Truth.

A PARASITE OF THE ROCK COD.—In our issue of April 28 we published a note from Dr. Henderson and Mr. Picken, of Whatcom, Wash., concerning a tapeworm in rock cod. This parasite was sent to Prof. Edwin Linton, of Washington and Jefferson College, Pa., and we now have the pleasure of presenting his letter upon the subject: "Editor Forest and Stream: The worm from a species of *Sebastes* is near *Dibothrium angustatum* Rudolphi, from *Scorpaena serofo* (a Mediterranean species). There were two fragments 31 and 19 centimeters in length respectively, which had been removed from the intestine by the collectors, and a third fragment, 11½ centimeters, in the upper part of the intestine with the scolex or head; the latter was attached in one of the pyloric caeca. There is a related worm (*D. rugosum*) which infests the common cod, that has a similar habit of burying the head in the pyloric caeca. The two loose fragments evidently belong to the same strobile; in other words, have broken from the part which bears the head."—EDWARD LINTON."

A MISSOURI FISH AND GAME CLUB.—Hannibal, Mo., May 6.—We have recently organized to improve the game fishing in Deep Lake, a fine body of water containing about 15 acres, which is already pretty well stocked with large bass, crappie, pike, salmon, etc. It is deep and cool, being fed from springs, and during the spring floods is connected with the Mississippi River. It is excellently adapted by nature for this purpose, and we propose to make it the model game-fishing spot in this section. Last week one of my friends caught in our lake on a spoon hook a pike weighing 9½ lbs.—the largest that has been taken on hook and line here for many years. A number of our prominent citizens are associating for preserving the Snye Crite, a large stream near our lake. I have been an ardent fisherman in the Mississippi River and its tributaries for 30 years and shall be glad to drop you a line occasionally if you wish me to do so.—S. E. WORRELL, Sec'y D. L. F. & G. Club.

WISCONSIN BASS.—Milwaukee, May 11.—Pickerel are gradually working their way into deep water as the spawning season is over. This year our bass will be protected and at a time when they most need it, as the law only permits of their being taken after June 15. Now there is no doubt but that to many this will seem like postponing the taking of bass a good while, but there is much to be said on each side of the question and it is much better to lose a couple of weeks sport than to butcher the fish while they are busy on the beds.—GREEN-HEAD.

MICHIGAN.—Holland, May 14.—Black bass are biting nicely now, although most of them caught are only of fair size. My largest this spring weighed 2½ lbs. A few muskallonge of from 6 to 15 lbs. have been taken, also a number of pickerel. If it were not for the netting we would have excellent fishing here. As it is the fish caught are getting fewer in numbers and smaller in size every year. Netting and spearing will deplete our waters if not soon stopped.—A. G. B.

MR. ALEX. STARBUCK will go again to the north shore of Lake Superior for the excellent fishing to be had there. In view of the enticing sport described by Mr. Starbuck in his papers now printing it is a mystery to us why more trout fishermen do not visit that country. The Dayton (O.) Journal notes: "Alex. Starbuck, of Cincinnati, is writing a series of charming trout sketches to FOREST AND STREAM. He casts a fine literary fly and lands his game brilliantly."

THE BRONX RIVER, which forms the upper boundary of New York city, has been infested this spring with gangs of Italians who have destroyed great quantities of fish with dynamite. The new game constable, Alex. D. Golyer, of Mount Vernon, reports that he has undertaken a campaign against the dynamiters.

HEARD ON THE CARS.—"How'd he know it was a bass?" "How did he know it? Well, he is forty-nine years old, and he's fished for bass every spring and fall since he was twenty; and if he don't know a bass strike nobody does."

THE KINGFISHERS.—We learn that the "Kingfishers" will "pull themselves together" for an exploration of the bass supply in some inland lake of Michigan this summer.

BLACK DRUM are taking the hook at Anglesea, New Jersey. A 76-pounder was caught the other day. Weakfish are coming on.

MASSACHUSETTS ASSOCIATION.

THE regular monthly meeting of the Massachusetts Fish and Game Protective Association was held at Young's Hotel, Boston, May 14. In the absence of Prof. Samuels, Vice-Pres. Geo. W. Wiggin presided, 46 members being present. The following gentlemen were elected members: Dr. Geo. C. Ainsworth, Chas. D. Ricker, John E. Miller, J. T. Butler, John C. Kerrison, Waldo A. Rich, Ernest Mienstet, Geo. B. Hilliard, Frank G. Farwell, Fredk. B. K. Marter, Wm. A. Carrie, Theo. P. Lovell, Henry R. Page, Edw. E. Babb, Guy C. Channell, G. P. Merrill, Harry R. Prindle, Wm. Walker, L. W. Burlen, Walter C. Brooks, John E. Colter, John A. Fogg, Forrest S. Smith, Fredk. M. Bond, Frank L. Marshall, E. M. Stoddard, Joshua N. Temple, Wm. N. McQuinn, T. D. Barrollo, T. D. Duce.

The applications for membership were referred to the committee. A committee consisting of Messrs. C. J. H. Woodbury, Danl. T. Curtis and H. H. Kimball, appointed to draft resolutions on the death of Mr. Chas. G. Davis, of Boston, presented the following, which it was voted to spread upon the records: REPORT OF THE COMMITTEE ON RESOLUTIONS ON THE LATE CHAS. G. DAVIS.

While on a foreign trip for the benefit of his health, Chas. G. Davis lost his life at the sinking of the *Utopia* in collision with a British man-of-war in the Straits of Gibraltar. The two other cabin passengers, the one a lady and the other an invalid, were

both saved. It is supposed that Mr. Davis, relying on his ability as a swimmer, devoted himself to the succor of others, and, not jumping from the vessel until too late, was drawn down into the vortex of seething waters.

Mr. Davis was connected with the Suffolk Bank earlier in life, but for the past fifteen years has been both paying and receiving teller of the Columbian National Bank; his clear and systematic methods of business enabling him to fulfil the duties of both positions. He was a man of absolute fidelity to trusts, which he served with rare intelligence, commanding a confidence that was widely established through his genial courtesy to all he met in the course of business.

He was of fine presence. His athletic physique seemed to appreciate in highest degree the opportunity to yield to the Adirondacks each year, where he spent his vacation in the forests. Although for many years known to be a skilled and enthusiastic fisherman, his connection with the association was of recent date, yet his rich acquaintance in business circles extended largely into our membership.

The robust body sustaining a vigorous mind endowing his possessor with a vast capacity for continuous work, yielded to the pressure of a sorrow caused by bereavement; and at the instance of the Directors of the Columbian Bank he accepted an extended leave of absence and also a most generous testimonial to provide for a trip which was expected to bring rest and recuperation.

Your committee beg to offer the following resolution: *Be it Resolved*, That by the decease of Chas. G. Davis the Massachusetts Fish and Game Protective Association has sustained the loss of a member consistently devoted to the principles of this organization; his gentlemanly demeanor, business capacity, and high sterling principles render his life an example to others; and because of his many virtues his friends shall ever garland his memory with pleasant recollections.

Respectfully submitted, O. J. H. WOODBURY, DANL. T. CURTIS, H. H. KIMBALL, } Committee.

BOSTON, MAY 14. Mr. John E. Boutwell spoke of the emptying of large quantities of poisonous chemicals into Richardson's Mill Pond, Woburn, by the chemical works, thereby destroying a great many trout, 15,000 of which were planted there last year. Mr. Boutwell thought the chemical works should be prohibited from emptying their refuse into the lake. On motion it was referred to the Massachusetts Fish and Game Commissioners. RICHARD O. HARDING, Sec.

Fishculture.

INDIANA FISHCULTURE.

WE have the report of Col. Wm. T. Dennis, Commissioner of Fisheries of the State of Indiana, for the years 1889 and 1890. The State appropriation for each of these years was \$700.

Indiana does not undertake the artificial propagation of fishes to any great extent, but devotes her energies to their protection and to the transplanting of indigenous fish. Five hundred thousand fry of the wall-eyed pike have been obtained from the U. S. Fish Commission and placed in a reservoir on the grounds of the Baker hatchery at Rome City, to be kept one year before their final distribution. Col. Dennis expects to deposit these fish early in the coming spring. Ten thousand landlocked salmon were received from the same source and hatched by the Baker Bros. Trout fry have been extensively liberated in the vicinity of Indianapolis and Shelbyville and in the Tippecanoe River. The lake trout which were planted in former years by the U. S. Fish Commission in the lakes of Steuben county have been moderately successful. Specimens weighing from 2½ lbs. to 6 lbs. have been taken with hook and line. One thousand lake trout fry which were placed in the Thistlethwaite Pond, near Richmond, are now about one year old and some of them measure 5 or 6 in.

The Commissioner is a firm believer in rigid and thorough protection as the surest and quickest means of repopulating the lakes and streams. Through his instrumentality a State convention was called of all those who favor the protection of fish and game, and the enforcement of the laws. A State association was formed and meetings were held at the county seats of several counties. Auxiliary societies were established, a large number of arrests and convictions were made with the help of private detectives (fully 100 convictions for violations of the fish laws were secured), and unlawful fishing has in a great measure been suppressed. The results of this protection are already apparent. The needed protection of fish in Indiana involves the prevention of water pollution, the introduction of fish ladders to allow the ascent of fishes to their spawning grounds, and the restriction of the capture to hook and line only.

Commissioner Dennis has reprinted, by permission of the publishers of FOREST AND STREAM, the account of the "Basses and Their Allies," which we published July 24, 1890. Through an unfortunate mistake, the names of some of the fish have been transposed, and we find the large-mouth black bass labeled the small-mouth, the warmouth is labeled blue sunfish, and the calico bass is called the warmouth, while the blue sunfish appears as the calico bass. The figure labeled large-mouth black bass we suppose is introduced to make a pleasing contrast with the rest of the cuts.

The proceedings of the State Fish and Game Convention, held at Indianapolis, Dec. 19, 1889, and Dec. 18, 1890, are given in full and contain much information of interest to anglers and fishculturers. This association has auxiliary branches in various counties of the State that is destined to play an important part in the future of the interests involved. The constitution and by-laws of the county branches are set forth on page 96 of this report. The fish and game laws are also republished in this document. On page 103 there is a very useful table showing the open season for game in Ohio, Illinois, Indiana, Kentucky, Michigan, Pennsylvania and West Virginia.

LOW EXCURSION RATES TO SULLIVAN CO. TROUT STREAMS.—On Friday and Saturday, May 29 and 30, the New York, Ontario & Western Railway will sell excursion tickets from New York city to all their stations in Orange, Sullivan and Ulster counties, N. Y., at the fare one way for the round trip. This affords those unfamiliar with one of the healthiest and most delightful regions in this vicinity an opportunity, during a holiday, to select a desirable summer boarding place 1,500ft. above the sea, absolutely free from malaria and mosquitoes, with time enough to enjoy a day's fishing among the famous trout streams with which it abounds. The tickets are good returning up to and including Monday, June 1, and are on sale at 323 Broadway, and Ferry Offices foot of Jay and Forty-second streets.—Advs.

ONE MOMENT, PLEASE.—Do you contemplate visiting Dubuque, St. Paul, Minneapolis, Marshalltown, Des Moines, St. Joseph, Leavenworth, Kansas City, or any point in the Northwest, the Puget Sound region, the balmy South or Southwest, or the busy East? The Chicago, St. Paul & Kansas City Railway will furnish you transportation enabling you to safely, quickly and comfortably reach your destination. Its splendid equipment and excellent management have made it a popular favorite. F. H. LORD, General Passenger and Ticket Agent, Chicago, Ill.—Advs.

FOREST AND STREAM, No. 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Glean," "Dick Swiveller," "Sybilene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds while they may kill. Cloth, 220 pages, price \$3.50. For sale by FOREST AND STREAM.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book "Pawnee Hero Stories and Folk-tales," giving a full content and specimen illustrations from the volume.—Advs.

advance can be made in other breeds why not in this? As I was unable to purchase Hotpot or Hermit I did the next best thing, sending two good and suitable bitches to be served by them. I trust the experiment will prove successful, and that next year I may be enabled to exhibit the produce.

It is a general supposition that there are no longer any Clumber spaniels at the Duke of Newcastle's estate—Clumber; but this is erroneous. While they are not kept there in anything like the numbers they once were, nor is the quality of the stock what it was, there are still quite a number of the beautiful lemon and whites in the ducal kennels. Owing to an epidemic about twenty years ago, which decimated the inmates of the ducal kennels, the old strain, that is, the immediate and distinct Clumber House strain, has been pretty well lost; though of course it is an easy matter to restock from the pure-blooded dogs kept on so many of the estates, and which naturally emanated originally from Clumber. Indeed, I know of instances where members of the Pelham-Clinton family purchased stock from outside kennels the produce of which they sold as the direct Clumber House strain. There is such a demand for these spaniels, and at paying prices, too, that it has often surprised me that they were not bred largely at Clumber for the market, as of course the very name of the breeder would throw an additional halo over dogs bred there. If the Duchess will make up her mind to exhibit her dogs at the leading shows, it will not be long before the interest in the breed is reawakened in England. This will mean that the breed will also meet with favor here.

Intending breeders and exhibitors should set most cautiously to work in making their selections, and bear in mind that a prize winner in England is not necessarily a perfect type of the breed. Let them either select a trustworthy agent or else study the criticisms of the dogs shown in the *Stock-Keeper* or the *Canine World*, and so discover the attributes of the various dogs before the public. They can then make their purchases intelligently and with some hope of getting what they want—a good Clumber. CLUMBER.

OTTAWA, Canada.

THE SOUTH AMERICAN BLOODHOUND.

Editor *Forest and Stream*:

A correspondent of *FOREST AND STREAM* inquires in the issue of April 23 about the South American bloodhound.

I once lived for a year in the city of Santa Marta, United States of Columbia, where these dogs were not uncommon.

When full grown the Spanish bloodhound stands from 28 to 30 in. high at the shoulder, and weighs from 70 to 80 lbs. It is usually of a tawny yellow color, with a black muzzle and fierce red eyes, hair short, with a slightly bushy tail and short ears. In form, more like the modern English foxhound than any other dog I know, but much larger and heavier, a cross perhaps, originally, between a foxhound and a mastiff, or probably some large and savage breed.

I lived for some months in a house where one of these dogs was kept as a watchdog, and so savage was he that no one of the family except the servant who fed the dog dared to leave their rooms in the morning until he was chained up. It is the only dog that I have failed to make friends with—he was like a wild beast. In the city of Manila, a Spanish colony in the East Indies, I found these bloodhounds. The American merchant there, who lived in an exposed situation in the suburbs, kept eight or ten of these dogs chained up about his premises. I passed some weeks with him, and no one except the man who took care of them dared to approach them. Some of them were tawny in color, others light brown or brindle, and they were even larger and heavier than those in South America.

I think these dogs must be of the same breed with those that the Spaniards took with them to Cuba and Mexico to hunt the natives with. They would make sad havoc among half-naked Indians. My host in Manila gave a puppy of this breed to the captain of the ship of which I was supercargo, it was about three months old, gentle and playful, but before we got home, some five or six months afterward, the beast had become savage and treacherous, and had bitten several of the crew. Our first officer, who took care of the dog, had to knock him down with a handspike more than once to save himself from injury.

When we reached Boston and the mate took the dog ashore, it was observed that ferocious as he was to mankind, he was a coward with other dogs. On the whole a very unsatisfactory kind of dog to have about. S. C. C.

TOO MUCH WHISTLING AT FIELD TRIALS.

Editor *Forest and Stream*:

I was much pleased to note that the Eastern Field Trials Club have eliminated retrieving from their rules, also the forty-five minute rule. I need not discuss the arguments that have been advanced pro and con on the subject. I merely desire to put myself on record as being heartily in accord with the change. What now prompts me to write you is a suggestion of further changes, or rather to suggest that instructions should be given to judges to place a different interpretation on a certain class of work of the dogs than obtained at the last trials. It was a new experience to me to see two handlers with whistles in their mouths, cast off their dogs and keep up a continual trot, reminding one of a couple of boys marching down the street during the bazoo craze. I, in my surprise and innocence, noting the dogs took no more notice of what to me meant "Come to heel," than if two donkeys were braying, asked, "What in thunder are they whistling for?" when I was informed by one of my confrères that that was the American mode of training dogs to keep out at their work and so the dogs would know the direction the handlers were going. This may be an excellent idea, but I should say, if field trials are meant to show high class natural ability, that did I own a brute that required whistling at to make him interested in his work, well, to put it mildly, he would be out of place in a field trial of the reputation of the Eastern Field Trials Club. If this mode of working dogs when out shooting was the one universally practiced no great harm would ensue, but I venture the assertion that not one man in a hundred works his setter or pointer in this manner. The consequence is, that if a handler, who works his dogs on the orthodox sportsman's way and who has a high class, obedient dog, that requires continually whistling at "to keep him out at his work," the obedient dog must naturally suffer. Then again, if the club will instruct their judges to penalize this style of handling and working dogs, it will do away with the suspicion that was openly asserted at the late trials, that certain handlers kept whistles of every known tone and used them to rattle an opponent's dog.

Another idea prevailed and was insisted on as the rule of the club—which I think should be changed—is that requiring a dog to remain pointing until the handler has flushed the bird. My idea is, and the only one I ever saw practiced, for a dog to remain at "point" until his handler comes up, then at command the dog to move with the gun and locate his game, for, as Mr. Brailsford tersely put it, "Which knows best where the game is, the dog with his powers of scent or the man who has none?" The style of work I advocate, shows to my mind the only true way to test a dog in a manner field trials are intended for, viz.: to show his accuracy on birds. If the manner of judging first mentioned prevailed in the district in which our local trials are held, the handler would find while he was aimlessly tramping around to prove his point that Mr. Prairie Chicken had run, probably a quarter of a mile, whereas a good chicken dog

THE POINTER DOG "OSSINING."

Owned by Mr. W. H. Hyland, North Tarrytown, New York.

would never permit the bird to get away any further than he could scent it. The style of dog required by the Eastern Field Trials Club, and the class of work they desire, viz.: a bold, dashing, game-finding animal, is thoroughly in accord with my own ideas of what a setter or pointer should be. I think and hope the club will take my suggestions in the spirit in which they are given. We are agreed and both aiming at how best to improve the setter and pointer for high-class work, and endeavoring to make rules whereby the best dog must win. THOS. JOHNSON.

WINNIPEG, Manitoba, April 26.

VAL JEAN.

Editor *Forest and Stream*:

Of the many interesting stories and bits of news found in your paper, nothing warms my heart so much toward my fellow sportsmen as an obituary of a faithful dog. Perhaps that kind of reading is not generally popular, but it always makes me feel that there are many kind and true men in the world after all, and that they have large hearts and are honest fellows, who feel the loss of their dog. Can I not picture to you a day in June, 1876, a village blacksmith shop in Massachusetts, an ox-cart a little to one side of the large door and a few gnarled oak trees near by. Under the cart an Irish water spaniel with a lot of brown woolly puppies playing about her. One of these dogs came into my possession in August of that year and was named Val Jean. His sire was an English spaniel of imported stock. I have had many dogs around me since that time, but none that could be taught as easily as Val, as we very soon called him, and none that possessed nearly as much of my affection. He was shown in the first New York dog show of the Westminster Kennel Club, but not having been put in his stall was not judged. The following year I was there to attend to him, and he easily secured second prize in the retrieving spaniels. He was easily trained for hunting and soon found a way of his own to dodge the brakeman and scurry under the first vacant seat in a passenger car of a railroad train. He was fond of travel and visited many of the States. Always ready for work and willing to do anything asked of him, he was a great favorite, and was always included with us in an invitation to dine out when in the West. He was good on all kinds of game and as a retriever none could beat him. Many stories I could tell of his exploits in that line, from getting a winged jacksnipe in a marsh, where he sank to his body in mud, to retrieving a redhead in icy water. Jumping over a cliff a few years ago, and dropping about twenty feet below into a meadow, he broke one of his legs, and since then was of little account for work. As a house dog and for useful work he was almost human. Val Jean was born in May, 1876, and died March 18, 1891. Poor old man! If your master and friends live as good a life and try as hard to do what is right as you did, their reward is certain when they are called. Your place can never be filled in my affection. C. T. P.

DEATH OF CHARLES DAVIS.

Editor *Forest and Stream*:

Early on Monday morning I had the great misfortune to lose my greyhound Charles Davis. He was killed while fighting through the wire partition which separated him and his mate Maud Torrington from the deerhounds. The wire is of about 4 in. mesh, and while snapping at the dogs on the other side he must have been caught by one of them and had his head pulled through. Being unable to extract it, the deerhounds soon put an end to one of the best greyhounds in this country, and one who I am sure had a grand career before him as a coursing dog. At the last meet of the Eastern Coursing Club he won the best course of the day, beating his competitor at the rate of 47 to 1 and making more points than the judge could follow. Naturally high hopes were entertained of what he might do at the coming meeting at Great Bend, at which he would have been slipped. His loss would seem less severe had he left behind him some of his blood, but unfortunately I refrained from breeding him to Maud Torrington last January, as I wished to show her through the circuit. Charles Davis was bred by Mr. Cleare, of Burnham, England. He was born in January, 1885. He was sired by Royal Stag out of Clyde. In England he had a record of eighteen firsts and specials, and on this side two first and four seconds, being beaten each time by Gem of the Season.

Notwithstanding this bad luck, I expect to introduce to the greyhound world, before long, something to take the place of poor Charlie which will make some of the old breeders hustle, so to speak. ALBION L. PAGE.

DUNROBIN KENNELS, Stanley, N. J., May 12.

Mr. G. W. Linchell lost his English setter bitch Dell Gladstone by death last week. She won third at the last Toronto show.

OSSINING.

THE subject of our illustration this week is the light-weight pointer dog Ossining, owned by Mr. Wm. H. Hyland, of North Tarrytown, N. Y. This dog was whelped March 20, 1888, and his breeder was Mr. J. O'Hara Denny, of Pittsburgh, Pa. His sire is champion Robert le Diable, dam, Countess Nellie D., and she is the dam of Prince, who divided second with Bang Bang at the Eastern field trials of 1885. Ossining is thoroughly broken on all game and has great speed and endurance in the field. His show record in good company also shows him well able to hold his own on the bench as well, having won third, New York; second, Boston; second, Wilmington, and first, Danbury, 1890; first, Lynn; second, Boston, and first, Cleveland, 1891. Mr. Hyland will shortly place him in the stud.

A STRAIGHTFORWARD CHALLENGE.

Editor *Forest and Stream*:

Mr. Laidlaw declines my challenge and refuses to make good his own boast. He said in an open letter to *FOREST AND STREAM*: (1) That in my comments of the Chicago show, written for your paper, I criticised his dog Oban maliciously, and extolled my own bitch Amazement unfairly. (2) That your reporter was more competent to judge dogs than I was. (3) That he would back his dog against my bitch for fun, money or marbles.

I forthwith sent to you New York draft for \$100 to settle the dog question, and you headed my communication "A Straightforward Challenge," but it has brought no response. It was fun or marbles Mr. Laidlaw wanted, not money; it was a bluff, not business, that he was writing for. The defaulter, as proved by his silence, is driven to admit the superiority of Amazement over Oban, the unfairness of Mr. Nelles in his awards at Cleveland, and finally the weakness of his own judgment. GEO. BELL.

[We have returned Mr. Bell's draft for \$100 according to his request.]

THE CHESTNUT HILL KENNELS' COLLIES.—Philadelphia, Pa.—*Editor Forest and Stream*: Referring to the article in your issue of the present week in regard to the large sale made by us to the Seminole Kennels, I beg to say that, while we have parted with a number of our best dogs, we have still on hand an assortment which no other collie kennel can boast of in this country, barring the Seminole. The latter kennels, we believe, do not intend to dispose of their best stock, at any rate for the present, whereas we are still offering for sale everything except the two Flurries. We have determined to dispose of our dogs for two reasons: In the first place, competition has been so much narrowed the last two years that we thought it best, for the interest of the collies, that the winning dogs, which have been largely controlled by us lately, should be separated among different kennels. Again, as it would have been a heavy expense to have kept our large kennels together, having determined not to exhibit except for specials before the fall of 1893, we for this reason also decided to reduce them. We have still three stud dogs, whose services we offer to the public at reduced rates. Wellsbourne Charlie, whom many people consider the best collie in the world; Maney Trefoil and Roslyn Regent, the son of The Squire, shown in New York and Chicago; beaten at the former place, but winning well at the latter. For the information of breeders who are looking for new stock, we would call their attention to the fact that we still have on hand a selection of the best collie bitches that can be obtained in this country, some in whelp and some will be shortly ready to breed, among them several by Christopher. —THE CHESTNUT HILL KENNELS (Mitchell Harrison, Proprietor).

CALIFORNIA NOTES.—Mr. W. H. Richardson, of this city, has purchased of Mr. George Raper, the well-known English judge, the fox-terrier bitch Richmond Jessamine. She was whelped May, 1890, and is by Spinner (Vesuvian—Preston Tiney) out of Lady Scarboro (Raby Trick—Mouseheld Zoe). She will be bred to Raby Dominie before leaving the old country for her long journey. "Honest John" visited two coursing matches while in San Francisco, at the Ocean View Park. I trust he will not gauge California coursing by that at Ocean View. The hares seldom run well there, and it cannot be compared with Merced coursing in any sense. I still predict that the very best Eastern dogs will have their pace cut out for them by the Merced hares, and whatever they win from the dogs on this coast they will earn. Human nature is the same the world over. When Mr. Davidson picked out Valley Queen as the best greyhound in the recent bench show and afterward compared her with Duke of Vernon for the best dog in the show, I confess to a thrill of pleasure. I had predicted that such would be the case months ago, and I cannot conceive of a stronger incentive to greyhound men to show their dogs, for Valley Queen has won every course she ever competed for and turns as if on a pivot.—NANQUOIT.

BEAGLE TRAINING.

Editor Forest and Stream:

The holding of beagle field trials this fall is an assured fact, and why not? Has it not the backing of one of the strongest specialty clubs in existence? A club that has never made a failure of anything it has undertaken, and rest assured this will be no exception to the general rule. Since field trials will be given, would it not be well to discuss, through the columns of FOREST AND STREAM, the best method of training dogs for the event? There must be many trainers who could give us unsophisticated amateurs a good deal of useful information in regard to the best methods of accomplishing the end desired. Should a beagle be under control? The field trials say, Yes, and so do I. Some one says: "I don't want a beagle that won't go out and hunt alone." Neither do I. Another says: "I want a dog that I can sit on a fence and let him do the hunting, not one that I have to keep telling to hunt here and there and so on." As far as the question goes this is all very well, and the above is true to life. If he is one of the sit-down kind, let me advise him to keep away from the trials, or he will be liable to have a few kinks in his knees before he leaves for home. But a dog that you can order to hunt "here and there and so on" is a mighty good one to have I think. Supposing from your lofty perch on the fence you should see a rabbit start up, if your dog was not under some control, ten to one by his not coming when you called, you would lose the rabbit. I might mention a hundred instances where a dog under good control would have the advantage of one not so trained. I will, however, refrain and give others a chance.

Should a beagle stop at or give tongue at a hole when the quarry has run in? This is a question upon which I am greatly in doubt what to answer. If I should say that he should stop at a hole, some one will say, "He is a ferret hunter," but if no is the answer, another one says, "How does he know when his dog has lost or holed?" Being too young to bear the load of responsibility, I leave the question open.

Should a beagle hunt like a setter or pointer: i. e., quarter his ground and hunt systematically, or range indifferently, going at his own sweet will? I should say, by all means the former; that is, hunt like a pointer or setter. Does not a setter work to the best advantage by quartering when game is sought? Is not game finding the object of hunting with a beagle? Some say no, but that trailing is the primary object. Perhaps it is, but you must find the game before it is trailed, must you not? This is also an open question and one on which I would like to hear different opinions passed. I could speak of many other things, but perhaps the patient reader, who has waded so far, will be looking for a club or gun to shoot the writer; but as the FOREST AND STREAM can only print a limited amount from each writer, so that all may have a show, perhaps I had better stop, though this subject has not by any means been exhausted, and many an abler pen than mine can think of much more and put it in much better language. Let us hear from "Uncle Dick," "Bannerman," "Pious Jeems," and a host of others, telling us kids "how to train a beagle in the way he should go," or else, after we have adopted a plan of our own contrary to theirs, let them forever hold their peace and not grumble when they find the trials are run contrary to their ideas. QUESTER.

BOSTON, Mass.

NATIONAL BEAGLE CLUB TRIALS.

Editor Forest and Stream:

With your kind permission in accordance with a vote of the executive committee of the National Beagle Club, I would like to correspond with the beagle men of America, and any others who may be interested in the advancement of the beagle, through the columns of FOREST AND STREAM regarding a place for holding our second annual field trials. The following are some of the qualifications that a place must necessarily have to be suitable for our purpose. First, it must be located so as to be easily accessible from the railroad; second, there must be good accommodations for visitors and dogs; third, the character of the ground must be such as to admit of ready trailing, the less sand and rocks the better; fourth, the country must be such that the dogs can be easily followed on foot and kept well in view; fifth, there must be an abundance of either rabbits or hares. Any one knowing of a place with any or all of these advantages will confer a lasting favor on the National Beagle Club, and I believe, through the club, on the beagle fraternity in general, by giving a brief description in the columns of FOREST AND STREAM, also stating any other points of interest or advantage he may deem important. I will say in conclusion that the National Beagle Club desires that their second field trials shall be even more of a successful event, both for the club and for its exhibitors, than that of last year, and believe that by the co-operation of the entire beagle loving public such will be the case. In conclusion I hope that the efforts of the club to make another brilliant success of this important event will meet with the hearty aid it deserves. F. W. CHAPMAN, Sec'y N. B. C.

BOSTON, Mass., May 16.

DOG CHAT.

WE are often asked the question if there is any way to obtain a litter from a shy breeder or barren bitch, therefore the following interesting account by Vero Shav in his "Fragments of Fancy" is worthy of attention: "An event occurred on Good Friday which may possibly prove interesting to dog breeders, and which I will, therefore, allude to for their benefit. It was only the appearance in the world of another litter of greyhound whelps. The circumstance at first sight may appear of no especial moment, but certain facts in connection with it may be worth relating. The dam had run a great puppy, and was tried good enough for Waterloo, when she split her pastern and became useless for coursing purposes. She is now seven years old and has been served by many different dogs, but without result until this winter. In consequence of her infirmity she has frequently changed hands, and at last came into the possession of her present owner for a sovereign. Her pedigree is first rate, and a supreme effort to obtain a litter from this barren bitch was determined upon. She was got into low condition, and the advice given to me by Dr. Walsh was acted upon, with the happiest results. This was to bleed the bitch heavily the very moment before she went to the dog, and all I can say on the subject is that the experiment was fully carried out in my presence, and that the bitch threw six whelps on Friday morning. Whether it is a case of cause and effect I do not profess to say; all I know is that 'Stonehenge' recommended the practice, and that a 'barren' bitch has belied her reputation after having been subjected to a copious blood letting. Nor do I undertake to advise anybody on the matter, and doubtless hundreds of the readers of the *Stock-Keeper* know and have practiced the operation. At the same time, many others may not have heard of the idea before, and may, therefore, feel disposed to try their luck if they have a presumably sterile bitch. I may suggest, however, that it would be as well to enlist the assistance of a veterinary surgeon, or some person versed in the mysteries of checking a flow of blood, or the experimentalists may discover that they are assisting at a funeral." If any of our readers should feel tempted to try the experiment we would be pleased if they would write us an account of it if successful.

Mr. Geo. Bell, of Toronto, Can., has sold his young cocker spaniel bitch I guess for a very long figure to Mr. Herbert

P. Mullens, of Abbey Wells, Newbury, England, a member of the committee of the English Spaniel Club. Mr. Mullens was delighted with Mr. Bell's kennel, and considered Amazeant a wonderful bitch, remarking that she would hold her own with any of the English dogs. I guess goes into a strong kennel, Mr. Mullens being the owner of some of the best spaniels in England. I guess was served by Mr. J. P. Willey's champion Obo II. on May 4. We wish Mr. Mullens every success with his new purchase and trust her family will bring credit in England to Canadian breeding.

An important meeting of the Spaniel Club was held at the office of Mr. R. P. Keady, New York city, May 18, at 4 P. M. The mail vote for judges was opened, and it was found that the 25 members cast their votes as follows: A. Clinton Wilmerding, 23; J. F. Kirk, 22; C. H. Mason, 22; J. P. Willey, 21; E. M. Oldham, 18; Jas. Watson, 18; Andrew Laidlaw, 16; J. O. Fellows, 15; Wm. West, 13, and Geo. Bell, 12. Several other men obtained votes, but not sufficient to carry them into the first ten. Benjamin Harrison and Grover Cleveland scored one vote each, the latter no doubt on the strength of Mrs. Cleveland having just purchased a Doe pup from Mr. Wilmerding. Mr. E. M. Oldham was elected delegate to the A. K. C. A committee was formed to confer with the Pet Dog Club in reference to holding a show next fall. A committee, consisting of the executive committee and Messrs. Kirk, Mason, Willey and Laidlaw, was appointed to confer with a similar committee of the English Spaniel Club, with regard to a uniformity of standard for all the spaniels. The new members elected were Messrs. W. B. Palmer and J. L. Little.

"Hello, Central!" exclaimed A. D. Lewis, as we entered the A. K. C. room to-day. "Any news?" was our answer. "Yes; we've got just the litter of the century, by Duke of Hessen out of Woolton Game, all winners, twenty-five litters already asking for pups." On mildly congratulating Friend Lewis we inquired their age. "Two weeks," unblushingly answered the secretary of the Hempstead Farm Co. One puppy has been sold to Mr. Hitchcock and another to Mr. Dexter.

We learn that the Associated Fanciers have brought suit against Mr. Frank Hope, 464 N. Ninth street, Philadelphia, for libel, he having spoken in uncompromising terms of their business methods. The latter gentleman is now on the lookout for evidence.

Another libel suit has been brought by Mr. Peshall in the Supreme Court, this time against Washington E. Connor, Sidney Dillon Ripley, Louis de Jonge, Jr., F. R. Hitchcock, H. F. Schellhass, Louis C. Clark, August Belmont, Eugene W. Durkee, W. C. Rogers, A. P. Vredenburg, Jas. L. Anthony, Lambar Sherwood, Howard Willett and John S. Hoey on account of the publication of the first issue of the *Kennel Gazette* containing Mr. Peshall's name among those disqualified. Mr. Peshall desires \$100,000 on this one. The summonses are dated May 15.

The American Pet Dog Club held a meeting at the house of the president, Mr. Charles Wheatleigh, Hempstead, L. I., on Thursday last. It was decided to take steps toward holding a show, in conjunction with other specialty clubs, Nov. 25 to 27, at the Madison Square Garden, New York city. A committee was formed to confer with the other clubs, and as we believe money was guaranteed at the meeting toward the expenses of a show, there is little doubt but that one will be held.

We draw the attention of our readers to the new kennel advertisements this week. Mr. Geo. Bell has a number of cockers for sale; Alexander Johnson and David Rowat have foxhound puppies. F. E. Atkins a pointer bitch; W. F. Burdell some fine English setter puppies; Connemara Kennels Irish setter puppies and Rochelle Kennels black and tan terriers; and there are also some St. Bernard puppies. In the stud, Mr. Moore has the great Phylimmon and Lord Melrose; John Keegan has Soggarth and Patrol. Mr. Leslie puts his boarding kennels on the market.

The Midland Fox-terrier Club's show opened May 13 with 689 entries. The Bulldog Club secured for their show a grand total of 198 dogs.

We regret to hear that Mr. Chas. E. Connell, of Philadelphia, Pa., has lost his pointer bitch Fan Fan, which won several prizes during the past circuit of shows. She had four puppies by Duke of Hessen, which will be raised by the bottle, if possible.

The Swiss Mountain Kennels' new importation, the St. Bernard bitch Lady Castlereagh, arrived safely in Philadelphia May 9. Mrs. Smythe has had her full quota of hard luck, but we hope it will take a turn for the better in this instance.

The poison fiend has been at work on two of Mr. Heath's young pointers that were in charge of the trainer, W. T. Mitchell. One was a litter sister to Graph and the other a bitch by Graphic out of old Bloome.

If any one has had his full share of heart-breaking luck, Mercer, of Ottawa, is the man. He writes us now that his Lady Lancaster and seven puppies by Hotpot, the crack English dog, have gone to the eternal bow-wows. However, "Clumber" has evidently the right fancier's blood in him, for he has written to buy her sister. He is determined to have some young Hotpots, and his Lady Belle, who sailed for the other side a week or two since, will have a chance to see what she can do.

Mr. Eberhart is making strenuous efforts to get together a team of pugs that will bring some of the fall kennel prizes to the "Square Deal" Kennels. He has just purchased Fannie K. (11,820), which he says is a small good one, and is also importing from England a brood bitch that is a winner over there as well. "Bradford Ruby's all right."

"See here, my friend, that dog of yours killed three sheep of mine last night, and I want to know what you propose to do about it?" "Are you sure it was my dog?" "Yes." "Well, I hardly know what to do. I guess I had better sell him. You don't want to buy a dog, do you?"—*Rochester Talisman*.

Mr. John E. Thayer writes us that he has purchased from Mr. John A. Logan, Jr., the fox-terriers Pitcher and Dona. The former's great record as a stud dog makes his services much sought after, and will no doubt be a valuable addition to the Hillside Kennels. Dona's record this past season stamps her as a good one, having won at every show almost. She is by Dominic out of Avon May, so as a brood bitch alone she should earn her "oats" many times over. Pitcher has been placed at stud at the moderate fee of \$25. We are glad to see that Mr. Thayer still supports the breed with such persistency.

Mr. Jarrett writes us that they are having a great run on their collies, and that they will soon have nothing left but the two Flurrys. Wellesbourne Charlie will remain at Chestnut Hill at stud till the fall, when he will return to his native land. Breeders should take advantage of this dog's services while they have the chance. Mr. Jarrett has just

heard from Mr. Charles, who manages the English branch of the Chestnut Hill Kennels, and he says that Christopher is in better shape than ever and had an easy win at Ishington and also at Coventry shows, where he won the special for best in the show, and with an eight-months-old daughter the special for best brace. Their Roslyn Dolly should leave Philadelphia on the 20th, but will not be shown till fall as she is out of coat. She will be bred to Gladdie. Friend Jarrett says they have a youngster by Scottia that they expect will make a better one than Roslyn Wilkes.

A dispatch from London, England, states that the Bulldog Club's show opened May 15 in the Agricultural Hall, Islington. All the well-known exhibitors, including Lady DeClifford, sent dogs which duly received a great deal of admiration. The sensation of the morning was the defeat of Mr. Samuel Woodwiss's famous champion British Monarch, in the heavy-weight challenge class. This brindled dog has been the winner of the Bulldog Club's fifty guinea challenge cup eleven times, and has taken in addition innumerable other first prizes. The judge, however, awarded the palm to Mr. Phillip Beresford Hope's Bedbury Lion, which is a white dog not yet three years old, and has won the fifty guinea challenge cup four times. British Monarch took second honors, and Mr. Ellis's Pathfinder received the third prize. To know whether Frank Dole won the American cup or not with H. M. Stanley, we must wait till the regular kennel papers arrive.

The Chestnut Hill Kennels have purchased the St. Bernard Donna Silva, by Duke of Wellington—Calypso, from the Swiss Mountain Kennels. She was shipped to Mr. Moore's Kennel, May 14, to be bred to the great Phylimmon. Donna Silva has won first at Brussels and third at Brighton, and is counted a pretty good bitch.

A picture of champion Buckle (late Gipping Sam), the field spaniel, appears in this week's *Canine World*. In that paper's "They Say" a note appears to the effect "That 'Uncle Dick' will be in print in less than forty-eight hours after he has seen the black spaniel champion Buckle."

At the Northern and Midland Collie show, just held in Manchester, a good improvement was seen in the method of posting the awards. At large shows there is always more or less confusion when a dog is entered in several classes, winning mention in each. The new plan is now to put the number of the class before the award, for instance, VI. First. At this show another innovation was seen. Instead of the old plan of having the benches open at the top, a wire screen ran along the top of the wire division, thus preventing dogs from getting at each other and tasting the sweets of a scrimmage. For the collie benches this will be found very useful. At this show Mr. L. P. Brearley claimed the bitch puppy winner, Moorland Belle, owned by Mr. Thompson, at the catalogue price, \$500. Mr. Amcough also bought in his puppy Parbold Pilot at the same figure.

"Cheerful Horn" tells us that Mr. Sam Woodwiss contemplates a visit to this country with his world-renowned team of bulldogs. This will be interesting news for our Bulldog Club men, and though all our best bulldogs hailed originally from the same country, still they are Americans now, and for the honor of the country we must give him a warm reception when he does come. We ought to try and encourage these friendly competitions, for if one sets the example others will soon follow.

It will be remembered that some time ago we noted the purchase by Mr. John H. Francis, Jr., of Peoria, Ill., of the St. Bernard bitch Keepsake (Keeper—Lady Miles) from Mr. F. E. Lamb, of Baltimore. Mr. Francis has now had an experience with an express company that will make him chary of running any such risks in the future. The bitch was bought with the understanding that she should be bred to Phylimmon, Jr. She was in due season sent to the Wyoming Kennels, April 18. On the 24th Mr. Green, the manager, shipped her per American Express Co. to Peoria, and notified Mr. Lamb of the fact, who in turn wired Mr. Francis to be on the lookout for her. After "looking out" for about a week, expecting her daily, he wired Mr. Green. Green telegraphed him he knew nothing of her. Mr. Francis then wired the Express Co. in Chicago, and they replied that there was no dog there nor had there been any for Mr. Francis, although the Melrose agent had his receipts from the agent at Chicago. Upon going to the Express Co.'s headquarters it was learned that the bitch had arrived at Chicago all right, and they said then that she got out of her crate at night and ran away when the door was opened in the morning. This is quite a yarn, for she was in a good strong crate, a new one made of $\frac{1}{2}$ in. lumber. They certainly should have sent Mr. Francis some word instead of trying to deceive him as they evidently did do. Mr. Francis is now going to sue the company for the price of the bitch, \$500, and having employed able counsel intends pushing the matter through.

M. Lamb's new bitch Margharita arrived all safe on the Queensmore, May 14. He thinks her a good one with excellent markings. Her measurements are as follows: Skull $24\frac{1}{2}$ in., muzzle $16\frac{1}{2}$ in., arm at elbow $12\frac{1}{2}$ in., leg $10\frac{1}{2}$ in., height at shoulder good $31\frac{1}{2}$ in., girth of chest $41\frac{1}{2}$ in., loin $38\frac{1}{2}$ in. The person from whom he bought her did not follow his instructions in sending her over, and sent her two weeks later than he ordered, with the result that she whelped a fine litter of 9 puppies on board ship, of which only one was saved. Fortunately she is in fine condition and as lively as a terrier. He is now negotiating for another to be bred to Lord Bute before she comes over.

A new judges' slate has been made for the Ottawa show. The judges now will be Messrs. W. Allan Hill, of Ottawa, for Clumbers; W. B. Palmer, of Woodstock, for other spaniels, and John Davidson all other classes. Our correspondent informs us that the prize list will be an extra good one, and the size of the building will be doubled. The latter improvement at any rate was very much needed, as the dogs last year had to be benched one over the other in many of the aisles.

Mr. C. A. Stone writes us that at a meeting of the bench show committee of the Industrial Exhibition Association, held on Friday afternoon, the following classes were allotted to the different judges at the coming show, Sept. 14-18: Miss A. H. Whitney, St. Bernards, great Danes and pirs; A. Clinton Wilmerding, the spaniel classes; C. H. Mason, mastiffs, bloodhounds, Newfoundlands, deerhounds, Barzoi, poodles, terriers, bulldogs and miscellaneous breeds; John Davidson, greyhounds, foxhounds, pointers, setters, collies, dachshunde and beagles.

Mr. Sears writes us that champion Hesper died of lymphangitis after ten days' illness.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

Prepared Blanks sent free on application. Lady Ruby, by Eberhart Pug Kennels, Cincinnati, O., for pug bitch, whelped Sept. 27, 1890, by Bradford Ruby (L. out of Pearl).

BRED.

Prepared Blanks sent free on application.

Lady Melville-Roscoe. F. W. Moulton's (Washington, D. C.) bull-terrier bitch Lady Melville (champion Trentham Dutch-Old Lill) to his Roscoe (Bendigo-champion Starlight), May 16.

Libertas-Roscoe. R. N. Sweet's (Rochester, Minn.) bull-terrier bitch Libertas (Rocky-Nell Bright) to F. W. Moulton's Roscoe (Bendigo-champion Starlight), April 9.

Lady Snow-Johnny or Boss III. Mercer & Middleton's (Ottawa, Ont.) Clumber spaniel bitch Lady Snow (champion John o' Gaunt-Faxley Beauty) to their champion Johnny or champion Boss III., April 29.

Lady Bromine-Johnny. Mercer & Middleton's (Ottawa, Ont.) Clumber spaniel bitch champion Lady Bromine (champion Tower-Lead) to their champion Johnny, April 30.

Mina-Johnny Junior. A. Watts, Jr.'s (Brantford, Ont.) Clumber spaniel bitch Mina (Shell-Lucy II.) to Mercer & Middleton's Johnny Junior, May 11.

Theodora-Bran. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Theodora to their champion Bran, April 12.

Hillside Romola-Bran. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Hillside Romola to their champion Bran, April 25.

Oiga-Clansman. G. S. Page's (New York) deerhound bitch champion Oiga to Hillside Kennels' champion Clansman, March 22.

Silver Queen-Chieftain. N. Q. Pope's (Brooklyn, N. Y.) deerhound bitch Silver Queen (Bran-Countess Zina) to Hillside Kennels' Chieftain, April 25.

Lady Coleus-Ilford Chancellor. Flour City Kennels' (Rochester, N. Y.) mastiff bitch champion Lady Coleus (champion Beaufort-Vistula) to their champion Ilford Chancellor (champion Ilford Caution-Brenda Secunda), May 8.

Florent-Ilford Chancellor. W. C. Farrar's (London, O.) mastiff bitch Florent (champion Bess-Dell) to Flour City Kennels' champion Ilford Chancellor (champion Ilford Caution-Brenda Secunda), May 11.

Minna-Mintin-Ilford Chancellor. Flour City Kennels' (Rochester, N. Y.) mastiff bitch Minna Mintin (champion Mintin-Minna) to their champion Ilford Chancellor (champion Ilford Caution-Brenda Secunda), May 4.

Arch Ducloux-Ben Ormonde. Swiss Mountain Kennels' (Germantown, Pa.) rough St. Bernard bitch Arch Ducloux (Arch Duke-Madam Barry) to Fairhill Kennels' Ben Ormonde (Marquis of Stafford-Hela), May 1.

Lady Dixie-Belthus. Alfred Boote's English setter bitch Lady Dixie (Pride of Dixie-Fairy Belle) to R. H. Albert, Jr.'s, Belthus (champion Rock-Cockerton's Meg), March 25.

Fannie K.-Eberhart's Cashier. Eberhart's Cashier's (Cincinnati, O.) par bitch Fannie K. (champion Kash-Flossie II.) to their Eberhart's Cashier (champion Kash-Lady Thora), May 12.

Richmond Dazzle-Russley Joke. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch champion Richmond Dazzle to their Russley Joke, April 9.

Lucy-Russley Joke. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Lucy to their Russley Joke, April 20.

Lyra-Suffolk Risk. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Lyra to their Suffolk Risk, April 9.

Lady Mixture-Suffolk Risk. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Lady Mixture to their Suffolk Risk, April 22.

Shame-Suffolk Risk. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Shame to their Suffolk Risk, April 29.

Meersbrook Nan-Russley Joke. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Meersbrook Nan to their Russley Joke, April 29.

Lady Reckon-Suffolk Risk. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Lady Reckon to their Suffolk Risk, April 29.

Rosa Canina-Suffolk Risk. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Rosa Canina to their Suffolk Risk, April 11.

Hillside Ruth-Reckoner. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Ruth to their Reckoner, April 11.

Hillside Linden-Russley Joke. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Linden to their Russley Joke, April 27.

Hillside Freda-Suffolk Risk. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Freda to their Suffolk Risk, March 20.

Hillside Sapphire-Pitcher. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Sapphire to their Pitcher, April 23.

Hillside Brilliant-Reckoner. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Brilliant to their Reckoner, April 27.

Hillside Syren-Reckoner. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Syren to their Reckoner, April 21.

Hillside Vivid-Ruby Mixer. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Vivid to their Ruby Mixer, April 28.

Warren Lady-Russley Joke. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Warren Lady to their Russley Joke, May 8.

Warren Cachet-Russley Joke. Mr. Rutherford's (New York) fox-terrier bitch Warren Cachet to Hillside Kennels' Russley Joke, March 12.

Reckoner. Louis Biddle's (Philadelphia, Pa.) fox-terrier bitch — to Hillside Kennels' Reckoner, March 20.

Ruby Mixer. Louis A. Biddle's (Philadelphia, Pa.) fox-terrier bitch — to Hillside Kennels' Ruby Mixer, April 2.

Dominica-Russley Joke. J. A. Longan's (Youngstown, O.) fox-terrier bitch Dominica (Dominie-Daphnia) to Hillside Kennels' Russley Joke, April 11.

Moonshine-Russley Joke. Clarence Rathbone's (Albany, N. Y.) fox-terrier bitch Moonshine to Hillside Kennels' Russley Joke, April 10.

Warren Comely-Ruby Mixer. Mr. Rutherford's (New York) fox-terrier bitch Warren Comely to Hillside Kennels' Ruby Mixer, April 10.

Russley Joke. R. S. Ryan's (Baltimore, Md.) fox-terrier bitch — to Hillside Kennels' Russley Joke, April 16.

Russley Joke. Louis Biddle's (Philadelphia, Pa.) fox-terrier bitch — to Hillside Kennels' Russley Joke, April 18.

Ruby Mixer. Mr. Lorrillard's (Jersey City, N. J.) fox-terrier bitch — to Hillside Kennels' Ruby Mixer, May 4.

WHEELS.

Prepared Blanks sent free on application.

Lorna Secunda. Hillside Kennels' (Lancaster, Mass.) deerhound bitch Lorna Secunda, April 23, three (one dog), by their champion Bran.

Topsy S. O. J. Sykes's (Alexandria Bay, N. Y.) cocker spaniel bitch Topsy S. (Snap-Walkin Bess), May 7, eight (five dogs), by T. J. Hook's champion Red Rover (champion Ool II.—Woodstock Dingo).

Richmond Olive. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch champion Richmond Olive, March 23, three (two dogs), by their Hillside Regent.

Freja. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Freja, May 9, five (two dogs), by their Russley Joke.

Hillside Spinster. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Spinster, March 28, four (one dog), by their Reckoner.

Hillside Leda. Hillside Kennels' (Lancaster, Mass.) fox-terrier bitch Hillside Leda, April 26, three (two dogs), by Mr. Rutherford's Warren Dandy (Warren Jim—Warren Sparkle).

SALES.

Prepared Blanks sent free on application.

Druides. Black and white English setter bitch, by Belthus out of Wonna Gladstone, by R. H. Alberts, Jr., Hoboken, N. J., to W. G. Douglass, Bristol, Pa.

Alma. White, tan and lemon English setter bitch, by Belthus out of Wonna Gladstone, by R. H. Alberts, Jr., Hoboken, N. J., to W. G. Douglass, Bristol, Pa.

Beau. Lemon, white and tan English setter dog, by Belthus out of Wonna Gladstone, by R. H. Alberts, Jr., Hoboken, N. J., to W. G. Douglass, Bristol, Pa.

Rural Ned. White, lemon and tan English setter bitch, by Pride of Dixie out of Fairy Belle, by W. G. Douglass, Bristol, Pa., to R. H. Alberts, Jr., Hoboken, N. J.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price \$2. Kennel Record and Account Book. Price \$3. Training vs. Breaking. By S. T. Hammond. Price \$1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

THE FULL TEXTS of the game laws of all the States, Territories and British Provinces are given in the *Book of the Game Laws*.

Rifle and Trap Shooting.

FIXTURES.

If you want your shoot to be announced here send in notice like the following:

May 26-28.—Wm. H. Wolstencroft's Second Annual Tournament, at Facony Driving Park, Philadelphia, Pa. Address Wm. H. Wolstencroft, Frankford, Philadelphia, Pa.

May 26-28.—Newark (N. J.) Tournament. Three days targets, two days live birds. Target shooting events under management of Mr. H. A. Penrose; live bird contests under control of Mr. Jacob Peutz.

May 30.—Canajoharie (N. Y.) Gun Club Tournament. T. C. Pegnitz, Sec'y.

May 30.—Spring Tournament Maplewood (N. J.) Gun Club. Open to all. Prizes sent by C. W. Brown, Pres. Maplewood, N. J.

June 2-5.—Saratoga Gun Club Shoot, assisted by the Inter-State Manufacturers' and Dealers' Association. Association guarantees \$1,000, club adds \$2,000, total \$3,000.

June 2-5.—Rocky Mountain Sportsman's Association Tournament, at Denver, Col. C. M. Hampson, Sec'y.

June 8-13.—Regular Annual Tournament of the Illinois State Sportsman's Association. L. J. Shepard, Sec'y, Chicago, Ill.

June 15-19.—Thirty-third Annual Tournament of the New York State Association for the Protection of Fish and Game, at Rome, N. Y. M. R. Bingham, Sec'y.

June 23-25.—Atlantic City Gun Club's Tournament, at Atlantic City, N. J. For programmes address Harry Thurman, Manager, Germantown, Philadelphia, Pa., or R. C. Griscom, Secretary, Atlantic City, N. J.

July 1st week.—Boston; Wellington Gun Club, three days' tournament, under auspices of Manufacturers' and Dealers' Association.

July 2-4.—Third Annual Tournament of Canastota (N. Y.) Gun Club. E. B. Roberts, Sec'y.

MISSOURI STATE ANNUAL.

St. JOSEPH, Mo., May 12.—There is dignity in a large name, perhaps, and that may be the reason that leading organizations of sportsmen lean toward good-sounding titles. The State organization of Missouri is called, whenever one has time, the Missouri State Fish and Game Protective Association. It is much like other State leagues in general plans, but is among the best of them. The Missouri trap-shooters have always been partial to live-bird shooting, and the big tournaments of this Association have contributed in the past some of the most considerable live-bird contests in the West. This year the State meet, as everybody knows, is at St. Joseph, "St. Jo." as that city is universally known. This is the fourteenth annual tournament, and to it are accredited the following clubs, many of which are present by representatives: Gate City Gun Club, Kansas City; Compton Hill Gun Club, St. Louis; St. Joseph's Sportsmen's Club, St. Joseph; Macon Gun Club, Macon, Mo.; St. Louis Gun Club, St. Louis; Butler Gun Club, Butler; Cameron Gun Club, Cameron; Sedalia Sporting and Shooting Club, Sedalia; Booneville Hunting and Fishing Club, Booneville; Memphis Gun Club, Memphis; Carondelet Gun Club, Carondelet; Charleston Shooting Club, Charleston; Mexico Gun Club, Mexico; Belt Line Gun Club, Kansas City; Keystone Gun Club, Cameron; Palmyra Sportsmen's Club, Palmyra; O. K. Gun Club, Kansas City; Garden City Gun Club, Garden City; Missouri Gun Club, St. Louis; Dardene Shooting Club, Dardene; Kansas City Gun Club, Kansas City; Jefferson Hunting and Fishing Club, Jefferson City; Hiell man Hunting Club, Hannibal; Capitol City Gun Club, Jefferson City; St. Louis Game and Fish Preserve Association, St. Louis; Palmyra Gun Club, Palmyra; St. Louis Central Hunting Club, St. Louis; Independence Rod and Gun Club, Independence; Culture Club, Culture; St. Charles Gun Club, St. Charles; Excelsior Gun Club, St. Louis; Moberly Gun Club, Moberly; Independent Gun Club, Kansas City; Sixteen Gauge Gun Club, Kansas City.

St. Jo. lies on the Missouri River. St. Jo. is far superior to ancient Rome, or any other city which only had seven hills. There are seven hundred hills in St. Jo., and all of them bigger than yellow and steeper in ratio than the paltry hills of ancient Rome. Rome never had a Missouri State tournament, either, and even if she had, it is a safe wager that the croppery fishing in the yellow river would not be in it with that of Lake Contrary, on whose green banks, item, beneath bold, rugged fms, item, within the inclosure of a pretty driving park, the meeting has progressed to-day. There are many ways in which St. Jo. is superior to Rome. One can go to the city, and see the street car to the Union depot, then takes the Santa Fe five miles down to the lake, and then takes supper at the road house by the grounds. The landlady said it took two barrels of bass and croppies and nearly as many frogs to feed the shooting populace to-day, from which it may be argued that quite a crowd was present. Such a crowd is not a bad thing, and, in fact, it is a pretty crowd. The target entry ran nearly four and a half miles. Weather's m'ply lovely. A very pleasant place and time for a good shoot.

Men are here to-day from Kansas City, Cameron, Hannibal, Sedalia, Independence, Carthage, Butler, Maryville and Atchison, Troy, Hiawatha and other points in Kansas. The Kansas City delegation, the largest of any, is a good one, and with some funds. After all, we have no live-bird town like Kansas City in all our Western country, her record of 60,000 birds last year being indubitable the best in mind for either West or East, and the fame of her shooters, individual or collective, being known throughout the land. Jimmy Elliott everybody knows as a live-bird shot, but I don't know whether they are all "on" him as a target shot. If his work to-day is any criterion, he is a good man to let alone in a race at innateness, too. He was smashing 'em pretty easy. Carl Guinnote, Jo Underwood, J. H. McGee, Lew Vories, Walter Halliwell, W. G. Fads, Fred Meagley, Ed. Hickman, Lee Porter, Ed. Choteau and nearly a dozen others of the K. C. notables are in this evening also. Dr. Lusk, of Seneca, Kas., Fred J. Close and Dr. Dinsmore, of Troy, Kas., D. V. Edwards, of St. Lawrence, Kas., and others of importance are here from across the river. Charlie Willard and a few lines of Colts, and Rolla Heikes, of Standard-Keystone connection, are both in from Chicago and both earning a little something toward shoes for the baby. Col. A. G. Courtney carries the Lefevre eagles forinst the muddy Missouri, and Charlie Budd, late from Ackly and Algonquin in Iowa, is present and accounted for. Charlie made about \$80 here to-day mingling with the innateness. I don't know that a really good shooter nowadays cares to have much said about his gun income, but I wonder, just from a news standpoint, how many know what a good shooter's income is or may be in a year? Well, to-day I heard, not from Charlie, but from good authority, that Charlie Budd's income last year, from shooting alone, was over \$2,700, clear above all expenses. "The dang little cuss!" said my informant; but added a moment later, what more of us would adore, "but I'd rather see him win it than anybody." In common with the above, I am glad to hear that Charlie is buying more and more property in his pretty city of Des Moines, and laying up something for the rainy day when the sporting press has knuckled the professional shooter into a cold and clammy cocked hat.

Much to the general regret, that burly and genial St. Josepher, Paul Francke, was absent by reason of sickness in his family.

Mr. J. W. Battcheller was first and chief among the hustlers to-day. It is much to be regretted that his backing has not been of the best. I do not like to be rude in criticism of so generous a backing as that of men as these Missouri shooters, nor to pass too hasty a judgment on this event, but it only just to say, to-day's work does not show this to be a great success as a State tournament, and that the more especially as a State live bird tournament. As a matter of fact the shooting to-day was nearly altogether confined to targets (the bluebirds bring in use). Only one live bird event was pulled off, and the entrance had to be returned to the gun club, and the gun club was nearly empty at the start, and the expected supply from the party who contracted to furnish them did not arrive. All this should have been attended to long before this late day for preparation, and thus should have been prevented the complaints so audible and common among the shooters to-night. As a pleasant, indeed delightful assemblage the meet to-day is a success. As a big stake tournament it is not a success as yet, and it would be wrong to so designate it. It is quite a business undertaking to run a big tournament. One or two men cannot do it. It takes an organized body of intelligent workers, patient, persistent and united in their efforts. We do not see that here to-day; why I should not care to ask or say, the fact only being of news interest, though I should prefer not to record that.

The rules adopted for the meeting are printed in the programme as follows: "American Association rules to govern except in the following instances: The boundary shall be a radius of a circle of fms., from point 10yds. in advance of center trap. Any bird shot after crossing the dead line (at shooter's score) shall be lost

bird. 14oz. of shot shall be the limit for either 10 or 12-gauge gun at 140yds. shot for any other size of gun. If a gun must be below the limit, the shooter calls "pull," otherwise he refers shall call "no bird." Any shooter who may get into any tie for money may draw his proportion of the same, provided he can save his entrance money, otherwise he shall be compelled to shoot down the ties until he can save his entrance—unless otherwise agreed upon by all of those concerned. Any bird called "no bird" shall be at the expense of the shooter, provided it shall appear to the satisfaction of the referee to be the shooter's own fault.

Rapid-firing system, 5 traps, on targets. Following are the scores:

Shoot No. 1, 10 bluebirds, \$2, 40, 80, 20 and 10 per cent:

Budd won first, Heikes, Crabill and Battcheller div. second, Cosby, Elliott, Dinsmore, Seaville and Sep Meyers div. third, Keene and Stevens div. fourth.

Thus the day was closed without a single live bird event being concluded.

Wednesday, Second Day, May 15.

I always thought it was very foolish of the poet to ask "What is so rare as a day in June?" and I thought he ought to have known that a day in September, April or November is just as rare. But if he referred to gilt-edged, ornamental, edition de luxe weather, regular circus weather, he would never have said anything about June if he had been here to-day and seen what old Missouri can do in May. It was good enough to live, let alone shooting, and things went along easy like, no one working very hard. Reinforcements and all, it was a very good assemblage. The target traps were fairly well worked, though

MORE PIECES OF PIE.
JOHNSTOWN, N. Y.—Editor Forest and Stream: The experience of the Johnstown Gun Club at its recent eighth annual tournament showed that a more extended division of the prize money works to the common advantage of all concerned, especially by the shooters who are not classed as experts. The scheme of division was suggested by Harry M. Levenson, Jr., of Saratoga. The boys took to it. The following scores will show how the plan worked. Just reckon up the winnings under the old way; that is where there would have been but three moneys, and you will see that many a shooter came in for a piece of pie, who under the other mode would have been left altogether. Some of them pretty small bites, though:

No. 3, 15 kingbirds, entrance \$1.45, divided 24, 22, 20, 18 and 16 per cent.:

AMATEUR REVOLVER CHAMPIONSHIP

For Walter Winans' Trophy.

Under auspices of "Forest and Stream."

No. 318 Broadway, New York.

CONDITIONS.

Open to any citizen or permanent resident of the United States. Any revolver, maximum length of bore, including cylinder, ten inches.

Any trigger pull.
Any sight, both sights to be on the barrel or forward of the grip of the pistol hand.

Any fixed ammunition.
Cleaning allowed only between scores of six shots.
Distance, 20yds.

Position standing, free from any artificial support, the revolver held in one hand only with the arm free from the body and unsupported in any way. The rear sight shall not be nearer to the eye than twelve inches.

Target—Ready measurement disks, one shot on each disk and the measurement to be taken by mechanical Vernier scale from center of disk to the center of the shot hole.

Scores—Aggregate of best three in five scores, each score to consist of six consecutive rounds. The five scores to be fired consecutively.

Amateur Standing—The standing of a contestant as amateur and professional to be determined in each individual case by FOREST AND STREAM rules.

Where not in conflict with conditions herein, the rules of the Massachusetts Rifle Association for revolver competitions to hold. The decision of FOREST AND STREAM to be final on all points.

Places of holding the competitions will be fixed, with consideration to the convenience of contestants, and one month's notice will be given of exact time and place. It has been already determined to have competitions at New York, Boston, Philadelphia and Chicago. These finals open to all comers, and will be in charge of the shooting editor of FOREST AND STREAM or his representative.

Preliminary to the final shoots for the championship, which will be held several months from date, and in order to develop shooting ability, FOREST AND STREAM will on a season of trial shooting. The targets for this test may be had free of cost on application to the office of FOREST AND STREAM. By their use the revolver shot may fix his progress, and the ready measure-

ment feature in them enables a quick determination of the total number of inches in the six shots.

The targets here given are for preliminary practice. In using the targets fire one shot each in order at the targets from 1 to 6. This will make just one round, and by keeping each shot separate there will be no possible dispute as to the cutting out of one shot hole by a subsequent shot. In this way, too, it will be possible to do more accurate scoring than by a confused mass of shots on one paper.

These target sheets have been prepared in quantity, and may be had on application either personally or by mail to this office. A good drill for any one intending to make a record in this match, or for any revolver shooter for that matter, would be to use old postal cards or bits of card board clipped to that size. When shot after shot can be placed at 20yds. on the card, then the man and his arm are in good condition for fine scoring. Until that degree of proficiency is reached there is need of improvement, either in holding or perhaps the arm is not capable of meeting the demands made upon it. In either case it is well to know just where the trouble lies, in order to correct the evil.
